THE ENCYCLOPÆDIA BRITANNICA

FOURTEENTH EDITION

VOLUME 13

JEREZ DE LA FRONTERA TO LIBERTY PARTY

JEREZ DE LA FRONTERA (formerly XERES), a town of southern Spain, in the province of Cadiz, near the right bank of the river Guadalete, and on the Seville-Cadiz railway, about 7 m. from the Atlantic coast. Pop. (1920), 64,861. Jerez is built in the midst of a fertile plain. It has been variously identified with the Roman Municipium Seriense; with Asido, perhaps the original of the Moorish Sherish; and with Hasta Regia, a name which may survive in the designation of La Mesa de Asta, a neighbouring hill. Jerez was taken from the Moors by Ferdinand III. of Castile (1217–1252); but it was twice recaptured before Alphonso X. finally occupied it in 1264. Towards the close of the 14th century it received the title *de la Frontera, i.e.*, "of the frontier," common to several towns on the Moorish border. The most characteristic features of Jerez are the huge *bodegas*, or wine-lodges, for the manufacture and storage of sherry, and the vineyards which surround it on all sides. The old English word *sherris* is the exact 16th century pronunciation of the name Jerez. The demand for sherry diminished very greatly during the last quarter of the 19th century, especially in England, which had been the chief consumer. Few towns of southern Spain display greater commercial activity than Jerez.

JEREZ DE LOS CABALLEROS, a town of south-western Spain, in the province of Badajoz, situated on two heights overlooking the river Ardila, a tributary of the Guadiana, 12 m. E. of the Portuguese frontier. Pop. (1920) 13,526. The town is said to have been founded by Alphonso IX. of Leon in 1229; in 1232 his son St. Ferdinand gave it to the knights templar. Hence the name *Jerez de los Caballeros*, "Jerez of the knights." Vasco Núñez de Balboa, discoverer of the Pacific, was born here. The old town is surrounded by a Moorish wall with six gates; the newer portion is well built, and planted with orange and other fruit trees.

JERICHO, an ancient town of importance in the Dead sea valley, 5 m. N. of the Dead sea. According to the account given in Joshua it was the first Canaanite city to be attacked by the Israelites. The view has recently been put forward, based on the excavations, that Jericho was destroyed in the 14th century B.C. and that it was already a heap of ruins in the time of Joshua. Its refortification was due to Hiel, a man of Bethel (1 Ki. xvi. 34), and is depicted later as the headquarters of a prophetic school (2 Ki. ii.). Elisha cured the poisonous waters of its spring, now known as *'Ain es-Sultān*. It was at Jericho that the Babylonians scattered Zedekiah's army (2 Ki. xxv.) and brought to an end the kingdom of Judah. In the New Testament Jericho comes to mind in the stories of blind Bartimeus, the publican Zacchaeus of small stature, and the good Samaritan. Bacchides and Aristobulus took it and Pompey encamped here on his way to Jerusalem. Herod and Vespasian severally caused panic amongst the inhabitants and flight at their approach. Herod made it his winter residence, built a palace, baths, theatre and a fortress, and in Jericho he died. The city changed its site several times. The mound of *Tell es-Sultān*, excavated by Sellin 1907–09, covers the site of the Canaanite city. The Roman, Herodian and Crusaders' cities were on different sites.

Modern.—Er-Rīha, the site of the Crusaders' city, lies 825 ft. below sea-level; pop. about 1,000 (900 Muslims). Under settled government it is now showing signs of prosperity. It possesses a Russian hospice, Greek church, Latin chapel and several hotels. Following the lead of Herod the Great, it could be made into a magnificent winter resort. It has lately become a popular week-end resort for British officials and the richer Arabs of Jerusalem. Palms, oranges, bananas, figs, etc , grow and ripen early.

See C. F. Lehmann-Haupt, "Jericho," *Klio*. 14 (1914) 264; C. Watzinger, "Jericho· Die Ergebnisse der Ausgrabungen" (*z D M.G.*) (1926), 131 *seq*, W. J. Phythian-Adams, "Israelite Tradition and the Date of Joshua," *Pal. Expl. Fund Quart. Stat.* (1927) 34 *seq.*

(E. Ro.)

JERITZA, MARIA, soprano, was born at Brünn, Austria. Making her début at Olmetz in 1909, she was engaged by the Vienna *Volksoper* and then appeared at the Imperial Opera House, Vienna, 1912, where she sang until she went to the United States. Her American début was made at the Metropolitan Opera House in 1921 as Marietta in *Die tote Stadt* by Erich Korngold. There she repeated her Viennese successes. Her most notable rôles have been in *La Tosca, Die tote Stadt, Tannhäuser, Fedora, Thaïs, Der Rosenkavalier* and *Turandot*, in which last of Puccini's operas she sang at the first New York production Nov. 16, 1926. Her autobiography, *Sunshine and Music*, appeared in 1924.

JERKIN, a short close-fitting jacket, made usually of leather, and without sleeves, the typical male upper garment of the 16th and 17th centuries. In architecture the term "jerkin-roofed" is applied to a particular form of gable end, the gable being cut off half way up the roof and sloping back like a "hipped roof" to the edge.

JEROBOAM is the name, in the Bible, of two kings of northern Israel.

1. Son of Nebat (10th century B.C.). A *corvée* overseer under Solomon, who incurred the suspicion of the king as an instrument of the popular democratic and prophetic parties. He fled to Egypt, but was recalled by the northern tribes on the refusal of Rehoboam, son of Solomon, to accept the constitutional terms offered to him at his accession. To counteract the political influence of the sanctuary of the house of David at Jerusalem, he established (or perhaps, rather, especially favoured) the bull-cults of Bethel and Dan, a step which the later historian regarded as responsible for all the religious failings and political disasters of the north. The inevitable war between Jeroboam and Rehoboam seems to have gone at first in favour of the South, but the power of Judah was permanently checked by an Egyptian invasion under Sheshonk, who captured a number of cities in Palestine (not including Jerusalem) and exacted an enormous tribute from Rehoboam.

2. Son of Joash (8th century B.C.). The last of the great kings of Israel, after whose death the country fell into confusion and ultimate servitude Aided, perhaps, by Assyrian pressure from the east, he brought to an end the long struggle between Syria and Israel, and definitely established the superiority of the latter over Damascus. The record in 1 Kings xiv. 23 states that his kingdom extended from the borders of Hamath on the Orontes to the Dead Sea, and it seems clear that he recovered territory in Transjordania, which had long been in the hands of Damascus. Two cities in that district are apparently mentioned in Am. vi. 13—Ashtoreth-Karnaim and Lodebar—as having been recently captured in 760 The reign of Jeroboam II. saw the greatest success and outward prosperity which Israel had known since the days of Solomon, though the social conditions depicted by Amos meant a national rottenness that could only end in disaster (T. H. R.)

JEROME, ST. (HIERONYMUS, in full EUSEBIUS SOPHRONIUS HIERONYMUS) (*c.* 340–420), was born at Strido (modern Strigau?), a town on the border of Dalmatia, destroyed by the Goths in A.D. 377. Jerome appears to have been born about 340; his parents were Christians, orthodox though living among people mostly Arians and wealthy. He was at first educated at home, Bonosus, a life-long friend, sharing his youthful studies, and was afterwards sent to Rome. Donatus taught him grammar and explained the Latin poets. Victorinus taught him rhetoric. He attended the law-courts, and listened to the Roman advocates pleading in the Forum. He went to the schools of philosophy, and heard lectures on Plato, Diogenes, Clitomachus and Carneades; the conjunction of names shows how philosophy had become a dead tradition. His Sundays were spent in the catacombs in discovering graves of the martyrs and deciphering inscriptions Pope Liberius baptized him in 360.

Jerome returned to Strido, a scholar, with a scholar's tastes and cravings for knowledge. From Strido he went to Aquileia, where he made friends among the monks of the large monastery, notably Rufinus From Aquileia he went to Gaul (366–370). He stayed some time at Treves studying and observing, and then returned to Strido, and from Strido to Aquileia. He settled down to literary work in Aquileia (370–373) and composed there his first original tract, *De muliere septies percussa,* in the form of a letter to his friend Innocentius. Some dispute caused him to leave Aquileia suddenly; and with a few companions, Innocentius, Evagrius, and Heliodorus being among them, he started for a long tour in the East. The epistle to Rufinus (3rd in Vallarsi's enumeration) tells us that they passed Thrace, visiting Athens, Bithynia, Galatia, Pontus, Cappadocia and Cilicia, to Antioch. At Antioch the party remained some time.

Innocentius died of a fever, and Jerome was dangerously ill. This illness induced a spiritual change, and he resolved to renounce whatever kept him back from God. His greatest temptation was the study of the literature of pagan Rome. In a dream Christ reproached him with caring more to be a Ciceronian than a Christian. He disliked the uncouth style of the Scriptures. "O Lord," he prayed, "thou knowest that whenever I have and study secular mss. I deny thee," and he made a resolve henceforth to devote his scholarship to the Holy Scripture. "David was to be henceforth his Simonides, Pindar and Alcaeus, his Flaccus, Catullus and Severus." Fortified by these resolves he betook himself to a hermit life in the wastes of Chalcis, S.E. from Antioch (373–379). Chalcis was the Thebaid of Syria. Jerome discovered and copied mss., and began to study Hebrew. There also he wrote the life of St. Paul of Thebes. Just then the Meletian schism, which arose over the relation of the orthodox to Arian bishops and to those baptized by Arians, distressed the church at Antioch (*see* MELETIUS OF ANTIOCH), and Jerome joined the fray. He was guided by the practice of Rome and the West; having discovered what was the Western practice, he set tongue and pen to work with his usual bitterness (*Altercatio luciferiani et orthodoxi*).

At Antioch in 379 he was ordained presbyter. From there he went to Constantinople, where he met Gregory of Nazianzus, and with his aid tried to perfect himself in Greek His studies resulted in the translation of the *Chronicon* of Eusebius, with a continuation[1] of twenty-eight homilies of Origen on Jeremiah and Ezekiel, and of nine homilies of Origen on the visions of Isaiah.

In 381 Meletius died, and Pope Damasus interfered in the dispute at Antioch. Jerome was called to Rome in 382, and was made secretary during the investigation. Damasus saw how his vast scholarship might be made of use to the church. Damasus suggested to him to revise the "Old Latin" translation of the Bible; and to this task he henceforth devoted his great abilities. At Rome were published the Gospels (with a dedication to Pope Damasus, an explanatory introduction, and the canons of Eusebius), the rest of the New Testament and the version of the Psalms from the Septuagint known as the *Psalterium romanum,* which was followed (*c.* 388) by the *Psalterium gallicanum,* based on the Hexaplar Greek text. Jerome was a zealous defender of that monastic life which was beginning to take such a large place in the church of the 4th century, and he found enthusiastic disciples among the Roman ladies. A number of widows and maidens met together in the house of Marcella to study the Scriptures with him; he taught them Hebrew, and preached the virtues of the celibate life. His arguments and exhortations may be gathered from many of his epistles and from his tract *Adversus Helvidium,* in which he defends the perpetual virginity of Mary against Helvidius, who maintained that she bore children to Joseph. His influence over these ladies alarmed their relatives and excited the suspicions of the regular priesthood and of the populace, but while Pope Damasus lived Jerome remained secure.

Damasus died in 384, and was succeeded by Siricius, who did not show much friendship for Jerome. He found it expedient to leave Rome, and set out for the East in 385. His letters (especially Ep. 45) are full of outcries against his enemies and of indignant protestations that he had done nothing unbecoming a Christian, that he had taken no money, nor gifts great nor small, that he had no delight in silken attire, sparkling gems or gold ornaments, that no matron moved him unless by penitence and fasting, etc. His route is given in the third book *In Rufinum;* he went by Rhegium and Cyprus, where he was entertained by Bishop Epiphanius, to Antioch. There he was joined by two wealthy Roman ladies, Paula, a widow, and Eustochium, her daughter, one of Jerome's Hebrew students. They came accompanied by a band of Roman maidens vowed to live a celibate life in a nunnery in Palestine. Accompanied by these ladies Jerome made the tour of Palestine.

From Palestine Jerome and his companions went to Egypt, remaining some time in Alexandria, and they visited the convents of the Nitrian desert. When they returned to Palestine they all settled at Bethlehem, where Paula built four monasteries, three for nuns and one for monks. She was at the head of the nunneries until her death in 404, when Eustochium succeeded her; Jerome presided over the fourth monastery. Here he did most of his literary work and, throwing aside his unfinished plan of a translation from Origen's Hexaplar text, translated the Old Testament directly from the Hebrew, with the aid of Jewish scholars. He mentions a rabbi from Lydda, a rabbi from Tiberias, and above all Rabbi

[1] *Cf.* Schoene's critical edition (Berlin, 1866, 1875).

Ben Aniña, who came to him by night secretly for fear of the Jews. Jerome makes the synagogue responsible for the accuracy of his version. "Let him who would challenge aught in this translation," he says, "ask the Jews." The result of all this labour was the Latin translation of the Scriptures, which afterwards became the Vulgate or authorized version; but the Vulgate as we have it now suffered a good deal from changes made under the influence of the older translations; the text became very corrupt during the middle ages, and in particular all the Apocrypha, except Tobit and Judith, which Jerome translated from the Chaldee, were added from the older versions. (*See* BIBLE: *O. T. Versions.*)

Earlier in life Jerome had a great admiration for Origen, and translated many of his works, and this lasted after he had settled at Bethlehem, for in 389 he translated Origen's homilies on Luke; but he came to change his opinion and wrote violently against two admirers of the great Alexandrian scholar, John, bishop of Jerusalem, and his own former friend Rufinus. At Bethlehem also he found time to finish *Didymi de spiritu sancto liber,* a translation begun at Rome at the request of Pope Damasus, to denounce the revival of Gnostic heresies by Jovinianus and Vigilantius (*Adv. Jovinianum lib. II.* and *Contra Vigilantium liber*), and to repeat his admiration of the hermit life in his *Vita S. Hilarionis eremitae,* in his *Vita Malchi monachi captivi,* in his translations of the Rule of St. Pachomius (the Benedict of Egypt), and in his *S. Pachomii et S. Theodorici epistolae et verba mystica.* He also wrote at Bethlehem *De viris illustribus sive de scriptoribus ecclesiasticis,* a church history in biographies, ending with the life of the author; *De nominibus Hebraicis,* compiled from Philo and Origen; and *De situ et nominibus locorum Hebraicorum.*[2] At Bethlehem, too, he wrote *Quaestiones Hebraicae* on Genesis,[3] and a series of commentaries on Isaiah, Jeremiah, Ezekiel, Daniel, the Twelve Minor Prophets, Matthew and the Epistles of St. Paul. About 394 Jerome came to know Augustine, for whom he held a high regard. He engaged in the Pelagian controversy with more than even his usual bitterness (*Dialogi contra pelagianos*); and his opponents forced him to flee and to remain in concealment for nearly two years. He returned to Bethlehem in 418, and after a lingering illness died on Sept. 30, 420.

Jerome "is one of the few Fathers to whom the title of Saint appears to have been given in recognition of services rendered to the Church rather than for eminent sanctity. He is the great Christian scholar of his age, rather than the profound theologian or the wise guide of souls." His great work was the Vulgate, but his achievements in other fields would have sufficed to distinguish him. His commentaries are valuable because of his knowledge of Greek and Hebrew, his varied interests, and his comparative freedom from allegory. To him we owe the distinction between canonical and apocryphal writings; in the *Prologus Galeatus* prefixed to his version of Samuel and Kings, he says that the church reads the Apocrypha "for the edification of the people, not for confirming the authority of ecclesiastical doctrines." He was a pioneer in the fields of patrology and of biblical archaeology. In controversy he was too fond of mingling personal abuse with legitimate argument, and this weakness mars his letters, which were held in high admiration in the early middle ages, and are valuable for their history of the man and his times.

Editions of the complete works: Erasmus (9 vols., Basle, 1516–20); Mar. Victorius, bishop of Rieti (9 vols., Rome, 1565–72); F. Calixtus and A. Tribbechovius (12 vols., Frankfort and Leipzig, 1684–90); J. Martianay (5 vols., incomplete Benedictine ed., Paris, 1693–1706); D. Vallarsi (11 vols., Verona, 1734–42), the best; Migne, *Patrol. Ser. Lat.* (xxii.–xxix.). The *De viris illust.* was edited by Herding in 1879. A selection is given in translation by W. H. Fremantle, "Select Library of Nicene and Post Nicene Fathers," 2nd series, vol. vi. (New York, 1893). Biographies are prefixed to most of the above editions. *See* also lives by F. Z. Collombet (Paris and Lyons, 1844); O. Zöckler (Gotha, 1865); E. L. Cutts (London, 1878); C. Martin (London, 1888); P. Largent (Paris, 1898); F. W. Farrar, *Lives of the Fathers,* ii. 150–297 (Edinburgh, 1889). Additional literature is cited in Hauck-Herzog's *Real-ncyk. für prot. Theol.* viii. 42.

[2] Compare the critical edition of these two works in Lagarde's *Onomastica sacra* (Götting. 1870).

[3] *See* Lagarde's edition appended to his *Genesis Graece* (Leipzig, 1868).

JEROME, JEROME KLAPKA (1859–1927), English author, was born on May 2, 1859. He was educated at Marylebone Grammar School, and was by turns clerk, schoolmaster and actor, before he settled down to journalism. He made his reputation as a humorist in 1889 with *Idle Thoughts of an Idle Fellow* and *Three Men in a Boat.* He was co-editor (1892–97) of the *Idler* with Robert Barr, and editor (1893–97) of *To-Day.* A one-act play of his, *Barbara,* was produced at the Globe theatre in 1886, and was followed by others, but his greatest success was scored with *The Passing of the Third Floor Back* (1907), with Forbes-Robertson in the principal rôle. He died on June 14, 1927. *See* his *My Life and Times* (1926).

JEROME, city in the copper and gold-mining district of Yavapai county, Arizona, U.S.A., near the Verde river, 90 m. N. of Phoenix. It is served by the Verde Tunnel and Smelter railroad, connecting at Clarkdale (6·5 m. E.) with the Santa Fe. The population was 4,030 in 1920, and was estimated locally at 7,000 in 1928. Copper production in the county in 1925, most of it from the Jerome district, amounted to 154,017,340 lbs. The city was incorporated in 1899.

JEROME OF PRAGUE (d. 1416), an early Bohemian church-reformer and friend of John Hus. Jerome is stated to have belonged to a noble Bohemian family and to have been a few years younger than Hus. After beginning his studies at the University of Prague, Jerome proceeded to Oxford in 1398. There he became greatly impressed by the writings of Wycliffe, of whose *Dialogus* and *Trialogus* he made copies. He soon proceeded to the University of Paris and afterwards continued his studies at Cologne and Heidelberg, returning to Prague in 1407. In 1403 he is stated to have undertaken a journey to Jerusalem. At Paris his advocacy of the views of Wycliffe brought him into conflict with John Gerson, chancellor of the university. In Prague Jerome gave offence by exhibiting a portrait of Wycliffe in his room. Jerome became a friend of Hus, and took part in all the controversies of the university. When in 1408 a French embassy to King Wenceslaus of Bohemia proposed that the papal schism should be terminated by the refusal of the temporal authorities further to recognize either of the rival popes, Wenceslaus summoned the members of the university. The re-organization of the university was also discussed, and as Wenceslaus for a time favoured the Germans, Hus and Jerome, as leaders of the Bohemians, were threatened with death by fire should they oppose the king's will.

In 1410 Jerome went to Buda, where King Sigismund of Hungary resided, and, though a layman, preached before the king denouncing strongly the rapacity and immorality of the clergy. Sigismund shortly afterwards received a letter from the archbishop of Prague accusing Jerome. He was imprisoned for a short time. Appearing at Vienna, he was again brought before the ecclesiastical authorities. He was accused of spreading Wycliffe's doctrines, and his general conduct at Oxford, Paris, Cologne, Prague and Ofen was censured. Jerome vowed that he would not leave Vienna till he had cleared himself from the accusation of heresy. He then secretly left Vienna, declaring that this promise had been forced on him. He went first to Vöttau in Moravia, and then to Prague. In 1412 the representatives of Pope Gregory XII. offered indulgences for sale at Prague, the object being to raise money for the pope's campaign against King Ladislaus of Naples. At a meeting of the members of the university both Hus and Jerome spoke strongly against the sale of indulgences. The fiery eloquence of Jerome obtained for him greater success even than that of Hus, particularly among the younger students. Shortly afterwards Jerome proceeded to Poland—it is said on the invitation of King Ladislaus. He again met with opposition from the Roman Church.

During his stay in northern Europe Jerome received the news that Hus had been summoned to appear before the council of Constance. He wrote to his friend advising him to do so and adding that he would also proceed there to afford him assistance. Contrary to the advice of Hus he arrived at Constance on April 4, 1415. Advised to fly immediately to Bohemia, he succeeded in reaching Hirschau, only 25 m. from the Bohemian frontier. He was here arrested and brought back in chains to Constance, where

he was examined by judges appointed by the council. His courage failed him in prison and, to regain his freedom, he renounced the doctrines of Wycliffe and Hus. He declared that Hus had been justly executed and stated in a letter addressed on Aug. 12, 1415 to Lacek, lord of Kravář—the only literary document of Jerome that has been preserved—that "the dead man (Hus) had written many false and harmful things." Full confidence was not placed in Jerome's recantation. He claimed to be heard at a general meeting of the council, and this was granted to him. He now again maintained all the theories which he had formerly advocated, and, after a trial that lasted only one day, he was condemned to be burnt as a heretic. The sentence was immediately carried out on May 30, 1416, and he met his death with fortitude.

See all works dealing with Hus; and indeed all histories of Bohemia contain detailed accounts of the career of Jerome. *The Lives of John Wicliffe, Lord Cobham, John Huss, Jerome of Prague and Zizka* by William Gilpin (1765) still has a certain value.

JERROLD, DOUGLAS WILLIAM (1803–1857), English dramatist and man of letters, was born in London on Jan. 3, 1803. His father, Samuel Jerrold, actor, was at that time lessee of the little theatre of Wilsby near Cranbrook in Kent, but in 1807 he removed to Sheerness. In Dec. 1813 he joined the guardship "Namur," and he served as a midshipman until the peace of 1815. He saw nothing of the war save a number of wounded soldiers from Waterloo; but till his dying day there lingered traces of his early passion for the sea. The peace of 1815 ruined Samuel Jerrold; there was no more prize money. On Jan. 1, 1816, he removed with his family to London, where the ex-midshipman began the world again as a printer's apprentice, and in 1819 became a compositor in the printing-office of the *Sunday Monitor*.

Jerrold soon began to write for the press, and then for the stage. His first piece was a comedy *More Frightened than Hurt* (Sadler's Wells, 1821), and he was presently engaged by Davidge at the Coburg theatre to produce dramas and farces at a few pounds a week. In 1829 he made a resounding success with the three-act melodrama, *Black-eyed Susan* (Surrey theatre). He now achieved a salary of £5 a week as dramatic writer, and was independent enough to refuse to do adaptations. *The Bride of Ludgate* (Dec. 8, 1831) was the first of a number of his plays produced at Drury Lane. The other patent houses threw their doors open to him also (the Adelphi had already done so); and in 1836 Jerrold became co-manager of the Strand theatre with W. J. Hammond, his brother-in-law. The venture was not successful, and the partnership was dissolved. While it lasted Jerrold wrote his only tragedy, *The Painter of Ghent*, and himself appeared in the title-rôle. He continued to write sparkling comedies till 1854, the date of his last piece, *The Heart of Gold*.

Meanwhile he was a contributor to the *Monthly Magazine*, *Blackwood's*, the *New Monthly*, and the *Athenaeum*. To *Punch*, the publication which of all others is associated with his name, he contributed from its second number in 1841 till within a few days of his death. He founded and edited for some time, though with indifferent success, the *Illuminated Magazine*, *Jerrold's Shilling Magazine*, and *Douglas Jerrold's Weekly Newspaper:* and under his editorship *Lloyd's Weekly Newspaper* rose from almost nonentity to a circulation of 182,000. Douglas Jerrold died at his house, Kilburn Priory, in London, on June 8, 1857.

Among the best known of his numerous works are: *Men of Character* (1838), including "Job Pippin: The man who couldn't help it," and other sketches of the same kind; *Cakes and Ale* (2 vols., 1842), a collection of short papers and whimsical stories; some more serious novels—*The Story of a Feather* (1844), *The Chronicles of Clovernook* (1846), *A Man made of Money* (1849), and *St. Giles and St. James* (1851); and various series of papers reprinted from *Punch—Punch's Letters to his Son* (1843), *Punch's Complete Letter-writer* (1845), and the famous *Mrs. Caudle's Curtain Lectures* (1846).

See W. B. Jerrold, *Life and Remains of Douglas Jerrold* (1859); and W. Jerrold, *Douglas Jerrold* (2 vols, 1914). A collected edition of his writings appeared in 1851–54, and *The Works of Douglas Jerrold*, with a memoir by his son, W. B. Jerrold, in 1863–64; but neither is complete. Among the numerous selections from his tales and witticisms are two edited by his grandson, Walter Jerrold, *Bons Mots of Charles Dickens and Douglas Jerrold* (new ed. 1904), and *The Essays of Douglas Jerrold* (1903), illustrated by H. M. Brock. *See* also *The Wit and Opinions of Douglas Jerrold* (1858), ed. W. B. Jerrold.

His eldest son, WILLIAM BLANCHARD JERROLD (1826–1884), was editor of *Lloyd's Weekly Newspaper* from 1857 to 1883. During the Civil War in America he strongly supported the North, and several of his leading articles were reprinted and placarded in New York by the Federal Government. Four of his plays were successfully produced on the London stage, the popular farce *Cool as a Cucumber* (Lyceum, 1851) being the best known.

Among his books are *A Story of Social Distinction* (1848), *Life and Remains of Douglas Jerrold* (1859), *Up and Down in the World* (1863), *The Children of Lutetia* (1864), *Cent per Cent* (1871), *At Home in Paris* (1871), *The Best of all Good Company* (1871–73), *Life of Napoleon III.* (1874), and *The Life of George Cruikshank* (1882).

JERSEY, EARLS OF. Sir Edward Villiers (*c.* 1656–1711), son of Sir Edward Villiers (1620–89), of Richmond, Surrey, was created Baron Villiers and Viscount Villiers in 1691 and earl of Jersey in 1697. His grandfather, Sir Edward Villiers (*c.* 1585–1626), master of the mint and president of Munster, was half-brother of George Villiers, 1st duke of Buckingham, and of Christopher Villiers, 1st earl of Anglesey; his sister was Elizabeth Villiers, the mistress of William III, and afterwards countess of Orkney. Villiers was knight-marshal of the royal household in succession to his father; master of the horse to Queen Mary; and lord chamberlain to William III. and Queen Anne. In 1696 he represented his country at the congress of Ryswick; he was ambassador at The Hague, and after 1697 in Paris. In 1699 he was made secretary of state for the southern department, and on three occasions he was one of the lords justices of England. After his dismissal from office by Anne in 1704 he was concerned in the Jacobite schemes. He died on Aug. 25, 1711.

The 2nd earl was William (*c.* 1682–1721), son of the above, an adherent of the exiled house of Stuart. The 3rd earl was the latter's son William (d. 1769), who succeeded his kinsman John Fitzgerald (*c.* 1692–1766) as 6th Viscount Grandison. The 3rd earl's son, George Bussy, the 4th earl (1735–1805), was the "prince of Maccaronies" at the Court of George III. The 4th earl's son, George, 5th earl of Jersey (1773–1859), married Sarah Sophia (1785–1867), daughter of John Fane, 10th earl of Westmorland, and granddaughter of Robert Child, the banker. She inherited her grandfather's wealth, including his interest in Child's bank, and with her husband took the name of Child-Villiers. Victor Albert George Child-Villiers (b. 1845) succeeded his father George Augustus (1808–59), as 7th earl of Jersey in 1859. He was governor of New South Wales in 1890–93. The ninth earl, grandson of the above, succeeded his father on Dec. 31, 1923.

JERSEY (British), the largest of the Channel islands, is the southernmost of the more important islands of the group. Its chief town, St. Helier, on the south coast (in 49° 12′ N., 2° 7′ W.), being only 40 m. from St. Malo, on the north coast of Brittany. It is 10 m. long and 6¼ m. broad; area is 45 sq m. Pop. (1921), 49,701.

The island is highest (nearly 500 ft.) in the north, where there is fine cliff scenery, and slopes southward, thereby raising its temperature. The east, south and west coasts consist of a succession of large open shallow bays, separated by rocky headlands. The principal bays are Grève au Lançons, Grève de Lecq, St. John's and Bouley bays on the north; St. Catherine's and Grouville bays on the east; St. Clement's, St. Aubin's and St. Brelade's bays on the south; and St. Ouen's bay, the wide sweep of which occupies nearly the whole of the west coast. The sea in many places has encroached on the land, but there are large accumulations of drift and blown sand on the west coast.

The surface of the country is broken by valleys, the heads of which are characteristic sites for churches. The soil is generally loam, but in the west is shallow, light and sandy. The subsoil is usually gravel. The average annual rainfall is 32·7 in., 4 in. less than that of Guernsey. Plants indigenous to warm climates flourish in the open. The typical form of settlement is that of separate farms with enclosed fields, which, on the introduction of root crops in the 17th century, superseded open fields with scattered holdings. Traces of Palaeolithic man have been found in Jersey, and there is abundant evidence of his presence in Neolithic and Aeneolithic times. Among its many megalithic monuments, La Hougue Bie is specially noted. Celtic saints have left

their mark in place names, notably in the fisher-havens of St. Brelade, St. Aubin and St. Helier. St. Aubin became the chief port of the island, but from the 17th century onwards St. Helier developed at its expense. Roman remains are scarce. In addition to important local fisheries, Jersey helped in the exploitation of the Newfoundland area, owning a fishing-bank and a fleet. Industries consequent on this activity were the knitting of "jerseys" with wool imported from England, ship-building and fine furniture-making with tropical woods for inlaying. The fertility of the soil, long maintained by the use of "Vraic," or seaweed, was further increased by the introduction of the parsnip and the turnip (17th century) which necessitated a deep plough worked by co-operative effort. This gave rise to social festivals associated with La Grande Charrue. Agricultural improvement expressed itself in the 18th century in the building of fine farm houses. The possibility of winter feeding led to improved stock-raising. The island is famous for its breed of cows; all others are excluded, and early in the 19th century a public herd book was instituted. In Jersey 28% of the males are agriculturalists. Owing to climatic advantages, Jersey is able to concentrate on outdoor, intensive cultivation, especially of potatoes followed by crops of tomatoes. Glass houses take a secondary place for the cultivation of grapes, flowers, etc. Orchards have been improved and much wall fruit is also grown. Communications with England are maintained principally from Southampton and Weymouth, and there are regular steamship services from St. Malo. The Jersey railway runs from St. Helier through St. Aubin, to Corbière; and the Jersey Eastern railway follows the southern and eastern coasts to Gorey. The island has a network of good roads and a motor-bus service.

Jersey is under a form of government distinct from that of the bailiwick of Guernsey. (*See* CHANNEL ISLANDS.) There are 12 parishes, that of St. Helier being the chief town. Pop. (1921), 26,418. The population of the island nearly doubled between 1821 and 1891, but has since declined a little.

Architecture, other than domestic, is poorly represented. St. Brelade's church, probably the oldest in the island, dating from the 12th century, shows some Norman style, St. Helier's is 14th century work. Amongst very early chapels (10th century or earlier) are the Chapelle-ès-Pêcheurs at St. Brelade's, and the chapel in the manor of Rozel. The castle of Mont Orgueil, of which there are remains, is believed to be founded upon the site of a Roman stronghold, and Grosnez Castle is said to have been built as a place of refuge, probably in the 14th century.

JERSEY CITY, city, eastern New Jersey, U.S.A., on a peninsula between the Hudson river and New York bay on the east and the Hackensack river and Newark bay on the west, opposite the lower end of Manhattan island, with which it is connected by the Hudson river tunnels, the Vehicular tunnel (opened 1928), and four ferries; the county seat of Hudson county, the second city of the State in size, and the 23rd in the United States (1920). It is served by the Baltimore and Ohio, the Central of New Jersey, the Erie, the Hudson and Manhattan, the Lehigh Valley, and the Pennsylvania railways, and for freight also by the Lackawanna and the New York Central; and by 50 steamship lines which have their terminals either within the city limits or near by. The population was 298,103 in 1920 (of whom 8,000 were negroes and 75,981 were foreign-born white, largely from Italy, Ireland, Poland and Germany), and was estimated at 324,700 in 1928.

The city has an area of 20·2 sq.m. and a waterfront of 11 m. Bergen hill, a southerly prolongation of the Palisades, extends through it from north to south, rising at the north end to nearly 200ft. Along the crest runs the fine Hudson County boulevard, 19m. long and 100ft. wide. The eastern waterfront, and part of the western, is occupied by manufacturing and shipping, while the better residential sections are on the hill, which since the opening of the Hudson tubes in 1909 has been within 8min. of the financial district of New York city. A conspicuous feature of the Hudson river front is the immense electric clock, visible for many miles, on one of the Colgate factories. The dial is 38ft. across, and the minute-hand (weighing nearly a third of a ton) moves 23ft. every minute. The public school system includes 40 elementary, a junior high and two high schools, a training school for teachers, vocational and evening schools, a school for crippled children, and special classes for mentally defective, incorrigible, retarded and anaemic children and for children defective in sight and in hearing. Children defective in speech are under the care of a special supervisor. Physical examinations and training are provided throughout the system. There are 20 parochial and 10 other private schools in the city.

Jersey City has a large foreign and coastwise shipping trade, but since it is a part of the Port of New York no separate statistics are available. Its manufacturing industries are numerous, large, and highly diversified, producing some 5,000 different articles. Among the leading products are meat, sugar, cigars and cigarettes, locomotives and railroad supplies, soap and toilet articles and electrical apparatus. A growing industry of recent origin is the manufacture of radio apparatus and supplies. The aggregate output of the factories in 1925 was valued at $340,734,818. Bank deposits on Jan. 1, 1926, approximated $220,000,000. The assessed valuation of property for 1926 was $605,098,400. Since 1913 the city has operated under a commission form of government.

The site of Jersey City was a part of the patronship of Pavonia granted to Michael Pauw in 1630. At that time it was a small sandy peninsula (an island at high tide) known as Paulus hook. Settlement began in 1633, and a small agricultural and trading community grew up. In 1764 a new post route between New York and Philadelphia passed through it, and a direct ferry to New York was established. Early in the Revolution, Paulus hook was fortified by the Americans, but they abandoned it soon after the battle of Long Island, and on Sept. 23, 1776, it was occupied by the British. On. Aug. 19, 1779, in one of the most brilliant exploits of the war, the British garrison was taken by Maj. Henry Lee ("Light Horse Harry"). In 1804 Paulus hook (117ac., with perhaps 15 inhabitants) was acquired by three enterprising New York lawyers, who laid it out as a town and formed a corporation for its government. The town was incorporated in 1820 as the City of Jersey, a part of the township of Bergen. In 1838 it was reincorporated as a separate municipality, and in 1855 as a city. From time to time the area was increased by annexations of territory and by filling in the tidal lands, until the present city is over 100 times the size of Paulus hook. The population, which had grown to 6,856 in 1850, was quadrupled in the following decade and tripled in the next, reaching 82,546 in 1870, and has increased steadily ever since, at the average rate of over 40,000 per decade.

JERSEY SHORE, a borough of Lycoming county, Pa., U.S.A., on the Susquehanna river, 12m. W.S.W. of Williamsport, in a fertile agricultural region. It is served by the New York Central and the Pennsylvania railways. The population was 6,103 in 1920 (96% native white) and was estimated locally at 7,000 in 1928. The borough has railroad shops and other manufacturing industries. It was settled about 1780 and incorporated in 1825.

JERUSALEM is the seat of the Government of Palestine under the mandate given to Great Britain in July 1922 and the chief town of its province. Pop. (1922), 62,678, of whom 33,971 were Jews. Letters found at Tell-el-Amarna in Egypt, written by an early ruler of Jerusalem, show that the name existed under the form *Urusalim, i.e.,* "City of Salim" or "City of Peace," in pre-Israelite days. The emperor Hadrian, when he rebuilt the city, changed the name to Aelia Capitolina. The Arabs usually designate Jerusalem by names expressive of holiness, such as Beit el Makdis and El Mukaddis or briefly El Kuds, *i.e.,* the Sanctuary. The city stands on a rocky plateau consisting of thin beds of hard siliceous chalk (*misse*) which overlie a thick bed of soft white limestone (*meleke*). The plateau projects southwards from the main line of the Judean hills, at an average altitude of 2,500ft. above the Mediterranean and 3,800ft. above the level of the Dead sea. On the east the valley of the Kidron separates this plateau from the ridge of the Mount of Olives, which is 100 to 200ft. higher, while the Wadi Er Rababi bounds Jerusalem on the west and south, meeting the Valley of Kidron near the lower Pool of Siloam. Both valleys fall rapidly as they approach their point of junction. Originally, the plateau was intersected by a

deep valley, called Tyropoeon by Josephus, which followed a course first south-east and then west of south, and joined the two main valleys of Kidron and Er Rababi at Siloam. Another shorter valley, taking an easterly direction, joined the Tyropoeon; while a third ravine passed across the northern part of the Haram enclosure and fell into the valley of the Kidron. The exact form of these three interior valleys, which had an important influence on the construction and history of the city, is being gradually revealed by exploration. During the summer months the heat on the plateau is tempered by a sea-breeze, and there is usually a sharp fall of temperature at night; but in spring and autumn the oppressive east and south-east winds blow across the heated depression of the Ghor. A dry season, which lasts from May to October, is followed by a rainy season. Snow falls two years out of three. The mean annual temperature at Jerusalem is 62·8°, the maximum 112° and the minimum 25°. The mean monthly temperature is lowest (47·2°) in February and highest (76·3°) in August. The mean annual rainfall is about 26 inches, the precipitation occurring mostly from November to April.

Many factors have made the traditions of holiness that have grown around this city. It became important at an early date as a fortress at the side of the trade-routes that ran from Hebron to Bethel and Shechem, or branched from the Bethel road to Jericho and across Jordan, or ran along the western side of the Dead sea Melchisedek, the priest king of Jerusalem, held an important position among his neighbours in the story in Genesis. The city set on the Judean hills held out for a long time against the

THE BUILDING, WITH THE MANY CUPOLAS, IN THE FOREGROUND IS THE RUSSIAN CHURCH.

Israelites. When it fell to David it had already a long tradition of holiness, and the conqueror's great concern was to build a temple. Remains have been found of the north wall and tower of the Jebusite city. To the Jews in exile it became the idealized city, and on their return it was the capital of their traditions. After the fall of the city to the Romans its religious meaning led it to become a glorious memory in the West, and later rulers used this to gather enthusiasm to send out armies to capture what was still an important focus of trade. Apart from this political and military interest the city itself has come to mean less and less, but around it memories have grown up, in men's minds, visions of an ideal city and a perfect order of society.

The Modern City.—Prior to 1858, when the modern building period commenced, Jerusalem lay wholly within its 16th century walls. At present Jerusalem without the walls covers a larger area than that within them. The growth has been chiefly towards the north and north-west; but there are large suburbs on the west, and on the south-west near the railway station on the plain of Rephaim. Since 1917 much good work has been done, particularly in the re-organization of the water supply. The ancient aqueduct leading from the springs of Birket-el-'Arub, 14m. distant, to Solomon's Pools has been cleared, and is used in part to lead the water to a large reservoir, whence it is distributed by gravity to Jerusalem. There is a second reservoir at Lifta. A town plan and civic survey have been made and several garden villages in the neighbourhood designed. A chamber of commerce has also been formed. The Government department of antiquities has the archaeological schools of the different nations under its control, with the assistance of an advisory board of representatives from the schools. Over 6,000 specimens have been catalogued as a nucleus of a Palestine museum at Jerusalem.

Roads fit for motor traffic all the year round have been made to Jaffa, Jericho, Hebron and Damascus. An Armenian patriarch was elected in 1921, with the formal approval of the British king, and the position of the Orthodox patriarch of Jerusalem has been confirmed by a British commission.

Jerusalem, University of.—The idea of creating a university in Jerusalem was first put forward in 1882 by Dr. Schapira. After preliminary steps it was approved by the 11th Zionist Congress in 1913, and a committee of the congress purchased a site on Mt. Scopus (near the Mount of Olives) in 1914. The foundation stone was laid in 1918 by Dr. C. Weizmann, the president of the Zionist organization, and the university was formally opened by Earl Balfour on April 1, 1925. The object of the university was twofold: to carry out research in all departments, and to teach especially in the departments of Jewish and Oriental studies, for which the university should be a world-centre. Departments of chemistry, including physical chemistry, microbiology and Jewish studies, are in existence, and there is an important agricultural research institute at Tel-Aviv in connection with the university. The library already contains over 136,000 volumes. The scientific research is especially directed with a view to the material development of Palestine. (X.)

HISTORY

Jerusalem is the product of human effort, not of geographical configuration. Her site is not specially distinguished. Some famous towns seem, from their beginning, to have been designed by nature for their ultimate purpose. Inevitably, by reason of their position, they have suggested to their earliest inhabitants the ideal capital, fortress or port destined to exercise influence and com-

mand afar. Jerusalem has not attained her importance automatically. She has been assigned a situation that is typical of her subsequent history, a situation responsive to the hand of man but needing to be discovered, developed and adapted to her function in the world. Jerusalem is the meeting place of east and west; poised on the watershed between the desert and the sea she has united them. "Central, but aloof, defensible but not commanding . . . left alone by the main currents of the world's history, Jerusalem had been but a small highland township, her character compounded of the rock, the olive and the desert. Sion, the Rock-fort, Olivet and Gethsemane, the Oilpress, the Tower of the Flock and the wilderness of the Shepherds, would still have been names typical of her life, and the things they illustrate have remained the material substance of her history to the present day. But she became the bride of kings and the mother of prophets" (G. A. Smith, *op. cit. inf.*, i., 4). While yet an insignificant hill-fort, known as *Urusalim* or burg of safety, she served as an outpost for the mighty Pharaoh, with whom Abdi Khiba, her king, corresponded in the cuneiform script, the highest form of polite letters of the age. For she lay close to the desert and her soldiers could traverse the wilderness of Judea in a day and soon reach the trade routes they were bound by treaty to defend. Jerusalem could control the desert but was and is influenced by it, for the desert reaches almost to her walls. She is between the sea and the western trade route by the maritime plain on one side and the trans-Jordanic caravan road on the other. Hence she was not naturally an entrepot; when she subsequently played her part in commerce her influence was military or political. Her water supply has always been poor and her timber scanty. Her industries were local and her main visitors were pilgrims. Jerusalem faces the east and calls the east westward. Her call has been answered in peace and war. In her 33 centuries of history she has suffered at the hands of nature and of man. She has been rocked by earthquakes and sacked by invaders. She has endured over 20 sieges and blockades, about 18 reconstructions and two periods of desolation, after Nebuchadrezzar and Hadrian, when history is silent: six times has she passed from one religion to another. Her valleys have been filled and her hills levelled, her streets and buildings destroyed and her people slain and exiled. But Jerusalem has remained. Her spirit is eternal.

THE MINARET IS KNOWN AS SALADIN'S TOWER, AND MARKS THE SITE OF THE PATRIARCH'S PALACE AT THE TIME OF THE CRUSADES

Early History.—The history of Jerusalem goes back to the Stone age. About 2500 B.C. Semites settled in Palestine from Arabia and numerous flint weapons have been found near Jerusalem. About 1400 B.C., before Joshua's invasion of the country, the city was a vassal of Egypt. Among the Tell-el-Amarna tablets (*q.v.*) there are some seven which are from Urusalim, as the city was then called, which speak of coming attack and ask for Egyptian aid. The Egyptians seem to have maintained a garrison there but when the Israelites invaded the country the city was in the hands of the Jebusites. At the division, it fell in the portions of Judah and Benjamin, the tribal boundary passing through the city, which was not completely captured till seven years after David's accession. On the eastern hill, on the site of the Jebusite Zion, he placed the royal city, and, to the north of this, he chose a place for the Temple which his son Solomon was to build. Across the Tyropoeon valley, on the western hill, was the civil town. This is the view generally accepted, but there are still scholars who contest these identifications. In 1870 the excavations of the late Sir A. Warren showed that the Tyropoeon valley passed under the south-west corner of the present Haram area. Probably the Holy of Holies stood over the rock in the so-called Mosque of Omar. Solomon fortified the city with a wall, the "old wall" of Josephus. After his death Jerusalem was plundered by Shishak of Egypt and suffered a further loss of prestige by Jeroboam's rebellion, which alienated ten tribes and left the house of David with only Judah, Benjamin and some of the Levites. In Amaziah's reign (*c.* 790 B.C.?), Joash, King of Israel, captured Jerusalem and broke down the northern wall (2 Kings xiv., 8–14), which, however, Uzziah, son of Amaziah (780–740 B.C.) repaired. When Judah became tributary to Assyria, Hezekiah improved the defences of his capital and arranged for a water supply, foreseeing the impending attack. This came in 701 but failed. In 586 Jerusalem was destroyed by Nebuchadrezzar and the fortifications were dismantled.

VIA DOLOROSA. THE ROAD BELIEVED TO HAVE BEEN TRAVERSED BY CHRIST ON HIS WAY TO CALVARY

Nehemiah's Work.—About 445 Nehemiah rebuilt the walls, including both hills in the periphery. His scheme provided for (1) the following gates: on the east wall, the East Gate, the Horse Gate, the Water Gate: on the south wall, the Fountain Gate, the Dung Gate, the Valley Gate: on the west wall there were no gates; on the north wall the Gate of Ephraim, the Old Gate, the Fish Gate and the Sheep Gate; (2) the towers Hananeel and Neah; (3) the governor's house. Hananeel stood north-west of the Temple and later formed the basis first of the citadel of Simon Maccabaeus and afterwards of Herod's Antonia. Nehemiah speaks of the Tomb of David, but the site cannot be identified. Twelve years after Alexander's peaceful entry into Jerusalem in 332 B.C., Ptolemy I., of Egypt, partially demolished the fortifications, which remained in ruins until their restoration by Simon II. (219–199 B.C.). The new walls were soon overthrown. In 168 B.C. Antiochus Epiphanes destroyed them again when he captured Jerusalem and laid the Temple waste. The city now sunk to the lowest state since the Captivity. Antiochus brought in a Greek garrison and built for them a citadel, the Akra, which commanded the eastern hill and the city of David The site of the Akra is much disputed: the position at the north-east corner of the present al-Aksa mosque suits the mutually consistent accounts in Josephus and the books of the Maccabees. The huge underground cistern which is there may well have been the garrison's water supply. Judas Maccabaeus recaptured Jerusalem but the Akra defied him. The Jews erected walls to cut it off from the city and Temple. The Akra fell to Simon Maccabaeus who demolished it and also lowered the hill on which it stood to prevent the Temple from being dominated again. The effect of this was to join the city and the Temple. To replace the Akra he built another citadel, mentioned above. Somewhere about this time a second or outer wall was built, to the north of the first wall. Pompey besieged and took Jerusalem in 65 B.C. In 54 Crassus plundered the Temple.

Herod's Changes.—In 37 Herod became king and having secured almost despotic power, proceeded to make such radical architectural changes that Jerusalem became a new city. Herod's great aim was to found a dynasty and make his kingdom remarkable culturally and politically. "Twice had Israel the opportunity of becoming a great world power and on both occasions the nation deliberately rejected it" (F. J. Foakes Jackson, *Biblical History of the Hebrews*, Camb. 1921, p. 216); and the same author draws a striking parallel between Solomon and Herod: "both were men of exceptional ability . . . both made the Temple of Jerusalem a wonder of the world; both had strong sympathy with foreign ideas; both cherished great schemes for the aggrandizement of the nation which were regarded in Israel as contrary to

its true destiny." Herod sought to achieve his ends by turning to Rome, as Solomon had turned to Tyre. At Rome, architecture was then particularly favoured. Herod had diplomatically enjoyed the favour first of Antony and then of Augustus. Augustus claimed to have "found Rome brick and left it marble" (Suet. Aug. 29: *Enc. Brit.* 11th ed., vol. 23, p. 585, n. 2 endorses this) and Herod determined to do the same for Jerusalem. His chief enterprises were the following: (1) He completely rebuilt the Temple from its foundations, doubling the area of the enclosure—a great part of the Haram walls date from his day; (2) he restored the fortifications and added to their strength by constructing the great fort of Antonia, north-west of the Temple; (3) on the western hill he raised a magnificent palace, defended by three great towers, named Mariamne, Hippicus and Phasaelus: the Tower of David, by the present Jaffa gate, is on the foundations of one of these towers; (4) he erected a theatre; (5) a gymnasium. His successor Archelaus (4 B.C.–A.D. 6) lost much of Herod's power which passed to the Procurators, under one of whom, Pilate, Jesus was crucified. The church of the Holy Sepulchre (*see* SEPULCHRE, HOLY) is now considered not to mark the site of his burial. Of other buildings in Jerusalem, *e.g.*, the Xystus or stone chamber where the Sanhedrin (*q.v.*) met, little is known. Herod Agrippa (41–44) built a third wall, the course of which is now (1928) being recovered by the Archaeological Society of Jerusalem University.

Titus and Hadrian.—The Romans would not allow the work to continue and when Titus besieged Jerusalem in 70 the wall was not complete. Titus, attacking from the north, captured successively the third and second walls, Antonia, the Temple and the upper city. It is probable that his orders for the complete destruction of the Temple and fortifications with the exception of the three towers, were not carried out. The Roman garrison which he left remained at Jerusalem until the Jewish war of Freedom under Bar Kochba in 132. Following the defeat of the Jews, Jerusalem was devastated more completely than by Titus. The site was ploughed over and a new city, Aelia Capitolina, so-called in honour of (Aelius) Hadrianus, was built over the ruins. From this Jews were excluded, but Christians, who had not sided with the Jews, might enter. Temples were dedicated to Bacchus, Venus and Serapis and over the former sanctuary a shrine of Jupiter Capitolinus was reared. A boar, the symbol of the X. Legion, was placed over the southern gate. Other buildings now constructed were the Theatre, the Demosia, the Tetranymphon, the Dodecapylon and the Codra. For two centuries little is known of Jerusalem. In 326 Constantine ordered Bishop Macarius to recover the sites of the Crucifixion and the burial of Jesus: two great churches were built, one of which, the church of the Holy Sepulchre, stood where its present namesake stands: of the Basilica of the Cross no trace remains. In 460 the empress Eudocia repaired the walls and extended them so as to include Siloam, building also churches; of these one, above the Siloam pool, was recovered by F. J. Bliss, another over the reputed tomb of Stephen, north of the Damascus gate, was discovered in 1874

Justinian's basilica, with adjacent hospitals for the sick and for pilgrims, built in the 6th century, is described by Procopius: this building probably occupied the so-called "Tomb of David." In 614 Chosroes II., of Persia, captured Jerusalem and damaged many buildings, including the church of the Sepulchre. Heraclius defeated Chosroes and re-entered Jerusalem in 629. In 637 Omar ousted the Romans but was careful not to harm the city. He built a wooden mosque which the Caliph Abdul Malik rebuilt in 688: this mosque is el-Aksa. Abdul Malik also constructed the Dome of the Rock (*Kubbet es-Sahra* or Mosque of Omar). In 1099 the Crusaders, under Godfrey of Bouillon, entered Jerusalem and a terrible carnage ensued. Jerusalem became the capital of the Latin kingdom (*see* CRUSADERS) until Saladin reconquered it in 1187 and repaired the walls. Soon after 1167 Benjamin of Tudela visited Jerusalem and left a description of the city in his *Itinerary*. Excepting from 1229–39 and 1243–44 Jerusalem remained in Mohammedan hands until its capture by Allenby. In 1517 Selim I. of Turkey took Jerusalem from the Egyptians: the present configuration of the walls is due to him. As a result of the World War Jerusalem is the capital of Palestine, a mandated territory of the British empire.

JERUSALEM, SYNOD OF (1672). By far the most important of the many synods held at Jerusalem (*see* Wetzer and Welte, *Kirchenlexikon,* 2nd ed , vi. 1357 *sqq.*) is that of 1672; and its confession is the most vital statement of faith made in the Greek Church during the past thousand years. It refutes article by article the confession of Cyril Lucaris, which appeared in Latin at Geneva in 1629, and in Greek, with the addition of four "questions," in 1633. Lucaris, who died in 1638 as patriarch of Constantinople, had corresponded with Western scholars and had imbibed Calvinistic views. The great opposition which arose during his lifetime continued after his death. Against Calvinism the synod of 1672 aimed its rejection of unconditional predestination and of justification by faith alone, also its advocacy of what are substantially the Roman doctrines of transubstantiation and of purgatory; against the Church of Rome, however, it renamed the rejection of the *filioque,* affirming once more that the Holy Spirit proceeds from the Father only. The 18 canons of the synod are also known as the "Confession of Dositheus" (the President).

JESPERSEN, JENS OTTO HARRY (1860–), Danish philologist, was born at Randers, Denmark, on July 16, 1860. In 1893 he was appointed professor at the University of Copenhagen. From 1909–10 he lectured at Columbia university, New York. A practical philologist, Jespersen's view of the development of language was influenced by Herbert Spencer and Wilhelm Ostwald. His most important works are *Progress in Language* (1894); *Phonetics* (1897–99); *Growth and Structure of the English Language* (1905, Prix Volney, 1906); *Lehrbuch der Phonetik* (1913); *Language, its Nature, Development and Origin* (1922); *Philosophy of Grammar* (1924).

JESSE, in the Bible, the father of David (*q.v.*), and as such often regarded as the first in the genealogy of Jesus Christ. (*Cf.* Isa. xi. 1, 10.) Hence the design representing the descent of Jesus from the royal line of David, which was formerly a favourite ecclesiastical ornament, is called a "tree of Jesse." From a recumbent figure of Jesse springs a tree bearing in its branches the chief figures in the line of descent, and terminating in the figure of Jesus, or of the Virgin and Child. There are remains of such a tree in the church of St. Mary at Abergavenny, carved in wood, and supposed to have once stood behind the high altar. Jesse candelabra were also made. At Laon and Amiens there are sculptured Jesses over the central west doorways of the cathedrals. The design was chiefly used in windows. The great east window at Wells and the window at the west end of the nave at Chartres are fine examples.

JESSEL, SIR GEORGE (1824–1883), English judge, was born in London on Feb. 13, 1824. He was the son of Zadok Aaron Jessel, a Jewish coral merchant. George Jessel was educated at a school for Jews at Kew, and at University College, London. He entered as a student at Lincoln's Inn in 1842 and was called to the bar in 1847. He secured a tolerably large practice quickly, but Lord Chancellor Westbury delayed his career by preventing him from becoming Q.C. till 1865. Jessel entered parliament as Liberal member for Dover in 1868, and although neither his intellect nor his oratory was of a class likely to commend itself to his fellow-members, he attracted Gladstone's attention by two learned

speeches on the Bankruptcy Bill which was before the house in 1869, with the result that in 1871 he was appointed solicitor-general. His reputation at this time stood high in the chancery courts; on the common law side he was unknown, and on the first occasion upon which he came into the court of Queen's bench to move on behalf of the Crown, there was very nearly a collision between him and the bench.

In 1873 Jessel succeeded Lord Romilly as master of the rolls. From 1873 to 1881 Jessel sat as a judge of first instance in the rolls court, being also a member of the court of appeal. In November 1874 the first Judicature Act came into effect, and in 1881 the Judicature Act of that year made the master of the rolls the ordinary president of the first court of appeal, relieving him of his duties as a judge of first instance. In the court of appeal Jessel presided almost to the day of his death. He sat for the last time on March 16, 1883, and died on March 21.

As a judge of first instance Jessel was a revelation to those accustomed to the proverbial slowness of the chancery courts and of the master of the rolls who preceded him. He disposed of the business before him with rapidity combined with correctness of judgment, and he not only had no arrears himself, but was frequently able to help other judges to clear their lists. His knowledge of law and equity was wide and accurate, and his memory for cases and command of the principles laid down in them extraordinary. In the rolls court he never reserved a judgment, not even in the Epping forest case (*Commissioners of Sewers* v. *Glasse*, L R. 19 Eq.; *The Times*, 11th November 1874), in which the evidence and arguments lasted 22 days (150 witnesses being examined in court, while the documents went back to the days of King John), and in the court of appeal he did so only twice, and then in deference to the wishes of his colleagues. Never during the 19th century was the business of any court performed so rapidly, punctually, and satisfactorily as it was when Jessel presided.

Jessel was master of the rolls at a momentous period of legal history. The Judicature Acts, completing the fusion of law and equity, were passed while he was judge of first instance, and were still new to the courts when he died. His knowledge and power of assimilating knowledge of all subjects, his mastery of every branch of law with which he had to concern himself, as well as of equity, together with his willingness to give effect to the new system, caused it to be said when he died that the success of the Judicature Acts would have been impossible without him. His faults as a judge lay in his disposition to be intolerant of those who endeavoured to persist in argument after he had made up his mind; but though he was peremptory with the most eminent counsel, young men had no cause to complain of his treatment of them.

Jessel's career marks an epoch on the bench, owing to the active part taken by him in rendering the Judicature Acts effective, and also because he was the last judge capable of sitting in the House of Commons, a privilege of which he did not avail himself. He was the first Jew who, as solicitor-general, took a share in the executive government of his country, the first Jew who was sworn a regular member of the privy council, and the first Jew who took a seat on the judicial bench of Great Britain; he was also, for many years after being called to the bar, so situated that any one might have driven him from it, because, being a Jew, he was not qualified to be a member of the bar.

See *The Times*, March 23, 1883; E. Manson, *Builders of our Law* (1904).

JESSORE, a town and district of British India, in the Presidency of Bengal. The town is on the Bhairab river, and it has a railway station. Pop. (1921), 10,139.

The DISTRICT OF JESSORE has an area of 2,904 sq.m. Pop. (1921), 1,722,219. The district, lying in the central portion of the Gangetic delta, is an alluvial plain intersected by rivers and watercourses, which in the south spread out into large marshes. Within the last century the rivers in the interior of Jessore have ceased to be true deltaic rivers. Some rivers, such as the Madhumati, still have active currents, but others have degenerated, except in the rains, into chains of long, almost stagnant pools. The rivers in the south are however affected by the tides. Owing to the changes due to its moribund rivers and obstructed drainage the population suffers from fever and other diseases and is declining. The staple crop is rice. The principal industry is the manufacture of sugar from date palms.

JESTER, a provider of "jests" or amusements, a buffoon, especially a professional fool at a royal court or in a nobleman's household. (*See* FOOL.)

JESUATI, a religious order founded by Giovanni Colombini of Siena in 1360. Colombini had been a prosperous merchant and a senator in his native city, but, coming under ecstatic religious influences, abandoned secular affairs and his wife and daughter (after making provision for them), and with a friend of like temperament, Francesco Miani, gave himself to a life of apostolic poverty, penitential discipline, hospital service and public preaching. When Urban V. returned from Avignon to Rome in 1367, Colombini craved his sanction for the new order and a distinctive habit. Before this was granted he had to clear the movement of a suspicion that it was connected with the heretical sect of Fraticelli, and he died on July 31, 1367, soon after the papal approval had been given. The guidance of the new order, whose members (all lay brothers) gave themselves entirely to works of mercy, devolved upon Miani. Paul V. in 1606 arranged for a small proportion of clerical members, and later in the 17th century the Jesuati became so secularized that the order was dissolved by Clement IX. in 1668.

See T. Kennedy, art. "John Columbine, Blessed" in the *Catholic Encyclopaedia;* Max Heimbucher, *Orden u. Kongregationen,* II. 240.

JESUITS, the name commonly given to the members of the Society of Jesus. (*See* JESUS, SOCIETY OF.)

JESUS, SOCIETY OF, a religious order in the Roman Catholic Church, founded in 1539. This Society may be defined, in its original conception and avowed object, as a body of highly trained religious men, bound by the three personal vows of poverty, chastity and obedience, together with, in some cases, a special vow to the pope's service, with the object of labouring for the spiritual good of themselves and their neighbours They are governed and live by constitutions and rules, mostly drawn up by their founder, St. Ignatius of Loyola, and approved by the popes. Their proper title is "Clerks Regulars of the Society of Jesus," the word *Societas* being taken as synonymous with the original Spanish term, *Compañia,* which implies a band of spiritual soldiers living under martial law and discipline.

CONSTITUTION AND CHARACTER

The formation of the Society of Jesus was a masterpiece of genius on the part of a man (*see* LOYOLA, ST. IGNATIUS OF) who was quick to realize the necessity of the moment. Just before Ignatius Loyola was experiencing the call to conversion, Luther had begun his revolt against the Roman Church by burning the papal bull of excommunication on the 10th of December 1520. Ignatius conceived the church to be in a state of war, and there slowly took shape in his mind the idea of an order not bound by the obligations of the cloister, and based on the principle of military discipline with a "general" in an almost uncontrolled position of authority.

The soldier-mind of Ignatius can be seen throughout the constitutions. Even in the spiritual labours which the Society shares with the other orders, its own ways of dealing with persons and things result from the system of training which succeeds in forming men to a type that is considered desirable. Ignatius knew that while a high ideal was necessary for every society, his followers were flesh and blood, not machines; but he made it clear from the first that the Society was everything and the individual nothing, except so far as he might prove a useful instrument for carrying out the Society's objects. He laid great stress on the importance of firmness of character and ability for business, for he was of opinion that those who were not fit for public business were not adapted for filling offices in the Society; but even exceptional qualities and endowments in a candidate were valuable in his eyes only on the condition of their being brought into play, or held in abeyance, strictly at the command of a superior. Hence his teaching on obedience. His letter on this subject, addressed to the Jesuits of Coimbra in 1553, is still one of the standard formularies

of the Society, ranking with those other products of his pen, the *Spiritual Exercises* and the *Constitutions*. In this letter Ignatius lays down that the general is to be obeyed simply as such and as standing in the place of God, without reference to his personal wisdom, piety or discretion; that any obedience which falls short of making the superior's will one's own, in inward affection as well as in outward effect, is lax and imperfect; that going beyond the letter of command, even in things abstractly good and praiseworthy, is disobedience, and that the "sacrifice of the intellect" is the third and highest grade of obedience, well pleasing to God, when the inferior not only wills what the superior wills, but thinks what he thinks, submitting his judgment, so far as it is possible for the will to influence and lead the judgment. When the *Letter on Obedience* became known beyond the Society the teaching met with great opposition, and all the skill and learning of Bellarmine was required as its apologist, together with the whole influence of the Society, to avert what seemed to be a probable condemnation at Rome. The teaching of the *Letter* must be understood not in the sense of a legal code but as an expression of the vital spirit of the Society. Ignatius himself lays down the rule that an inferior is bound to make all necessary representations to his superior so as to guide him in imposing a precept of obedience. When a superior knows the views of his inferior and still commands, it is because he is aware of other sides of the question which appear of greater importance than those that the inferior has brought forward.

BY COURTESY OF C. W. HACKETT

CHURCH AT THE OLD JESUIT MONASTERY OF TEPOTZOTLAN, NEAR MEXICO CITY, BUILT IN THE 16TH CENTURY

The Jesuits had to find their principal work in the world and in direct and immediate contact with mankind. To seek spiritual perfection in a retired life of contemplation and prayer did not seem to Ignatius to be the best way of reforming the evils which had brought about the revolt from Rome. He withdrew his followers from this sort of retirement, except as a mere temporary preparation for later activity; he made habitual intercourse with the world a prime duty; and to this end he rigidly suppressed all such external peculiarities of dress or rule as tended to put obstacles in the way of his followers acting freely as emissaries, agents or missionaries in the most various places and circumstances. The Jesuit has no home: the whole world is his parish. Mobility and cosmopolitanism are of the very essence of the Society.

MACHINERY OF GOVERNMENT

Next we must consider the machinery by which the Society is constituted and governed so as to make its spirit a living energy and not a mere abstract theory. An applicant for the *novitiate* has first to undergo a strict retreat, practically in solitary confinement, during which he receives from a director the *Spiritual Exercises* and makes a general confession of his whole life; after which the first novitiate of two years' duration begins. In this period of trial the real character of the man is discerned, his weak points are noted and his will is tested. Prayer and the practices of asceticism, as means to an end, are the chief occupations of the novice. He may leave or be dismissed at any time during the two years; but at the end of the period if he is approved and destined for the priesthood, he is advanced to the grade of *scholastic* and takes the threefold vow of poverty, chastity and obedience, promising to "understand all things according to the constitutions of the society." The scholastic then follows the ordinary course of an undergraduate at a university. After passing five years in arts he has, while still keeping up his own studies, to devote five or six years more to teaching the junior classes in various Jesuit schools or colleges. The scholastic does not begin the study of theology until he is twenty-eight or thirty, and then passes through a four or six years' course. Only when he is thirty-four or thirty-six can he be ordained a priest and enter on the grade of a spiritual coadjutor. A lay brother, before he can become a temporal coadjutor for the discharge of domestic duties, must pass ten years before he is admitted to vows. Sometimes after ordination the priest, in the midst of his work, is again called away to a third year's novitiate, called the tertianship, as a preparation for his solemn profession of the three vows. His former vows were simple and the Society was at liberty to dismiss him for any canonical reason. The formula of the final Jesuit vow is as follows:—

"I, *N.*, promise to Almighty God, before His Virgin Mother and the whole heavenly host, and to all standing by; and to thee, Reverend Father General of the Society of Jesus, holding the place of God, and to thy successors (or to thee, Reverend Father *M.* in place of the General of the Society of Jesus and his successors holding the place of God), Perpetual Poverty, Chastity and Obedience; and according to it a peculiar care in the education of boys according to the form of life contained in the Apostolic Letters of the Society of Jesus and in its Constitution."

In connection with these vows the Jesuit makes certain solemn promises, as that he will not accept or consent to his election to any dignity or prelacy outside the Society unless forced thereunto by obedience; and that if elected to a bishopric he will never refuse to hear such advice as the general may deign to send him and will follow it if he judges it is better than his own opinion. The highest class of members, who constitute the real core of the Society, whence all its chief officers are taken, are the professed of the *four vows*. The vows of this grade are the same as the last formula, with the addition of the following important clause:

"Moreover I promise the special obedience to the Sovereign Pontiff concerning missions, as is contained in the same Apostolic Letter and Constitutions."

There is some evidence in France in the time of Louis XV. of the existence of a still higher grade of members, secretly enrolled and acting as the emissaries of the Society in various lay positions. The Jesuits themselves deny the existence of any such body, and are able to adduce the negative disproof that no provision for it is to be found in their constitutions. On the other hand there are clauses therein which make the creation of such a class perfectly feasible if thought expedient. An admitted instance is the case of Francisco Borgia, who in 1548, while still duke of Gandia, was received into the Society.

The general lives permanently at Rome and holds in his hands the right to appoint, not only to the office of provincial over each of the head districts into which the Society is mapped, but to the offices of each house in particular. There is no standard of electoral right in the Society except in the election of the general himself. By a minute and frequent system of official and private reports he is informed of the doings and progress of every member of the Society and of everything that concerns it throughout the world. Every Jesuit has not only the right but the duty in certain cases of communicating, directly and privately, with his general. While the general thus controls everything, he himself is not exempt from supervision on the part of the Society. A consultative council is imposed upon him by the general congregation, consisting of the assistants of the various nations, a *socius*, or adviser, to warn him of mistakes, and a confessor. These he cannot remove nor select; and he is bound, in certain circumstances, to listen to their advice, although he is not obliged to follow it. Once elected the general may not refuse the office, nor abdicate, nor accept any dignity or office outside of the Society; on the other hand, for certain definite reasons, he may be suspended or even deposed by the authority of the Society, which can thus preserve itself from destruction. No such instance has occurred, although steps were once taken in this direction in the case of a general who had set himself against the current feeling. Moreover the general is not independent of the pope. The influence of the society as a whole has always been for obedience to the pope, who authorized, protected and privileged them, and on whom they ultimately depend for their existence.

Thus constituted, with a skilful union of strictness and freedom, of complex organization with a minimum of friction in working, the Society was admirably devised for its purpose of introducing a new power into the Church and the world. Its immediate services to the Church were great. The Society did much, single-handed, to roll back the tide of Protestant advance when half of Europe, which had not already shaken off its allegiance to the papacy, was threatening to do so. They had the wisdom to see and to admit, in their correspondence with their superiors, that the real cause of the Protestant reformation was the ignorance, neglect and vicious lives of so many priests. They recognized, as most earnest men did, that the difficulty was in the higher places, and that these could best be touched by indirect methods. At a time when primary or even secondary education had in most places become a mere effete and pedantic adherence to obsolete methods, they were bold enough to innovate, both in system and material. They not merely taught and catechized in a new, fresh and attractive manner, besides establishing free schools of good quality, but provided new school books for their pupils which were an enormous advance on those they found in use; so that for nearly three centuries the Jesuits were accounted the best schoolmasters in Europe, as they confessedly were in France until their forcible suppression in 1901. Bacon succinctly gives his opinion of the Jesuit teaching in these words: "As for the pedagogical part, the shortest rule would be, Consult the schools of the Jesuits; for nothing better has been put in practice" (*De Augmentis*, vi. 4). Again, when most of the continental clergy had sunk, more or less, into the moral and intellectual slough which is pictured for us in the writings of Erasmus and the *Epistolae obscurorum virorum* (*see* HUTTEN, ULRICH VON), the Jesuits won back respect for the clerical calling by their personal culture and the unimpeachable purity of their lives. These qualities they have carefully maintained; and probably no large body of men in the world has kept up, on the whole, an equally high average of intelligence and conduct. As preachers, too, they delivered the pulpit from the bondage of an effete scholasticism and reached at once a clearness and simplicity of treatment such as the English pulpit scarcely begins to exhibit till after the days of Tillotson. It is in the mission field, however, that their achievements have been most remarkable. Whether toiling among the teeming millions in Hindustan and China, labouring amongst the Hurons and Iroquois of North America, governing and civilizing the natives of Brazil and Paraguay in the missions and "reductions," or ministering, at the hourly risk of his life to his fellow-Catholics in England under Elizabeth and the Stuarts, the Jesuit appears alike devoted, indefatigable, cheerful and worthy of hearty admiration and respect.

ROMAN CATHOLIC OPPOSITION

Nevertheless, the most remarkable fact in the Society's history is the suspicion and hostility it has incurred within the household of the Roman Catholic faith. The first cause of the opposition redounds to the Jesuits' credit, for it was largely due to the kind of success which they achieved. Their churches, sumptuous and attractive, were crowded; and in the confessional their advice was eagerly sought in all kinds of difficulties. Full of enthusiasm and zeal, devoted wholly to their Society, they were able to bring in numbers of rich and influential persons to their ranks; for, with a clear understanding of the power of wealth, they became, of set purpose, the apostles of the rich and influential. The Jesuits felt that they were the new men, the men of the time; so with a perfect confidence in themselves they went out to set the Church to rights. It was no wonder that success, so well worked for and so well deserved, failed to win the approval or sympathy of those who found themselves supplanted. But, besides this, the *esprit de corps* which is necessary for every body of men was, it was held, carried to an excess and made the Jesuits intolerant of any one or anything if not of "ours." The Society, or rather its members, were too aggressive and self-assertive to be welcomed; and a certain characteristic, which soon began to manifest itself in an impatience of episcopal control, showed that the quality of "Jesuitry," usually associated with the Society, was singularly lacking in their dealings with opponents. Their political attitude also alienated many. Many of the Jesuits could not separate religion from politics. To say this is only to assert that they were not clearer-minded than most men of their age. But unfortunately they had their share, direct or indirect, in the embroiling of states, in concocting conspiracies and in kindling wars. They played with edged tools and often got wounded through their own carelessness. Among the grievances they raised by their perpetual meddling in politics were their share in fanning the flames of political hatred against the Huguenots under the last two Valois kings; their perpetual plotting against England in the reign of Elizabeth; their share in the Thirty Years' War and in the religious miseries of Bohemia; their decisive influence in causing the revocation of the edict of Nantes and the expulsion of the Protestants from France; the ruin of the Stuart cause under James II., and the establishment of the Protestant succession. In a number of cases where the evidence against them is defective, it is at least an unfortunate coincidence that there is always direct proof of some Jesuit having been in communication with the actual agents engaged. All activities of a distinctively political character are forbidden by the constitutions of the Society; but though politicians were comparatively few in number, they held high rank; and their disobedience to the rule besmirched the name of the Society and destroyed the good work of the other Jesuits who were faithfully carrying out their own proper duties.

A far graver cause for uneasiness was given by the Jesuits' activity in the region of doctrine and morals. Their founder himself was arrested, more than once, by the Inquisition and required to give account of his belief and conduct. But St. Ignatius, with all his powerful gifts of intellect, was entirely practical and ethical in his range, and had no turn whatever for speculation, nor desire to discuss, much less to question, any of the received dogmas of the Church. He was acquitted on every occasion; but his followers were not so fortunate. The controversies raised by their doctrine of grace (*see* MOLINA) were so serious as to call for adjudication by a special commission, the only result of which was the imposition of silence on the disputants. The accusations against the Jesuit system of moral theology and their action as guides of conduct have had a more serious effect on their reputation. The Society was trying to make itself all things to all men. Propositions extracted from Jesuit moral theologians have again and again been condemned by the pope and declared untenable. Many of these can be found in Viva's *Condemned Propositions*. In addition to these papal censures, a number of individual ecclesiastics of eminence and influence raised their voices against them from time to time, such as Melchor Cano, one of the ablest Dominicans of the 16th century, and Carlo Borromeo, to whose original advocacy they owed much, especially at the Council of Trent. Later on a formidable assault was made on Jesuit moral theology in the famous *Provincial Letters* of Blaise Pascal (*q.v.*), eighteen in number, issued under the pen-name of Louis de Montalte, from January 1656 to March 1657. Their wit, irony, eloquence and finished style have kept them alive as one of the great French classics—a destiny more fortunate than that of the kindred works by Antoine Arnauld, *Théologie morale des Jésuites*, consisting of extracts from writings of members of the Society, and *Morale pratique des Jésuites*, made up of narratives professing to set forth the manner in which they carried out their own maxims. But, like most controversial writers, the authors were not scrupulous in their quotations, and by giving passages divorced from their contexts often entirely misrepresented their opponents. The immediate reply on the part of the Jesuits, *The Discourses of Cleander and Eudoxus* by Père Daniel, could not compete with Pascal's work in brilliancy, wit or style; moreover, it was unfortunate enough to be put upon the Index of prohibited books in 1701. The essential points in the Society's reply to Pascal's charges of lax morality were that several of the cases cited by him are mere abstract hypotheses, many of them now obsolete, argued simply as intellectual exercises, but having no practical bearing whatever; that even such as do belong to the sphere of actual life are of the

nature of counsel to spiritual physicians, how to deal with exceptional maladies; and were never intended to fix the standard of moral obligation for the general public; and that the theory of their being intended as general precepts is refuted by the admitted fact that the Jesuits themselves have been singularly free from personal, as distinguished from corporate, evil repute; and no one pretends that the large number of lay-folk whom they have educated or influenced exhibit greater moral inferiority than others.

A charge persistently made against the Society is that it teaches that the end justifies the means. And the words of Busembaum, whose *Medulla theologiae* has gone through more than fifty editions, are quoted in proof. True it is that Busembaum uses these words: *Cui licitus est finis etiam licent media.* But on turning to his work (ed. Paris 1729, p. 584, or Lib. vi. Tract vi. cap. ii., *De sacramentis,* dubium ii.) it will be found that the author is making no universal application of an old legal maxim; but is treating of a particular subject (concerning certain lawful liberties in the marital relation) beyond which his words cannot be forced. The sense in which other Jesuit theologians —*e.g.,* Paul Laymann (1575–1635), in his *Theologia moralis* (Munich, 1625), and Ludwig Wagemann (1713–1792), in his *Synopsis theologiae moralis* (Innsbruck, 1762)—quote the axiom is an equally harmless piece of common sense; the *proviso* is always to be understood, that the means employed should, in themselves, not be bad but good or at least indifferent. Again, the doctrine of probabilism is utterly misunderstood. It is based on an accurate conception of law. Law to bind must be clear and definite; if it be not so, its obligation ceases and liberty of action remains. No probable opinion can stand against a clear and definite law; but when a law is doubtful in its application, in certain circumstances, so is the obligation of obedience in the specified case. In moral matters a probable opinion, that is one held on no trivial grounds but by unprejudiced and solid thinkers, has no place where the law of conscience is clear and distinct.

WEAKNESSES OF THE SOCIETY

The weakness of the Society is due to its lack of really great intellects. The Society, numbering as it does so many thousands, and with abundant means of devoting men to special branches of study, has, without doubt, produced men of great intelligence and solid learning. The average member, too, on account of his long and systematic training, is always equal and often superior to the average member of any other equally large body, besides being disciplined by a far more perfect drill. But it takes great men to carry out great plans; and of really great men, as the outside world knows and judges, the Society has been markedly barren. Apart from its founder and his early companion, St. Francis Xavier, there is none who stands in the very first rank. Francisco Suarez was an able theologian; the French Louis Bourdaloue (*q.v.*), the Italian Paolo Segneri (1624–1694), and the Portuguese Antonio Vieyra (1608–1697) represent their best pulpit orators; while of the many mathematicians and astronomers produced by the Society Angelo Secchi, Ruggiero Giuseppe Boscovich and G. B. Beccaria are conspicuous, and in modern times Stephen Joseph Perry (1833–1889), director of the Stonyhurst College observatory, took a high rank among men of science. Their boldest and most original thinker, Denis Petau, so many years neglected, has the merit of having inspired Cardinal Newman's *Essay on the Development of Christian Doctrine.* The Jesuits have produced no Aquinas, no Anselm, no Bacon, no Richelieu. Men whom they trained, and who broke loose from their teaching, Pascal, Descartes, Voltaire, have powerfully affected the philosophical and religious beliefs of great masses of mankind; but respectable mediocrity is the brand on the long list of Jesuit names in the catalogues of Alegambe and De Backer. This is doubtless due in great measure to the training which destroys individual initiative. In accordance with the spirit of its founder, who wished to secure uniformity in the judgment of his followers even in points left open by the Church ("Let us all think the same way, let us all speak in the same manner if possible"), the Society has shown itself to be impatient of those who think or write in a way different from what is current in its ranks. Nor is this all. The *Ratio Studiorum,* devised by Acquaviva and still obligatory in the colleges of the Society, lays down rules which are incompatible with all breadth and progress in the higher forms of education. True to the anti-speculative and traditional side of the founder's mind, it prescribes that, even where religious topics are not in question, the teacher is not to permit any novel opinions or discussions to be mooted; nor to cite or allow others to cite the opinions of an author not of known repute; nor to teach or suffer to be taught anything contrary to the prevalent opinions of acknowledged doctors current in the schools.

Another cause of weakness is the lesson, too faithfully learnt and practised, of making its corporate interests the first object at all times and in all places. Men were quick to see that Jesuits did not aim at co-operation with the other members of the Church but directly or indirectly at mastery. The most brilliant exception to this rule is found in some of the missions of the Society and notably in that of St. Francis Xavier (*q.v.*). But he quitted Europe in 1541 before the new Society, especially under Laynez, had hardened into its final mould; and he never returned. It would almost seem that careful selection was made of the men of the greatest piety and enthusiasm, whose unworldliness made them less apt for diplomatic intrigues, to break new ground in the various missions where their success would throw lustre on the Society and their scruples need never come into play. But such men are not to be found easily; and, as they died off, the tendency was to fill their places with more ordinary characters, whose aim was to increase the power and resources of the body. The individual Jesuit might be, and often was, a hero, saint and martyr, but the system which he was obliged to administer was foredoomed to failure; and the suppression which came in 1773 was the natural result of forces and elements they had set in antagonism without the power of controlling.

The influence of the Society since its restoration in 1814 has not been marked with greater success than in its previous history. In Europe they confine themselves mainly to educational and ecclesiastical politics, although both Germany and France refuse, on political grounds, to allow them to be in these countries. It would appear as though some of the Jesuits had not, even yet, learnt the lesson that meddling with politics has always been their ruin. The main cause of any difficulty that may exist to-day with the Society is that the Jesuits are true to the teaching of that remarkable panegyric, the *Imago primi saeculi Societatis* (probably written by John Tollenarius in 1640), by identifying the Church with their own body, and being intolerant of all who will not share this view. Their power is still large in certain sections of the ecclesiastical world, but in secular affairs it is small.

HISTORY

The separate article on St. Ignatius of Loyola tells of his early years, his conversion and his first gathering of companions. It was not until November 1537, when all hope of going to the Holy Land was given up, that any outward steps were taken to form these companions into an organized body. It was on the eve of their going to Rome, for the second time, that the fathers met Ignatius at Vicenza and it was determined to adopt a common rule and, at the suggestion of Ignatius, the name of the Company of Jesus. Whatever may have been his private hopes and intentions, it was not until he, Laynez and Faber (Pierre Lefevre), in the name of their companions, were sent to lay their services at the feet of the pope (Paul III.) that the history of the Society really begins.

Various obstacles cleared away, Paul III., on the 27th of September, 1540, issued his bull *Regimini militantis ecclesiae,* by which he confirmed the new Society (the term "order" does not belong to it), but limited the members to sixty, a restriction which was removed by the same pope in the bull *Injunctum nobis* of the 14th of March, 1543. In the former bull, the pope gives the text of the formula submitted by Ignatius as the scheme of the proposed society, and in it we get the founder's own ideas: ". . . This Society, instituted to this special end, namely, to

offer spiritual consolation for the advancement of souls in life and Christian doctrine, for the propagation of the faith by public preaching and the ministry of the word of God, spiritual exercises and works of charity and, especially, by the instruction of children and ignorant people in Christianity, and by the spiritual consolation of the faithful in Christ in hearing confessions. . . ." In this original scheme it is clearly marked out "that this entire Society and all its members fight for God under the faithful obedience of the most sacred lord, the pope, and the other Roman pontiffs his successors"; and Ignatius makes particular mention that each member should "be bound by a special vow," beyond that formal obligation under which all Christians are of obeying the pope, "so that whatsoever the present and other Roman pontiffs for the time being shall ordain, pertaining to the advancement of souls and the propagation of the faith, to whatever provinces he shall resolve to send us, we are straightway bound to obey, as far as in us lies, without any tergiversation or excuse, whether he send us among the Turks or to any other unbelievers in being, even to those parts called India, or to any heretics or schismatics or likewise to any believers." Obedience to the general is enjoined "in all things pertaining to the institute of the Society . . . and in him they shall acknowledge Christ as though present, and as far as is becoming shall venerate him"; poverty is enjoined, and this rule affects not only the individual but the common sustentation or care of the Society, except that in the case of colleges revenues are allowed "to be applied to the wants and necessities of the students"; and the private recitation of the Office is distinctly mentioned. On the other hand, the perpetuity of the general's office during his life was no part of the original scheme.

On the 7th of April, 1541, Ignatius was unanimously chosen general, and the newly constituted Society took its formal corporate vows in the basilica of San Paolo. Scarcely was the Society launched when its members dispersed in various directions to their new tasks, while Ignatius busied himself in Rome with good works, and in drawing up the constitutions and completing the *Spiritual Exercises*. Success crowned these first efforts; and the Society began to win golden opinions. The first college was founded at Coimbra in 1542 by John III. of Portugal, and a second at Goa. The Collegio Romano was founded in 1550. Both from the original scheme and from the foundation at Coimbra it is clear that the original idea of the colleges was to provide for the education of future Jesuits. In Spain, national pride in the founder aided the Society's cause almost as much as royal patronage did in Portugal; and the third house was opened in Gandia under the protection of its duke, Francisco Borgia, a grandson of Alexander VI. In Rome, Paul III.'s favour did not lessen. He bestowed on them the church of St. Andrea and conferred at the same time the valuable privilege of making and altering their own statutes; besides the other points, in 1546, which Ignatius had still more at heart, as touching the very essence of his institute, namely, exemption from ecclesiastical offices and dignities and from the task of acting as directors and confessors to convents of women. The former of these measures effectually stopped any drain of the best members away from the Society and limited their hopes within its bounds, by putting them more freely at the general's disposal, especially as it was provided that the final vows could not be annulled, nor could a professed member be dismissed, save by the joint action of the general and the pope. The founder, against the wishes of several of his companions, laid much stress on the duty of accepting the post of confessor to kings, queens and women of high rank when opportunity presented itself.

After the death of the first general (1556) there was an interregnum of two years, with Laynez as vicar. During this long period he occupied himself with completing the constitutions by incorporating certain declarations, said to be Ignatian, which explained and sometimes completely altered the meaning of the original text. Laynez was an astute politician and saw the vast capabilities of the Society over a far wider field than the founder contemplated; and he prepared to give it the direction that it has since followed. In some senses, this learned and consummately clever man may be looked upon as the real founder of the Society as history knows it. Having carefully prepared the way, he summoned the general congregation from which he emerged as second general in 1556. As soon as Ignatius had died Paul IV. announced his intention of instituting reforms in the Society, especially in two points: the public recitation of the office in choir and the limitation of the general's office to a term of three years. Despite all the protests and negotiations of Laynez, the pope remained obstinate; and there was nothing but to submit. On the 8th of September 1558, two points were added to the constitutions: that the generalship should be triennial and not perpetual, although after the three years the general might be confirmed; and that the canonical hours should be observed in choir after the manner of the other orders, but with that moderation which should seem expedient to the general. Taking advantage of this last clause, Laynez applied the new law to two houses only, namely, Rome and Lisbon, the other houses contenting themselves with singing vespers on feast days; and as soon as Paul IV. died, Laynez, acting on advice, quietly ignored for the future the orders of the late pope. He also succeeded in increasing further the already enormous powers of the general. Laynez took a leading part in the colloquy of Poissy in 1561 between the Catholics and Huguenots; and obtained a legal footing from the States General for colleges of the Society in France. He died in 1564, leaving the Society increased to eighteen provinces with a hundred and thirty colleges, and was succeeded by Francisco Borgia. During the third generalate, Pius V. confirmed all the former privileges, and in the amplest form extended to the Society, as being a mendicant institute, all favours that had been or might afterwards be granted to such mendicant bodies. Everard Mercurian, a Fleming, and a subject of Spain, succeeded Borgia in 1573, being forced on the Society by the pope, in preference to Polanco, Ignatius's secretary. In 1580 the first Jesuit mission, headed by the redoubtable Robert Parsons and the saintly Edmund Campion, set out for England. This mission, on one side, carried on an active propaganda against Elizabeth in favour of Spain; and on the other, among the true missionaries, was marked with devoted zeal and heroism even to the ghastly death of traitors. Claude Acquaviva, the fifth general, held office from 1581 to 1615, a time almost coinciding with the high tide of the successful reaction, chiefly due to the Jesuits.

It was chiefly during the generalship of Acquaviva that the Society began to gain an evil reputation which eclipsed its good report. In France the Jesuits joined, if they did not originate, the league against Henry of Navarre; absolution was refused by them to those who would not join in the Guise rebellion, and Acquaviva is said to have tried to stop them, but in vain. The assassination of Henry III. in the interests of the league and the wounding of Henry IV. in 1594 by Chastel, a pupil of theirs, revealed the danger that the whole Society was running by the intrigues of a few men. The Jesuits were banished from France in 1594, but were allowed to return by Henry IV. under conditions. In England the political schemings of Parsons were no small factors in the odium which fell on the Society at large; and his determination to capture the English Catholics as an apanage of the Society was an object lesson to the rest of Europe of a restless ambition and lust of domination which were to find many imitators. A general congregation of the Society in 1594 passed a decree forbidding its members to participate in public affairs; but the decree was not enforced. Parsons was allowed to keep on with his work, and other Jesuits in France for many years after directed, to the loss of religion, affairs of state. In 1605 took place in England the Gunpowder Plot, in which Henry Garnet, the superior of the Society in England, was implicated. That the Jesuits were the instigators of the plot there is no evidence, but they were in close touch with the conspirators, of whose designs Garnet had a general knowledge. There is now no reasonable doubt that he and other Jesuits were legally accessories, and that the condemnation of Garnet as a traitor was substantially just (*see* GARNET, HENRY).

From the moment that Louis XIV. took the reins, the Society gained ground steadily in France, and Jesuit confessors guided

the policy of the king, not hesitating to take his side in his quarrel with the Holy See, which nearly resulted in a schism, nor to sign the Gallican articles. Their hostility to the Huguenots forced on the revocation of the Edict of Nantes in 1685, and their war against their Jansenist opponents did not cease till the very walls of Port Royal were demolished in 1710, even to the very abbey church itself, and the bodies of the dead taken with every mark of insult from their graves and literally flung to the dogs to devour. But while thus gaining power in one direction, the Society was losing it in another. The Japanese mission had vanished in blood in 1651; and though many Jesuits died with their converts bravely as martyrs for the faith, yet it is impossible to acquit them of a large share in the causes of that overthrow.

THE SOCIETY'S TRADING POLICY

But the most fatal part of the policy of the Society was its activity, wealth and importance as a great trading firm with branch houses scattered over the richest countries of the world. Its founder, with a wise instinct, had forbidden the accumulation of wealth; its own constitutions, as revised in the 84th decree of the sixth general congregation, had forbidden all pursuits of a commercial nature, as also had various popes; but nevertheless the trade went on unceasingly, necessarily with the full knowledge of the general, unless it be pleaded that the system of obligatory espionage had completely broken down. The first serious attack came from a country where they had been long dominant. In 1753 Spain and Portugal exchanged certain American provinces with each other, which involved a transfer of sovereign rights over Paraguay; but it was also provided that the populations should severally migrate also, that the subjects of each crown might remain the same as before. The inhabitants of the "reductions," whom the Jesuits had trained in the use of European arms and discipline, naturally rose in defence of their homes, and attacked the troops and authorities. Their previous docility and their entire submission to the Jesuits left no possible doubt as to the source of the rebellion, and gave the enemies of the Jesuits a handle against them that was not forgotten. Eventually the Portuguese government issued a decree ordering the immediate deportation of every Jesuit from Portugal and all its dependencies and their suppression by the bishops in the schools and universities. Those in Portugal were at once shipped, in great misery, to the papal states, and were soon followed by those in the colonies. In France, the immediate cause of their ruin was the bankruptcy of Father Lavalette, the Jesuit superior in Martinique, a daring speculator, who failed, after trading for some years, for 2,400,000 francs and brought ruin upon some French commercial houses of note. Lorenzo Ricci, then general of the Society, repudiated the debt, alleging lack of authority on Lavalette's part to pledge the credit of the Society, and he was sued by the creditors. Losing his cause, he appealed to the parlement of Paris, and it, to decide the issue raised by Ricci, required the constitutions of the Jesuits to be produced in evidence, and affirmed the judgment of the courts below. But the publicity given to a document scarcely known till then raised the utmost indignation against the Society. A royal commission, appointed by the duc de Choiseul to examine the constitutions, convoked a private assembly of fifty-one archbishops and bishops under the presidency of Cardinal de Luynes, all of whom except six voted that the unlimited authority of the general was incompatible with the laws of France, and that the appointment of a resident vicar, subject to those laws, was the only solution of the question fair to all sides. After vain resistance, the Jesuits were suppressed by edict in 1764, and suffered to remain as secular priests until 1767, when they were expelled from the kingdom. In the very same year, Charles III. of Spain, a monarch known for personal devoutness, prepared a decree suppressing the Society in every part of his dominions. The expulsion was relentlessly carried out, nearly six thousand priests being deported from Spain alone. The Bourbon courts of Naples and Parma followed the example of France and Spain; Clement XIII. retorted with a bull launched at the weakest adversary, and declaring the rank and title of the duke of Parma forfeit. The Bourbon sovereigns threatened to make war on the pope in return (France, indeed, seizing on the county of Avignon), and a joint note demanding a retractation, and the abolition of the Jesuits, was presented by the French ambassador at Rome on the 10th of December 1768 in the name of France, Spain and the two Sicilies. The pope, a man of eighty-two, died of apoplexy, brought on by the shock, early in 1769. Cardinal Lorenzo Ganganelli, a conventual Franciscan, was chosen to succeed him, and took the name of Clement XIV. He endeavoured to avert the decision forced upon him, but, as Portugal joined the Bourbon league, and Maria Theresa with her son the emperor Joseph II. ceased to protect the Jesuits, there remained only the petty kingdom of Sardinia in their favour. The famous breve *Dominus ac Redemptor* on the 21st of July 1773, appeared, suppressing the Society of Jesus. This remarkable document opens by citing a long series of precedents for the suppression of religious orders by the Holy See, amongst which occurs the ill-omened instance of the Templars. It then briefly sketches the objects and history of the Jesuits themselves. It speaks of their defiance of their own constitution forbidding them to meddle in politics; of the great ruin to souls caused by their quarrels with local ordinaries and the other religious orders, their condescension to heathen usages in the East, and the disturbances, resulting in persecutions of the Church, which they had stirred up even in Catholic countries, so that several popes had been obliged to punish them. Seeing then that the Catholic sovereigns had been forced to expel them, that many bishops and other eminent persons demanded their extinction, and that the Society had ceased to fulfil the intention of its institute, the pope declared it necessary for the peace of the Church that it should be suppressed, extinguished, abolished and abrogated for ever, with all its houses, colleges, schools and hospitals. The breve proceeds to make regulations for the transference of the authority of the Society's officers; for giving priests of the Society the option of joining other orders or remaining as secular clergy, and kindred matters. The apologists of the Society allege that no motive influenced the pope save the desire of peace at any price, and that he did not believe in the culpability of the Jesuits. The categorical charges made in the document rebut this plea. The pope followed up this breve by appointing a congregation of cardinals to take possession of the temporalities of the Society, and armed it with summary powers against all who should attempt to retain or conceal any of the property.

VICISSITUDES

At the date of this suppression, the Society had 41 provinces and 22,589 members, of whom 11,295 were priests. Far from submitting to the papal breve, the ex-Jesuits, after some ineffectual attempts at direct resistance, withdrew into the territories of the free-thinking sovereigns of Russia and Prussia, Frederick II. and Catherine II., who became their active friends and protectors. Russia formed the headquarters of the Society, and two forged breves were speedily circulated, being dated June 9 and June 29, 1774, approving their establishment in Russia, and implying the repeal of the breve of suppression. But these are contradicted by the tenor of five genuine breves issued in September 1774 to the archbishop of Gnesen, and making certain assurances to the ex-Jesuits, on condition of their complete obedience to the injunctions already laid on them.

They elected three Poles successively as generals, taking, however, only the title of vicars, till on the 7th of March 1801 Pius VII. granted them liberty to reconstitute themselves in north Russia, and permitted Kareu, then vicar, to exercise full authority as general. On the 30th of July 1804 a similar breve restored the Jesuits in the two Sicilies, at the express desire of Ferdinand IV., the pope thus anticipating the further action of 1814, when, by the constitution *Sollicitudo omnium Ecclesiarum,* he revoked the action of Clement XIV., and formally restored the Society to corporate legal existence, yet not only omitted any censure of his predecessor's conduct, but all vindication of the Jesuits from the heavy charges in the breve *Dominus ac Redemptor.* In France, even after their expulsion in 1765, they had maintained a precarious footing in the country under the partial disguise and names of "Fathers of the Faith" or "Clerks of the Sacred Heart,"

but were obliged by Napoleon I. to retire in 1804. They reappeared under their true name in 1814, and obtained formal licence in 1822; but after incurring much hostility, were dispersed at the revolution of July 1830. Once more, however, they made their way into France, recovered the right to teach freely after the revolution of 1848, and gradually became the leading educational and ecclesiastical power in France, notably under the Second Empire, till they were once more expelled by the Ferry laws of 1880, though they quietly returned since the execution of those measures. They were again expelled by the Law of Associations of 1901. In Spain they came back with Ferdinand VII., but have had no legal position since, though their presence is openly tolerated. In Portugal, ranging themselves on the side of Dom Miguel, they fell with his cause, and were exiled in 1834. There are some to this day in Lisbon under the name of "Fathers of the Faith." Russia, which had been their warmest patron, drove them from St. Petersburg and Moscow in 1813, and from the whole empire in 1820, mainly on the plea of attempted proselytizing in the imperial army. Holland drove them out in 1816, and, by giving them thus a valid excuse for aiding the Belgian revolution of 1830, secured them the strong position they have ever since held in Belgium; but they have succeeded in returning to Holland. They were expelled from Switzerland in 1847–1848 for the part they were charged with in exciting the war of the Sonderbund. In south Germany, inclusive of Austria and Bavaria, their annals since their restoration have been uneventful; but in north Germany, owing to the footing Frederick II. had given them in Prussia, they became very powerful, especially in the Rhine provinces, and, gradually moulding the younger generation of clergy after the close of the War of Liberation, succeeded in spreading Ultramontane views amongst them, and so leading up to the difficulties with the civil government which issued in the Falk laws, and their own expulsion by decree of the German parliament (June 19, 1872). Since then many attempts have been made to procure the recall of the Society to the German Empire, but without success, although as individuals they are now allowed in the country. In Great Britain, whither they began to straggle over during the revolutionary troubles at the close of the 18th century, and where, practically unaffected by the clause directed against them in the Emancipation Act of 1829, their chief settlement has been at Stonyhurst in Lancashire, they have been unmolested; but there has been little affinity to the order in the British temperament, and the English province has consequently never risen to numerical or intellectual importance in the Society. In Rome itself, its progress after the restoration was at first slow, and it was not till the reign of Leo XII. (1823–1829) that it recovered its place as the chief educational body there. It advanced steadily under Gregory XVI., and, though it was at first shunned by Pius IX., it secured his entire confidence after his return from Gaeta in 1849, and obtained from him a special breve erecting the staff of its literary journal, the *Civiltà Cattolica,* into a perpetual college under the general of the Jesuits, for the purpose of teaching and propagating the faith in its pages. How, with this pope's support throughout his long reign, the gradual filling of nearly all the sees of Latin Christendom with bishops of their own selection, and their practical capture, directly or indirectly, of the education of the clergy in seminaries, they contrived to stamp out the last remains of independence everywhere, and to crown the Ultramontane triumph with the Vatican Decrees, is matter of familiar knowledge. Leo XIII., while favouring them somewhat, never gave them his full confidence; and by his adhesion to the Thomist philosophy and theology, and his active work for the regeneration and progress of the older orders, he made another suppression possible by destroying much of their prestige. But the usual sequence was observed under Pius X., who appeared to be greatly in favour of the Society and to rely upon them for many of the measures of his pontificate.

BIBLIOGRAPHY.—The bibliography of the Society is of enormous extent, and only a few of the more important works can be cited here.

JESUS CHRIST. The principal problem which is presented by the New Testament to the historian is the problem of accounting for the faith of the early Christians in one whom they had known as Jesus the carpenter's son of Nazareth, and whom they had seen die the shameful death of a criminal outside Jerusalem. We have evidence that a very few weeks after that event His followers, who had scattered in dismay, were reunited at Jerusalem, men and women to the number of about 120, feeling themselves to be bound together in a religious society through a common conviction, a common expectation and a common attitude towards Jesus. They were fully persuaded that He was alive, and that He had been seen by individuals and by groups of His followers. They were eagerly expecting that He would quite shortly return as the Messiah of their race, the Son of God with power, and they adopted an attitude to Him which, though still undefined, was an attitude of religious faith. The strength and the sincerity of their conviction were tested by persecution and proved by their steadfastness. The religious quality of their attitude to Jesus was evinced by devotion, self-sacrifice and a sense of obligation to Him which swept away the last barrier of selfishness. And they had a message concerning this same Jesus which they proceeded to proclaim with enthusiasm and amazing success. The Church of Christ became a fact of history.

What manner of man was it whose life and character, teaching and experience, are to account for this phenomenon? The answer must be looked for in the three Gospels of Mark, Matthew and Luke, commonly known as the Synoptic Gospels, with some assis-

tance, slight but important, from the Acts of the Apostles, and the Epistles of St. Paul. All three Gospels were the work of men who were believers in Christ, and were intended primarily at least for the benefit of those who already believed. Luke definitely announces his purpose is to confirm Theophilus in the certainty of the things wherein he had been instructed; and though Matthew and Mark make no similar statement, it is equally clear that their purpose was similar; it was not either to prove anything not already accepted or to persuade other men to believe, but to give connected and permanent form to narratives of what Jesus had done and said which had hitherto been current in the Christian community, either as oral tradition or in preliminary attempts to reduce the tradition to writing. Their own faith did not rest upon the story which they told; for the earliest preaching was not the proclamation of the historic Jesus but the proclamation of "Christ and Him crucified," that is to say, the witness of believers to the risen, living and glorified Christ whose connection with the life of men and with the purpose of God might be learnt from the fact that He had been crucified. The Gospels were written in order to satisfy the eager desire to know more fully and to know with certainty the earthly life of Him in whom men believed as the living Saviour and Lord.

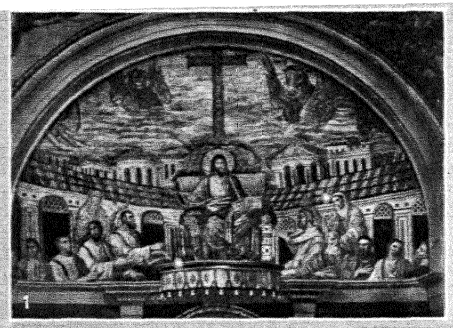
DISTINCTIONS BETWEEN THE GOSPELS

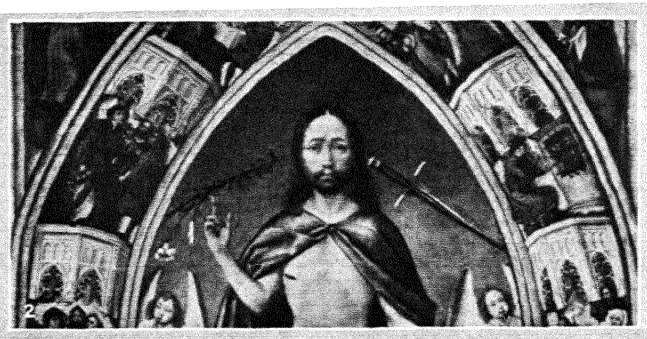
While this is the purpose common to all three Evangelists, there are important distinctions between them in respect of the material which they have at command, the way in which they severally handle it, and the aspects of life and thought in which they are severally interested. They all show great and equal interest in the account of the Trial and Passion of Jesus which they relate with fulness and detail; but in the account of the previous ministry of Jesus, Mark confines himself mainly to narrative, reporting in comparison but little of what Jesus taught, few of His parables and little of His discourse. Luke and Matthew, while incorporating nearly all of Mark in their Gospels, add, each in his own different way, a large amount of discourse material which had probably been already collected in a document commonly described as the second Source (Q). And to the material thus collected from two sources both Luke and Matthew add material of their own. That which is peculiar to Luke may possibly represent the earliest stratum of his Gospel with which he combined first (Q) and afterwards Mark (Streeter).

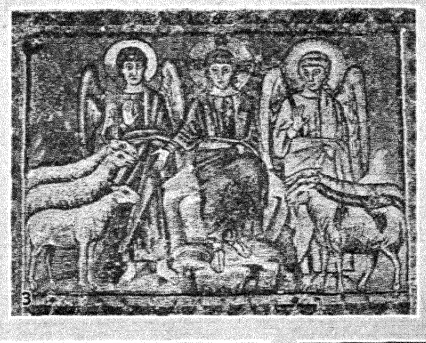
According to the dates now commonly assigned to these Gospels Mark was composed before the fall of Jerusalem in A.D. 70 but not before A.D. 60, Luke and Matthew after the fall but not later than A.D. 80. But if Harnack is right in the view he still (1928) holds with conviction that the Acts of the Apostles was completed before the death of Paul, then Luke's Gospel would fall early in the '60s and Mark's would be earlier still. And if Streeter's theory referred to in the foregoing paragraph proved to be correct, the occasion for Luke's collecting of the earliest draft of his Gospel would be found in his visit to Caesarea about A.D. 43.

According to a tradition which has very early authority Mark acted as attendant to Peter and also as his interpreter; and much if not all of his material was derived from the accounts which Peter was in the habit of giving of the life and death and resurrection of Jesus. His Gospel was probably written at Rome and primarily for the benefit of Gentile Christians. Taking Mark as a witness to the interest of such an audience we should infer that it was strongly directed to Jesus as a healer, as one who had power over demons, power from which it could be concluded that He had overcome the prince of the demons; to Jesus as a teacher who neglected no opportunity of teaching, and was eagerly listened to whether by the crowds or by the inner circle of disciples; to Jesus as the embodiment of a Gospel, great and good news, the acceptance of which or of whom transformed life by setting it in the key of faith in God and assured hope of His Kingdom; to Jesus as standing to God in the relation of Son to the Father, and prescribing the destiny of men in terms of their relation to Himself. (The opinion that Mark bears evidence of having been influenced by Pauline thought and teaching has been shown to be groundless, M. Werner, 1923.)

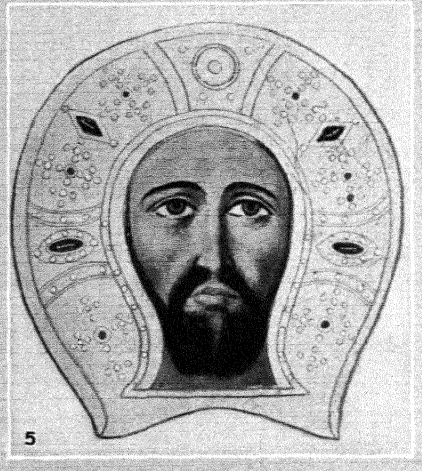
The Gospel of Matthew, written primarily for such Christians as like himself were of Jewish origin, reflects something of their national consciousness and particularly their interest in Jesus as the Messiah of the Jews. Long before his time pious research and even pious imagination had been at work on the Old Testament collecting all the phrases which bore or could be made to bear on the figure and the experiences of the Messiah. And Matthew's delight is to discover either in the Old Testament itself or in some such collection language which illustrates and confirms the belief that in Jesus had been found the Hope of Israel. It is natural that he should conceive of the teaching of Jesus as a new law, and bring out the contrast between the new law and the old; that his interest in this aspect of the teaching should lead him to group into connected instructions utterances which properly belonged to various occasions; that modifications which he introduces should be suggested by his interest in the Church's task of evangelization or by the internal problems of the Church itself; that on occasion he has modified a narrative in order to adjust it to a prophecy. His outlook on the future is sombre; he elaborates the eschatological element in the teaching of Jesus, to whose Person an increasing majesty is attached, even as His function as Judge is emphasized. "Matthew conceives Christianity as the fulfilment of Judaism;" the divine Lawgiver who has fully revealed the word of God is the Jesus whom the Jews rejected and crucified. He cometh quickly to judgment.







The interests reflected in Luke's Gospels are less those of his audience or of the school to which he belongs than his own personal ones. He is a Gentile, free from all trace of Jewish nationalism, interested in men as men, in the perennial problem of rich and poor, emphasizing at once the drastic demands of the Gospel and the universality of the appeal made by Jesus, His personal contacts with individual men and women, the occasions of social intercourse, and the infinite graciousness and tenderness of the Master. "If Matthew is the Gospel of judgment, Luke is the Gospel of mercy. If there is something of pessimism in Matthew, Luke is full of hope."



The influence of these several interests by which the Evangelists were moved is seen alike in their selection of material and in their handling of it, oftentimes in quite subtle modulations of their sources. And it is this rather than any special dogmatic purpose, still less any "deliberate falsification or conscious idealization" which accounts for the differences between the Gospels, and explains how it is that though we have three portraits distinguishable from one another we feel them all to be portraits of the same Person.

Apart from the Birth stories at the opening of Matthew and Luke (the exact significance of which in this respect is ambiguous) there is nothing in these three Gospels to suggest that their writers thought of Jesus as other than human, a human being specially endued with the Spirit of God and standing in an unbroken relation to God which justified His being spoken of as the "Son of God." Even Matthew refers to Him as the carpenter's son and records that after Peter had acknowledged Him as Messiah he "took Him and began to rebuke Him" (Matt. xvi. 22). And in Luke the two disciples on the way to Emmaus can still speak of Him as "a prophet mighty in deed and word before God and all the people" (Luke, xxiv. 19). It is very singular that in spite of the fact that before Mark was composed "the Lord" had become the description of Jesus common among Christians. He is never so described in the second Gospel (nor yet in the first, though the word is freely used to refer to God). All three relate the Passion of Jesus with a fulness and emphasis of its great significance; but except the "ransom" passage (Mark x. 45) and certain words at the Last Supper there is no indication of the meaning which was afterwards attached to it. It is not even suggested that the death of Jesus had any relation to sin or forgiveness. Had the "ransom" saying been suggested by Paul it would not stand as it does in its isolated vagueness.

HIS MINISTRY

The Three Stages.—Any attempt to write a "Life of Jesus" should be frankly abandoned. The material for it certainly does not exist. It has been calculated that the total number of days in

REPRESENTATIONS OF JESUS CHRIST 2ND TO 17TH CENTURY

1. Mosaic of "Christ Enthroned"; 4th cent. Church of Sta. Pudenziana, Rome
2. Right hand panel of altar-piece, "The Crucifixion," by Roger Van der Weyden (1400–64), Flemish. The Prado, Madrid
3. "Division of the Sheep and Goats"; Byzantine mosaic of the 6th century. Church of S. Apollinare, Nuovo, Ravenna, Italy
4. Painting on cloth in the Sacristy of St. Peter's, Rome. The definitely ascertained history of this piece reaches back to 2nd century
5. Head of Christ painted on cypress wood; by tradition attributed to St. Luke, but probably 3rd century. Vatican Library, Rome
6. Painting on cloth of the head of Christ; 2nd century. Church of S. Bartolomeo, Genoa
7. "The Good Shepherd," early Christian conception of Christ without a beard; 3rd cent. Lateran Museum, Rome
8. "The Trinity," from a German illuminated manuscript; 12th–13th cent. Pierpont Morgan Library, New York
9. Mosaic of the head of Christ, from the Roman Catacombs
10. Cloth bands in which are woven pictures of incidents in the life of Christ; Egyptian or Syrian, 5th–6th cent.
11. Palestine Coptic ivory carving, "The Ascension"; late 6th or early 7th cent.
12. Coins in use during the reign of Justinian II. (8th cent.), showing the image of Christ
13. Byzantine cloisonné enamel, of Christ; late 11th cent.

His life regarding which we have any record does not exceed 50. And, moreover, the notes of time by which many of the episodes are connected are now seen to form the setting in which each Evangelist has put the different sections of his material, and represent rather his narrative-style than the actual time-relation between the events. At the same time, the ministry described by the Synoptists falls into three well-marked stages, the first mainly in Galilee, the third in Jerusalem and its neighbourhood, and the intermediate one a period of travel and sojourn either in Peraea according to Mark, or, if we follow the indications of Luke, in the neighbourhood of Samaria. Within this framework we have a continuous narrative only in the third section; in the other two a series of events and episodes, utterances, discourses, discussions and parables, the order of which is of less significance than their meaning. For what is true of all of them is conspicuously true of many, that even taken separately they convey an adequate, though it may not be a complete, impression of His character or His teaching or His significance for men. "It is precisely the greatness of Jesus, and the peculiarity of the tradition regarding Him, that every one of His brief sayings and every one of His parables and the stories concerning Him display His inner character entire, and display it so clearly that even the unlearned men may receive from it the deepest impression."

"Jesus was at the outset (of His ministry) about 30 years of age." His birth took place in the reign of Herod (d. 4 B.C.), and His crucifixion probably in A.D. 29 or 30. These dates confirm the impression produced by careful comparison between the Synoptic Gospels and John, that a duration of nearly three years for the ministry suggested by the data of the latter is probably correct rather than one of some 18 months, which is all we should infer from the former.

The ministry of Jesus was heralded by that of John the Baptist, a stern reproduction of one of the ancient prophets such as Elijah. He appeared in the unpopulated district in the Jordan valley proclaiming that the Kingdom of Heaven was at hand, which on his lips meant a day of judgment for the wicked. He called on those who listened to him to repent. And those who so repented he "baptized in the Jordan." This procedure was something so novel as to secure for him the description of "the baptizer"; it was an outward and visible sign of the repentance to which was granted "remission of sins," and probably was understood to seal admittance to the coming Kingdom. Large crowds flocked to his preaching. Many repented and were baptized. Others who remained at home said, "He has a devil." A further feature of his preaching was the repeated announcement that he was but a forerunner, that he would be followed by one stronger and nobler than he, who would baptize with Holy Spirit, while he himself baptized with water only. According to the tradition preserved by the fourth Gospel John actually pointed out Jesus to two of his own disciples ("Behold the Lamb of God, which taketh away the sin of the world," John i. 29), and they thenceforth quitted John and became followers of Jesus. Nevertheless, the movement started by John survived, possibly as a rival to the Church, against whose claims the writer of the fourth Gospel finds it necessary to protest.

His Baptism and Temptations.—Jesus Himself was baptized at the hands of John. That He thereby exposed himself to misunderstanding may be admitted, though the Synoptic Gospels significantly omit any reference to confession of sin in His case. This, however, is not the difficulty referred to in Matthew. It is that John, himself a kinsman of Jesus, shrinks from seeming to claim moral superiority by conferring baptism upon Him. Jesus brushed aside the objection, waiving the claim which John makes for Him, as He afterwards waived the claim to be excused the temple tax. In this ceremony of initiation and consecration to the ideals of the coming Kingdom He is resolved to be one with His brethren, even at the risk of misunderstanding. It is the first public symbol of the self-identification of one who was holy with those who were sinners.

The baptism itself was immediately followed by the coming of the Holy Spirit upon Jesus, and by the Divine assurance conveyed to Him in words of Scripture which sealed His vocation to be Messiah, the Messianic Son of God. At what period of His life the possibility of such a vocation first dawned on Him we cannot say. Doubtless it grew on Him. When He came to His baptism He was willing to accept it. After His baptism He knew it to be God's will. And already the specific character of His Messiahship was grasped by Him, as is indicated by the combination with the Messianic text from Psalm ii. of familiar words from Isaiah xlii. referring to the Suffering Servant. Jesus devoted Himself to be a Messiah who should effect the redemption of God's people through suffering, and at His baptism He received the Divine confirmation of this self-dedication.

It is this Messianic self-consciousness which gives the clue to the meaning of the Temptations which followed. These were far removed from the temptations of ordinary men, so far indeed that only this Messianic consciousness can account for them. In solitude and fasting Jesus faced and settled the problem of the Messiahship, tested and rejected one after another of the policies which offered themselves for consideration. The Messianic endowment of the Spirit was not to be employed in order to satisfy physical need or appetite. It had to do with that higher form of life which was nourished by the self-communication of God. Neither was it to be employed to produce supernatural evidence of His claim, even though Scripture could be quoted to confirm its validity. Even He had no right to put God to such a test for such a purpose. Finally, the possibility was suggested of accomplishing the Messianic task of making the kingdoms of this world "the kingdom of our Lord and of His Christ," by forming an alliance with evil, attempting, as a policy of compromise, to "serve God and Mammon." The subsequent course of His ministry shows how each of the "temptations" had been triumphantly overcome.

Characteristics of the Ministry.—The Synoptic Gospels agree in representing the public ministry of Jesus as commencing after John the Baptist had been thrown into prison by Herod. "Jesus came into Galilee proclaiming the Gospel of God, that the time is fulfilled and the Kingdom of God has drawn near." The burden of the message was the same as that of the Baptist, but on the lips of Jesus it was great and glad news, a Gospel in the presence of which, or in the power of which, men could be called on to believe in God. From Capharnaum which appears to have served as a centre this message was carried by Jesus through the length and breadth of Galilee.

In the synagogues and in private houses, on the hill-slopes and by the lakeside He taught the crowds who flocked to hear Him. He believed in teaching. Because He had compassion on the multitude, "He began to teach them many things." To this proclamation of the Kingdom and this teaching Jesus added a ministry of healing, largely described in terms of the casting out of demons. For, according to the ideas of the time, not only nervous diseases but many other forms of sickness and physical disability were believed to be due to possession by a demon or unclean spirit. This gave rise to a class of persons, "exorcists," who professed, and not always in vain, to be able to cure disease by casting out the demon. And Jesus did not shrink from drawing attention to the parallel between Himself and them. But it is clear that His "mighty acts of healing" had a scope and were on a scale far beyond the reach of such men. The Evangelists report an extension of His power beyond cases of a psychical or psychophysical nature, to include the curing of fever, paralysis, leprosy, blindness, deaf-mutism and even the raising of the dead, as having characterized His ministry. Of a different class and yet falling under the head of "wonders" were the so-called "nature-miracles" of which the Evangelists relate several.

The Miracles.—There can be no doubt that the Evangelists believed that these things happened as they describe them. There is equally no doubt that many of them would be differently described and differently accounted for by modern observers, who are as eager to find out the secondary causes as earlier observers were ready to do justice to the primary one. They "gave glory to God," and sometimes no doubt thought that they gave the greater glory by enhancing the supernatural character of the event. In general, it must be born in mind that "miracles" were

far from being unexpected or rare. St. Paul claimed to have worked "signs" in circumstances which put his sincerity beyond challenge, and he is witness to the fact that the Apostles wrought signs and wonders. Even the raising of the dead was not a thing so incredible as it is to us. Irenaeus believed that two cases occurred in his own time. If this seems to reduce the "evidential value" of miracles, it must be replied that there is very little to indicate that specific evidential value attached to the miracles of Jesus. There are two instances but only two where anything like an appeal is made to miracle in order to prove anything, the healing of the paralytic and the answer to the messengers from the Baptist. In the one case it is an argument from the power of physical healing to the power of spiritual restoration. In the other it is not the miraculous character of the events which is emphasized but their quality; "to the poor the Gospel is preached" (Luke vii. 22).

Otherwise no appeal is made to the miracles in order to prove anything. That they were not understood to prove the Messiahship of Jesus is clear from the insistent demand of the Pharisees for "a sign," by which they meant some portent which would, so they thought, make it impossible for men not to believe, *e g.*, casting Himself down from the pediment of the Temple. And when Jesus sternly refused to give such a sign, He made it clear that miracles were neither intended nor calculated to produce faith. There are indications that there came a point in His ministry when He became chary of healing indiscriminately. This is shown by a new emphasis on His "compassion" as the motive of particular miracles, or on "faith" as the condition of His performing them. He may well have recognized that the popular enthusiasm due to the working of such miracles on a large scale, so far from furthering His mission, was only too likely to wreck it. And, further, that in too many cases those who were healed were satisfied with the physical boon and were indifferent to the higher gifts He had to give. They failed to show even that rudimentary attachment to Himself which could deserve the name of faith; and He was "unable" to do any mighty works where He found that "faith" wholly wanting.

A miracle has been well defined as "the supremacy of the spiritual forces of the world to an extraordinary degree over the mere material." In our inability to measure such spiritual forces we dare not *a priori* set any limit to their efficacy, and the test of probability, for any particular miracle lies not in what we conceive to be its physical possibility, but in its moral significance and value. The Evangelists record the miracles of Jesus not as demonstrating His Messiahship or His divinity, but as spontaneous expressions of a personality filled with the Spirit of God and indications of a character wholly animated by sympathy for men.

To teaching and healing as characteristics of the ministry must be added companionship. Jesus was not only accessible to men and women of all types and classes; He went forth to meet them, threw round them the compelling atmosphere of interest and care. Levi the tax-farmer, Simon the Zealot, Zacchaeus, Martha, Mary and Lazarus, Simon the Leper, these were typical instances. Many He drew into a wide circle of "followers," who accompanied Him in His circuit of Galilee; some into a yet closer circle of professed "disciples." Twelve He selected "that they might be with Him;" to these, who had shown a real initial receptivity He revealed "the mysteries of the Kingdom," and some of the depths of His own personality. These, when gathered into His fellowship (or "name") and to some extent imbued with His spirit He sent forth with power to cast out demons, to proclaim still more widely the coming Kingdom.

The earliest result of this ministry in Galilee was seen in a wave of popular interest and enthusiasm. "The common people heard Him gladly" (Mark xii. 37). They crowded the house where He was, the street where He walked, the beach to which His boat was moored. His fame spread through all Galilee and even "beyond Jordan," to Judaea and Idumaea. On the other hand opposition began to show itself. The religious authorities were alarmed at the independence of this unauthorized teacher, who ignored the traditional rules by which they had fenced the law of the Sabbath, who encouraged His disciples to drop the practice of fasting, who dared even to reach back behind the law of Moses itself and proclaim on His own authority the wider principles on which that law rested. Alarm deepened into suspicion, suspicion into dislike and hostility, as attempts made by scribes and Pharisees to challenge Him in argument were met and worsted by Jesus. Already the Pharisees began to conspire with their traditional foes the court-party "how they might destroy him." At the same time it became only too clear that the popular enthusiasm was but fleeting. The parable of the Sower is probably a reading off of the disappointing experience. Much of the seed which He had sown had fallen either on stony ground or among thorns; and even what sprouted had either withered away or been choked. Nazareth itself, His home town, showed conspicuously its contemptuous want of faith. Jesus withdrew from Galilee; His continuous ministry there came to an end. Through "the district of Tyre and Sidon" (where He broke through the barrier of Jewish exclusiveness by healing the daughter of a Gentile woman) He fetched a wide circuit by the valley of the upper Jordan, and after a brief visit to Galilee turned north again, to arrive at Caesarea Philippi at the southern base of Mount Hermon.

PETER'S DISCOVERY

The Messiahship.—The most momentous result of the ministry up to this point is seen in the acknowledgment made by Peter (apparently with the tacit consent of his fellow disciples), "Thou art the Messiah." This was in answer to a direct question put by Jesus; and according to Matthew it was followed by a blessing pronounced upon Peter, together with the announcement "flesh and blood hath not revealed it unto thee but My Father which is in heaven" (xvi. 17). Peter's discovery was due not to any external testimony but to what we should call a spiritual intuition; Jesus accepted the description, but enjoined His followers to keep it as a secret to themselves.

What were the reasons which led Peter to make this discovery and declaration? It is exceedingly difficult to say. Certainly they do not lie upon the surface of the Gospel narrative. There was no form of the Jewish expectation of a Messiah to which the appearance and activities of Jesus in the least corresponded; He was far enough removed from a warrior-prince who should restore the political glories of David's reign; He was not less removed from the transcendental figure of the Son of Man coming on the clouds of Heaven to judge the enemies of God and of Israel. The stories of a miraculous birth were not yet current; neither the Immanuel prophecies nor those of the Suffering Servant could give any help. Miracles, regarded merely as evidence of supernatural power, did not point out the Messiah. It was no part of the expectation concerning Him that He would work miracles. That the Messiah should teach, that He should claim to forgive sin, that He should seek to draw men into fellowship with Himself, that He should call them to take His yoke upon them—all these distinguishing features in the Synoptic portrait of Jesus were wanting in any picture of the Messiah drawn by Jewish imagination.

Seeking for the explanation of Peter's "confession" we appear compelled to find it in subtler forces which had been playing upon the disciples, the qualities of character displayed in the acts and words of Jesus, the influence of His personality mediated through daily intercourse, the sense of mystery and awe produced by His moral majesty ("Depart from me, for I am a sinful man, O Lord"), the growing conviction that somehow their relation to God was bound up with their relation to Him; all this combined to produce a profound impression in the effort to describe which Peter, when challenged, grasped at the highest religious conception which could be attached to a man, and said "Thou art the Messiah."

Neither for Jesus nor for His disciples was the title adequate. It had many associations which were actually out of harmony with His true mission and with the methods by which it was to be accomplished. Yet it was the best available description of the vocation which He had accepted, which His followers felt Him to be fulfilling. The title placed Him in direct connection with the delivering or redeeming purpose of God revealed by the prophets, and with the divine theodicy expected by the Jews.

Prediction of Suffering and Death.—According to these Evan-

gelists Jesus proceeded at once to exhibit more clearly His conception of the Messianic vocation by the startling and reiterated announcement of His impending arrest, death and resurrection. He foresaw His fate, and accepted it as part of the Divine purpose He was called to fulfil. He was to transform the rôle of the Messiah into that of the Suffering Servant. The disciples were utterly perplexed or frankly incredulous. "This saying was hid from them" and they did not understand what was said. The Transfiguration which followed on the first of these announcements is best understood as a parallel to the Baptism and a fore-gleam of the Resurrection. In it Jesus received the Divine confirmation of His self-devotion to the way of the Cross; He stood in line and in harmony with the monumental figures in the Divine revelation, and He enjoyed a foretaste of "the glory that should follow." From that time forward we see Him with His face "set to go unto Jerusalem"; for, as He said, "it cannot be that a prophet perish away from Jerusalem." And we get in Mark the wonderful silhouette, as of figures on the sky-line and against the sunset, Jesus in front and alone "iam totus in passione sua" as Bengel puts it; behind him the twelve or the inner circle of disciples, who were "the nearest bit of the world for Him as He was the first inkling of eternity for them"; they were filled with awe and wonder. Behind them again came those less closely attached, less akin to His spirit; and "they were afraid."

So these Evangelists bring Jesus to Jerusalem by way of Jericho. The feast of Passover was approaching. Crowds of pilgrims, many of them from Galilee, travelled by the same road. Jesus for a moment dropped the veil which concealed His Messiahship from all but those who were in spiritual sympathy with Himself. He arranged to enter the city in a guise which would recall a Messianic prophecy of Zechariah, "lowly and riding upon an ass," a Messiah who was a man of peace. Whether the crowd recognized the symbol, or whether it was the prophet of Galilee whom they recognized, a wave of enthusiasm seized them. They surrounded Him with joyous acclamations and so conducted Him to the gate of the city. Either on the same or the following day He visited the Temple, and being moved to indignation at its desecration through the exploiting of the religious needs of the people by avaricious traffickers and money-changers, drove them forth before Him by the force of His anger. They had turned God's house of prayer into "a bandit's cave." This drastic exhibition of moral authority seems to have been the cause which brought to a head the hostility of "the chief priests and scribes," among whom the former at any rate reaped a rich revenue from the traffic. They finally resolved on His destruction, but felt compelled by His popularity with the people, especially the Galilean pilgrims, to proceed with caution. The following days were spent by Jesus in the courts and porticoes of the Temple, where He taught and dealt with questions, some captious, some sincere, which were submitted to Him by opponents or by friends. The nights He appears to have spent at Bethany or on the Mount of Olives.

Judas Iscariot.—Two days before the Passover an unexpected opportunity was presented to His enemies when one of His own followers, one indeed of the Twelve, Judas Iscariot, went to the high priest with an offer to betray Jesus into their hands, probably by pointing out where He could be arrested quietly. Innumerable explanations have been suggested for this treachery; its ultimate root was probably disappointed personal ambition working on an imperfect allegiance, fastening on Jesus as the cause of the disappointment and passing through disloyalty and dislike to hatred. And, "hates any man the thing he would not kill?"

The Last Supper.—Even for Judas there remained still an opportunity "to see one instant and be saved." For he was present at the Last Supper, when Jesus manifested to His followers that "He loved them to the end." We shall probably do wisely if we follow here the tradition preserved in the fourth Gospel rather than that which appears to underlie the Synoptic Gospels. The latter certainly seems to imply that it was the Passover meal of which Jesus and His disciples partook; John clearly understands that it took place on the night before the Passover, and that Jesus went to death on the following day, at the time when the Passover lambs were being sacrificed; this would further account for the absence from the Synoptic reports of nearly all the features characteristic of the Passover meal. The Last Supper then corresponded probably to the weekly "Sanctification of the Sabbath" when the common meal had a specially religious character, and just before the Sabbath began the head of the household pronounced a solemn benediction over a cup of wine. No doubt Jesus had been in the habit of observing this weekly ceremony with His disciples. If on this occasion He anticipated it by 24 hours, and introduced it by saying "Much have I desired to eat this (coming) Passover with you" intimating that that would not be so, this occasion would at once be charged with special significance and solemnity.

There are several variations in the reports of what Jesus said at the Last Supper as given by the three Evangelists (with whose record we must take into account that given by Paul in 1 Corinthians). Luke's account as found in the common text appears to have been assimilated to Paul's; but when the true text is restored it varies more from Paul's than either of the others. The probable meaning of the words spoken by Jesus may perhaps best be given in a paraphrase. He took a loaf and blessed and broke it and said, "This represents Me as I give Myself in sacrifice to be the spiritual nourishment of men": and He took a cup and gave thanks and gave to them saying, "This represents Me as I give Myself in sacrifice to seal the new covenant." The central purpose of the rite would appear to be that there might be brought vividly to the consciousness of His followers the real Presence of their Master when He had passed from their sight, such a Presence as carried with it the continuation of all the aspects of His ministry which had entered into their experience while He was visibly with them. The command, "Do this to bring Me to remembrance," which is found only in Paul, may be an authentic word of Jesus or it may be an inference from the experience of the Church; "He was known of them in the breaking of bread."

From the upper room Jesus and His disciples went through the darkness to Gethsemane, outside the city, "where was a garden." There, withdrawn from His followers and even from the inner circle of closest friends, Jesus went through the agony of a human soul facing shame, suffering and death. Escape was still possible. The prayer rose to His lips that He might be spared the necessity of drinking "this cup," only to be cancelled in the next moment with "Nevertheless not what I will, but what thou willest." He returned to His companions to find them sleeping. Then came the lights, the clamour of voices, the crowd of chief priests and temple officers and Judas leading the way to betray His Master with a kiss. Jesus was seized and led away a prisoner. As to His disciples "they forsook him and fled, all of them."

CRUCIFIXION AND RESURRECTION

The Trial of Jesus.—There is considerable variation between the Evangelists in the reports which they give of the judicial or quasi-judicial proceedings which followed. Mark reports a formal meeting of the Sanhedrin held at once in the house of the High Priest; which seems unlikely especially if it were followed by another formal meeting next morning Luke reports that Jesus was taken to the house of the high priest, but defers the investigation till the next day. The tendency of Mark's narrative is to throw a greater responsibility upon the Jewish authorities, and to suggest that the Sanhedrin had more independent jurisdiction than probably belonged to it. The object of the chief priests was to frame a charge against Jesus which would lie in a Roman court; and this they found in the admission which He made to the High Priest that he was the Messiah. For that admission could be easily interpreted to Roman ears as involving a claim to be "the King of the Jews," and one who was therefore politically dangerous. Evidence that He had publicly made such a claim does not appear to have been forthcoming. But when directly challenged by the High Priest "Art thou the Messiah, the Son of the Blessed One?" Jesus replied, "I am," the first and only time when, according to Mark, He formulated the claim in express words. On this His own confession the Sanhedrin adjudged Him guilty of blasphemy, and after being overwhelmed with brutal insults He was hurried off to be tried before the Roman governor,

Pontius Pilate.

Luke, whose account of these events is largely independent of the other two Synoptists, describes the religious authorities as laying three distinct charges against Jesus, out of which Pilate selects for following up the charge that He called himself "Christ a king." To Pilate's question whether He did indeed claim to be King of the Jews He returned only an ambiguous reply. What follows is in effect an account of the struggle in Pilate's mind between his conviction that his prisoner was an innocent man and that it was "through envy" that the high priests had sent him for trial, and the fear lest by offending the Jews he might be involved in a riot at Jerusalem and a charge of maladministration at Rome. As a last resource he threw on the crowd the responsibility of choosing whether they would have Jesus or another prisoner, Barabbas, a bandit, released to them. When they had chosen Barabbas and Pilate asked what then was he to do with Jesus, the shout went up, "Crucify him," and Pilate gave sentence that it should be as they demanded.

The Gospel narratives present Jesus as bearing Himself throughout with unswerving dignity towards men, with uncomplaining submission towards God. Deserted by His followers, betrayed by one of His Apostles, publicly denied by another, beaten and spat upon by the soldiers, jeered by the populace, crucified between two criminals, forsaken by man, and, as it seemed, by God, no form of bitterness was wanting to the cup which He drank, the cup of failure, shame, pain and death. He "obeyed unto the death of the Cross," "for the glory that was set before Him."

The Resurrection.—On "the third day," the first day of the week, the same Jesus appeared to some of those who had known Him and believed on Him, alive. And on the conviction that He rose from the dead and "liveth for evermore" the faith and life and hope of the Christian Church are founded. It is to this faith that the Gospel narratives bear collective witness, despite their variations as to the mode and circumstances of the event. The earliest and the strongest evidence for the Resurrection of Jesus is provided by the Acts of the Apostles and the Epistles of St. Paul. The early chapters of the Acts (whatever be the date of their final composition) contain source-material which testifies to the existence, very shortly after the death of Jesus, of a fellowship or community of men and women for whom the verdict of the Cross had been reversed. They were bound together by a common loyalty to Jesus, a common readiness to suffer "for his name," and a common expectation of His early and visible return. That by which they were animated and sustained was the belief that He was alive, and apart from such a belief there is no explanation to be given of the existence of such a community. Evidence of the vividness and impressiveness of this conviction is provided in the conversion of Saul of Tarsus, for which we must find one of the predisposing causes in the tenacious witness borne to the Resurrection by the disciples whom he had "haled and committed to prison." Some 20 years after, when writing to the Corinthians, Paul summarizes part at least of the Gospel which he had been taught when he became a Christian and which he in turn transmitted to others; and in the short list of points he includes the fact that Christ "hath been raised on the third day," and goes on to recite a list of persons to whom He had appeared—Peter, the Twelve, more than five hundred brethren at once, James, all the Apostles, himself. But the fact or event of the Resurrection is for Paul only the beginning of a new and risen life for Jesus of which His followers have experimental proof in daily life and in victory over the world and sin. The living Saviour is even more real to him than the historical fact that He had risen from the dead. And Paul is not alone; the Epistle of Peter, that to the Hebrews and the Apocalypse bear witness to the like conviction confirmed by the like experience.

The real historical evidence for the Resurrection is the fact that it was believed and preached, and that it produced its fruit and effect in the phenomenon of the Christian Church, long before any of our Gospels were written. And it is in the light of this fact that the narratives of the Evangelists must be read. All three attest the fact that Jesus rose from the dead. Mark's Gospel breaks off before recording any appearance to His disciples. Both Luke and Matthew record several occasions on which He so appeared; but they severally reproduce different traditions. The appearances which Matthew describes take place with one exception in Galilee whither he reports that the apostles were instructed to proceed; Luke, on the other hand, records appearances in Judaea only, and seems even to be at pains to remove the allusions to Galilee. The two traditions are not mutually exclusive, but if one only corresponds to the facts, the Jerusalem one is probably to be preferred. Close examination discloses other discrepancies between the narratives; but these do not affect the central witness which they convey, "The Lord is risen indeed, and hath appeared." The detail to which the greatest significance attaches is at the close of the story of Emmaus, "He was known of them in the breaking of bread," the germ of later Eucharistic practice and Eucharistic experience.

EARLY LIFE AND TEACHING

His Birth and Boyhood.—Mark's Gospel opens when Jesus "began to be about thirty years of age." It is to Matthew and Luke that we owe all that is reported about the period before that. Throughout this section the two narratives are independent of one another, Luke being the more copious of the two. He relates the promise of the birth of a son first to Elizabeth, then to Mary, and the visit of Mary to Elizabeth Then he describes the birth first of John the Baptist, then of Jesus, and completes his record with an account of the presentation of Jesus in the Temple after His circumcision and of His visit to the Temple with His parents when 12 years old. Luke reserves to a later point the genealogy of Jesus, with which Matthew opens his Gospel; and whereas the former carries the list back from Jesus who was "as was supposed, the son of Joseph," to Adam "the son of God," the latter starts from Abraham and works down to Joseph "the husband of Mary, of whom was born Jesus which is called Christ." Matthew then describes the birth of Jesus (without any foregoing Annunciation), the visit of the Magi, the flight into Egypt and the return to Nazareth.

There can be no doubt that both the First Gospel and the Third —in the form in which we have it—represent the birth of Jesus as supernatural in character. His mother was betrothed to Joseph, but still a virgin when He was born. With regard to Luke's account, however, it is possible that the passages which provide the evidence to this effect represent later insertions by the hand of the Evangelist himself. And while the story of the Annunciation in Matthew emphasizes the Messianic rank and function of the son who is to be born rather than what we should mean by the Divine Sonship, both Gospels have this in common that though ascribing supernatural powers to Jesus, they neither describe nor exhibit Him as other than man. The emergence of a high conception of Christ's Person which led ultimately to the acknowledgment of His Divinity took place before either of these Gospels was written, but it proceeded along different lines, and apparently without any reference to or inference from a Virgin Birth, which does not appear to have formed part of the Apostolic preaching. Neither Paul nor Mark betrays any knowledge of the tradition. It follows that it did not form an essential factor in the presentation of Jesus which we find in Mark or in the interpretation of Him which we owe to Paul. It is probable that "Luke became acquainted with the tradition for the first time, either when he was in process of writing his Gospel, or immediately afterwards. The First Gospel presupposes the Virgin Birth tradition, which had probably been known to its readers for some time, sufficiently long for problems to be raised and for difficulties to be started" (Vincent Taylor).

His Work and Teaching.—Mark has preserved but little of the teaching of Jesus compared with Luke and Matthew, who have incorporated in their Gospels large sections of the discourse-document known as Q as well as other discourse material which each of them had received independently. The earliest collection of such material may possibly have been made by Luke at Caesarea about A.D. 43.

Jesus was primarily conspicuous in the eyes of His contemporaries as a healer and a teacher. When He was moved with

compassion for the multitude "he began to teach them many things." He is constantly presented as "teaching" in the synagogues, in a house, in the Temple, by the lake-side; and His teaching was effective—"the common people heard him gladly." There was novelty in it, not only in its contents but in its quality. He "taught as One having authority, and not as the scribes." So He was both addressed and described as the Teacher, as John was described as the Baptizer. When men addressed Him as "Rabbi," they gave expression to the respect they felt for Him, His character and His teaching; though it is an anachronism for us to refer to Him as "a Jewish Rabbi" since it was only after the fall of Jerusalem that the title took on its modern connotation.

His Task.—It is well to try to realize the nature and magnitude of the task which Jesus set Himself as a Teacher, measured as it may be partly by the teaching itself and partly by what He has accomplished at least for a section of mankind. It was a task of almost incalculable difficulty, nothing less than to give to plain, matter-of-fact men a vision of reality which would become for them a permanent factor of experience and an inspiration for ethical development. It was to lift thought, feeling and aspiration in such men from the level at which they are bounded by the horizon of this present life to the level they attain when that horizon disappears. It was to reveal and commend the possibility of a "life" of a different quality from that which is nourished "by bread alone," a life natural to the family of God, alike in its joy, its ethical character and its permanence. And He had to do this, making use not only of a language already familiar to His people, but of thought-forms with which they were familiar, however inadequately they might body forth His own conceptions. Illustrations may be found in "the Kingdom of God" and "the Son of Man," regarding both of which He had much to say, though both of them brought up from the past associated ideas which did not necessarily form part of His own conception.

The Kingdom of God.—The ministry of Jesus opened with His arrival in Galilee proclaiming the Gospel, the great and good news of God, that "the time is fulfilled and the Kingdom of God has drawn near," and much of His recorded teaching was devoted to instruction about the Kingdom, its character, its incommensurable value and the conditions of belonging to it. The interpretation of the phrase which commends itself to many scholars is "the sovereignty of God." But that is altogether too abstract to do justice to the conception of Jesus. He presents the Kingdom as something which is both sought and given, both entering into and entered by men, as destined to arrive in the future yet actually within reach of men now, to arrive one day like a flash yet to grow quietly as the seed grows to the full corn in the ear. We can only do justice to a conception so plastic by recognizing it as involving both the rule and the realm of God; and though it is a mistake to identify the Kingdom with the Church, the Church is the nearest approximation in human life to the fulfilment of the idea. The Kingdom consists of persons who enter it and live within it in happy acceptance of the rule of God and in loyal relation with one another. Thus it is a society, divinely constituted and divinely controlled. It is thus one aspect of the highest good and men are urged to seek it before all else, to count no cost too great to pay for securing it. At the same time it is a thing given, given as the highest conceivable gift by a Father to His children. It has a consummation in the future, being nothing less than the world-purpose of God: and yet it is present already. Its distance is measured not by time, but by a man's moral preparedness to receive it; its blessings can be experienced not only "in the coming Age" but "at this present time." It would be only in accordance with the Jewish habit of identifying the king with his people if we said that the Kingdom had come because He, the King, had come. And it took visible form from the moment when two or three were gathered together in His name, that is, in a common relation to Jesus, as He was known.

The Soul or Higher Life.—Jesus similarly inculcated the incommensurable value of the human soul, the human personality as capable of acquaintance and contact with the unseen world of spiritual reality. He represented as the greatest conceivable disaster the loss of that organ or faculty, as the highest conceivable ambition the saving or preserving of it. Again, no cost was to be reckoned too great for the securing of this, the highest good conceived in its individual character. "What shall it profit a man if he gain the whole world and lose his own soul?" And the way to save his soul, his true self, was for a man to treat it as a farmer treats his seed, to be ready for sufficient reason to throw it away. "To one who will think concretely of human relations Christ's paradox, 'He that saveth his life shall lose it,' reveals itself as a simple commonplace of experience, expressing the self-transcendence of personality" (McMaster).

Sin.—It is from this point of view that we can best approach the teaching of Jesus on the subject of sin. He saw sin as the great danger, and the great injurer of human happiness; it destroyed or jeopardized the highest good, whether in the present or in the future. In His handling of the subject, however, we note a distinction of great importance. In regard to actions in which the man himself is the chief or primary victim, or dispositions which employ the organs of the body as instruments of evil, Jesus emphasizes not so much their sinfulness as their danger. They destroy or jeopardize a man's opportunity of "life"; they endanger his participation in the highest good. And they are therefore so serious, so alarming that in order to avoid the danger a man would wisely cut off the member which is for him the organ of evil.

Under this head fall most of those actions or dispositions which even now men commonly reckon as "sins." But Jesus gave a wide extension to the field covered by the term as well as a much deeper conception of the consequences of sin at their worst. The stress laid by the Law, especially as interpreted by some of the Pharisees, upon ritual purity and ritual cleansing encouraged the view that what "defiled" a man was contact with certain external things. This rendered him ceremonially "unclean," disqualified for worship and sacrifice. Jesus, on the other hand, while He emphasized the fact that the dispositions which prompted to acts of sin were as culpable in the sight of God as the acts themselves, swept away the whole theory of ritual defilement, and proclaimed that what really "defiled" a man, and disqualified him for worship or fellowship with God, was what "came out of him," the expressions in action of a character centred upon self and averse from God. And in the list which He gave of the things which thus disqualify a man Jesus made very significant additions to what had been branded as forbidden by Moses and by most moralists. He added such things as envy, insatiableness, vituperation or railing (A.V. "blasphemy"), insolent superiority and moral insensibility. The last of these corresponds to "the sin against the Holy Ghost," something for which there can be no forgiveness, the victim of it having rendered himself impervious to the arrival of mercy. The others are all cases of injury done to the happiness of human individuals or of groups. In a word, morality is changed from a system of commandments and prohibitions whose justification is hid from men, into a system for the protection of the true welfare and happiness of the individual and of the community. If whatever injures these is what is now branded as "sin," it means that God Himself has taken these under His protection.

God.—Jesus took as the basis of His teaching the conception of God as it had been developed and moralized by the prophets from the 8th to the 6th centuries B.C. He was a God who is one, who has character and whose character is known—"a God full of compassion and gracious, slow to anger, and plenteous in mercy and truth . . . and that will by no means clear the guilty," a God who for very love demanded goodness in His worshippers. Sin was not less truly sin because, as we have seen, Jesus emphasized those aspects of it which infringed the happiness of men rather than the honour of God. And the Divine reaction against it was not to be thought less stringent when Jesus completed the work of the prophets by concentrating men's thought on the Fatherhood of God and making that central to His interpretation of life. The idea of divine Fatherhood had not failed to make its appearance in the Jewish scriptures, canonical and uncanonical, as indeed it appears in many religions. But the allusions are rare, and most of these perfunctory. Jesus does not appear to have

made the Fatherhood of God the subject of definite teaching. He did not argue about it; He did not attempt to prove it; but He recognized and employed the conception as no one had ever done before Him, as the dominating and normative aspect of God in His relation to men. On His lips the name ("the Father," "My Father," "your Father") displaces almost entirely every other name for God. And that it is no mere title appears from the two facts—first, that the gratuitous love and faithfulness which the name connotes represent precisely the aspect of the Divine character which finds special emphasis and illustration in His teaching, and, secondly, it is the further and ultimately the complete realization of Sonship to this Father in which His followers are invited to find the motive and goal of Christian conduct. For while Jesus assumes that God is the Father of all men, He does not assume that all men are His sons. The relationship is for men potential. It requires to be realized in thought and practice, recovered through "repentance." One aspect of the highest good was to "know the Father," and of this knowledge Jesus Himself was the indispensable organ and mediator. He and He alone had the power to communicate it, and it lay with Him to determine to whom the revelation should be made. The fourth Gospel crystallizes the whole situation when it reports Jesus as saying "He that hath seen me hath seen the Father."

Jesus' Ethical Teaching.—The ethical ideals of Jesus differed radically from those of Moses in that they were not embodied in any code of commandments or prohibitions. He ought never to have been presented to the world as a lawgiver or a legislator; Paul, in fact, shows profound affinity with his Master when he so emphatically lays down the principle, "the written code killeth." Jesus promulgated only one law which was of universal application, binding on all men in all circumstances—"thou shalt love." This was a demand for the complete reversal of the current of natural human interest and ambition. Hitherto directed to the self, its well-being, safety and happiness, it is now to be directed to the not-self. And the not-self is comprehensively analysed into two objects, God and our "neighbour," that is to say, the man who is thrown across our path. The sole universal demand or command of Jesus is that men shall care for God with all their heart and mind, and that they shall care for their "neighbour" as they care for themselves. Other utterances which take the form of precepts or commandments either convey in reality urgent advice ("Seek ye first the kingdom of God") or apply like "Sell that thou hast" to the case, any case, where earthly possessions are choking spiritual instincts; or, like "Turn to him the other cheek also," are startlingly vivid illustrations of the kind of conduct which may be expected of one who truly cares for his neighbour as he does for himself. For such a one the motive of personal rancour or revenge has ceased to operate. He will no longer claim what is granted to him by the Mosaic legislation, "an eye for an eye and a tooth for a tooth" Once more Paul has seized the real meaning of this teaching, "Why do ye not rather put up with injury, why do ye not rather submit to being defrauded?" The ambition of Christ's followers in such circumstances is expressed in the saying "if he hear thee, thou hast gained thy brother." It follows also that it is mistaken and vain to look to the recorded teaching of Christ for rules to guide men in circumstances which He did not contemplate, and in particular, in respect of political and economic problems which were non-existent in His time. That is not to say that Jesus has no guidance to give in these matters. He has left no written code, but those who have accepted His one commandment can have conscience and judgment so educated by His spirit that the application of the law of love to any given circumstances is within reach of their discovery.

The Future.—Under the influence of the Apocalypses the Jewish religious hopes of the future had taken a largely conventional form. The final scene in a series of dramatic pictures represented the catastrophic end of the present Age or World-order. It was associated with a day of judgment when the righteous would be finally separated from the unrighteous, and was to be connected with or preceded by the coming of the Messianic Son of Man "with the clouds of heaven." Prior to that, however, there was to be a time of terrible trial and tribulation for God's people, the "woes" antecedent to the Messiah's coming. The reward of the righteous was conceived largely in terms of material prosperity and happiness, the punishment of the wicked in terms of physical suffering. It is exceedingly difficult to bring all the recorded utterances of Jesus on the subject into any single and coherent view. It is far from improbable that even before the material for our Gospels was collected there were two schools of thought in the Church, the one predominantly interested in the catastrophic aspect of the Kingdom's coming, the other in the evolutionary and ethical aspect; and that according to the prevailing interest the material received emphasis and expansion. Still, it is not possible to eliminate entirely either the catastrophic or the evolutionary form of expectation from the teaching of Jesus, and we must be prepared to recognize a paradox or seeming contradiction in the view which He held. But these points are to be noticed. Jesus no doubt began by sharing the conventional anticipations of His time. But up to a certain point in the unfolding picture (and that was the point reached in His experience) He was able to criticize these anticipations, and did so in the light of two convictions. The first was that the Kingdom was essentially and wholly spiritual; this led Him to discard firmly and completely all forms of nationalistic and of eudaemonistic hope. The second, which would be a corollary from His Messianic consciousness, was that in a true sense the Kingdom had already arrived. The conditions and methods of its growth were evidently dictated by its spiritual character. Nevertheless, it was obviously incomplete, whether it were looked at extensively or intensively. And it was also part of its character that it comes from the other world. It is not the result of human activity, but a gift of God. It need not surprise us if, the experience of Jesus stopping where it did, He continued to expect a consummation which would be sudden and catastrophic and would include His own visible return. He described the coming of the Kingdom as impending, yet not immediate, and clothed the expectation of His own return in the traditional symbolism of the Danielic Son of Man.

His Self-consciousness.—How Jesus thought of Himself is a question of great difficulty and delicacy, and we must be prepared to find some promising lines of approach yielding disappointing results. That He ranked Himself as a prophet appears from a few passages such as "It cannot be that a prophet perish out of Jerusalem." He frequently referred to Himself as the Son of Man; but while this must be maintained in face of influential opinions to the contrary, the result for our purpose is less important than we might expect, for the possible meanings of the phrase are as numerous as the sources from which it may possibly have been derived. They range from simple "man" through "man in his human weakness" and the representative "Man" to the supernatural man from heaven foreshadowed in Daniel. If we had to postulate one source and one meaning for the phrase as used by Jesus of Himself, it would probably be found in Psalm lxxx., where the poignant appeal to God for the redemption of Israel runs out on the hope of a "son of man whom thou madest strong for thyself." But possibly what commended the title to Jesus was just the many-sidedness of its meaning; it set men questioning about Him and sent them to seek for an answer in the literature of Jewish hope.

The case is not very different in regard to the title "Messiah." Jesus did not, according to the Synoptic Gospels, proclaim Himself to be the Messiah; but He accepted the acknowledgment that He was the Messiah when it was made by Peter. He admitted it to the high priest at His trial, and from His Temptation onwards we see Him discharging a vocation which could best be described in terms of Messiahship, the vocation of one anointed by the Spirit of God and equipped for the fulfilment of the age-long purpose of God to deliver His people. At the same time, as a description of His vocation as He conceived it, the title was neither accurate nor adequate: there was not in the mind of the Jews of His time any accepted or uniform portrait of the Messiah to which He could be said to conform. That the Messiah would employ force either as a national king or in the exercise of a

Divine prerogative was a feature which was commonly taken for granted, but one which Jesus deliberately rejected. That He would teach, make disciples, forgive sins, suffer—these found no place in any form of Messianic expectation; yet these were conspicuous characteristics of His ministry. As factors common to Messianic expectation and to the consciousness of Jesus we should probably recognize the rôle of Deliverer, King and Judge, and particularly commissioned representative of God. But the meaning of the first three of these at least was so transformed in His thought that the words are little more than a shell into which He put His own content. Whether it is Peter conferring the title or Jesus accepting it, they must both be understood as employing a term which was far from expressing accurately or adequately the impression made on the one or the consciousness of the other. Jesus himself was the author of the Messianic conception which He fulfilled.

A more fruitful line of enquiry regarding the self-consciousness of Jesus begins with the recognition that He attached the highest significance both to His own presence in the world and to the attitude which men took up to Him. The beginning of a new era was to be found between John the Baptist and Himself. "Blessed are the eyes which see what ye see"—things that many prophets and kings had desired to see. The repeated references to the reasons why He had come or been sent, together with the reasons themselves testify to the same consciousness. Conversely, the privilege involved in His presence carried with it great responsibility. Men would classify themselves according as they responded or failed to respond to the appeal of His personality and His message. Those who were obtuse to this appeal would meet a fate less tolerable even than that of Sodom. Men are not in the Synoptic Gospels directly called on to "believe on" Him. Yet He looked for a faith which rested on Himself as object, a confident self-committal which involved readiness to receive all that He had to give, not merely a physical boon but His teaching and His spirit. The absence of such faith precluded Him on occasion from doing any "mighty works." On the other hand, to "receive" Him, just as "to be worthy" of Him is represented as a priceless privilege. "Whosoever receiveth me, receiveth not me but him that sent me." The thought which finds expression in these various forms is firmly embedded in the Synoptic Gospels, and involves on the part of Jesus a tacit claim of a stupendous character.

Jesus never refers to Himself as the "Son of God," and the title when bestowed upon Him by others probably involves no more than the acknowledgment that He was the Messiah. But He does describe Himself as "the Son" absolutely, and in one passage, one in which at the same time He disclaims omniscience, He sets himself as "the Son" below the Father but above the angels. Moreover, He uses the word "Father" in the same absolute way to define His relationship to God—"my Father in heaven"; "all things have been given unto me by my Father." And we find striking, because indirect testimony to the same consciousness when in the parable of the Wicked Husbandman introducing a figure which clearly represents Himself, He says: "last of all he sent his son." It is in this manner of referring to Himself and to God, and in the life He lived in entire consonance with a relation which could be so described that we discover the deepest thing in the self-consciousness of Jesus, a profound and controlling sense of a relation to God, personal, intimate and permanent, which could only be described in terms of Sonship. As there is only one person who can be called the Father, so there is only one who can be called the Son in this absolute way. And the whole tenor of His life was such as to reveal not only the Fatherhood of God but His own Sonship to the Father. It is conceivable that He did not always realize the uniqueness of this relationship, that in early life He thought of the privilege as one which He shared with other men, but that experience of life and deeper knowledge of human nature forced upon Him the discovery that in this He stood alone. The first manifestation of the Divine in Jesus lay in this that He did not suffer this singular privilege which was His to separate Him from other men. He bridged what must have been an ever widening gulf; while remaining one with God He did not cease to be one with men, in sorrow, temptation and pain; and so in all save that relation to God, which He called Sonship, and in the moral perfectness which was its emblem and its fruit.

In claiming Sonship Jesus claimed a relation to God which was on an entirely different plane from the Messiahship. The one was personal, ethical and inherent, the other functional and official. And what contributed most to the transformation of His conception of Messiahship was the linking with it of another conception of His function which was symbolized by the figure of the Suffering Servant in Isaiah. The combination appears to have been made for the first time by Jesus Himself, and He made it deliberately and completely: the redeeming work of the Messiah was to be accomplished only through suffering and death; and so he set himself to the way of the Cross, not in dumb acceptance of the inevitable, but in obedient fulfilment of the purpose and method of God, and anticipating as "the glory that should follow" the final establishment of a "kingdom" of redeemed sons of God.

The counterpart to this kingdom in which God was to rule unchallenged was the kingdom in which evil forces held sway, those spirit-forces of evil which found their summation and impersonation in Satan or Beelzebub. Some measure of control over human affairs and destiny was understood to have passed, temporarily at least, to these evil forces. "God," as Stephen put it, "handed them over to serve the host of heaven," "spirit-forces in the unseen," "the prince of this world." And Jesus claimed that the first stage in His redeeming function was already achieved. His power over the demons, the rank and file of Satan's forces, was proof that He had already engaged the "strong man" in a determined struggle, and had worsted him; a proof of the fall of this kingdom of evil was found by Him in the success of the disciples whom He sent forth to preach and heal, and was expressed in similar terms. But Jesus also connected Himself with other aspects of redemption. "The Son of man came not to be ministered unto but to minister, and to give his life a ransom for the sake of many." The language belongs to the same field of thought as the prophecies about the Suffering Servant, whose soul was made "a sin-offering," "by whose stripes we are healed." The picture is that of an ideal Israel suffering for the sins of actual Israel and by that suffering redeeming their fellow-men. In that picture Jesus saw a foreshadowing of Himself, and in the results of the Servant's suffering a promise of the results of His own.

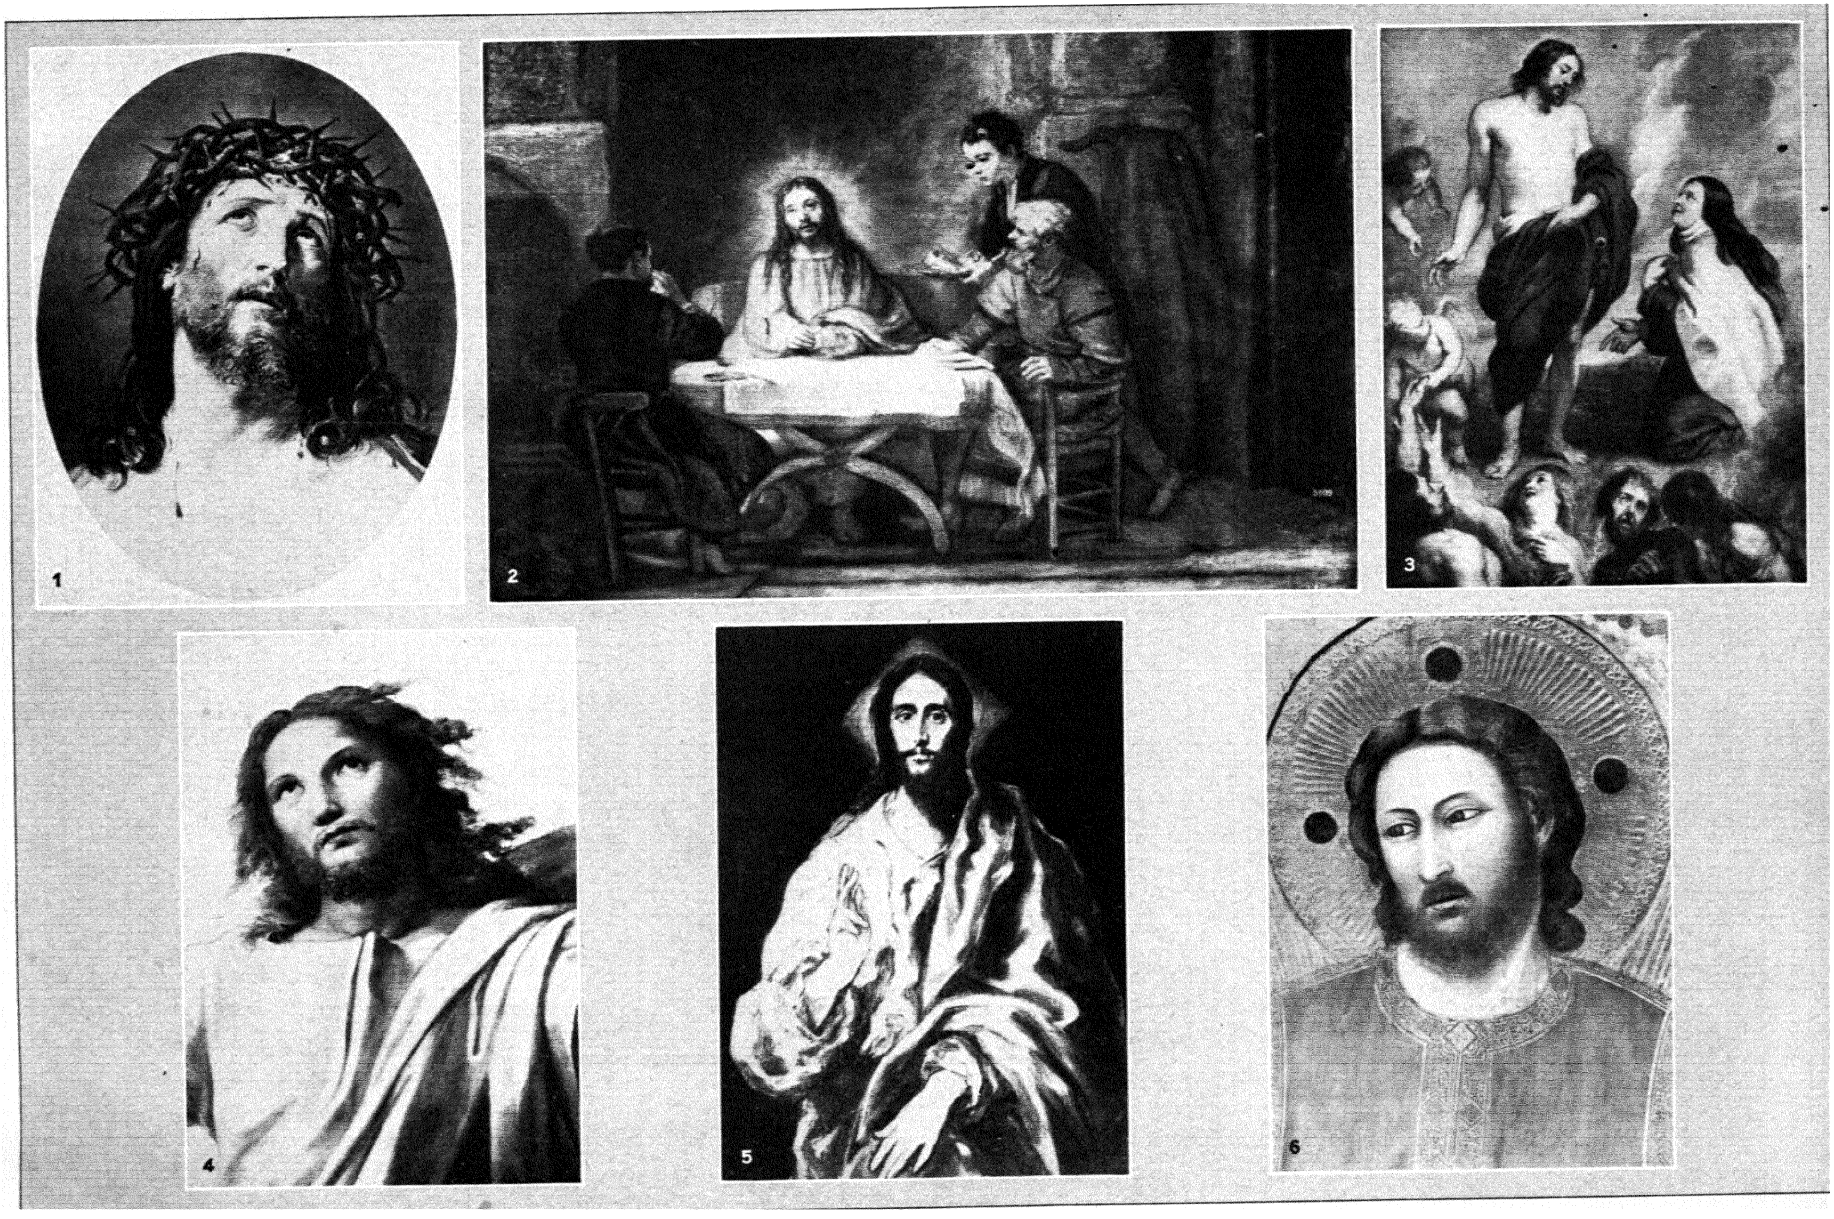
Yet another field of thought in the Old Testament provided another formulation for this factor in His self-consciousness When on the occasion of the Last Supper He took the cup and said "This cup is my blood of the new covenant," He brought Himself significantly into connection with the "new covenant" which according to Jeremiah God would one day establish between Himself and His people (the *Zadokite Document* of Schechter shows that this expectation was still cherished in some quarters). His words suggested that the new covenant was about to be sealed with His blood as with the blood of sacrifice.

HIS "GRACE"

The Impression Jesus Made.—Jesus' words and deeds (and it must be remembered that only a fraction of them have been handed down in the Gospels), together with all the subtle play of His personality upon those whom He had chosen to be "with Him," produced a profound impression on His followers It was indeed an impression of such a kind that even in His lifetime they entered upon a personal relation to Jesus which may be rightly described as "believing on Him" (Joh. Weiss) In analyzing this impression probably the first thing to recognize, as it was first and most widely felt, was His "grace." Luke, describing the natural growth of the boy, records that "he increased in wisdom and stature, and in grace before God and man." And the Synoptic Gospels provide many illustrations of that attractiveness which is the by-product of "grace." Negatively, there was nothing about Him of superiority, of aloofness, of self-consciousness or of indifference to the common life of common men Positively, there was a ready sympathy, an understanding tenderness, a way of meeting men, as if each one, even the degraded and the

outcast, had already a place in His interest. We see the effect of this in the way in which men and women "sway to His orbit as He moves." It bespeaks a deep-seated characteristic, a radiant adequacy which is not for itself alone, but continuously bestows itself in unconscious enriching and enheartening of others. Grace is in fact the atmosphere which love creates around itself. And the fourth Gospel, which so often concentrates to the glittering pin-point of a star what we have seen shimmering like a nebula in the Synoptic Gospels, sums up the impression produced by a thousand contacts, "We beheld his glory . . . full of *grace* and reality"; John thus witnessing to the discovery that the Divine glory was no longer to be sought in material splendour but in qualities of character.

His Authority and Power.—A second factor in the impression made by Jesus which was felt from the beginning and increasingly to the end was power, power greater in intensity and wider in scope than had been felt before, and yet wholly independent of force, prestige, social or ecclesiastical position or any of the ordinary sanctions of authority. This power was felt in Him—witness the testimony that "He spake with authority and not as the scribes." The scribes claimed and exercised authority of a certain kind, *coercive* authority, to an unusual degree. What men recognized in Jesus was authority of a different kind, *persuasive* authority, the authority of truth pressed home by a unique personality. Further, men observed Him exercising power over the unseen world, over demons and so over disease, and by an extension of the scope of such power easier for them to accept than for us, power over forces of nature, regarded as not wholly impersonal. They saw in Him many different forms "the supremacy of the spiritual forces of the world to an extraordinarily marked degree over the material." They felt His power, they observed it, and they also heard Him claim it, authority to interpret (and to interpret so as to transcend) the sacred Law of Moses, authority to forgive sins, authority to fix the destiny of men in accordance with the attitude which they took up towards Himself. Men must have seen in him such spiritual power and such consciousness of authority that they could without amazement hear him say, "All things have been delivered unto me of my Father."



His Moral Supremacy.—A factor in the impression which would be at first only surmised as moral superiority but afterwards realized with startling clearness was the moral supremacy of Jesus. If in all else men who knew Him felt Him to be one with themselves, they early began to feel the difference between themselves and Him in the sphere of character, and must have been led to reflect on the reason for it in His relation to God. We see its effects in the reluctance of John to baptise Jesus; "I have need to be baptised of thee, and comest thou to me?" Himself a stern ascetic he recognized in Jesus one before whose moral character he himself must bow. The like conviction due to the same cause finds expression in the words of Peter: "Depart from me, for I am a sinful man, O Lord." What was the measure of the difference? Can it be fully described as moral superiority? Or did it amount to moral perfection, without stain of sin? If we accept the witness of the New Testament as a whole, we shall have no hesitation in saying that it was the latter. That alone accounts wholly for the impression which Jesus made, and that alone is consistent with what we can discover of His own consciousness.

This supreme distinction in the character of Jesus is commonly referred to His Sinlessness. The description is not, however, a very happy one; it is better to state and emphasize the unique supremacy and perfect adequacy of His moral ideal, and then His own perfect fulfilment of that ideal. Both the nature of the claim and the justification of it are contained in one utterance, "My meat is to do the will of Him that sent me." When we acknowledge the moral perfectness of Jesus, we mean that He knew the will of God and that in the doing of it He found His greatest joy and the nourishment of the highest life within Him. His is the only character in history which abides the test of the two commandments which He re-enunciated as the great commandments of the Law. These ethical principles, which even for those who have the stimulus of His example and the inspiration of His Spirit remain an ideal towards which they flutter, were for Him the sole motives of daily life. They continuously governed His relation to God on the one hand and to men on the other; and the death which was the natural and accepted issue of the kind of life He lived in the kind of world that man has made, was but the supreme expression of the twin principles of perfect love to God and perfect love to man. And the man who loves God and man perfectly is the perfect man.

In Fashion as a Man.—Certain words of Peter spoken at the time of Pentecost, "A man approved of God," describe Jesus as He was known and regarded by His contemporaries. He was "found in fashion as a man," that is, in all particulars which presented themselves to outward observation He appeared and behaved as one of the human race. He "was made man." The Gospels leave no room for doubt as to the completeness with which these statements are to be accepted. From them we learn that Jesus passed through the natural stages of development, physical and mental, that He hungered, thirsted, was weary and slept, that He could be surprised and require information, that He suffered pain and died. He not only made no claim to omniscience, He distinctly waived it. This is not to deny that He had insight such as no other ever had, into human nature, into the hearts of men and the purposes and methods of God. But there is no reason to suppose that He thought of the earth as other than the centre of the solar system, of any other than David as the author of the Psalms, or did not share the belief of His age that demons were the cause of disease. Indeed, any claim to omniscience would be not only inconsistent with the whole impression created by the Gospels, it could not be reconciled with the cardinal experiences of the Temptation, of Gethsemane and of Calvary. Unless such experiences were to be utterly unreal, Jesus must have entered into them and passed through them under the ordinary limitations of human knowledge, subject only to such modifications of human knowledge as might be due to prophetic insight or the sure vision of God.

There is still less reason to predicate omnipotence of Jesus. There is no indication that He ever acted independently of God, or as an independent God. Rather does He acknowledge dependence upon God, by His habit of prayer and in such words as "this kind goeth not forth save by prayer." He even repudiates the ascription to Himself of goodness in the absolute sense in which it belongs to God alone. It is a remarkable testimony to the truly historical character of these Gospels that though they were not finally set down until the Christian Church had begun to look up to the risen Christ as to a Divine Being, the records on the one hand preserve all the evidence of His true humanity and on the other nowhere suggest that He thought of Himself as God.

Confirmations.—We are not left without valuable confirmation of certain aspects of the character of Jesus which have presented themselves in the Gospels. Peter in the Acts describes Him, still in language which falls short of the faith of the later Church, as one whom "God anointed with the Holy Ghost and with power; who went about doing good and healing all that were oppressed by the devil." It must have been out of a wide knowledge of the things said and done by Jesus that Paul drew his conclusions about Him, and the salient features of His character and conduct. He was one who "pleased not himself"; "ye know the *grace* of the Lord Jesus"; "purity and disinterestedness," these were qualities of His character (2 Cor. xi. 3). "Endurance" and "obedience," "deference and considerateness," these were displayed in His life and conduct. Paul further attests the belief that "he knew no sin," Peter that He "did no sin," the writer to the Hebrews that though tempted at all points like as we are, He was "yet without sin." And however we may account for it, Paul's ethical teaching is in closest harmony with the ethical teaching of Jesus. Both make love the central and sufficient motive of their system: "love is the fulfilling of the law." And in the application of the central principle to the details of conduct there is a startling combination of similarity of result with marked difference of form; even the "desire not to give needless offence" which is so characteristic of Paul reproduces a feature in the conduct of Jesus. A portrait of the ideal man constructed from the teaching of Jesus would be

PAINTINGS OF JESUS CHRIST, FROM THE 14TH TO 17TH CENTURIES

1. "Ecce Homo," pastel by Guido Reni (1575–1642), Italian. In the National Gallery, London
2. "Christ at Emmaus," Rembrandt Van Rijn (1606–1669), Dutch. In the Louvre, Paris
3. "St. Teresa Praying to Christ," Peter Paul Rubens (1577–1640), Flemish. In Royal Museum, Antwerp
4. Head of Christ, from "The Transfiguration," Rafaello Sanzio (1483–1520), Italian. In Vatican Gallery
5. "Christ," by El Greco (Domenico Theotocopuli, 1550?–1614) of the Spanish School. In the Cathedral at Toledo, Spain
6. Detail, head of Christ, from "The Last Judgment." Giotto di Bondone (1267?–1337), Italian. In the Arena Chapel, Padua

indeed hard to distinguish from a similar portrait drawn from the materials supplied by St. Paul. Unless we are to postulate two creative minds working on the same subject and independently arriving at practically the same unique result, we must regard Paul as confirming, all the more emphatically because indirectly, the ethical teaching of Jesus as recorded in our Gospels.

The Interpretation.—The phenomena which we have been collecting and classifying taken together constitute the fact of Jesus, the fact whose impact on certain of His contemporaries is necessary to account for the emergence of the Christian Fellowship or Church. We have now to recall the successive attempts to interpret this fact, to place it rightly in its context of human history and Divine purpose. Jesus Himself invited reflection on this problem: "Whom say men that I am?" And the Synoptic Gospels record the earliest stages of the solution. The people whose knowledge of Him was comparatively superficial said that He was a prophet, or "one of the prophets" specifying certain names. And Jesus accepted the description. Those whom He had chosen to be "with Him" recognized in Him "the Messiah," employing, as we have seen, the highest category which could be applied to a human being, yet one which fell short of exhaustively describing the totality of the impressions He had made upon them. When in these Gospels we find Him also referred to as "the Son of David" or "the Son of God," nothing is really added to the description of Him as Messiah, as even the second of these phrases is drawn from the traditional description of the ideal king. It seems probable that He accepted the designation "the Messiah" even as they conferred it, with a sense, much deeper than theirs, that it was the best available, and that it was a true conception only in so far as its contents were such as He put into it.

PAUL'S INTERPRETATION

But neither "prophet" nor "Messiah" gave a complete account of what the disciples had felt and found in Jesus. In particular, the ideas connected with the Suffering Servant and with Sonship were still waiting to be subsumed under some larger, loftier conception. Not till after the Crucifixion and the Resurrection were even all the materials ready for a complete and final interpretation of Jesus; and even then we see the primitive Church fumbling after such an interpretation. He was "a Prince and a Saviour," "Lord and Christ." But even here the title Lord is at the stage of transition from its use as an address of courtesy in the Gospels to its use in the fullest religious sense by Paul. Nevertheless, "the language of words always lags behind the inner secret of Christianity," and we see in the Acts evidence of that "surrender of soul which precedes the articulate utterance of the creeds." Men and women "believed on" Jesus even before they were prepared to give dogmatic expression to their faith: they looked up to Him as in Heaven, "at the right hand of God"; they offered prayer to Him, and worship, which probably means that they reverently sought to realize His fellowship in the breaking of bread; they were inexpressibly grateful to Him because, as they believed, He had died "for their sins." Yet, in the matter of dogmatic interpretation there is no evidence that they got beyond Peter's "God was with him." It was left to Paul setting all he knew (and it was not little) of the life and teaching, the character and personality, of Jesus, in the light of Christian experience, to draw the next of the widening circles, and include much that the previous interpretation had omitted. He proclaimed that at and through the Resurrection Jesus had been publicly instated as Son of God with power; and if the phrase has not wholly lost its official Messianic connotation, it certainly includes a reference to the personal Sonship, which Paul elsewhere makes clear by speaking of Him as God's "own Son" "the Son of his love."

It may not be possible to decide whether it was the primitive community or Paul himself, who first put full religious content into the title "Lord" as used of Christ. Probably it was the former. But the Apostle undoubtedly adopted the title in its full meaning, and did much to make that meaning clear by transferring to "the Lord Jesus Christ" many of the ideas and phrases which in the Old Testament had been specifically assigned to the Lord Jehovah. God "gave unto Him that name that is above every name—the name of 'Lord.'" At the same time by equating Christ with the Wisdom of God and with the Glory of God, as well as ascribing to Him Sonship in an absolute sense. Paul claimed for Jesus Christ a relation to God which was inherent and unique, ethical and personal, eternal. While, however, Paul in many ways and in many aspects, equated Christ with God, he definitely stopped short of speaking of him as "God." While the Hellenic world light-heartedly added to its pantheon one after another of its mystery-heroes or saviours of their country, the Christian Church was withheld by the conception of God which it inherited from Judaism, from giving this form of expression to its conviction regarding Jesus and its experience of the living Christ until at least the close of the first century. That final step in the interpretation of Jesus, is recorded, if it is recorded in the New Testament at all, in the Fourth Gospel; and it is not certain that we find it even there.

The Fourth Gospel.—We come lastly to the witness of the Fourth Gospel, placing it here not only because this Gospel is the latest of the documents relevant to our purpose, but because the writer, whoever he was, combines to a singular degree dependence on the teaching which we find in Paul with striking originality of his own. It is now generally understood that his work has much less the character of an historical record than of an interpretation of Jesus, an interpretation in the light of Christian experience and of the situation of the Church towards the end of the first century. That is not to say that "John" does not confirm, sometimes directly, sometimes indirectly, many parts of the story of Jesus which are familiar to us from the Synoptic Gospels. There are even matters on which he appears to have preserved a more trustworthy tradition than the Synoptic Gospels. But alike in the selection of the material and in the way in which it is handled the Evangelist is guided by the interpretation which has now been put upon Jesus and by his desire to commend that interpretation to men. His work is not best described as an allegory or as a series of allegories but as a series of transparencies, episodes, actions and teaching through which and behind which is seen not obscurely the glory of a Divine Being, who is the Life and the Light of men. This does not mean that the truly human nature of Jesus is either overlooked or obscured. Rather is it insisted on with emphasis; but it is treated as the vehicle for the self-revelation of the Logos which, having been in the beginning, and with God, and "divine," had entered human life and history as the Word "made flesh." It was this interpretation which took up into itself and fused into one all the factors predicated by Paul, but made a further advance upon Paul by relating the religious convictions of the Church concerning Jesus to the philosophical language and ideas of the time. But the identification of Jesus with the Logos was not tantamount to recognizing Him as "God." Neither the "Word of God" in Hebrew nomenclature nor the Logos in Greek speculation was "God," though it was definitely "divine." And it is not certain that even the words which Thomas addressed to Jesus (xx. 28) meant what they suggest in the English version. They may mean, "it is Jesus himself, and now I recognize him as Divine" (Burkitt). If so, the final step in the interpretation of Jesus, the recognition of his Deity belongs to the truth into which the Spirit has led the Church since the New Testament was complete. The New Testament enshrines a rich and variegated record of the experience and teaching of Jesus, of the impression on His followers into which these were translated, of the convictions to which the impression and their own experience of the living Christ gave rise. And if the intellectual conclusion drawn within the first century is most truly expressed by saying that the Church gave Jesus "the value of God," it is clear also that there was still something in the record waiting to be subsumed in a final interpretation, the fact that Jesus has given new values to God. If God were to appear upon earth to-day, the Christian world would expect him to be like Jesus.

BIBLIOGRAPHY.—Out of the vast mass of literature a small selection has been made of those works which combine scientific knowledge with religious insight. (*a*) Sources: H. G. Wood in *The Parting of the Ways* (1912); F. C. Burkitt, *The Gospel History and its Transmission*, 3rd ed. (1911); B. H. Streeter, *The Four Gospels* (1924). (*b*) History: W. THE RELIGIOUS AND HISTORICAL BACKGROUND[1]

The land in which Christianity arose has never been an isolated one, least of all in that age when, by common consent, a new era was inaugurated in human history. Indeed, Galilee itself, the home of its Founder, lay in close proximity to the Greek cities of the Decapolis; it was more susceptible to external influences than was Jerusalem, with its temple and its stricter Judaism, and well deserved its old name "Galilee of the Nations." Two great "positive" religions (*i.e.,* religions explicitly due to personal founders) had already firmly established themselves. Of these, Buddhism (*q.v.*) under King Asoka (3rd century B.C.), had sent its missionaries as far afield as Egypt and Cyrene; but its influence seems negligible, in marked contrast to its subsequent steady conquests in the Far East. On the other hand, the religion of Persia (*see* ZOROASTER), which has become weak in the East, was far more important in the West, and directly or indirectly exerted very considerable influence on the literature of Judaism and in Asia Minor. Between all these religions many striking parallels can, at one time or another, be found; but the difficulty of dating the sources frequently makes it impossible to determine on which side the debt, if any, really lies. Thus, certain Jewish doctrines (*e.g.,* the merits of the fathers), in the form in which they are preserved, may be due to a Jewish "counter-reformation" after the birth of Christianity.

A broad survey of the Roman world reveals a more or less continuous development from the Hellenistic age to the Byzantine age, in the middle of which the Hellenistic "detested superstition," as Tacitus styles Christianity, makes its appearance as an accomplished fact. The general religious situation over that large area—the centre of gravity of which may be said to have been Egypt—was exceedingly complex. We see Stoicism, Epicureanism and a variety of mystical cults. There are a number of outstanding figures—Posidonius of Apamea, Philo of Alexandria, Seneca, Marcus Aurelius, Hillel—to name only five. Egyptian and Anatolian cults moved Romewards, and great Baals (Jupiter of Doliche, Jupiter of Heliopolis-Baalbek), with the cult of the Persian Mithras, almost reached the Atlantic. At their gates the Jews had Graeco-Semitic cults of Zeus, Apollo and Dionysus, and a "good, bountiful and compassionate Baal of Heaven"; at Gaza was "Our Lord" (Marna), and at Askalon the "Face of Baal" (Phanebal). There were anticipations of some profound change from the famous Fourth Eclogue of Virgil to the varied Messianic and cataclysmic beliefs of the Jews, and changes ensued. In the 2nd century A.D. there was the recognition at Alexandria that a new era had begun with the new Gothic cycle (A.D. 139–143). In Syria, the amazing emperor Heliogabalus (*q.v.*) was one of other signs of an oriental revival of which, apart from Christianity, the Sasanian renascence is of considerable historical importance. (*See* PERSIA, *History.*) And in India, the Bhagavad Gita was henceforth to exercise the most powerful influence depicting a Krishna who, to many minds has seemed a worthy rival of the Christ who was conquering the West.

In Christianity itself the differing tendencies, sects and heresies, indicate the diversity of minds in whom the seeds of the new religion were producing growths most of which could not endure or be tolerated. (*See,* for a noteworthy example, SOLOMON [ODES].) "False" Messiahs, Essenes and Zealots, and especially John the Baptist, reflect in their turn significant movements. Hence if, to use a modern phrase, "reconstruction" was in the air, the fundamental facts are two: (*a*) the victory of Christianity and its progressive development amid the conditions of its age, and (*b*) the primary and impressive fact that "the stone which the builders rejected" became the foundation stone of a veritable new era (Acts iv. 11).

What was there in Jesus to achieve this result? The world has agreed to recognize sundry men of outstanding genius—Homer, Plato, Dante, Shakespeare. . . . Men of unequalled spiritual genius are to be found among the prophets, psalmists and writers of old Israel. Yet, possible though it might be to produce parallels or analogies for the several sayings and acts of Jesus, there is no record, no hint among the sages, seers and saints of his or any other age of any personality so rich as he in all that has won men's hearts. None the less, he did not stand quite alone; the story of the Gospels, set forth as it is on a relatively small canvas, its simplicity and directness, the ability of the writers to present their narratives and to interpret what Jesus meant for them—all this points to men, also uniquely gifted, and able to paint so vitalizing a picture because they stood so near to the mind of their Master. There was, in truth, a certain qualitative difference between Jesus and his first interpreters, on the one hand, and, on the other the various reformers and reforming or revolutionary movements of his age—*see* notably JOHN THE BAPTIST (Matt. xi. 11). A certain organic unity distinguishes the personality of Jesus as described in the Gospels, and this gave Christianity, from the first, a decisive individuality despite the striking points of contact between it, its background and other religions.

JESUS AS THE LAST OF THE PROPHETS

Some centuries earlier the religion of Israel had reached its high-water mark in the "Second Isaiah" (Is. xl. *sqq.*), and more especially in the idea of the "Servant of the Lord." To Christians it has always seemed natural to pass from the great figures of that earlier age (Jeremiah and the writers and actors in the Second Isaiah), to Jesus of Nazareth, and this earlier age, like that of Jesus, cannot be isolated from the more or less contemporary events in religion elsewhere. (*See* HEBREW RELIGION, sec. 9 end, 14 end.) Similarly, the rise of the first great prophets, Amos and Hosea (8th century B.C.), the "Mosaic" age (that of the "Amarna" period) and the age of Abraham (*c.* 1st Babylonian dynasty and 12th Egyptian dynasty) are part of far-reaching changes in history, religion and civilization. Indeed, with Eduard Meyer (*Gesch. des Altertums,* i. 1, secs. 592 *sqq.*) and George Foote Moore (*Hist. of Religions,* i. p. 8 *sqq.*), we may see earlier examples, *c.* 5000, and again *c.* 3000 (more recently confirmed by the discoveries at Ur) of a *simultaneity* which the latter has compared to geological epochs. Whatever be the true explanation of these striking facts, here are clearly-marked stages in man's increasing knowledge of himself and of the universe. There is a *continuity* to the rise of Christianity; a progressive development runs through the Old Testament (as interpreted by modern biblical criticism); it passes to the New and subsequently bases itself upon the Bible. This line of development stands in contrast to the religious history of lands and peoples which fall outside it; although the comparative study of religions finds a real relationship among the ideas and beliefs of all peoples, even the most rudimentary. But the development is no mechanical one. At certain periods the clash of conflicting ideas can be very clearly discerned, so that the progressive advance is evidently due to the victory of those tendencies and ideas which, for whatever reason, were most vital and pregnant.

Viewed in the light of the history of Palestine, Jesus is the last of the Hebrew prophets. (*See* HEBREW RELIGION, sec 21.) The inability of Judaism to accept him must, therefore, be contrasted with the remarkable reorganization of the religion of Israel through the prophets, at an age (before and in 6th cen. B.C.) when the old empires of Egypt, Assyria and Babylonia, lost or were losing their old creative power. It is also important to observe that the line of development is not narrowly Hebrew, or even Semitic. The influence of non-Semitic peoples upon Palestine can be traced or suspected from ancient times to the rise of Christianity; and this religion was not so distinctively oriental in the way that Hinduism, Buddhism, and Islam have been. Even

[1]This article considers the relation of Jesus to the religious and historical background of the period, and His place in the history of religions. For a discussion of the life and teaching of Jesus, as these may be gathered from the sources, *see* the preceding article.

Islam has been indebted in its progress to Greeks and to Persians in the East (*cf.* articles AVICENNA, FARABI, KINDI), and to intercourse with Spaniards in the West. The spirituality and the fertility of thought in the great non-Christian religions deserve a much more appreciative study than they have often received, but the differences in the *rate* and the *nature* of development among all the world's religions are not without significance. At all events, Christianity, utilizing Greek and Latin thought as it grew, has found itself obliged to face problems other and more intricate than those of oriental peoples. Judaism, too, though sharing the Old Testament with Christianity, and making important contributions to Western thought in and after the middle ages, has not been compelled to work out those questions, which, arising out of the whole Bible, have directly or indirectly spurred on and directed Western research. Christianity arose in a world which, in a sense, was being prepared for it. If the East had been Hellenized, the West was being orientalized. But it had to recharge, reshape, and revitalize current ideas and beliefs; and if it has progressed it is because it made an exceptionally heavy demand upon the intellectual no less than upon the moral and spiritual life of its adherents, and had to overcome powerful and well-equipped rival or hostile tendencies.

Everywhere men had been able to find in the universe, or within themselves—and in Indian thought the two are ultimately one—that which answered their needs and called forth their best. Osiris and Marduk were effective gods in Egypt and Babylonia; and in Krishna, it has been said, every Indian ideal, instinct and conviction found sanction and embodiment. Even among rudimentary religions the totems, ancestral deities and friendly spirits can be the mainstay of the social life. Throughout there are to be found fundamental resemblances. But the differences are no less fundamental, owing to the way in which the primary beliefs and ideas are shaped. There are typical needs and universal difficulties, but the closer the parallels the more significant do differences become—of this a careful comparison of treatment of the person of founders of religions affords many interesting examples. It was during the middle of the 1st millenium B C. that there arose religions addressing themselves to individuals; but Christianity differs from Zoroastrianism and Buddhism, and also from the religion of Mohammed, by its organic connection with its Jewish environment. It carried on and "fulfilled" the great essential ideas of the parent religion. Israel had been conscious of a peculiarly intimate personal relationship with its God. The majesty and might of the Deity meant both the insignificance of the individual, but also the glory and the mission of one who had such a God as his own. Great ideas were hammered out and tested through centuries of hard and strenuous history, and from the first Christianity felt that the religion of Israel had now reached its culminating point, and that the Israel of old was replaced by the Christian body, the body of Christ.

The efforts to preserve unchanged the teaching of a Founder or to develop its essential character can be followed in the history of religions. The rapid growth of legends and miracles, and the necessity for forming a "canonical" history can be seen most recently in the rise of Babiism (*q.v.*). Moreover, the extraordinary development of Buddhism from an ethical brotherhood to an elaborate religion is "a radical transformation . . . comparable to that which out of the religion of Jesus made Catholic Christianity" (G. F. Moore). It illustrates the effort to adapt a new religion to the most diverse needs. In this process the transition from the male Avalokiteshvara to Kwan-yin (Kwan-non) the "goddess of mercy," of the Far East, reflects the demand for Divine female attributes, even as in the Near East, the great mother-goddesses continued to survive in the Virgin Mother. To satisfy popular needs a religion has often moved away from the plain life and teaching of its Founder; and whereas Jesus himself repudiated the suggestion that he should prove his greatness by working marvels (*cf.* Mark viii. 11 *seq.*, also the Temptation), popular religion, by demanding tangible and physical proofs of his uniqueness (*e.g.*, the Virgin birth), diverted attention from that which really made him unique. But already, earlier, in Israel, the prohibition to put God to the test (Deut. vi. 16) had to contend with popular stories of the proofs and signs of Yahweh's might, or of his readiness or ability to fulfil his word. (*Cf.* Abraham, Gen. xv. 8; Moses, Ex. iii. *seq.*; Gideon, Judges vi.; Hezekiah, 2 Ki. xviii.)

Religions tend to undergo some weakening of their earlier spiritual value. (*Cf.* Christ as a wonder-worker, or as merely an ethical teacher, or a social reformer.) But from time to time there are demands for a return to what is felt to be fundamental and essential, and the "return" can be an "advance" with an enrichment of spiritual meaning. The fourth Gospel is a striking example of the way in which, a reinterpretation, after the lapse of some decades, has been felt to be so true that the four Gospels have seemed to be a single unit even as the whole book of Isaiah. The whole Old Testament and the whole Bible have been felt by many to be single organic units, and not the highly composite works that they are. On the other hand, the return to the past illustrated in the antiquarianism of Babylonia and of Egypt, and later of the Sassanian revival as unsuccessful and proves that an old system must be adjusted to later conditions if it is to endure.

THE ESSENTIAL NATURE OF RELIGION

Just as the common assumption that religion, in general, sprang from some *single* element (*e.g.*, fear, ghosts, sex, or magic), is disproved by the fact that early religion is essentially a practical, social, religious system, so the higher religions, in turn, are not based upon the utterances and acts of a single Founder, but are organic systematic bodies of ideas. With these the test of truth is not only the ordinary social effectiveness of the religion, but the value of the theological and philosophical developments which sooner or later are required among peoples at a higher stage of mental growth. The distinction which students of religion are obliged to draw between magic and religion reflects the fact that religious beliefs and practices are found to differ markedly in their social, ethical or logical value. But while any harmful social or ethical consequences (*e.g.*, human sacrifice) sooner or later do not fail to arouse the reformer, questions of intellectual value and the conflict between religious ideas and ordinary contemporary knowledge are much more obscure.

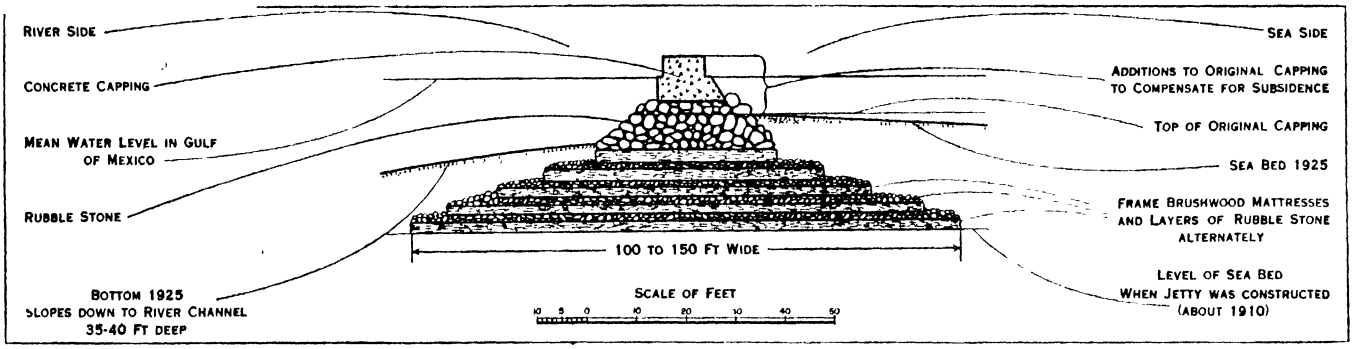
Religion typically implies certain ideas of the nature of man and the universe which are commonly of the utmost importance for man's knowledge of the world in which he lives. Both the pre-existence of Christ and his profound "cosmic" significance (*cf.* Rom. viii. 19 *sqq.*, Col. i.) are not without parallels as far back as the Pharaohs of Egypt. Gods were often believed to be immanent in nature or in natural processes; or the universe was something living; it was a man, as man in some sense partook of the essence of the universe. If the moralist would enjoin man to live in harmony with the order that rules in the universe, the mystic would feel his oneness with it, or the devotee might seek union with its God. The attempt to frame a "rational" description of the universe may perhaps be traced back to the noteworthy conception of a universal cosmic "order" (*rita*) under the guardianship of the ethical god Varuna. (*See* HEBREW RELIGION, sec. 4.) Later there was a differentiation, and while Zoroastrianism develops the idea of *ethical* order, also under an ethical god (Ahura-Mazda), a *naturalistic* treatment arose in the West in Ionia. Indian thought, on the other hand, emphasized the essential unreality of the world, and by a tremendous leap, identified the ultimate principle of the individual with that of the universe. Of course, men often enough were not, and are not, conscious of the real problems which religious experience brings. Religion might give a man all the knowledge of the universe that he wanted; it might also deprecate curiosity concerning God's handiwork. If intense religious experience made the world seem transitory and unreal, the decisive conviction of its reality subordinated all deeper religious enquiry to the current knowledge. When Christianity arose there was abundant speculation of a theological, philosophical, and pseudo-scientific character, and had the idea of Christ as an immanent cosmic principle been developed, there would have been, instead of a theology virtually a theory of the universe. (*Cf.* MANICHAEISM.)

Characteristic of the age were the catastrophic anticipations

and forebodings. A changed world was demanded, or was believed to be imminent. Overwhelming spiritual experiences imply or require a sphere other than that of earthly life. Religion demands a sphere of its own, or it makes one. Renunciation and seclusion from the world of active life were no novelty—Buddhism and Taoism had their monks; but religion is also dominating and imperialist, and the Old Testament illustrates the extremes of submission, passivity, and self-centredness, and the zeal of a religion proud of its strength and its efficiency and of its significance for the world at large. Christianity, like Judaism, accepted the world. God moulded history for Israel; "righteousness" and "salvation" had material implications even as "sin" meant misfortune and unhappy conditions, the fruit of men's wrongdoing. Christianity, like Judaism, was for active practical use; and the Jesus of the Gospels, the reverse of an ecstatic or unstable character even gives point to his teaching by utilizing examples of successful capacity (the parable of the Talents and of lack of preparation for war [Luke xiv. 31]). Neither the life after death (*cf.* the "psychic" body of 1 Cor. xv. 44), nor the conditions after an anticipated cataclysm could be regarded as entirely other than what earthly experience could suggest, even as the earlier Messianic expectations (in Is. xi. 4–6) are not of a sinless age, but of an age of absolute justice and peace.

Jesus follows in the line of Jeremiah's New Covenant and the Book of Deuteronomy in his appeal to the individual, whose worth he so wonderfully magnifies. In Jesus himself, his followers saw supreme "Divine Personality, and Perfect Man"; he was the ideal "Son of Man," and this co-existence of the perfectly divine and perfectly human lies at the centre of the new religion and of later theological development of the doctrine of the person of Jesus Christ. From the individual Jesus required complete faith and trust in God and the highest social ideals. The most spiritual type of life was that manifested in the simplest and humblest duties, and while the truest religion was to show itself in human activity, the individual who was true to humanity's highest ideals was in fact fulfilling the Law of Christ.

Now, the meaning of the example and teaching of Jesus, for the real nature of man and his environment was much more than a religious or a theological problem. Nor could philosophy solve it. Philosophy has always been a late comer in the history of human development. It follows upon the anthropomorphic and mythological explanation of things. It betokens an introspective and detached mind and a knowledge of the inner life for which Indian and Iranian religions afforded the earliest examples. But the Indo-Iranian peoples, like the Semites, had relatively little positive knowledge, and the Greeks, on the other hand, with all their acuteness and skill, had little real religious instinct. In this respect the more practical West and the more mystical East have always diverged. Philosophy wavered between an explanation of religious (spiritual, mystical) experience and a reasonable account of man and of the universe wherein he lived; and whereas there has grown up in the Western world an antithesis between "religion" and "science," the true antithesis is the more complex one, (1) between different qualities of religion (in their social and other value), and (2) between religious and related experience (the "numinous") and all that comes through the senses and may be called "non-religious."



The ideal of Christianity has been fullness of life. In being true to self, man has found the self to which to be true, and the supreme self-consciousness which distinguishes the religion of Israel finds its climax in renunciation as a step towards the fullest life. Men have to learn the one thing needful, and with the refusal of the rich man whom Jesus loved (Mark x. 21) contrast his own recognition of what was required of himself. The great refusals mean decay and death. In common with the prophets of Israel Jesus combines compassion and consolation, warning and grief for warning unheeded. From Amos and Hosea, onwards, there is a Divine Law as well as a Divine Love; and neither individuals nor nations can offend with impunity. Israel, the firstborn of Yahweh, suffers when she offends against the Divine Law, but Jesus the "only begotten" goes to his death fulfilling his destiny (*cf.* Mark viii., 31–33) and "fulfils" what the Israelite "servant of the Lord" had begun (Is. liii.). The whole process, as unfolded in the history of religion, has a more than religious significance, for the great religious ideas concern the very nature of the universe. There is an increasing consciousness of what the universe demands of men (*cf.* earlier, Micah vi. 8); and the vicissitudes of Christianity and other religions have been so shaped by spiritual needs, and by moral needs, and by mental or intellectual needs that religion itself represents something from which ethical and intellectual demands cannot be isolated. When the Founder of Christianity set up the ideal of a normal life wherein the religious and non-religious sides should be in harmonious relation, it followed that all that religion represents must be a normal and a natural part of man, and the "philosophy"—if that term be retained—which grows most naturally out of the personality of the Founder, must make explicit the ideal harmonious interrelation of spiritual, ethical and intellectual aspects of life and thought.

The old ego-centric conceptions of the universe, which modern knowledge of space and time has put in the background, find their explanation in man's consciousness of his essential unity with the universe or of his relation with its God. But the immense accumulation of facts concerning the universe as revealed to man by his senses is confronted by a no less impressive mass of data of religion and of religious and all related experience. The history of civilization proves that the religious and non-religious types of experience can never be lastingly severed, and the modern study of man's mental processes and world of thought is preparing the way for a better knowledge of the part played by religion, in particular by Christianity, in enabling man to understand his total environment.

Christianity, centring upon an ideally perfect Personality, has to shape men towards an increasingly fuller consciousness of the ultimate truths of God, man and the universe. Its career and the stages leading up to it can be placed, as has been seen, upon the background of history and religion But whilst the line of development can be clearly traced back, its future course cannot be easily foreshadowed. Christianity is based upon a single book, or rather a collection of books (*see* BIBLE) covering the centuries during which there were the profoundest developments of which we know, and upon which the Bible is the only direct source of knowledge. Entirely characteristic is the utterly uncompromising recognition that God is no respecter of persons or peoples, but that the Divine purpose in all its workings is not arbitrary. Certain awe-inspiring ideas of God and man were realized, and have proved capable of continuous reinterpretation; but the real significance of the great religious truths has yet to be restated in the light of modern knowledge. (S. A. C.)

JET, a substance which seems to be a peculiar kind of lignite or anthracite; often cut and polished for ornaments. (Fr. *jais,* Ger. *Gagat.*) The word "jet" probably comes, through O Fr. *jaiet,* (from the classical *gagates,* a word which was derived, according to Pliny, from Gagas, in Lycia, where jet, or a similar substance, was originally found). Jet was used in Britain in prehistoric times; many round barrows of the bronze age have yielded jet beads, buttons, rings, armlets and other ornaments. The abundance of jet in Britain is alluded to by Gaius Iulius Solinus (*fl.* 3rd century) and jet ornaments are found with Roman relics in Britain. Probably the supply was obtained from the coast of Yorkshire, especially near Whitby, where nodules of jet were formerly picked up on the shore. Caedmon refers to this jet, and at a later date it was used for rosary beads by the monks of Whitby Abbey.

The Whitby jet occurs in irregular masses, often of lenticular shape, embedded in hard shales known as jet-rock and belonging to that division of the Upper Lias which is termed the zone of *Ammonites serpentinus.* Microscopic examination of jet occasionally reveals the structure of coniferous wood, which A. C. Seward has shown to be araucarian. Probably masses of wood were brought down by a river, and drifted out to sea, where they sank and were buried in a deposit of fine mud which eventually hardened into shale. Under pressure, perhaps assisted by heat, and with exclusion of air, the wood suffered a peculiar kind of decom-

CROSS-SECTION OF JETTIES AT SOUTH-WEST PASS, MISSISSIPPI DELTA, AT FROM 1,000 TO 4,000 FT. FROM OUTER END

position, probably modified by the presence of salt water, as suggested by Percy E. Spielmann. Scales of fish and other fossils of the jet-rock are frequently impregnated with bituminous products, which may replace the original tissues. Drops of liquid bitumen occur in the cavities of some fossils, whilst inflammable gas is not uncommon in the jet-workings, and petroleum may be detected by its smell. Iron pyrites is often associated with the jet.

Formerly sufficient jet was found in loose pieces on the shore, set free by the disintegration of the cliffs, or washed up from a submarine source. When this supply became insufficient, the rock was attacked by the jet-workers; ultimately the workings took the form of true mines, levels being driven into the shales not only at their outcrop in the cliffs but in some of the inland dales of the Yorkshire moorlands, such as Eskdale. The best jet has a uniform black colour, and is hard, compact and homogeneous in texture, breaking with a conchoidal fracture. It must be tough enough to be readily carved or turned on the lathe, and sufficiently compact in texture to receive a high polish. The final polish was formerly given by means of rouge, which produces a beautiful velvety surface, but rotten-stone and lampblack are often employed instead. The softer kinds, not capable of being freely worked, are known as bastard jet. A soft jet is obtained from the estuarine series of the Lower Oolites of Yorkshire.

See P. E. Spielmann, "On the Origin of Jet," *Chemical News* (Dec. 14, 1906); C. Fox-Strangways, "The Jurassic Rocks of Britain, vol. i., Yorkshire," *Mem. Geol. Surv.* (1892); J. A. Bower, "Whitby Jet and its Manufacture," *Journ. Soc. Arts* (1874, vol. xxii. p. 80).

JETHRO, the priest of Midian, in the Bible, whose daughter Zipporah became the wife of Moses. He was a priest of Yahweh, and resided at the sacred mountain where the deity commissioned Moses to deliver the Israelites from Egypt. Subsequently Jethro came to Moses (probably at Kadesh), a great sacrificial feast was held, and the priest instructed Moses in legislative procedure. Jethro was invited to accompany the people into the promised land, and later, we find his clan settling in the south of Judah (Judg. i. 16); *see* KENITES.

JETSAM: *see* FLOTSAM, JETSAM AND LIGAN.

JETTY. The term jetty, derived from Fr. *jetée,* and therefore signifying something "thrown out," is applied to a variety of structures connected with river, dock and maritime works. Their forms and construction are as varied as their uses and the word jetty is, moreover, often applied to structures which are better described as breakwaters or piers. They are sometimes high open-work structures of timber, reinforced concrete, or steel and iron, braced together; sometimes they are low solid projections of rubble stone, concrete or masonry, and occasionally only differ from breakwaters in their object. The most common uses to which the term jetty should be applied are:—(1) The regulation of river channels where jetties are projected from the banks towards deep water. (2) Structures in continuation of river channels at their outlets into deep water, and at the entrances to harbours of lagoon type. (3) Projections from the sides of docks, or in tidal basins, harbours and rivers, alongside which ships may lie for discharging and taking in cargo. These are sometimes described as piers, particularly when of solid construction, and are commonly so called in North American ports. (4) Structures outside the entrances to docks forming the sides of and protecting a convenient approach channel, and (5) An outwork of timber or reinforced concrete piles framed together and protecting a pier, including bridge piers in navigable waters.

Jetties for Regulating Rivers.—Jetties intended to act as groynes are often extended at intervals from one or both banks of a river to contract a wide channel and, by concentration of the current, to produce a deepening of the central channel. Similarly jetties are sometimes projected from the concave bank of a river to check the erosion on that side. They are variously termed spurs, spur dikes or jetties, cross dikes and groynes, and are formed of timber or of mounds of rubble stone, or of combinations of these materials. Fascines and mattress work weighted and covered by rubble are also frequently employed. This system of river regulation occasions a greater scour abreast the ends of the groynes than in the intervening channels and consequently sometimes produces an irregular depth. Longitudinal training works are therefore preferred for the regulation of many rivers. The jetty system does, however, possess the advantage that the length of the groynes may be easily reduced or increased as experience of their effect on the channel shows to be advisable. Spur dikes have been employed in recent years in this way at the south-west pass of the Mississippi outlet. (*See* RIVER ENGINEERING.)

Jetties at Harbour Entrances.—Parallel or nearly parallel jetties are frequently constructed at the entrances to ports on sandy coasts, particularly those formed at the mouths of rivers and at the outlets of lagoons and land-locked bays obstructed by bars. (*See* HARBOURS.) The older jetties at such ports as Calais, Dunkirk and Ostend were usually formed of clay or rubble hearting covered on the top by fascine-work and stone pitching and held together by timber piles and bracing. The timber-work was carried high enough to form a platform above the level of the highest tides. The newer jetties at Dunkirk were founded on the sandy beach by sinking caissons by the aid of compressed air to a depth of 23ft. below low water spring-tides. A solid masonry structure was raised above the concrete foundations to about half-tide level and above that again an open timber-work superstructure was carried up to well above high water. Compressed-air sinking has been employed in forming the foundations of entrance jetties at other French ports as, for instance, at Boulogne, where a new jetty 1740ft. long on the north side of the channel to the inner harbour was built between 1913–27. The channel depth is about 17ft. at low-water, but the jetty is designed for a future depth of at least 20ft. at low-water spring tides. In this case the open superstructure of the jetty above the solid masonry work is of reinforced concrete.

The jetties at the entrances to the Venetian lagoon at Lido and Malamocco (*see* HARBOURS) are of rubble stone surmounted by a small masonry superstructure brought up above water level. Those at the Charleston (S.C.) harbour entrance were originally built of fascine mattresses weighted with stone, but are now formed entirely of rubble. The converging jetties carried out from each shore of Dublin bay for deepening the approach to the river Liffey and Dublin harbour are also of rubble.

Jetties at the Outlets of Tideless Rivers.—Jetties have been constructed at the outlets of many rivers flowing into tideless (or nearly tideless) seas as at Swinemünde, on the Baltic,

and Tampico in the gulf of Mexico, with the objects of prolonging the scour of the river and protecting the channel from being shoaled by littoral drift. The most interesting application of parallel jetties is in connection with the mouths of deltaic rivers flowing into tideless seas. In such cases the construction of jetties, by a virtual prolongation of the river banks, extends the scour of the river out to the bar. Jetties prolonging the Sulina branch of the Danube into the Black sea, and the south and south-west passes of the Mississippi into the Gulf of Mexico (fig. 1) have concentrated the discharge of these rivers so as to scour the bars obstructing the access to them and have effected considerable increase in depth in the navigable channels The sediment-bearing waters are moreover carried by this concentration of discharge sufficiently far out to come under the influence of littoral currents, which by conveying away some of the sediment, postpone the eventual formation of a fresh bar further out. It is, however, very seldom that jetties alone suffice to secure the maintenance of a sufficient depth of water for modern requirements, and recourse has been had to intensive suction dredging both at Sulina and the Mississippi passes. (*See* RIVER ENGINEERING.)

Jetties at the Mouths of Tidal Rivers.—Rivers whose discharge is generally feeble and which debouch on an exposed coast subject to littoral drift are liable to have their outlets blocked during severe storms. This is specially the case when the river is narrow near its mouth and the tidal range is small. Sea action piles up sand and shingle to the obstruction of the outlet and the river is thus forced to seek another exit at a weak spot of the beach which, along a low coast, may be some distance off. The new outlet in its turn may be blocked up, so that the river from time to time shifts the position of its mouth. This inconvenient cycle of changes may be stopped by fixing the outlet of the river at a suitable site, by carrying a jetty on each side of this outlet across the beach, thereby concentrating its discharge in a definite channel and protecting the mouth from being blocked up by littoral drift. This system was long ago applied to the shifting outlet of the river Yare to the south of Yarmouth. Later it was successfully employed for fixing the wandering mouth of the Adur near Shoreham, and of the Adour flowing into the bay of Biscay below Bayonne. Timber-piled jetties filled with rubble stone have often been employed in such cases.

When the new channel was cut across the Hook of Holland to provide a straighter and deeper outlet channel for the river Maas, forming the approach channel to Rotterdam, jetties formed of fascine mattresses weighted with stone were carried across the foreshore on either side of the cut to protect the channel from littoral drift and confine the discharge of the river. (*See* HARBOURS and RIVER ENGINEERING.)

Jetties in Docks, Rivers, etc.—Openwork timber or reinforced concrete jetties are often constructed in docks (*q.v.*) with sloping sides, being carried across the slope so that vessels may lie alongside them in deep water. Similar structures are also employed in open basins, harbours and rivers as well as in docks for supporting coal-loading tips and hoists, and for berthing vessels carrying oil in bulk. Continuous quayage is not essential in these cases and for oil berths nothing more is required than adequate dolphin and fendering structures (against which vessels may lie) and comparatively light structures connecting with the shore for carrying the necessary pipes, etc., for loading and discharging the oil. (*See* plans of Colombo and other harbours in HARBOURS.) Examples of reinforced concrete jetties carrying coal hoists will be found among the illustrations in the article DOCKS. Long and wide structures projected from the sides of docks and basins, designed for berthing vessels on either side, are virtually continuous wharves or quays and are more properly called piers. A convenient distinction is to restrict the term jetty, as applied to berthing, to those structures intended for berthing ships across their ends or in front of a T-shaped head and to openwork island structures only connected with the shore by bridges or approach viaducts. Long openwork structures thrown out into a river and curving round so as to provide shipping berths more or less parallel with the river bank, such as the Tilbury river jetty and the coal-staiths at Dunston on the Tyne and at Blyth, are correctly termed jetties. Jetties of open steel and iron construction are also used, both for cargo and passenger traffic, particularly in tropical ports (*see* DOCKS).

Jetties at Dock Entrances.—Jetties of pilework and occasionally of solid character are constructed outside the entrances to docks on each side of the channel from the river or sea approach so as to form a funnel-shaped passage leading to the lock entrance. These jetties serve to guide vessels entering or leaving the docks, to protect them from the effect of tidal or river currents and, in some cases, as convenient lay-bys where a vessel may, if necessary, tie up when waiting for the gates to be opened. The entrance jetties at Avonmouth are solid constructions, founded on concrete monoliths, with timber face work; those at the King George V. dock, London, and at Immingham are of open timber work. Timber-piled jetties filled in with rubble stone are also employed, as at Swansea. In this instance they serve as minor breakwaters sheltering the entrance to the river and docks and prevent, to some extent, sand from entering the dredged channel.

Jetties Alongside Piers, etc.—Timber and, in recent times, reinforced concrete jetties are frequently employed as adjuncts to breakwater and pier structures, serving as landing places and for other purposes, as for instance oil-bunkering and watering. The word jetty is also used to describe a timber fendering structure or outwork constructed in connection with swing and other bridges in navigable waters to protect the bridge piers from damage by vessels passing through the navigation openings.

(N. G. G.)

JEVER, a town of Germany, in the republic of Oldenburg, 13 m. by rail N W. of Wilhelmshaven, and connected with the North sea by a navigable canal. Pop. (1925) 6,042 The castle of Jever was built by Prince Edo Wiemken (d. 1410), the ruler of Jeverland, a populous district which in 1575 came under the rule of the dukes of Oldenburg. In 1603 it passed to the house of Anhalt and was later the property of the empress Catherine II. of Russia, a member of this family. In 1814 it came again into the possession of Oldenburg. The chief industries are spinning, dairying, brewing and milling; there is also a trade in cattle.

JEVONS, WILLIAM STANLEY (1835–1882), English economist and logician, was born at Liverpool on Sept. 1, 1835. His father, Thomas Jevons, a man of strong scientific tastes and a writer on legal and economic subjects, was an iron merchant. His mother was the daughter of William Roscoe. He was educated at University college school and University college, London. In 1853 he was appointed assayer to the new mint in Australia. He left England for Sydney in June 1854, and remained there for five years. In the autumn of 1859 he returned to University college, London, proceeding in due course to the B.A. and M.A. degrees of the University of London. Although he now gave his principal attention to the moral sciences, his interest in natural science continued throughout his life, and his intimate knowledge of the physical sciences contributed to the success of his chief logical work, *The Principles of Science.* In 1866 he was elected professor of logic and mental and moral philosophy and Cobden professor of political economy in Owens college. Next year he married Harriet Ann Taylor, whose father had been the founder and proprietor of the *Manchester Guardian.* Jevons, who suffered from ill health, found the delivery of lectures covering so wide a range of subjects burdensome, and in 1876 he was glad to exchange the Owens professorship for the professorship of political economy in University college, London. He found his professorial duties irksome, and in 1880 he resigned. On Aug. 13, 1882, he was drowned whilst bathing near Hastings.

Jevons arrived quite early in his career at the doctrines that constituted his most characteristic and original contributions to economics and logic. The theory of utility, which became the keynote of his general theory of political economy, was practically formulated in a letter written in 1860; and the germ of his logical principles of the substitution of similars may be found in the view which he propounded in another letter written in 1861, that "philosophy would be found to consist solely in pointing

out the likeness of things." The theory of utility above referred to, namely, that the degree of utility of a commodity is some continuous mathematical function of the quantity of the commodity available, together with the implied doctrine that economics is essentially a mathematical science, took more definite form in a paper on "A General Mathematical Theory of Political Economy," written for the British Association in 1862. This paper does not appear to have attracted much attention either in 1862 or on its publication four years later in the *Journal of the Statistical Society;* and it was not till 1871, when the *Theory of Political Economy* appeared, that Jevons set forth his doctrines in a fully developed form. After the publication of this work Jevons became acquainted with the applications of mathematics to political economy made by earlier writers, notably A. A. Cournot and H. H. Gossen. The theory of utility was about 1870 being independently developed on somewhat similar lines by Carl Menger in Austria and M. E. L. Walras in Switzerland. As regards the discovery of the connection between value in exchange and final (or marginal) utility, the priority belongs to Gossen, but this in no way detracts from the great importance of the service which Jevons rendered to English economics by his fresh discovery of the principle. In his reaction from the prevailing view he sometimes expressed himself without due qualification: the declaration, for instance, made at the commencement of the *Theory of Political Economy,* that "value depends entirely upon utility," lent itself to misinterpretation.

It was not, however, as a theorist dealing with the fundamental data of economic science, but as a brilliant writer on practical economic questions, that Jevons first received general recognition. *A Serious Fall in the Value of Gold* (1863) and *The Coal Question* (1865) placed him in the front rank as a writer on applied economics and statistics; and he would be remembered as one of the leading economists of the 19th century even had his *Theory of Political Economy* never been written. Amongst his economic works may be mentioned *Money and the Mechanism of Exchange* (1875), a *Primer on Political Economy* (1878), *The State in Relation to Labour* (1882), and two posthumous works, *Methods of Social Reform* and *Investigations in Currency and Finance.* The last-named volume contains Jevons's speculations on the connection between commercial crises and sun-spots. He was engaged at the time of his death upon the preparation of a large treatise on economics; this fragment was published in 1905 under the title of *The Principles of Economics: a Fragment of a Treatise on the Industrial Mechanism of Society, and other Papers.*

Jevons's work in logic went on *pari passu* with his work in political economy. In 1864 he published a small volume, entitled *Pure Logic; or, the Logic of Quality apart from Quantity,* which was based on Boole's system of logic, but freed from what he considered the false mathematical dress of that system. In the years immediately following he constructed a logical machine, exhibited before the Royal Society in 1870, by means of which the conclusion derivable from any given set of premisses could be mechanically obtained. In 1866 what he regarded as the great and universal principle of all reasoning dawned upon him; and in 1869 he published a sketch of this fundamental doctrine under the title of *The Substitution of Similars.* He expressed the principle in its simplest form as follows: "Whatever is true of a thing is true of its like," and he worked out in detail its various applications. In the following year appeared the *Elementary Lessons on Logic.* In the meantime he was engaged upon a much more important logical treatise, which appeared in 1874 under the title of *The Principles of Science.* In this work Jevons embodied the substance of his earlier works on pure logic and the substitution of similars; he also enunciated and developed the view that induction is simply inverse deduction; he treated in a luminous manner the general theory of probability, and the relation between probability and induction; and his knowledge of the various natural sciences enabled him throughout to relieve the abstract character of logical doctrine by concrete scientific illustrations. Jevons's general theory of induction was a revival of the theory laid down by Whewell and criticized by Mill; but it was put in a new form, and was free from some of the non-essential adjuncts which rendered Whewell's exposition open to attack. The work as a whole was one of the most notable contributions to logical doctrine that appeared in Great Britain in the 19th century. His *Studies in Deductive Logic,* consisting mainly of exercises and problems for the use of students, was published in 1880. Jevons's strength lay in his power as an original thinker; and he will be remembered by his constructive work as logician, economist and statistician.

See *Letters and Journal of W. Stanley Jevons,* edit. by his wife (1886). This work contains a bibliography of Jevons's writings. *See* also LOGIC: *History.*

JEW, THE WANDERING, a legendary Jew (*see* JEWS) doomed to wander till the second coming of Christ because he taunted Jesus as He passed bearing the cross, saying, "Go quicker." Jesus replied, "I go, but thou shalt wait till I return." This legend first appeared in a pamphlet alleged to have been printed at Leyden in 1602. This pamphlet relates that Paulus von Eizen (d. 1598), bishop of Schleswig, had met at Hamburg in 1542 a Jew named Ahasuerus, who declared he was "eternal" and was the same who had been thus punished by Jesus. The pamphlet is supposed to have been written by Chrysostomus Dudulaeus of Westphalia and printed by one Christoff Crutzer, but as no such author or printer is known—the latter name indeed refers directly to the legend—it has been conjectured that the whole story is a Protestant myth.

The story met with ready acceptance. Eight editions of the pamphlet appeared in 1602, and the 40th edition before 1700. It was translated into Dutch and Flemish with immense success. The first French edition appeared in 1609, and the story was known in England before 1625, when a parody was produced. Denmark and Sweden followed suit, and the expression "eternal Jew" passed into Czech. Thus the story in its usual form spread wherever there was a tincture of Protestantism. In southern Europe little is heard of it in this version, though Rudolph Botoreus, parliamentary advocate of Paris (*Comm. histor.,* 1604), speaks contemptuously of the popular belief in the Wandering Jew in Germany, Spain and Italy.

The popularity of the pamphlet soon led to reports of the appearance of this mysterious being almost everywhere. Besides the original meeting of the bishop and Ahasuerus, the Wandering Jew was stated to have appeared at Prague (1602), at Lübeck (1603), in Bavaria (1604), Brussels (1640), Paris (1644, by the "Turkish Spy"), Stamford (1658), and Astrakhan (1672). In the next century he was seen at Munich (1721), Brussels (1774), Newcastle (1790, *see* Brand, *Pop. Antiquities, s v.*), and in London between 1818 and 1830 (see *Athenaeum,* 1866, ii. 561). The latest report of his appearance was near Salt Lake City in 1868, when he is said to have made himself known to a Mormon named O'Grady. It is difficult to tell in any one of these cases how far the story is an entire fiction and how far an ingenious imposture.

In most Teutonic languages the stress is laid on the perpetual character of the punishment and the man is known as the "eternal" Jew (Ger. *ewige Jude*). In Romance lands the usual form has reference to the wanderings (Fr. *le Juif errant*). The English form follows the Romance, possibly because derived from France. The actual name given to the mysterious Jew varies in the different versions: the original pamphlet calls him Ahasver, a name most inappropriately borrowed from the Book of Esther. In one of his appearances at Brussels his name is given as Isaac Laquedem—bad Hebrew for "Isaac of old"—and Dumas made use of this title. In the *Turkish Spy* he is called Paul Marrane, from the Marranos or secret Jews of Spain. In the few references to the legend in Spanish writings the Wandering Jew is called Juan Espera en Dios, which gives a more hopeful turn to the legend Eugène Sue calls him Ahasvérus.

Under other names, a story very similar to that of the pamphlet of 1602 occurs nearly 400 years earlier on English soil. According to Roger of Wendover in his *Flores historiarum* for 1228, an Armenian archbishop, then visiting England, was asked by the monks of St. Albans about Joseph of Arimathaea, who had spoken to Jesus and was said to be still alive. The archbishop claimed to have seen him in Armenia under the name of Carthaphilus, who

had confessed that he had taunted Jesus. This Carthaphilus had afterwards been baptized by the name of Joseph. Matthew Paris, in copying Wendover, reported that other Armenians had confirmed the story on visiting St. Albans in 1252. A similar account is given in the chronicles of Philippe Mouskès (d. 1243). A variant was known to Guido Bonati, an astronomer quoted by Dante (*Inferno*, xx. 118), who calls his hero Butta Deus because he struck Jesus. Under this name he is said to have appeared at Mugello in 1413 and at Bologna in 1415.

SOURCE OF THE LEGEND

The source of all these reports is probably Matthew xvi. 28. These words indeed are quoted in the pamphlet of 1602. Again, a legend was based on John xxi. 20; while another legend (current in the 16th century) condemned Malchus, whose ear Peter cut off (John xvii. 10), to wander perpetually till the second coming for scoffing at Jesus. These legends and the utterance of Matt. xvi. 28 were "contaminated" with the legend of Joseph of Arimathaea and the Holy Grail, and took the form given in Wendover and Matthew Paris. But there is nothing to show the spread of this story among the people before the pamphlet of 1602, and it is difficult to see how this Carthaphilus could have given rise to the legend of the Wandering Jew, since he is not a Jew nor does he wander. The author of 1602 was probably acquainted with the story as given by Matthew Paris, since he gives almost the same account. But he gives a new name to his hero and directly connects his fate with Matt. xvi. 28.

The combination of eternal punishment with restless wandering has attracted the imagination of writers in almost all European tongues. The German Romantic poets have been especially attracted by the legend, which has been made the subject of poems by Schubart, Schreiber, W. Müller, Lenau, Chamisso, Schlegel, Mosen and Koehler. They were perhaps influenced by the example of Goethe, who in his *Autobiography* describes the plan of a poem he had designed on the Wandering Jew. More recently poems have been composed on the subject in German by Wilbrandt, Lienhard and others; in English by Robert Buchanan, and in Dutch by Heijermans. German novels also exist on the subject, by Franz Horn, Oeklers, Laun and Schucking, tragedies by Klinemann, Haushofer and Zedlitz. Sigismund Heller wrote three cantos on the wanderings of Ahasuerus, while Hans Andersen made of him an "Angel of Doubt." In France, E. Quinet published a prose epic on the subject in 1833, and Eugène Sue, in his best-known work, *Le Juif errant* (1844), associates the Jew with the legend of Herodias. In modern times the subject has been made still more popular by Gustave Doré's designs (1856), containing some of his most striking and imaginative work. This probably suggested Grenier's poem on the subject (1857).

In England, besides the ballads in Percy's *Reliques*, Godwin introduced the idea of an eternal witness of the course of civilization in his *St. Leon* (1799), and Shelley introduces Ahasuerus in *Queen Mab*. It is doubtful how far Swift derived his Struldbrugs from the notion of the Wandering Jew. George Croly's *Salathiel* (1828) gave a highly elaborate turn to the legend; this has been republished under the title *Tarry Thou Till I Come*.

Prost, *Die Sage vom ewigen Juden in der neueren deutschen Literatur* (1905); T. Kappstein, *Ahasver in der Weltpoesie* (1905). (J. JA.; E. E. K.)

JEWEL, JOHN (1522–1571), English divine, bishop of Salisbury, son of John Jewel of Buden, Devonshire, was born on May 24, 1522, and educated at Merton college, Oxford. He became a fellow (1542) of Corpus Christi, made some mark as a teacher, and was after 1547 one of the chief disciples of Peter Martyr. He became public orator of the university, in which capacity he composed a congratulatory epistle to Mary on her accession. In 1554 he acted as notary to Cranmer and Ridley at their disputation, but in the autumn he signed a series of Catholic articles. He was, nevertheless, suspected, fled to London, and thence to Frankfort, where he sided with Coxe against Knox. He soon joined Martyr at Strasbourg, accompanied him to Zurich, and then paid a visit to Padua.

Under Elizabeth's succession he returned to England, and tried to secure what would now be called a low-church settlement of religion. Indeed, his attitude was hardly distinguishable from that of the Elizabethan Puritans, but he gradually modified it under the stress of office and responsibility. He was one of the disputants selected to confute the Romanists at the conference of Westminster after Easter 1559; he was select preacher at St. Paul's Cross on June 15, and in the autumn was engaged as one of the royal visitors of the western counties. In 1560 he became bishop of Salisbury.

Jewel now constituted himself the literary apologist of the Elizabethan settlement. He had on Nov. 26, 1559, in a sermon at St. Paul's Cross, challenged all comers to prove the Roman case out of the Scriptures, or the councils or Fathers for the first six hundred years after Christ. He repeated his challenge in 1560, and Dr. Henry Cole took it up. The chief result was Jewel's *Apologia ecclesiae Anglicanae* (1562), which in Bishop Creighton's words is "the first methodical statement of the position of the Church of England against the Church of Rome, and forms the groundwork of all subsequent controversy." Thomas Harding, an Oxford contemporary whom Jewel had deprived of his prebend in Salisbury Cathedral for recusancy, published an elaborate and bitter *Answer* in 1564, to which Jewel issued a *Reply* in 1565. Harding followed with a *Confutation*, and Jewel with a *Defence*, of the *Apology* in 1566 and 1567; the combatants ranged over the whole field of the Anglo-Roman controversy, and Jewel's theology was officially enjoined upon the Church by Archbishop Bancroft in the reign of James I. He was consulted by the government on such questions as England's attitude towards the council of Trent, and political considerations made him more and more hostile to Puritan demands with which he had previously sympathized. He wrote an attack on Cartwright, which was published after his death by Whitgift. He died on Sept. 23, 1571, and was buried in Salisbury Cathedral.

Jewel's works were published in a folio in 1609 under the direction of Bancroft who ordered the *Apology* to be placed in churches, in some of which it may still be seen chained to the lectern; other editions appeared at Oxford (1848, 8 vols.) and Cambridge (Parker Soc., 4 vols.). *See* also Gough's *Index to Parker Soc. Publ*; Strype's *Works* (General Index); *Acts of the Privy Council; Calendars of Domestic and Spanish State Papers;* Dixon's and Frere's *Church Histories;* and *Dict. of Nat. Biography.*

JEWELLERY, a collective term for jewels, and so for the art of making them (O.F. *jouel*). Jewels are personal ornaments made of precious metals and precious stones, alone or combined. One type of jewel, including clasps and brooches of all kinds, arises from the decorative elaboration of a practical object; another type, of which pendants are an example, is derived from the primitive practice of wearing such objects as the teeth of wild animals, shells, or stones of strange colour or shape, hung round the neck with magical intent. Other jewels, such as earrings and bracelets, appear to be purely decorative in origin.

The origins of jewellery are lost in the mists of antiquity. The practice of wearing objects round the neck dates from the stone age, and gold was worked to make jewels before the use of bronze was known. For recent discoveries of jewels at Ur, *see* ASIA: *Archaeology;* for an account of Egyptian jewellery, *see* EGYPT: *Ancient Art and Archaeology;* for Greek and Roman jewels, *see* SILVERSMITHS' AND GOLDSMITHS' WORK.

HISTORY OF EUROPEAN JEWELLERY

The Empire of Rome, which had extended to the Rhine, the Danube and the Scottish frontier, and the trade of Rome, which had passed beyond these limits through Bohemia to the northern countries, left behind them a tradition so strong that it long outlived the Roman empire itself. In all this region the form, technique and decoration of jewels were influenced by Roman usage. The use of gold filigree remained general; and the varied Roman fibula forms became the basis of yet more complicated brooches. The most important development was in the use of

had confessed that he had taunted Jesus. This Carthaphilus had afterwards been baptized by the name of Joseph. Matthew Paris, in copying Wendover, reported that other Armenians had confirmed the story on visiting St. Albans in 1252. A similar account is given in the chronicles of Philippe Mouskès (d. 1243). A variant was known to Guido Bonati, an astronomer quoted by Dante (*Inferno*, xx. 118), who calls his hero Butta Deus because he struck Jesus. Under this name he is said to have appeared at Mugello in 1413 and at Bologna in 1415.

SOURCE OF THE LEGEND

The source of all these reports is probably Matthew xvi. 28. These words indeed are quoted in the pamphlet of 1602. Again, a legend was based on John xxi. 20; while another legend (current in the 16th century) condemned Malchus, whose ear Peter cut off (John xvii. 10), to wander perpetually till the second coming for scoffing at Jesus. These legends and the utterance of Matt. xvi. 28 were "contaminated" with the legend of Joseph of Arimathaea and the Holy Grail, and took the form given in Wendover and Matthew Paris. But there is nothing to show the spread of this story among the people before the pamphlet of 1602, and it is difficult to see how this Carthaphilus could have given rise to the legend of the Wandering Jew, since he is not a Jew nor does he wander. The author of 1602 was probably acquainted with the story as given by Matthew Paris, since he gives almost the same account. But he gives a new name to his hero and directly connects his fate with Matt. xvi. 28.

The combination of eternal punishment with restless wandering has attracted the imagination of writers in almost all European tongues. The German Romantic poets have been especially attracted by the legend, which has been made the subject of poems by Schubart, Schreiber, W. Müller, Lenau, Chamisso, Schlegel, Mosen and Koehler. In all this region the form, technique and decoration of jewels were influenced by Roman usage. The use of gold filigree remained general; and the varied Roman fibula forms became the basis of yet more complicated brooches. The most important development was in the use of

EARLY ANGLO-SAXON, CELTIC AND SCANDINAVIAN JEWELLERY

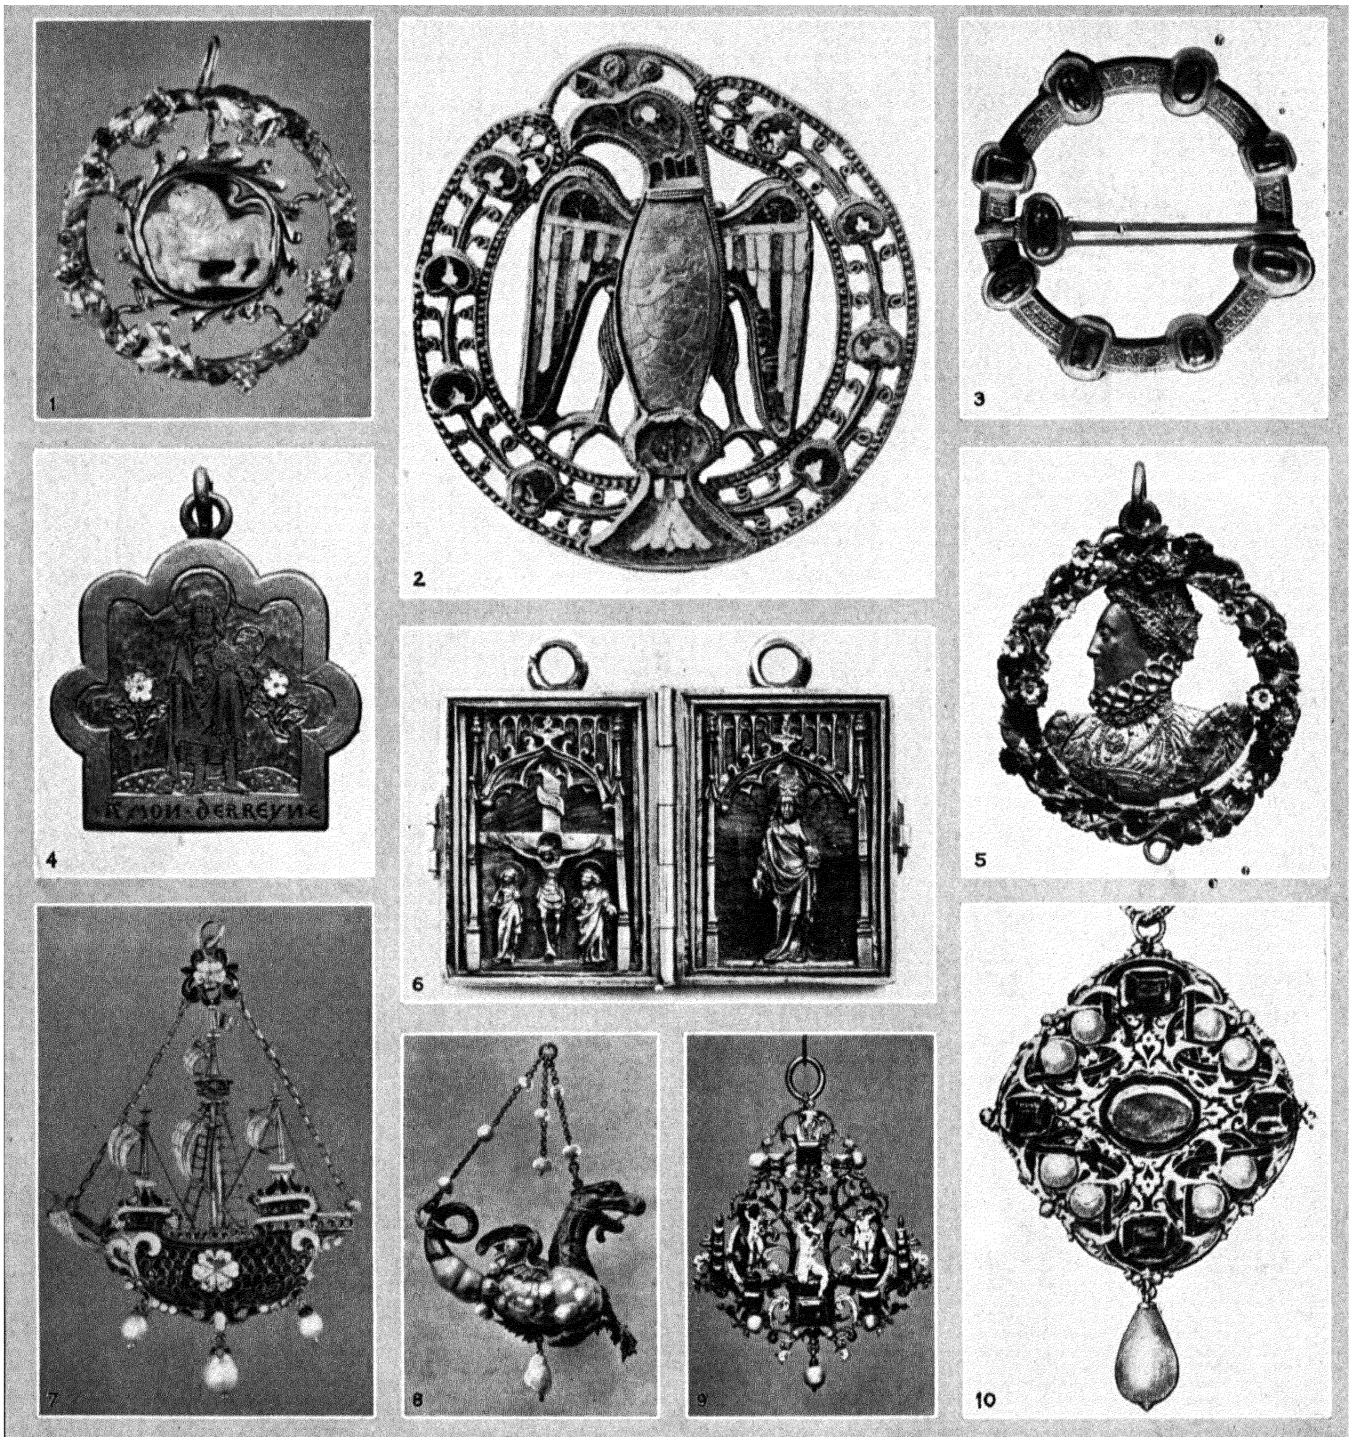
1 and 3. The Alfred Jewel, of gold, found in 1693 at Newton Park, three miles from the isle of Athelney. Fig. 1. shows the front set with a plaque of cloisonné enamel held in place by a gold fret of the letters AELFRED MEC HEHT GEWYRCAN (Alfred ordered me to be made). Fig. 3 shows the engraved back

2. Seventh century buckle from Faversham, set with garnets and decorated with gold filigree

4. Kentish brooch of the 7th century, set with garnets and pastes and decorated with gold filigree

5. Silver filigree brooch of the 9th century from the province of Scania, Sweden

6. Gold engraved and nielloed ring of Aethelwulf, King of Wessex; inscribed Ethelvulfr: second quarter of the 9th century. This ring was found at Laverstock near Salisbury in A.D. 1780



7. Saxon cross of the 7th century, made of gold and set with garnets, found at Ixworth

8. Kentish brooch of the 6th century, set with garnets and meerschaum, and decorated with gold filigree

9. Celtic penannular brooch of silver of the early 10th century

10. Gold bracteate of the 7th century from Faversham

JEWELLERY

BROOCHES AND PENDANTS OF THE MIDDLE AGES AND THE RENAISSANCE

1. Brooch of gold set with a cameo. French, 14th century
2. "The Eagle Brooch," about 1120, of gold decorated with cloisonné enamel in translucent green and blue, turquoise, white and yellow
3. Ring brooch of gold, engraved and set with rubies and sapphires. French or English, late 13th century
4. Reliquary pendant of gold; the side shown is engraved with figure of St. John and the inscription *A mon derreyne*, the opposite side with the figure of a bishop. Both figures are between flowers of white enamel. English of about 1480
5. The "Phoenix" jewel; a bust of Queen Elizabeth cut from the Phoenix badge of 1574, mounted in a wreath of red and white roses of enamelled gold
6. "Tablet" of silver gilt, enamelled, with the scene of the crucifixion and the figure of the Virgin in relief. French or Rhenish, early 15th century
7. Enamelled pendant in the form of a ship. Italian, 16th century
8. Dragon-shaped pendant of gold, enamelled and set with baroque pearls. German, about 1570
9. Pendant of gold, enamelled and set with jewels, representing Hercules upholding the world in the garden of the Hesperides. South German, end of the 16th century
10. Design for a pendant of enamelled and jewelled gold, by Hans Holbein. About 1540

thin slices of garnet set like enamel in metal cells (Plate A 2, 4, 7, 8), a technique ultimately derived from Egypt and probably transmitted through the Crimea. It is represented in the great 4th-century treasure found at Petrossa, 60 m. from Bucharest, and appears to have been in use nearly all over Europe between the 3rd and 8th centuries A.D. At the same time under Byzantine influence cloisonné enamel (*see* ENAMEL) was used for exceptional pieces, such as the famous Alfred jewel (Plate A, 1–3). This common tradition, however, was modified by each of the great European tribes into a style characteristic both in design and technique. Thanks to the general custom of burying their jewels with the dead these types of jewellery are well represented in European museums.

Ostrogothic Jewellery.—In Italy classical influence was strong, but the Ostrogoths developed the type of the Roman radiated fibula into brooches of great magnificence, and combined the Byzantine interlaced style with the northern style of animal decoration, to produce a type of ornament that was to be yet more fully developed in Scandinavia.

Visigothic.—The Visigoths used cloisonné work set with garnets or pastes, combined with pearls and cabochon gems set in fretted gold. The most splendid surviving Visigothic jewels are the crowns dedicated by Kings Svinthila (621–623) and Recceswinthus (649–672), now in the Musée de Cluny, Paris, and the Real Armería, Madrid.

Frankish.—The Franks practised a more Germanic style, but with their settlement of Gaul came under the influence of the Gaulish classical tradition. Their characteristic forms are rosette or circular brooches, generally decorated with filigree, brooches shaped as birds, and buckles of heavy rectangular form. They also developed the Roman type of radiated fibula with oval foot and square or semicircular headplate (a type which was also used with a lozenge foot in the Rhineland), and occasionally used the classical fish and horse forms of brooch. The goldsmiths of the Belgian provinces practised a "chip carving" style of design, that was common over a wide area in the 5th century but was later characteristic of Scandinavia.

Scandinavian.—Scandinavia developed the common types along complex lines and produced fibulae of great size and elaboration. In the 5th century Sweden was the end of a Byzantine trade route, but after this period classical influences are very slight. The Swedish "bracteates," circular pendants of thin gold, are at first imitated from Roman medallions of the time of Constantine, but in the 5th century the local style of animal ornament supersedes this, and when coins are imitated they are Anglo-Saxon sceattas.

In Norway, too, fibula types of the 4th, 5th and early 6th centuries are derived from Roman or Crimean Gothic originals but after about 550 the types become national. The Scandinavian "tortoise" and trefoil brooches are entirely characteristic; the former date from the 7th to the early 11th century, while the latter are characteristic of the 9th and 10th centuries. These and cognate circular brooches (Plate I., fig. 5) are generally decorated with symmetrical designs of considerable beauty. The relations between Scandinavia and Ireland in the 8th and 9th centuries brought in the type of penannular brooch which in its attenuated northern form is characteristic of the Viking age.

English.—In England types from many of these areas were received and modified. The Continental type of gold filigree and garnet work was introduced by the Jutish settlements of Kent, the Isle of Wight and part of Hampshire (Pl. I., figs. 2, 4, 8). In Sussex, Surrey, Berks and Oxon "saucer" fibulae of a type found in the Hanover district are fairly common, while north of the Thames complex Scandinavian types are general. With the introduction of Christianity such forms as pendant crosses (Pl. I., fig. 7) come in, and Carolingian and Byzantine influence is evident.

Celtic.—Ireland, and in a lesser degree Scotland, had types of their own, of which the most interesting and characteristic is the penannular brooch. Generally of great size, and worn on the shoulder with the pin pointing upwards, it was richly decorated; and the finest example, the "Tara" brooch, represents the climax of Celtic art as it is known to us, with an infinite variety of the delicate interlaced patterns that are characteristic of Irish work. This probably dates from the 8th century. The type continued in use until the 10th century (Pl. I., fig. 9) or later.

Mediaeval Jewellery.—With the dawn of the Middle ages the barbarian tradition of form and pattern in jewellery comes to an end; jewellery takes its place as one of the many industrial arts, fostered first in the monastic workshops for the service of the Church, and then by the jewellers of the towns. At the same time our knowledge of it is drawn from different sources. After Carolingian times the custom of burying jewels with the dead fell into disuse; but with the development of graphic and plastic art more and more jewels were represented in painting and sculpture, and with the development of a settled society more and more were accurately described in wills and inventories.

The brooch continued to be the most characteristic ornament, but the Roman safety pin type fell into disuse. The mediaeval brooch is nearly always a ring-brooch, of which the pin is held in position by the pull of the stuff through which it passes. The ring-form was modified in endless ways: it might be partly filled in, as on the great Eagle brooch at Mainz (Pl. II., fig. 2) or its rim might be formed as a wreath or a heart or in more fantastic shape. The other characteristic mediaeval jewel is the reliquary or devotional pendant (Pl. II., figs. 4, 6) chased or enamelled with religious subjects, often set in an architectural frame. In the 14th and 15th centuries jewellery became increasingly a part of dress (*q.v.*), and was fashioned into belts and chaplets, hair nets and necklaces, and sewn upon garments. The personal motto of the wearer, or an amatory sentiment, was often inscribed upon jewels.

Renaissance Jewellery.—With the Renaissance (*q.v.*) the link between jewellery and costume became still closer. On occasions of ceremony the whole dress was sewn with jewels, as many portraits of the 16th century show. A new class of artificers in metal came into being, whose only concern was with such small objects as jewels. Henceforward a gradual loss of plastic quality is noticeable, compensated by an increasing skill in the cutting and display of gems. At the same time the development of the art of engraving, and the publication by this process of designs for jewels, helped to standardize their patterns throughout Europe. Both these developments, however, were gradual; and the design of Renaissance jewels shows no lack of individual fancy, and is often conditioned by the shape of an oddly-formed gem or baroque pearl. (Pl. II., fig. 8.) The Reformation and the classical revival combined to bring the religious symbolism of mediaeval jewel-design to an end; only in Italy and Spain did the mediaeval reliquary classical types survive; but an occasional allusion in subject (Pl. II., fig. 9) is all that is classical in Renaissance jewels. A new class of portrait-jewels came into being (Pl. II., fig. 5), and many jewelled cases of great beauty were made to contain portrait miniatures.

Jewels of the 17th and 18th Centuries.—With the 17th century a certain change is evident. Jewels cease to be works of art with some idea or fancy to express, and become mere personal ornaments beautiful in line and in material but without any deeper significance. (Pl. III., fig. 3.) Many improvements were made in technique; the art of gem-cutting was developed (*see* GEMS IN ART), and by the middle of the 17th century rose and brilliant cutting had almost superseded the older table cut diamond, and the enamellers produced painted flower enamels of great beauty (*see* ENAMEL), as well as enamels in such delicate technique as *émail en resille sur verre,* of which the ground is not metal but glass; and the jewellers learnt to mass their gems and to set them with great lightness and elegance in leafy settings of gold and silver (*see* SILVERSMITH'S AND GOLDSMITH'S WORK). (Pl. III., fig. 1.) With the development of this style, which in a modified form still influences jewellery design, the forms of jewels tended to become stereotyped. The characteristic jewel of the 18th century is the *parure:* ear-rings and brooch, necklace or clasp, and ring and sometimes shoulder-brooches or buckles, all to match, set with diamonds alone or in combination with rubies, topazes, sapphires or emeralds.

19th Century Jewellery.—With the change of fortune that accompanied the French Revolution the two categories continued

to exist. For State occasions the Napoleonic court imitated the *parures* of the ancient régime, with the addition of a jewelled coronet of classic form, while for every-day wear they, and poorer folk, contented themselves with *parures* set with semi-precious stones, or shell cameos in mounts of delicate filigree of gold enamelled with small patterns in black or blue. Other jewellery of modest intrinsic value depended on sentimental interest, and often contained the hair of a friend, relative or lover. With the Restoration in France and the shifting back of the centre of fashion to a class impoverished by revolution and war, such semi-precious jewellery became increasingly important, and quantities of topaz, amethysts and aquamarines were imported from Brazil and Mexico. Diamonds and precious stones were set in light flower, leaf and wheat ear patterns that could be executed in stones of lesser size. With the reign of Louis Philippe the influence of mediaeval and Renaissance decoration was shown in the use of Gothic arcadings and Baroque scrolls on jewels, but there was no revival of the refined technique of the earlier period. Jewellery, indeed, became steadily more stereotyped in its form and more industrial and mechanical in its production.

With the creation of the Second Empire (Pl. III., fig. 2) many jewels were designed on simple lines—frets, crescents, stars and so on—simply to display the diamonds with which they were set, while others attempted to imitate flowers with inartistic verisimilitude (Pl. III., fig. 5). A few jewellers, such as Lucien Falize in Paris and Giuliano in London, revived the Renaissance style alike in design and technique, and produced beautiful work in enamelled and jewelled gold. At the same time others—notably Castellani of Rome and Fontenay of Paris—drew inspiration from such classical jewellery as that of the Campana collection, and produced delicate "Etruscan" work in gold adorned with filigree.

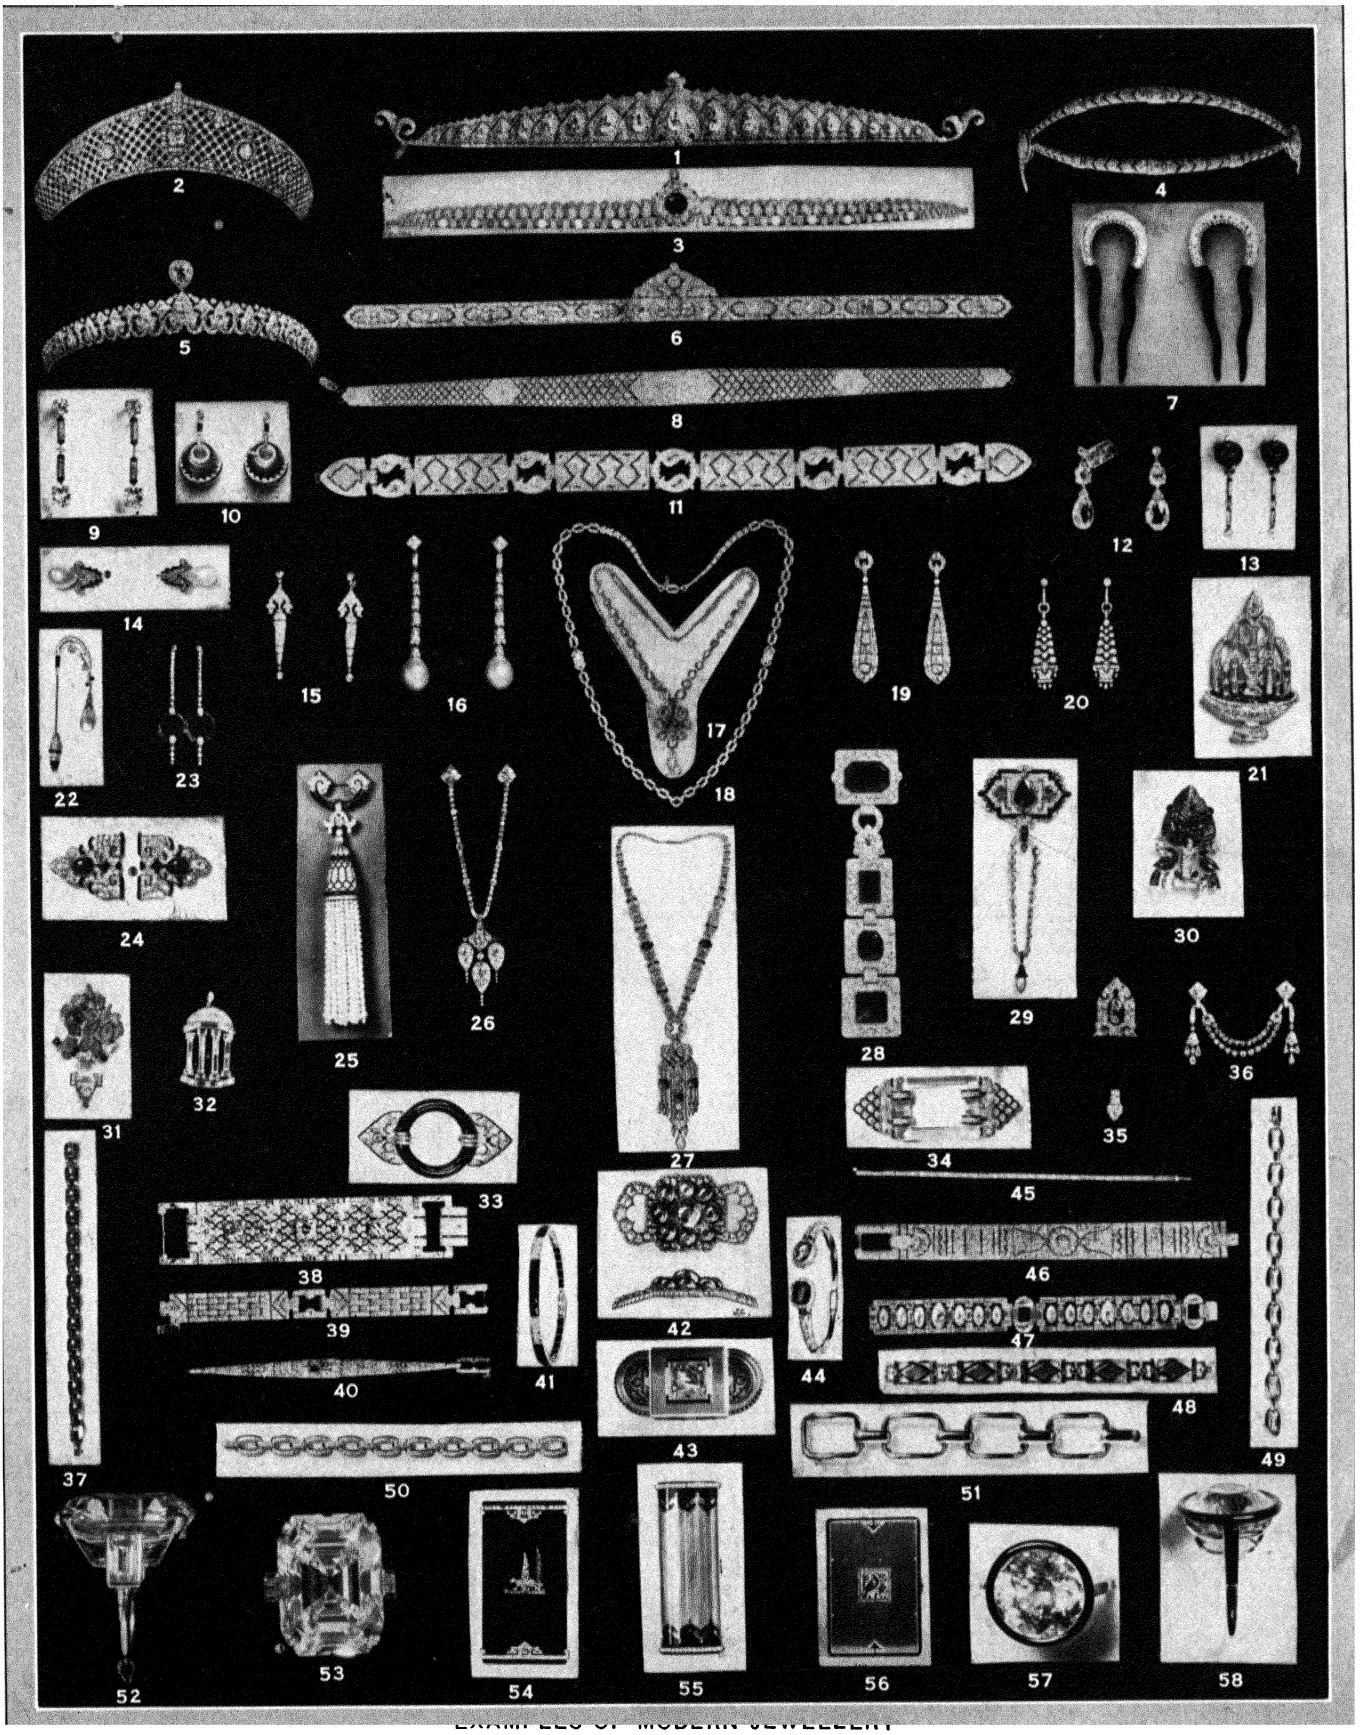
MODERN JEWELLERY

1851–1900.—In 1851 the wealth of European countries was rapidly increasing. Rich families had sprung up amongst the middle-class, and the nobility too had benefited by the rise of the industrial era. The jewellery made on the occasion of the Emperor Napoleon III.'s marriage was on a scale worthy of the most brilliant courts that France had known. The most precious stones were used, diamonds, pearls, sapphires and emeralds, in silver and gold settings. The base of the mountings was still in gold, but the front was made of silver, brilliantly polished in order to detract as little as possible from the diamonds themselves. The Empress Eugénie and Princess Mathilde revived the fashion of wearing strings of pearls in the evening. Large bracelets were also worn, mainly made of diamonds on a background of enamelled or engraved gold. Diadems were worn, curved to fit closely to the shape of the head.

When the brilliant court of Empress Eugénie was dispersed in 1870, inspiration and taste seemed momentarily to have deserted the French jewellers. Jewels were plentiful because the country was getting rich and the diamonds were more easily obtainable on account of the opening of the mines in South Africa. The jewellers turned to the choice of good stones and the manufacture of settings that would show off their beauty, but the designs, continually repeated, were generally poor.



The most characteristic jewels of this period were brooches and head ornaments made in the shape of crescents or stars, or with a bowknot design, and necklaces made of a succession of single stones, called *rivières*. The improvement in the settings which had taken place in the reign of Napoleon III. was due to a large extent to the fact that more liberal prices were paid to the working jewellers instead of the strict tariff which had been applied before. Something of the same kind also took place with regard to stones about 1878. A new class of purchasers came to Europe from South America and later North America, who were willing to pay very large sums for stones of exceptional size and quality. Whilst size had been the main attraction in the previous collections pearls were now chosen for their quality. Valuable stones were mounted and worn as rings, bracelets, earrings (mostly single diamonds called *solitaires* or large round pearls hanging from a small diamond), hairpins, feathers, or pendants. Gold jewellery having been replaced mostly by diamond jewellery, chiselled gold work was confined mainly to powder boxes, card cases, umbrella handles and handbags.

1900–1914.—The beginning of the 20th century marks a reaction against the monotony and lack of imagination of the style prevalent in jewellery since 1870. This reaction showed itself in two very different ways: (1) A number of jewellers favoured an idealistic interpretation of nature without any connection with past styles, which took the name of new art. This branch of the modernists attracted considerable attention at the 1900 "International Exhibition" in Paris. Their novelty lay not only in the designs, but in the choice of material—translucid enamels, ivory, horn. The beauty of the jewel was to come from the perfection of the artistic conception; the value of the precious stones employed was of less importance than their appropriateness to the scheme. Outside France, the new art in jewellery appealed principally to Germany, Austria, and Scandinavia. (2) In all countries, however, a larger section of the public favoured the other group of jewellers who, reacting against the soulless repetition of washed-out classic designs, turned back for inspiration to the old styles at their best periods.

As a reaction against the use of a relatively uniform scale of stones which gave jewels a heavy effect, small diamonds were used together and in contrast with the large stones they were to accompany. The diamonds were set in platinum instead of gold and silver. Platinum had been used experimentally since the 18th century, but it was only in 1900 that it started to be used exclusively in the setting of diamonds and found favour on account of its brightness and its superior hardness, which permitted of considerably lighter settings. As the new settings reduced the diamond to its proper size, the jewellers had to use larger diamonds than they had in the old settings which had made the stone appear larger than it actually was. All the jewels became more brilliant and more costly. Another change was that bracelets, worn in the preceding period in the shape of rigid and tightfitting bangles, were now made supple and loose.

A trimming revived from the 18th century was the velvet ribbon worn at the top of the neck with a small pendant hanging in front. These ribbons were edged with diamonds set on a mounting of platinum covered by black velvet. The fashion of the narrow velvet ribbon was followed by that of the jewelled *plaque de cou* occupying the front of the neck, worn either on a wide velvet ribbon or else attached to a number of rows of pearls clasped tightly round the neck. This again was followed by the diamond dog-collar.

At this period most ladies wore their hair "Pompadour" fashion in front, with a chignon at the back. This enabled them to wear diamond combs and diamond hairpins called *fourches*, mounted on large tortoiseshell pins. With this way of wearing the hair piled high on top of the head, diamonds and tiaras were no longer worn flat to the head, as in the Empire period and the Victorian era, but were mounted on metal frames, resting on the top of the head. The prevalent shape of the tiara was the so-called

Necklace of three rows of pearls containing 145 pearls weighing 2136 94 grains with ruby and diamond cluster clasp, collected by Madame Thiers, who left it to the Louvre. They were bought at auction June 16th, 1924, and sold privately by Cartier. 10 and 12. Ring in rose diamonds mounted in gold; period 1850. 11 and 13. Ring in one large rose diamond mounted in gold; period 1850. 14. Diamond and sapphire coronet and tiara as worn by the Empress Eugénie

"Russian" shape, or sun-rays, which could be turned into a necklace or the seven points carrying an important stone at the tip of each point. On the occasion of the coronation of King Edward VII. a great many of the tiaras of the English nobility were reset in a new style, and during his reign tiaras were worn at all important receptions. On such occasions the ladies also wore large brooches, sometimes called stomachers, occupying the entire front of the dress.

As mentioned above, the great preponderance of diamond rings over all other kinds came from the fact that most ladies chose diamond rings for their engagement rings; the diamond, being indestructible, was considered eminently suitable for such an occasion. These are now always set in platinum. The diamond ring is either a solitaire, a stone weighing from one to ten carats, or a single stone surrounded by one or two rows of smaller diamonds. The actual ring itself sometimes carries three or five smaller diamonds on each side of the main stone. After diamonds, pearls, sapphires, emeralds and rubies are the most worn.

Since 1907 the demand for pearls had grown very quickly. Not only were strings of large pearls worn, but neck-bands, bracelets and chains, made of small pearls strung together in patterns, were sold in numbers. Diamond pendants, which could no longer be worn on the neck because of the fashion of strings of pearls, were worn on long chains, hanging below the decolletage. The great quest of pearls took European jewellers to India, from whence they brought back emerald beads, until then worn almost exclusively in Indian jewels, and engraved emeralds of all shapes became a factor on the stone market of Europe. The dominating note of the jewels at the end of this period was the combination of diamonds and black onyx.

Jewellery for men's wear was mostly confined to rings, links, studs, waistcoat buttons, scarf pins and watch chains. For rings the favourite shapes were signet rings in gold, and the gypsy ring in gold or platinum. Of the fancy shapes the snake rings were mostly in favour. The keynote of the rings, like all the jewellery worn by men, was simplicity and unostentatiousness, in comparison with the jewels worn at the beginning of the century. This is also exemplified in the watch-chains which used to be composed of heavy links of gold and enamel, but were now made of fine, delicate links of gold and black enamel. Scarf pins were very much smaller, to suit the ties, which had also decreased very much in size. The pearl scarf pin was the favourite. For waistcoat buttons the favourite stones were the onyx and diamond.

The word cuff-links was new and described the two buttons united by a chain which began to be worn at this period. Until 1870 the buttons in these links were generally of a very simple character, made of gold and only remarkable because of the work in the gold itself. It was only from about 1880 that precious stones were included in sleeve-links, and then only for the evening. From the inclusion of a single stone in the centre of the link, these gradually began to be done in precious stones set in platinum.

Since 1914.—Owing to the fashion of bobbed hair, hairpins and combs were replaced by diamond slides; diamond bandeaux worn flat on the forehead and round the head were worn at most receptions, whilst tiaras were reserved for court functions. Through the fashion of short sleeves, the jewel most in demand was the bracelet; this was from half-an-inch to over two inches wide.

Large sums of money have been invested in rings, mostly diamonds, emeralds, pearls, rubies and sapphires. Where a diamond of 10-carat used to be considered large, 15-carat diamonds are now frequently worn, the largest stones being worn for rings weighing up to 40 carats.

The difference between jewels worn during the day and those worn in the evening is less noticeable. Rows of pearls of great value are worn everywhere, at any time. The modern tendency is to wear two or three strings held together by the same important diamond or emerald clasp at the back, and falling closely together in front.

The use of the wrist watch and of vanity and cigarette cases has become universal. Regarding the latter, while gold and enamel remain the foundation, they are enriched by semi-precious or precious stones. They are also made of hard stones, such as black onyx, Russian jade, lapis, amber and grey agate, decorated with diamonds. The less expensive cases are made of tortoiseshell, Russian birch, or compositions resembling hard stones.

The dominant note in modern jewellery is the intensive use of coloured stones, the cutting of the stones, and the design. While no new coloured stones have been found, the blending of so many different kinds of coloured stones together has probably never been seen before. The results were obtained by the combined use of precious stones, semi-precious stones and hard stones such as black onyx, jade, lapis, amber and agate. While in previous periods all the stones used were round or square, now, except for the small round diamonds, the stones are cut in a variety of shapes to fit the design. Even the most valuable diamonds, regardless of weight, are now cut in square or rectangular shapes, like emeralds, and in such a way that only the finest, cleanest stones can stand the test. The use of coloured stones engraved with oriental designs has added a new touch to modern jewels. (J. CAR.)

CHINESE, JAPANESE, INDIAN AND PERSIAN

Nature and Use.—There can be few branches of craftsmanship in which the characteristics of a race are more clearly expressed than in its jewellery. Not only is the refinement born of centuries of civilization to be set against the untutored love of mere glitter, but many other factors have to be considered. Some of these become obvious at once when a comparison of the jewellery of the Far East with that of western Europe or America is attempted. Even the circumstance that in such a comparison Japan would have to be left almost entirely out of the question is relevant. Living in a mountainous country with scanty natural resources, and parted from their neighbours by the ocean, the Japanese hardly know the meaning of jewellery.

The character of the personal ornaments depends to a large extent upon the minerals and metals which a country provides, upon its climate, and upon the amount and nature of the clothing worn. Consideration must also be given to religious beliefs and national customs, giving to this or that article of jewellery a special significance, and limiting its use to persons of a particular age, condition or station. Personal ornaments may serve as indispensable articles of dress, rather than as mere embellishments, and their nature is thus to a large extent determined by the purpose they serve. The influence of religion and ritual observance is too obvious to need emphasizing. In the East, the custom of accumulating savings in the form of jewellery is a factor not to be overlooked. A young bride's dowry may consist entirely of personal ornaments in gold or silver, or of a headdress strung with coins or precious stones. But others too find in jewellery a convenient means of holding their wealth, enabling them to have it continually with them, both for safeguarding and for use when occasion requires.

India.—The jeweller's craft in India is of the highest antiquity. The forms of ornamentation of the jewellery described in the ancient Hindu epics is said to denote an unbroken continuity of tradition from those times of shadowy history to the present day, and even the names have suffered little change. The code of Manu, which is believed to have taken its present form about 2,000 years ago, contains a description of the jeweller's craft, and mentions the fines for bad workmanship and the punishment for debasing gold.

A Hindu drama, "the Toy Cart," written about the same time, describes a jeweller's workshop where craftsmen examine pearls, topazes, emeralds, sapphires, lapis lazuli, coral and other jewels. Some set rubies in gold, some string gold beads on coloured thread, some string pearls, some grind lapis lazuli, some cut shells and some turn and pierce coral. Sir George Birdwood points out the close relationship of such operations to the practice of the present day. A dialogue in the drama has reference to the skill with which jewellery was even then imitated.

Few early examples of Indian jewellery have been preserved to the present day. The sculptures of Sanchi, Bharhut, Amravati and Orissa, and paintings such as those of Ajanta, demonstrate the similarity in appearance of the ancient jewellery to that still made and worn. Numerous representations of the Hindu gods, whether human or animal, illustrate the early use of tiaras, necklaces (sometimes hanging in festoons to the waist), armlets at the elbow, bracelets, anklets and other forms of jewellery.

One of the oldest known examples of ancient Indian jewellery in existence is a small relic casket found in a Buddhist shrine in the Kabul valley near Jellalabad. It is of gold, studded with balas rubies, and when found it contained burnt pearls and coral, and beads of sapphire, agate and crystal, besides a number of small gold ornaments. Coins found with the casket show that its workmanship is to be attributed to the 1st century B.C. It betrays Greek influence, due to the conquests of Alexander the Great.

The Indian goldsmiths are expert in the economy of the precious metals, beating gold and silver into the thinnest plates. Bracelets often end in the head of an animal; earrings represent the flower of the lotus; and various blossoms are fashioned for hairpins. It is principally in the south of India that elaborate gold jewellery is made with subjects in relief from the Hindu mythology. The ancient art of soldering gold in minute granulations has never been lost. The crescent-shaped gold brooch (Pl. VII., fig. 1) made at Delhi, with gold pendants and openwork setting, is an admirable example. Filigree is done in many places; the silversmiths of Çuttack, of Kashmir and of Bengal excel in this work. The armlet (Pl. VII., fig. 2) formed of diamonds set in gold upon a glass foundation is of Bengal workmanship. The back is ornamented with flowers in coloured enamels.

The art of enriching gold jewels with enamel has been carried to great technical perfection in India, particularly at Jaipur in Rajputana. The pattern is chased and engraved in sunk relief on the jewel, and the hollows filled with transparent enamel in brilliant hues, principally red (derived from copper and iron), green (from copper), and opaque white (from tin). The turban-ornament (Pl. VII., fig. 3) of gold is a beautiful example of Jaipur enamelling of the 18th century. The peacock and the surrounding floral ornament are in translucent coloured enamels on an opaque white ground. The rim was formerly mounted with a row of pearls. Three other chased gold turban-ornaments illustrated were made in the state-workshops of Jaipur in the 17th and early part of the 18th century. Two (Pl. VII., figs. 4–5) are enamelled in red, green and opaque white; the other (Pl. VII., fig. 6) is in green enamel. The last turban-ornament illustrated (Pl. VII., fig. 7) is of Benares workmanship. It is of gold, with rubies, emeralds, diamonds and pearls set in gold filigree.

Nepal, Assam, Burma and Siam.—A Nepalese silver comb (Pl. VII., fig. 8) has nine stones mounted in gold and attached by stout wire. The gold ear-plugs (Pl. VII., figs. 10–11) of the 18th century are from Assam. They are set with rubies and emeralds.

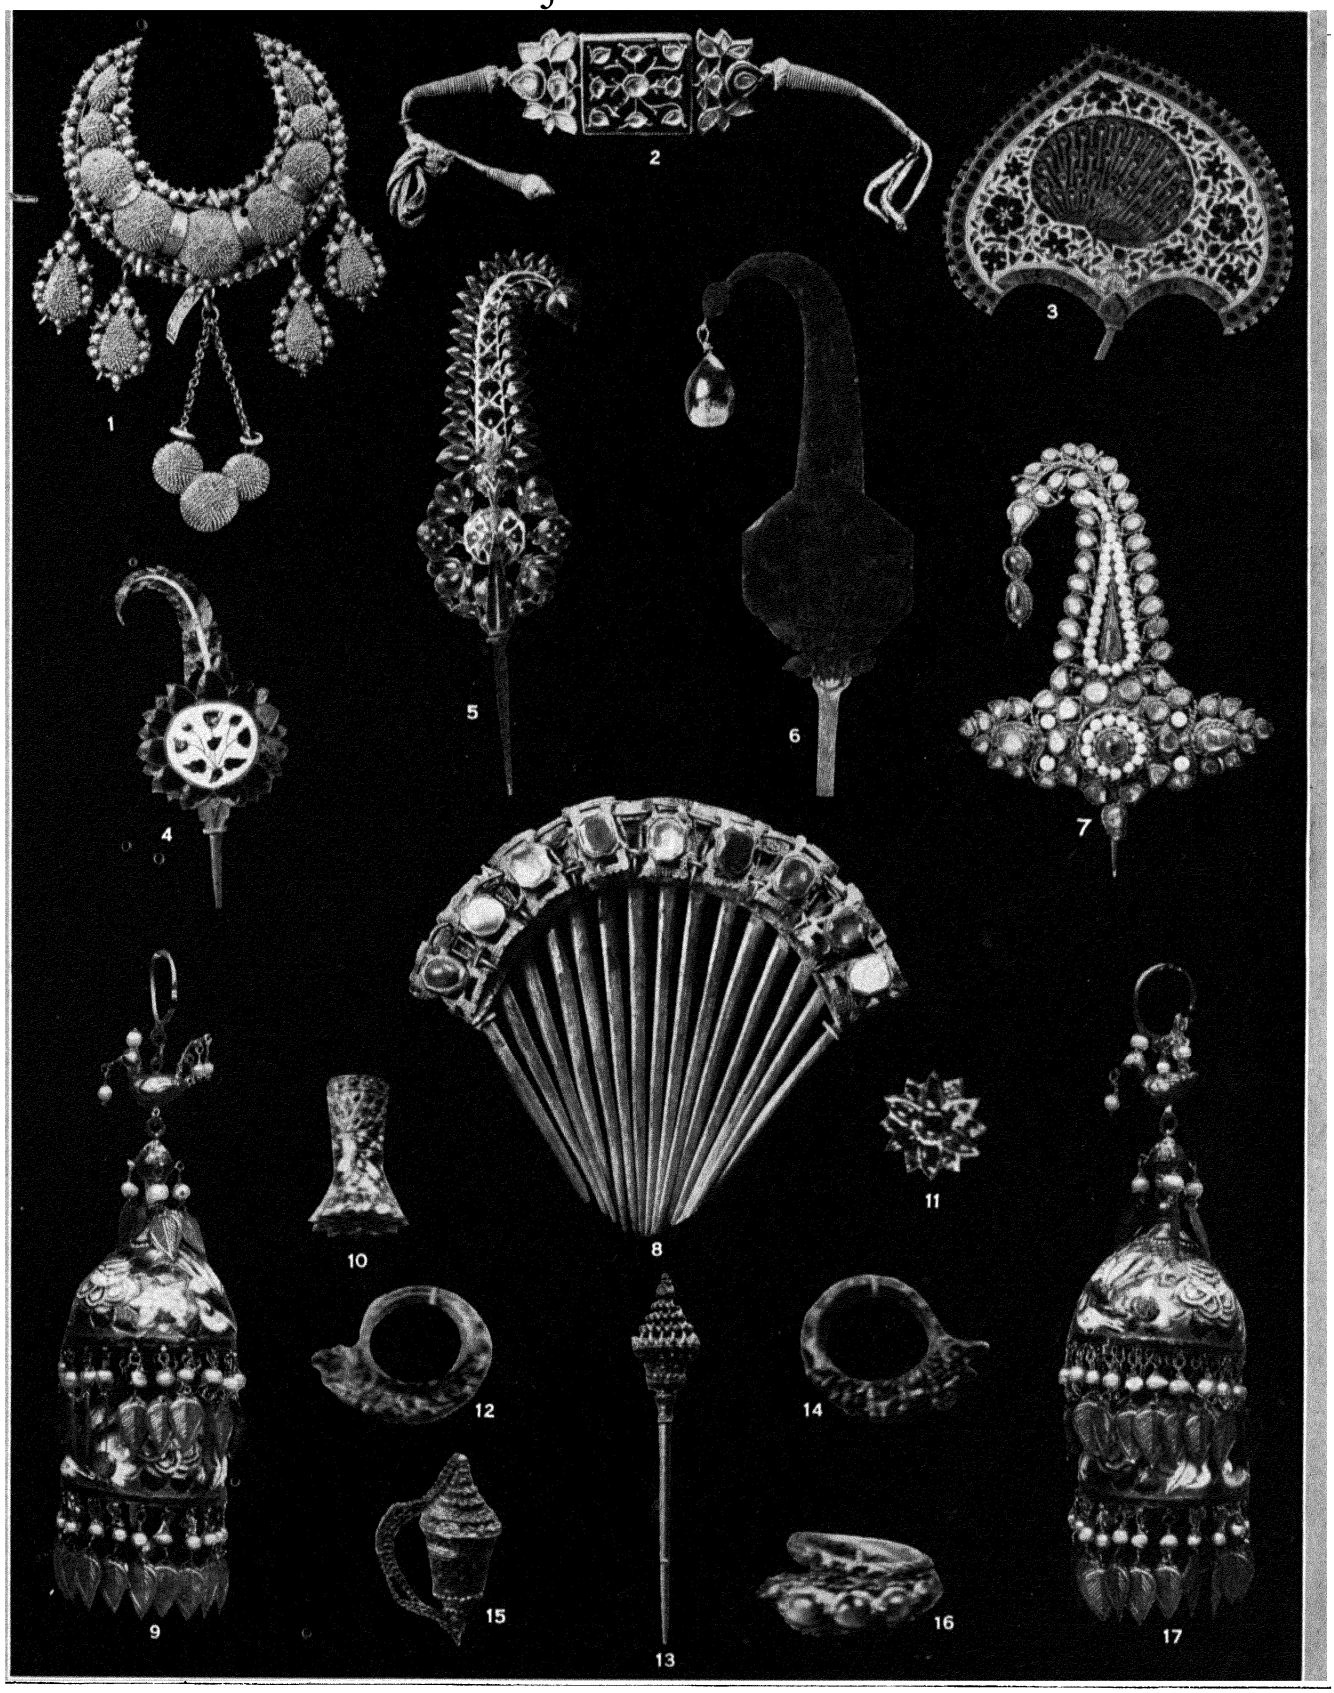
The jewellery of Burma and Siam has a semi-Chinese character. The Burmese necklaces, with their multitudinous strings of gold beads, sometimes interspersed with pearls and gems, are characteristic. Five Siamese gold ornaments are here reproduced. The hairpin (Pl. VII., fig. 13) is used for fixing the knot on the top of the head. The small urn-shaped case (Pl. VII., fig. 15) is for holding scented ointment. The jewelled rings (Pl. VII, figs. 12, 14, 16) are in the form of dragons.

Persia.—In Persia much of the jewellery is in enamelled gold. Shiraz is the chief centre of this work. A pair of massive gold earrings is here illustrated (Pl. VII., figs. 9 and 17). Each consists of two gold domes, enamelled with flowers in colours and fringed with rows of seed pearls and gold leaves. Talismans and amulets, much used in Persia, are sometimes of enamelled gold. Small silver boxes for carrying opium are often embossed in high relief.

China.—Jewellery in China is characterised by a delicacy and manipulative elaboration for which the Chinese craftsman shows great aptitude. Silver is by far the most usually employed of the precious metals, though ornaments are occasionally of solid gold. Silver jewellery is generally gilt to safeguard it from tarnishing. Rubies, amethysts and other precious and semi-precious stones are used—not cut in facets, but polished and set *en cabochon*. Gems and pearls are frequently drilled through and attached by means of a fine wire. Flexible strings of jewels, often interspersed with plaques of carved jade or enamel, are worn as personal ornaments and employed in a variety of other ways. This practice gives a distinctive character to Chinese jewellery.

Personal jewellery in China often takes the form, or bears the images, of the animals, real or fabulous, and the numerous ritual and symbolical objects of Chinese art and culture. A dragon or phoenix may form a bracelet or decorate a headdress or a hairpin. The "precious ornaments," or eight Buddhist emblems of happy augury, are strung with rows of pearls or used separately. It should be noticed that the first of the "precious ornaments" is a round jewel wreathed with a fillet, and that innumerable works of art represent the dragon pursuing or grasping the flaming jewel of omnipotence. Emblems often indicate the rank and office of the wearer, from the emperor downwards. Special ornaments were worn by the Manchu or Chinese ladies, and various limitations were imposed by sumptuary laws.

Gold and silver plaques were manipulated in several ways. They might be pressed into moulds, hammered in relief, cut into openwork patterns or engraved. The dexterity of the Chinese craftsman has carried the art of filigree (*q.v.*) in the precious metals to a degree of intricacy and minuteness unsurpassed elsewhere. It is used for the most elaborate headdresses and for all kinds of personal ornaments. Jewellery in gold and silver is often enamelled—gold generally in light blue obtained from copper, and silver in dark blue from a cobaltiferous ore; both colours are also used together.



The gold filigree bracelet (Pl. VIII., fig. 1) is in the form of two dragons. The headdress (Pl. VIII., fig 2) was worn by a Manchu lady of high rank. It has a wire foundation covered with silk and mounted with panels of silver-gilt filigree in the form of bats (for happiness) and peaches (for longevity). It is overlaid with kingfisher plumes and enriched with amber, jadeite, amethysts, coral and pearls. The cap of state (Pl. VIII., fig. 3), from the Summer Palace, Peking, is also of silver-gilt filigree with kingfisher plumes and enrichment of pearls and coral. The ornament includes figures of Taoist immortals, birds and butterflies. The bride's headdress (Pl. VIII., fig. 4) is of the same materials, showing a temple-pavilion, dragons and phoenixes. The chatelaine (Pl. VIII., fig. 5) has a row of silver-gilt toilet articles. There are various forms of hairpins, hair-ornaments, cap-ornaments, earrings and buttons in silver and silver-gilt, with jewels, enamels and kingfisher plumes.

The Indian practice of inlaying precious stones in finger-rings and plaques of jade was copied in China, where jade and jadeite rank among the most valued of precious stones. Figure-subjects are sometimes carried out in gems and semi-precious stones, encrusted on plaques of white jade. Small personal ornaments of many kinds have been carved in jade. For Egyptian Jewellery *see* ART AND ARCHAEOLOGY OF EGYPT.

See GEMS; PRECIOUS STONES; JADE; GOLDSMITHS' AND SILVERSMITHS' WORK; also Sir G. Birdwood, *The Industrial Arts of India* (1880) and S. W. Bushell, *Chinese Art* (Victoria and Albert Museum handbook).

JEWETT, SARAH ORNE (1849–1909), American writer, was born in South Berwick (Me.), Sept. 3, 1849. She was a daughter of the physician Theodore H. Jewett, whom she has drawn in *A Country Doctor* (1884) and to whom she dedicated *Country By-Ways* (1881). She studied at the Berwick academy, but her chief training came from her long drives with her father as he visited his country patients. In 1869 she contributed her first story to the *Atlantic Monthly*. Her best work consists of short stories and sketches such as those in *The Country of the Pointed Firs* (1896). The people of Maine, with their characteristic speech, manners, and traditions, she described with peculiar charm and realism. The background, too, she touched in with loving care. She was awarded the degree of Litt.D. by Bowdoin college in 1901. She died at South Berwick (Me.), June 24, 1909

Among her publications are: *Deephaven*, a series of sketches (1877); *Old Friends and New* (1879); *A Marsh Island* (1885), a novel; *A*

CHINESE (MANCHU) HEAD-DRESSES AND JEWELLERY

1. Bracelet of gold filigree work in the form of two dragons
2. Head-dress of silk and silver-gilt worn by a Manchu lady of high rank
3. Silver-gilt filigree cap, probably a wedding head-dress, worked in a design of human figures and insects, ornamented with kingfisher plumes, pearls and coral
4. Bride's head-dress of silver-gilt filigree with applied ornament in form of a temple, dragons and ho-hos (phoenixes). Height, 12 in.
5. Chatelaine gilt metal chains and bows, holding seven silver-gilt implements for the toilet. Length 15¼ in.

White Heron and Other Stories (1886); *The King of Folly Island and Other People* (1888); *Strangers and Wayfarers* (1890); *A Native of Winby and Other Tales* (1893); *The Queen's Twin and Other Stories* (1899); and *The Tory Lover* (1901), a historical novel. A selection of the best of her stories was made by Willa Cather (1925). *The Letters of Sarah Orne Jewett* were edited by Annie Fields (1911). C. M. Thompson treats sympathetically "The Art of Miss Jewett" in *The Atlantic Monthly,* vol. xciv. pp. 485–497.

JEWFISH, the name applied to several tropical American grouper fishes of the family Serranidae, especially the yuasa (*Promicrops guttatus*) of the Caribbean sea, pale olive green with five darker stripes, and reaching a maximum weight of 300lb.; the black sea bass (*Stereolepis gigas*) of southern California, reaching a length of 7ft. and a weight of 500lb., brown in colour, blotched with greenish-black and highly esteemed for the table; and the black jewfish (*Garrupa nigrita*), also reaching a weight of 500lb., chocolate brown in colour and a favourite with anglers. It ranges from South Carolina south to Brazil.

JEWISH LITERATURE: *see* HEBREW LITERATURE.

JEWISH PHILOSOPHY. The term Jewish Philosophy is here used to denote the attempt of Jews to solve the general problems of Philosophy from the point of view of Judaism, and conversely to establish the doctrines of Judaism on a philosophic basis. It does not include, however, merely dogmatic statements about God, the universe and man, such as are found in the sacred books, for philosophy is characterized by method as well as content. Every general proposition concerning the nature and attributes of the Divine Being, the origin and processes of the universe, the nature, origin and destiny of man and the human soul, the rules of human conduct, and so on, belongs in content to philosophy. But the literature containing such propositions is not classed as philosophical unless the method is scientific, *i.e.*, rationalistic. Appeal to authority or faith or revelation is not a scientific or rationalistic method. Scientific method makes use of observation and inference, deductive and inductive. Authority, faith and revelation may themselves form the subjects of scientific study, and a rationalistic analysis of the topics mentioned would also come under philosophy. Accordingly, in a historical sketch of Jewish philosophy we exclude almost entirely the books of the Bible because, although the topics treated therein are also dealt with in philosophy, the method is not rationalistic, but dogmatic. The historians, the lawgivers and the prophets of the Bible appeal almost entirely to authority and revelation for opinion and guidance. The books of Job and Ecclesiastes form an exception and may be regarded as forming a transition from the purely dogmatic to the purely philosophic point of view. Nor can we include in this study the second literary monument of Judaism, the Talmud. And for the same reason. The Talmud is partly legal and partly legendary and homiletic. The legal and homiletical elements are based upon the Bible as revealed authority, and the legends are of course just legends. The fact is that the Hebrews in their creative period, both in Biblical and Talmudic times, had no scientific or rationalistic interests. We need not take literally the statement of Henry Sumner Maine: "Except the blind forces of Nature, nothing moves in this world which is not Greek in its origin"; but as concerns the application of rational analysis to the phenomena of nature and of human life, the opinion of Maine is correct. And if the Jews, too, in the course of their life as a people began to philosophize, the impulse thereto is to be traced to Greek influence.

In pre-Christian times the Jews of Alexandria for the first time in their history came into contact with Greek life and thought. Being separated from their native country, Palestine, they quickly assimilated the Greek mode of life and intellectual atmosphere. Hebrew became a foreign tongue to them, and they read the Pentateuch in a Greek translation. They did not, however, forget that they were Jews, and the thinkers among them revered the laws of Moses and the rest of the Biblical books as the Word of God. At the same time they had a thorough appreciation of Greek science and philosophy which they tried to make their own. Being attached to two diverse cultures they felt the need of a synthesis or harmonization. The result was what is known as the Judeo-Alexandrian School of Philosophy, a brief description of which will be given later. When, in the middle ages, beginning in the 10th century, the philosophic movement was inaugurated among the Jews in Kairuan and in Babylonia and later spread to Spain, Provence and other European countries, the impulse was again due, though indirectly, to Greek literature. The immediate incentive came from the Arabs. But the Arabs themselves owed their interest in philosophical studies to the Christians in Syria and Mesopotamia, who in turn were the disciples of the Greeks.

The Judeo-Alexandrian school may be traced back in its crude beginnings to the 2nd century B.C., and its culmination in the works of Philo Judaeus (b. *c.* 25 B.C.) is contemporaneous with Christianity. The philosophical movement among the Jews in the middle ages was not a continuation of the Alexandrian philosophy. The latter spent its force, so far as the Jews were concerned, in Philo, who had no Jewish successors, though the Fathers of the Church almost adopted him as their own, and traces of his influence are found in Clement of Alexandria, Origen, St. Ambrose, and in all likelihood also in the prologue of the Gospel of St. John. The early mediaeval Jewish philosophers, like Isaac Israeli, Al Mukammas, Saadia and others, made a fresh beginning to rationalize the Jewish faith, following the example of the Arabs among whom they lived.

CHARACTER AND CONTENT OF JEWISH PHILOSOPHY

One characteristic is common to both schools of Jewish philosophy which distinguishes them from the classical Greek philosophy to which in part they owed their existence. It is an attribute which Jewish philosophy shares with all religious philosophy, hence with Christian and Mohammedan scholasticism. All the Jewish philosophers believed in a twofold source of truth, revelation and reason. We derive our knowledge, so the theory runs, partly from our own efforts, sense-perception and reason, and partly from Divine revelation, which is recorded in the Bible. This view does not necessarily vitiate the scientific character of religious philosophy if a rational attempt is made to show that God does reveal Himself to mankind and that this revelation is recorded in the sacred books. And though the attempts in this direction, made by the mediaeval philosophers, seem to us crude and naïve, we must judge them from their point of view and not from our own. Literary criticism did not exist in those days, and tradition enjoyed greater authority than it does now. Philological and critical interpretation was in its infancy, and texts were as clay in the hands of exegetes.

The idea of a twofold source of truth necessarily suggested itself by the presence of two series of literary documents, the one appealing to reason, the other to revelation. This dualism raised the problem of the relation between the two sources, and the solution was that there is no conflict between them. They supplement each other, and properly so, since reason alone is inadequate in matters transcendental, requires maturity and time and effort in all matters, and is fallible at best. Conduct cannot wait upon reason, hence must rely upon revelation until reason comes limpingly after to confirm the data of revelation. Opinion and belief are also a matter of great moment, both in themselves as necessary to salvation and as bases of conduct. Here, too, therefore revelation is necessary until reason comes to confirm it.

This is satisfactory enough as theory, but does not apparently square with the facts. The two sources sometimes seem to conflict. Revelation teaches creation of the world in time, reason suggests to Aristotle that the world is eternal. Revelation teaches free will, reason suggests to certain philosophers that human acts are determined by past causes. Revelation speaks of God in anthropomorphic terms, reason proves that God is incorporeal. The greater part of Jewish philosophy is devoted to reconciling these apparent conflicts. And the solutions always take one of two forms. Either so-called reason is at fault, and for apparent reason is substituted a better reason which does agree with revelation, or the current interpretation of the revealed documents is at fault, and for apparent revelation is substituted true revelation which does agree with reason. Hence Biblical exegesis played a very important rôle in Jewish philosophy, and it was not an insuperable task for a

Jewish philosopher in the middle ages to adopt the greater part of the philosophy of the day, because exegesis had much greater latitude in those days. Particularly the Bible, since it was not an ordinary book, and was intended for young and old, the learned and the unlearned, must have more than one meaning, and each person sees in the Bible as much as he is capable of seeing.

PROBLEMS OF JEWISH PHILOSOPHY

Judeo-Alexandrian School.—The main philosophical problem in Philo, apart from the general one of the relation between revelation and reason, which was discussed above, is the nature and attributes of God. Here Philo, under the cultural influences of his day which are only vaguely understood, deviated from the classical Greek philosophy of Plato, Aristotle and the Stoics whom in eclectic fashion he ordinarily follows, as well as from the Old Testament. And herein consists his original contribution to philosophic and theologic thought. The Biblical conception of God is in many parts frankly anthropomorphic. The classic philosophy of the Greeks depersonalized God to a great extent and thought of Him as disembodied thought or reason. Philo, on the other hand, conceived of God as transcendent, *i.e.*, altogether unlike anything in human experience and hence unknowable and inconceivable to the human mind. His transcendence, moreover, makes it impossible for Him to mould matter into a world, and hence His relation to the world is only indirect. Certain powers emanate from Him, constituting subordinate beings or divinities through which the world has taken shape. Chief among these and embracing them all is the Logos, which represents God's reason, though it is at the same time a distinct personality and is once referred to as the Son of God. It is through this Logos that the transcendent God moulds matter into a world and rules it as the soul rules the body.

This doctrine of the Logos, which must have been a stumbling-block to the Jews, impairing, as it seemed, the basic monotheism of the Jewish religion, was eagerly accepted by the Church, and thereafter, in all Christian theology, patristic as well as scholastic, the Logos, incarnate in Jesus, was identified with the second person of the Trinity. This was perhaps the reason why Philo's philosophy was never more than an episode in Jewish thought.

The Mediaeval Period.—In the 10th century Judaism was divided into two sects, the Rabbinite and Karaite. They were divided on the question of the authority of the Rabbinic tradition. The Mishnah and the Talmud were rejected by the Karaites as authoritative interpretations of the Bible. To the Rabbinites, on the other hand, the Oral Law, as tradition was called, was coeval with the Written Law of Scripture and hence equally authoritative. Both of these schools of Judaism followed the example of the Arabs, who, in the East and later in Spain, were so enamoured with Greek scientific and philosophic thought that they assimilated the various phases of it with enthusiasm, and in the course of three or four centuries (from the 9th to the 12th) developed a rich literature of their own on the subjects of logic, ethics, metaphysics, mathematics, natural science and medicine. It stands to reason that the Karaites, who were not bound by tradition, found their philosophic path less beset with difficulties than the Rabbinites, but on the whole the progress of the two was more or less parallel, since the fundamental theological and metaphysical dogmas were the same.

The main problems which concerned the Jewish philosophers in the middle ages may be classed under the following heads: God, the World, Man, his Soul, Conduct, Revelation, Reward and Punishment. All other problems of logic, physics and metaphysics were merely auxiliary or instrumental. They were studied as means to an end, the end being a true understanding of God and His relation to the world and particularly to man. As the predominant philosophy among the Arabs changed, so did the Jewish thinkers pass from one point of view to another. And the Arabs, too, advanced from one mode of conceiving metaphysical problems to another according as more of ancient Greek philosophical literature became known to them in Arabic translation. The succession of schools, therefore, in Arabic and Jewish philosophy was not the same as among the Greeks, since it did not represent, as in the case of the originators, an immanent development based to a great degree on logical necessity and only incidentally affected by historical circumstances. Among the Arabs and the Jews, historical circumstances played a greater rôle than logical necessity. Thus the neo-Platonic point of view, which was the last stage in Greek thought, preceded, among the Arabs and the Jews, the Aristotelian stage, which was separated from neo-Platonism in the land of Greece by the intervening schools of the Stoics, the Epicureans and the Sceptics. At the same time it cannot be denied that there must have been an inherent reason why the phase of philosophic thought which became permanent among the three religions in the middle ages was Aristotelianism. Peoples as unlike as the European Christians, the Mohammedan Arabs and the Jews agreed in making Aristotle the supreme authority where reason was concerned, and not Plato or Plotinus. It was probably because the rationalism of Aristotle was the extreme antithesis to the supernaturalism and mysticism of the several religions that the great desideratum was to harmonize them. Such harmony alone was able to produce the satisfaction that is felt in unity.

PHILOSOPHERS OF THE MIDDLE AGES

The Jewish philosophers of the middle ages can be best classified under four heads as follows: Kalamists, neo-Platonists, Aristotelians and anti-rationalists. These divisions represent the predominating tendencies and are not to be taken strictly. Many of the mediaeval Jewish philosophers were eclectic in their teachings, either consciously or unconsciously; consciously, in that they tried to harmonize diverse systems; unconsciously, because their sources were confused, and spurious works as well as apocryphal sayings circulated under the name of Empedocles, Plato, Aristotle, etc.

Kalamists.—Kalam is the name given to a system of doctrine which originated among the Arabs in the 9th century and continued until the eleventh. The adherents of this form of teaching were called in Arabic Mutakallimun, which may be anglicized into Kalamists They were the first to add reason as an aid in arriving at true knowledge. In seeking for a basis in reason for their theology, they adopted the atomistic doctrine of the pre-Aristotelian philosophers, Leucippus and Democritus. The basis of all physical being is atom and accident. The atom is the basic substance, the accident is the quality or attribute. God created both, and His will alone determines what accident is to be joined to what atom. There is no other causal activity in the world except the Divine will; natural law and necessity are fictions established by philosophers on the basis of observed repetitions. There is no inherent difference between the ordinary and the extraordinary, the normal and the abnormal, the natural and the supernatural or miraculous, except as repetitions in the physical world create in us habits of expectation that what has happened before will happen again. To God nothing is normal and nothing is abnormal. The rare phenomenon of the division of the Red sea and the daily phenomenon of the rising of the sun stand on the same footing. If we leave out the Divine will we have in these views an anticipation of David Hume.

These doctrines were preliminary to the more properly theological teachings which the Kalamists advocated. In conformity with their reliance on reason they elaborated proofs for the existence of God which were based upon the doctrine of the world's creation in time. They argued as follows: The world either had an origin in time or not. If it had no origin in time, it had existed from eternity, and no one made it. If, on the other hand, it had a beginning in time, it must have been made by someone, since nothing can make itself. Hence if the creation of the world in time can be proved, the existence of a Creator can be proved likewise. Accordingly they proceeded to prove that the world was created in time, and then based upon this conclusion the proof of the existence of God. They defended the unity of God against the Christians, His incorporeality against the anthropomorphists in their own midst, and invented ingenious and hair-splitting discussions concerning the Divine attributes so as to make the absolute unity of God consistent with the theology of

the Koran. Unity was understood in the absolute sense as excluding any and every kind of plurality. There is no such unity in our experience, since every object, no matter what, has parts and divisions or is capable of receiving them. Hence God is absolutely different from everything else, and when we say, He is living, wise and powerful, we must not be understood as ascribing to God three distinct qualities. In God they are one with Him and with each other, though we do not understand how.

The Kalamists also defended God's justice against the orthodox views of the arbitrariness of the Divine will and of fatalism or determinism. If good and evil, right and wrong, mean simply conformity to and deviation from God's will, then God's will is neither good nor evil, and God is neither just nor unjust. This is an untenable doctrine, hence they taught that good and evil are absolute and not relative to the Divine will. God wills the good because it is good and abhors evil because it is evil. Similarly if man is determined to act as he does, reward and punishment are not just. Hence to vindicate God's justice they taught freedom of man's will.

The earliest Jewish philosophers followed the teachings of the Arab Kalamists. Among the Karaites may be mentioned: Joseph Al Basir (11th century) and Jeshua ben Judah (11th century); among the Rabbinites, David ben Merwan Al Mukammas (10th century), Saadia Ben Joseph Al-Fayyumi (892–942), Bahya Ibn Pakuda (12th century), Joseph Ibn Zaddik (d. 1149). The Karaites followed the Arab Kalamists more closely than did the Rabbinites, but none of the Jewish Kalamists went so far as to deny natural law. Thus Saadia, whose philosophical work *Emunot ve-Deot* (Beliefs and Opinions) is based upon the Kalamistic model, rejects the doctrine of metempsychosis or transmigration of souls on the ground that there must be a certain kinship between a given soul and its body, that the soul of a human being cannot be associated with the body of a lower animal.

Neo-Platonists.—The next wave of philosophic tradition that passed over Arabic culture and hence over Jewish culture also in Mohammedan countries, was the neo-Platonic. Plotinus was the founder of this school of thought in the 3rd century, and it was the last attempt of the Greeks to establish a system of philosophy on purely scientific though pagan lines As the name indicates it was a return to Plato in the sense of being a spiritualistic philosophy, which regarded the material, the concrete and the sensible as unreal and as the source of evil. The intelligible alone is real and good. By intelligible is meant that which can be grasped by intellect alone and not by the five senses. The neo-Platonists, however, went even beyond Plato in assuming that that which can be apprehended by intellectual thinking is not the highest reality, that beyond the intelligible is the transcendent, which cannot be subsumed under the categories of thought. This is God, the unknowable. But though God cannot be known as we understand knowledge, an exceptional individual may in rare instances reach the state of enthusiasm or ecstasy in which, losing consciousness of himself as an individual, he may momentarily enter into a mystic union with the source of all being. This idea of the transcendence of God and of mystic union with Him is found also in Philo; and as the precursor of the neo-Platonic philosophy, Ammonias Saccas, who was the teacher of Plotinus, lived in Alexandria, it is probable that the Philonian philosophy had its share in the formation of the neo-Platonic doctrine.

In their derivation of the universe from God the neo-Platonists used the method of emanation, which makes their system Pantheistic. There is no creation *ex nihilo,* nor do they start, as did Plato and Aristotle, with two ultimate principles, mind and matter, or form and matter, but beginning with the One good God, they allow everything else to emanate from Him as light emanates from a luminous object. First emanates Intellect (Greek νοῦς), then universal Soul (ψυχή), then Nature (φύσις), then Matter (ὕλη), which, as the last in the series, is farthest from the Source and hence the coarsest, the least real and the source of evil, which is pure negation and not anything positive.

The chief representative of the neo-Platonic philosophy in the Jewish literature of this subject is Solomon Ibn Gabirol (1021–58), though neo-Platonic ideas are also found in Isaac Israeli (855–955), the oldest Jewish philosopher of the middle ages, Bahya, Pseudo-Bahya, Abraham bar Hiyya (12th century), Joseph Ibn Zaddik, Judah Halevi (12th century), Moses (1070–1138) and Abraham Ibn Ezra (1092–1167). Gabirol's *Fons Vitae* is completely neo-Platonic, though he deviates from the traditional neo-Platonic doctrine in placing universal matter and universal form in all the stages of existence as they emanate from God, instead of making matter the last stage in the emanation series. Matter itself changes its nature in the course of its descent and coarseness is not the property of matter as such, but the result of increasing distance from the source. The essential quality of matter is rather indeterminateness, as determination is the characteristic quality of form.

Aristotelians.—The last positive philosophic stage among the Jews of the middle ages was Aristotelianism, and to this system of philosophy belong the most important Jewish thinkers of that period, namely, Abraham Ibn Daud (1110–80), Moses Maimonides (1135–1204) and Gersonides (1288–1344). Aristotle's is the most rationalistic system of Greek antiquity, using the term rationalism not in contrast to empiricism but in opposition to mysticism. Perhaps intellectualism is the better word. Aristotle is regarded as the philosopher *par excellence* and all his works are studied with all their details, not necessarily the translations of them, but in the majority of instances paraphrases and commentaries on the works of Aristotle made by the Arabs Al Kindi, Al Farabi, Ibn Sina (Avicenna) and Ibn Roshd (Averroes).

Aristotle was the first to delimit the boundaries of the various branches of philosophy and to treat them systematically. Logic, physics, psychology, biology, metaphysics, ethics, politics, rhetoric and poetics are all rigidly distinguished, and each of them has a treatise or treatises devoted to it in the extant works of Aristotle. The politics and the poetics were rather neglected by the Jews, the former because the Jews had no State of their own and the latter because it had no bearing on theology or the Bible. To be sure there is poetry in the Bible, but the Jewish philosophers were interested in doctrine and not in literary form. All the other works of Aristotle, notably the logic, physics, psychology, metaphysics and ethics, were carefully studied, even if not at first hand, and the ideas contained therein were laid under contribution in the attempt to establish a scientific Jewish philosophy. Interest in Aristotle's problems was taken partly for their own sake, for the Jews did develop a scientific temper, and partly for an apologetic purpose to defend the dogmas of Judaism scientifically. And Biblical exegesis was introduced as an aid in the apologetic activity.

The most important part of the Aristotelian philosophy for the Jewish theologians was naturally his idea of God. His was the first scientific attempt to prove the existence of God irrespective of the religious motive. As is well known, Aristotle proves that the motion at the basis of all natural phenomena in the heavens and on earth requires for its existence an immovable mover, and an analysis of the concept of an immovable mover leads to the recognition of a being having the Divine attributes of unity and incorporeality. This demonstration was of immense importance for a religious philosophy and was adopted eagerly by the Jewish philosophers as soon as it became known to them. It took the place immediately of the Kalamistic proofs of the earlier writers and prepared the downfall of that system of doctrine. For Aristotle's proof of the existence of God could not be taken as an isolated bit of argumentation. Aristotle's ideas are not episodic, they are above all systematic. The argument for the existence of God carries with it the entire physical and metaphysical system of Aristotle without which it has no meaning. Hence Maimonides, in the second book of the *Guide of the Perplexed,* prefaces the Aristotelian proof with a list of 25 propositions, which sum up in the form of dogmatic conclusions the physical and metaphysical theories of Aristotle. Abraham Ibn Daud, in his *Exalted Faith,* does the same thing in a less concentrated and less skilful form And Hasdai Crescas (1340–1410), the Anti-rationalist, undermines the Aristotelian doctrine by undertaking to refute, in his *Light of the Lord,* the 25 principles laid down by

Maimonides.

The difference in method between the Kalamistic proofs of the existence of God and the Aristotelian is that the former were all based upon the doctrine of the creation of the world in time. Creation was proved first and the existence of God followed from creation. The Aristotelian proof was direct, though in proving God's incorporeality the assumption is that the world is eternal. This meant, of course, that one had to exercise caution in availing oneself of the Aristotelian arsenal for the purpose of borrowing arms for the defence of Judaism. There were those —not at all insignificant persons—who made precisely this charge that, in following the teachings of Aristotle, Maimonides and his school were falsifying Judaism. Maimonides did make use of the Aristotelian proof in place of the Kalamistic because he did not believe the creation of the world in time to be demonstrable by reason. But neither did he believe that Aristotle had succeeded in proving the world's eternity. As a matter of pure logic he thinks that the balance of probability is in favor of creation, and in creation he believes.

The treatment of the Divine attributes in the philosophy of the Jewish Aristotelians is also based on Aristotelian ideas. Unity and incorporeality are derived in Aristotelian fashion from the concept of the "unmoved mover." Thus the Aristotelian conceptions of matter and form and motion and change and nature and potentiality and actuality are adopted and laid under contribution. Nevertheless the doctrine of Divine attributes in its details is not wholly Aristotelian. In the first place God is the Creator *ex nihilo* in accordance with the traditional interpretation of the creation story in Genesis and not merely the prime mover causing the combination of the eternal matter with the eternal forms as in Aristotle. Secondly, there is an element of neo-Platonic transcendence in the conception of God both in the philosophy of Maimonides and in that of the other Jewish Aristotelians, who differ only in the degree of transcendence they ascribe to God, Maimonides being extreme in his views on the subject, while Gersonides is more moderate.

The Aristotelian cosmology as it relates to the motions of the heavenly bodies and their several spiritual movers—the spirits of the spheres, as they were called, or the separate Intelligences—was also adopted in part and made use of to find a place for the Biblical doctrine of angels. The angels of which the Bible speaks are none other than the movers of the spheres, and they are immaterial beings.

Aristotle's psychology was also adopted in part, the soul being conceived of as the form or entelechy of the body and not as a pre-existing and distinct entity which was placed in the body, as the Platonic view has it. The different parts and faculties of the soul, the senses—internal and external—etc,, were also understood in the Aristotelian manner. And similarly Aristotle's doctrine of dreams and divination and his conception of the Active Intellect were adapted to the Jewish doctrines of prophecy and immortality. Prophecy was explained on psychological principles as being a combination of reason and imagination, Moses alone being an exception in that his prophetic gift was wholly supernatural; while the immortality of the soul was ascribed only to the intellect or reason, which is immaterial. The Active Intellect of Aristotle, which could be conceived of in various ways, since Aristotle's description of it is obscure, was, in Arabic fashion, identified with the mover or spirit of the lunar sphere, and was regarded by Gersonides as the bestower of the prophetic information upon the reason of the human individual. The surviving human reason is after death absorbed in the Active Intellect, to whose illumination it owes all its theoretical knowledge, the natural knowledge of the philosopher as well as the supernatural of the prophet.

The ethics of Aristotle played a less important part in Jewish philosophy, as it did not come in direct conflict with any specific Biblical or Rabbinic doctrine. Nevertheless Maimonides made use of Aristotle's ideas in his commentary on the ethical treatise of the Mishnah called *Abot*. In his introduction to his commentary he lays down the Aristotelian analysis of the faculties of the human soul as the basis of his ethical doctrine and takes over from Aristotle the definition of virtue as the rational activity of the soul acquired as a permanent possession, the division of the virtues into theoretical and practical, and the doctrine of the mean, namely, that in those fields of human conduct to which the terms virtue and vice can be applied, excess and defect are both vices, while virtue is represented by the mean. Thus in the matter of spending money, excess in spending is extravagance, a vice, defect in spending is niggardliness, also a vice, moderation in spending is the virtue, and the same holds true in other lines of conduct.

More important, however, than the borrowing of these specific ethical doctrines is the general spirit of Aristotelian rationalism which Maimonides and others apply to the laws of the Pentateuch. Despite the statement in the Talmud that the so-called "statutes" (Heb. *hukkim*) represent the arbitrary will of God and should not be enquired into nor explained in a humanitarian spirit where no such interpretation is given in the Bible itself, Maimonides devotes a large part of his *Guide* to a rationalization and ethicization of the Pentateuchal laws. And where either seems impossible, as in the elaborate institution of sacrifices, he makes bold to brand the whole as superstition. The Israelites of that time, he says, under the influence of custom and the example of the surrounding nations, were attached to the sacrificial rites which they practised in honour of strange gods. It would have been impossible to wean them away from idol worship and to convert them to the worship of the true God if sacrifices were abolished. Hence a concession was made to the customs of the people and they were told to offer sacrifices to the Lord, in the hope that in the course of time as the true faith would educate them and purify and refine their conception of God, the sacrifices would fall away of themselves.

An important problem which pertains equally to ethics and theology was the doctrine of free will in its relation to the Divine attribute of omniscience. The doctrine of freedom is a necessary consequence of Divine justice. Reward and punishment, a fundamental dogma of Judaism, cannot be justified if man is not free to determine his will to do or to abstain. But if man is free, God's knowledge is limited in so far, because freedom means in the last analysis causelessness, and the causeless is from the nature of the case unknowable in advance of its occurrence. Maimonides's solution is that this argument does not hold of the Divine Being who is transcendent. He can know the unknowable. Ibn Daud and Gersonides admit that the causeless is as such unknowable and hence unknown to God also, but omniscience must not be understood in a sense which would make its meaning contradictory and absurd, any more than the attribute of omnipotence can be taken to mean that God can now make that which happened yesterday not to have happened, or to make a tree grow artificial flowers. Hasdai Crescas, whom we class among the anti-rationalists, saves God's omniscience by limiting human freedom, yet maintains the justice of reward and punishment by pointing out that such is the law of things, and there is a necessary connection between wrong-doing and suffering as there is between swallowing poison and death.

The Anti-Rationalists.—Among those who were conversant with the philosophical views of the day, neo-Platonic and Aristotelian, but refused to make of them a procrustean bed upon which to stretch the doctrines of Judaism, the foremost are Judah Halevi (fl. 12th century) and Hasdai Crescas. Judah Halevi was a poet and had no confidence in the theories and arguments of the philosophers. In the first place he distinguished between the method and aim of philosophy on the one hand and those of Judaism on the other. The philosopher uses the discursive reason and his aim is knowledge. Whether his subject matter is God or the shape and size of the earth, or the identity and number of the elements, his methods and aims are alike. Judaism is not a rationalistic philosophy, its purpose is not to impart theoretical information. Judaism is a mode of life based upon the historic fact of the Divine revelation to Moses and Israel on Sinai and His election of the people of Israel to bear testimony to His existence and will. The prophets are the teachers of Israel and not the philosophers. The prophets knew God directly and not

through logical inference. They were in communion with God, having personal experience of Him, and were attached to Him in love and devotion. They speak of Him with enthusiasm and their enthusiasm is contagious and makes disciples. The prophets of Israel constitute a higher species of being than the ordinary Israelite. Judah Halevi does not therefore subscribe to the Maimonidean conception of prophecy which attempts to approximate it to the natural phenomena of the acquisition of knowledge. Judah Halevi maintains the wholly supernatural character of prophecy and the objective reality of the prophetic visions. What these visions actually were he does not attempt to say. The messengers or angels who appeared to the prophets may have been specially created, he says, from the fine elementary bodies, or they may have been the spirits of the spheres or abstract Intelligences of which the philosophers spoke. Halevi maintains a wholesome restraint and abstains from dogmatism as to the precise nature of these theophanies, but he has no doubt of their objective reality, since all the prophets testify to having seen them. We apply the same test, he says, to the phenomena appearing to our senses. We test the objective reality of such appearances by the testimony of the generality of mankind. Prophetic visions, similarly, are tested by their appearance to all members of the prophetic guild.

Nor does Halevi find it necessary to find human reasons for the ritual and ceremonial laws of the Pentateuch. The sacrifices are not objectionable to him, nor inconsistent with the nature of God. It is presumptuous to say that because we do not understand the significance of sacrifices as determining spiritual health, they must be given a symbolic meaning or rejected altogether. For neither do we know what determines the physical health of plant and animal, and why a certain proportion of elementary mixture constitutes health and a slight deviation therefrom disease and even death. Israel is superior to other nations, Palestine to other countries and Hebrew to all other languages. Prophecy is inseparable from Palestine and Israel alone had prophets. No philosopher ever achieved prophetic inspiration.

Judah Halevi passes in review all the principal doctrines of the philosophy current in his day and subjects them to a rigorous and unsympathetic criticism. Some of these theories, he shows, are arbitrary and without any evidence, while others are clearly untenable as they do not account for the facts. He is particularly opposed to the philosophic doctrine of immortality, that it is due to the intellectual nature of the soul and is dependent upon the knowledge which the soul possesses. The philosophic requirement for immortality, Halevi objects, is either too small or too great, according to the meaning one attaches to the word knowledge.

CRESCAS AND MAIMONIDES

Despite the criticisms of Halevi, the philosophical or Aristotelian point of view gained ground among the Jews in Spain and Ibn Daud, Maimonides and Gersonides made it fashionable and authoritative. Maimonides created a school of Judaism which had many followers and dominated the thought of the learned in the following centuries. To be sure, it was not alone in the field and it met with violent opposition. Most of this, however, came from those who were not familiar with philosophic speculation, and the opposition was based on purely dogmatic grounds. The traditional interpretation of the Bible and the authority of the Talmud were appealed to against the new-fangled ideas which came from non-Jewish sources.

In Hasdai Crescas, however, we have a new champion of traditional Judaism, a philosophical defender of the unadulterated faith against the rationalism and intellectualism of the Maimonidean school. Like Judah Halevi, and with more rigour of logic and argument, he undertook to undermine the views of the philosophers by refuting the 25 propositions (or the more important among them) which Maimonides laid down as the basis of his proof of the existence, unity and incorporeality of God. He showed that the physics and the metaphysics of Aristotle are not to be relied upon, hence a fresh start must be made to establish a system of Judaism. This Crescas undertakes to do in his *Light of the Lord* (or Adonai). Some of his arguments are not more convincing than those he attacks, but he feels safer in that he is closer to the traditional understanding of Scripture and there is no doubt that his interpretation of Judaism is truer to its spirit, since he does not force alien conceptions upon the Bible. At one point he admits that logic and reason are inconclusive, as one may find arguments *pro* and *contra,* and has recourse to Scripture: "Hear, O Israel, the Lord our God, the Lord is One." In respect to the doctrine of attributes there is no doubt that Maimonides departs from traditional and Rabbinic Judaism in denying all positive attributes to God and reducing Him to the Unknowable of Herbert Spencer. Such depersonalization of God is scarcely compatible with a detailed revelation, a special Providence, the institution of prayer, fasting and repentance, not to speak of sacrifices, which indeed Maimonides was consistent enough to reject. Crescas, therefore, admits positive attributes of God, without teaching anthropomorphism. For God, he says, is infinite and a necessary existent, whereas His creatures are finite and possible existents.

Inasmuch as Crescas is opposed to the use of alien philosophies in the interpretation of Judaism, he analyzes the Jewish religion from within and discusses its essential dogmas. To be sure Maimonides did the same thing, nay, he was the first to enumerate the fundamental dogmas of Judaism. But he did this in his commentary on the Mishnah and not in his systematic philosophical work, the *Guide of the Perplexed.* To Crescas's mind the dogmas and beliefs are the essential part of a constructive philosophy of Judaism. Accordingly he criticizes the list of 13 dogmas established by Maimonides on the ground that they are either too many or too few according to the idea one attaches to the word dogma. Crescas distinguishes between fundamental doctrines and true beliefs. The former are those without which Judaism could not exist, the latter are essential indeed and disbelief in them constitutes heresy, but Judaism could exist without them.

The 13 articles of Maimonides's creed are: (1) Existence of God; (2) Unity; (3) Incorporeality; (4) Eternity; (5) God alone should be worshipped; (6) Prophecy; (7) Superiority of Moses; (8) Revelation; (9) Immutability of the Torah; (10) God's omniscience; (11) Reward and punishment; (12) Belief in the coming of the Messiah; (13) Resurrection. Crescas, as we have seen, has two lists. The fundamental dogmas are the following: (1) God's knowledge of existing things; (2) Providence; (3) God's omnipotence; (4) Prophecy; (5) Freedom of the will; (6) The purpose of the Torah is to inspire man with the love and fear of God. In addition to these six fundamental doctrines, there are true beliefs which are eight in number: (1) Creation; (2) Immortality; (3) Reward and punishment; (4) Resurrection; (5) Eternity of the Torah; (6) Superiority of Moses; (7) The Urim and Tummim as a source of knowledge of the future for the priest; (8) Belief in the Messiah.

Immortality and Providence.—In reference to immortality and Providence there is a clear division of opinion between the philosophers (neo-Platonists and Aristotelians) and the Anti-rationalists. The former, like Maimonides and Gersonides, make both of these privileges dependent upon intellectual knowledge. The immaterial as such is immortal and the human soul achieves its complete immateriality as an actual entity through contemplation and thought, hence the human reason or the rational soul is immortal, and the degree of immortality is dependent upon the character and extent of theoretical knowledge. The Anti-rationalists, like Halevi and Crescas, reject this notion on logical grounds and, with a truer understanding of the spirit of Judaism, lay stress on the love of God and the observance of the Biblical and the Rabbinic commandments as the sole requisite and condition of immortality.

The problem of Providence was one of great difficulty both on theoretical grounds and by reason of its apparent conflict with experience. In order to make special Providence theoretically possible, God must know every individual as such and reward and punish him according to his deeds. But it is difficult to see how, on the Aristotelian theory of matter and form and the concept of God and of theoretical knowledge, it is possible for an immaterial

being to know the individual person or to take cognizance of particular acts which as particulars must be material. Moreover, experience shows that many good men suffer and many bad men are prosperous. The theoretical difficulty did not trouble Maimonides, since he maintains that everything is possible for the transcendent God though it may seem to us contrary to reason. Gersonides, as we have seen, was not so easily satisfied, and limited God's direct knowledge to universals, the particulars being indirectly involved as contained in the universals. But the practical difficulty could not be so easily disposed of. The main solution of the Aristotelians was that not all human beings are equally under the special care of the Divine being. All depends upon the nearness of man to God, which is brought about by theoretical study. The more learned and philosophical a person is the nearer he is to God and the more he enjoys the Divine care. Observance of the Jewish laws and ceremonies are necessary as a step in the acquisition of true knowledge. An immoral man who follows after the desires of his appetite can never become a truly learned man. And the majority of ordinary persons who are mediocre in theory as well as in practice, not to speak of the wicked, are simply left to their fate as determined by nature and are no more taken special notice of than the beasts of the field. Nature provides for them in a general way in accordance with general laws.

The Anti-rationalist Crescas is opposed to this intellectualistic doctrine. God does know particulars, hence there is no theoretical difficulty. But reward and punishment are not determined by a person's intellectual status, but by his obedience and disobedience to God's will and command. Real reward and punishment are given in the next world, nevertheless the apparent anomalies in the fortunes of men in this world, where the good man suffers and the bad man flourishes, can be explained in various ways. Evil is sometimes a good in disguise; the suffering man may not really be so good as he seems; one sometimes inherits good and evil from one's parents; the individual is sometimes involved in the destiny of the majority, and so on. All inequalities, however, will be adjusted in the future world.

In addition to the more general doctrines discussed so far, many of the Jewish philosophers exercised their systematizing activities upon the more specific dogmas of the Jewish religion and upon the interpretation of Scripture. An examination of the laws in the Pentateuch showed that some of the rules of action, like those which have to do with social life, are recognized by human society universally, while others are peculiar to the Jewish law. Accordingly they were divided into two classes, called rational and revealed respectively. Some of the Jewish thinkers treat also of the eschatological doctrines of Judaism, among which are the messianic period, the dogma of resurrection, the nature of reward and punishment after death, the meaning of paradise and hell, the future world, and so on. Rationalism plays a small part in these discussions, which are mainly based upon Biblical and Talmudic statements and the traditions connected with them.

NO MODERN MOVEMENT

The philosophic movement among the Jews in the middle ages began to decline in the 15th century, partly by reason of the rise of the mystic lore, known as the Cabala, and partly by reason of the decline of philosophical studies among the Arabs, where the reign of toleration was succeeded by persecution and forced conversions. In Christian countries the status of the Jews was even worse and hence not favourable to science and philosophy. Joseph Albo (1380–1444) is the last one of the mediaeval Jews who summed up in popular form the entire philosophy of the preceding centuries, and though there are no original contributions to Jewish thought in his *Ikkarim* (Dogmas, lit. Roots), nevertheless by reason of his orthodox position and the popular style of his discussions, filled as they are with Biblical and Talmudic quotations, Albo was read by many who feared to approach Maimonides' *Guide of the Perplexed.* There were sporadic individuals in the following centuries who wrote on philosophic questions and related them to Bible and Talmud, or who interpreted the Bible in philosophic fashion, and clung to the scholastic method and its authority Aristotle, long after Bacon and Descartes and Leibniz introduced a new method and point of view. But the philosophical movement as such had spent its force, and it was not again resumed. Spinoza belongs to the general history of philosophy rather than to the history of Jewish philosophy. Mendelssohn was an isolated philosopher and had no successors. Other individual thinkers may be mentioned who in modern times endeavoured to lay a general philosophical basis for Judaism: Nahman Krochmal (1785–1840), Samuel Hirsch (1815–1889), both under the influence of Hegelianism, which the latter used for the defence of the Reform movement in Jewry, Asher Ginzberg (Ahad Haam) (1856–1927), the philosopher of Zionism, Hermann Cohen (1842–1918), the neo-Kantian and founder of the Marburg school. It is extremely doubtful whether in the present status of Jewry, divided and dispersed as it is, and the extreme individualism of the modern Jew, a philosophy of Judaism is possible which will appeal to more than a very small minority. Such a philosophy, if it were possible, would have to reckon with the points of view and theories of modern science and the methods and results of the Higher Criticism of the Bible. The mediaeval Jewish philosophy is of historical interest only, though as such it ought to be studied more than it is; critical editions should be brought out of the classical treatises, and the manuscript material of less important works should be made accessible to the student.

JEWS. The word *Jew* is derived through the Latin *Judaeus* and the Greek Ἰουδαῖος from the Hebrew יְהוּדִי (Yehūdhī), a gentilic adjective, occurring only in the later parts of the Old Testament and signifying a descendant of יְהוּדָה (Yehūdhāh, Judah, Judas), the fourth son of Jacob, whose tribe, together with that of his half-brother Benjamin, constituted the kingdom of Judah, as opposed to that of the remaining tribes (Israel). The name came to mean the followers of Judaism, including in-born and proselytes, the racial signification diminishing as the religious increased.

Apart from this proper use the word occurs in certain phrases through popular corruption, *e.g.,* Jew's harp, which has nothing to do with "Jew," but is possibly connected with the French *Jeu, i.e.,* "toy harp." The verb "to Jew," in the sense of "to cheat" (*e.g.,* on p. 439 *The Concise Oxford Dictionary,* adapted by H. W. and F. G. Fowler, Oxford, 1926) is an instance of class hatred and may be paralleled by other derogatory examples, *e.g.,* "Jesuit" (on the same page), "to Welsh" (p. 1,013), etc. *See* also under separate headings, notably JUDAISM, JEWISH PHILOSOPHY, ZIONISM, ANTISEMITISM, etc. (H. M. J. L.)

Racial History.—The racial composition of the Jews has given rise to considerable controversy. Most observers profess to see in the Jewish type one of the most persistent varieties of the human race, others, including Ripley and Boas, believe that they take on the physical traits of the people among whom they live. Recent observations, which, however, by no means include Jews from all over the world, tend to show that in the majority of cases the Jews tend to have rather a round head, and show to an unusual degree the same amount of variation. They also tend to preserve

other characters, the most noticeable being the form of the nose. There is a marked resemblance between Jews and Armenians, and though the Armenoid type predominates there are other features in their composition. Weissenberg suggests that there was within historic times a mixture, not in Palestine but in the Caucasus, between the Armenoid and a blond type, and that there are two types of Jews—the Semitic, dark with a fine nose, and Armenoid, with a coarser nose and an appearance of blondness.

See W. Z. Ripley, *The Races of Europe* (1899, bibl.); F. Boas, *Descendants of Immigrants* (1912); L. H. D. Buxton, *The Peoples of Asia* (1925, bibl.). (L. H. D. B.)

EARLIEST TIMES TO THE GREEK DOMINATION

1. **Early History.**—For the first two periods the history of the Jews is mainly that of Palestine. It begins among those peoples occupying the area between the Nile on the one side and the Tigris and the Euphrates on the other. Surrounded by ancient seats of culture in Egypt and Babylonia, by the deserts of Arabia, and by the highlands of Asia Minor, Palestine, with Syria on the north, was the high road of civilization, trade and warlike enterprise, and the meeting-place of religions Its small principalities were dominated by the great Powers, whose weakness or acquiescence alone enabled them to rise above dependence or vassalage. The land was traversed by old-established trade routes and possessed important harbours on the Gulf of 'Akaba and on the Mediterranean coast, the latter exposing it to the influence of the Levant. It was "the physical centre of those movements of history from which the world has grown." The portion of this district abutting upon the Mediterranean may be divided into two main parts: Syria (from the Taurus to Hermon) and Palestine (southward to the desert bordering upon Egypt). The latter is about 150 m. from north to south (the proverbial "Dan to Beersheba"), with a breadth varying from 25 to 80 m., *i.e.*, about 6,040 sq miles. This excludes the land east of the Jordan. (*See* further, PALESTINE.)

Already, in the 15th century B.C., Palestine was inhabited by a settled people whose language, thought and religion were not radically different several centuries later. Petty princes ruled as vassals of Egypt which, after expelling the Hyksos from its borders, had entered upon a series of conquests as far as the Euphrates. Some centuries previously, however, Babylonia had held sway to the west, and the Akkadian script and language were now used, not merely in the diplomatic correspondence between Egypt and Asia, but also among the Palestinian princes themselves. Canaan (Palestine and the south Phoenician coast land) and Amor (Lebanon district and beyond) were under the constant supervision of Egypt, and Egyptian officials journeyed round to collect tribute, to attend to complaints, and to assure themselves of the allegiance of the vassals. The Amarna tablets and those found at Taannek (bibl. Taanach) and at Boghaz-keui (*see* HITTITES) combine with archaeological evidence (Lachish, Gezer, Megiddo, Beth-shan, etc.) to reflect advanced conditions of life and culture, the chronological limits of which cannot be determined. This, the "Amarna age," with regular maritime intercourse between the Aegean settlements, Phoenicia and the Delta, and with lines of caravans connecting Babylonia, North Syria, Arabia and Egypt, presents a vivid picture of life and activity, in the centre of which lies Palestine, with here and there Egyptian colonies and traces of Egyptian cults.

The "Amarna age" affords the first starting-point for any estimate of Palestine and the history of Israel. The records reveal a state of anarchy in Palestine for which the weakness of Egypt and the downward pressure of North Syrian peoples were responsible. Subdivided into a number of little local principalities, Palestine was suffering both from internal intrigues and from the designs of the northern powers. It is now that we find the restless Habiru, a name which is commonly identified with that of the "Hebrews". For such information as we possess, reference must be made to the articles ABRAHAM, AMORITES, CANAANITES, PHILISTINES. Unfortunately the external evidence fails just when it would be most welcome. There comes a time when the fate of Palestine was no longer controlled by the great powers, and the curtain rises upon the historical traditions of the Old Testament.

2. **Biblical History.**—For the rest of the first period the Old Testament forms the main source. It contains, in fact, the history itself in two forms: (*a*) from the creation of man to the fall of Judah (Genesis–2 Kings), which is supplemented and continued further to (*b*) the foundation of Judaism in the 5th century B.C. (Chronicles–Ezra–Nehemiah). In the light of contemporary monuments, archaeological evidence, the progress of scientific knowledge and the recognized methods of modern historical criticism, the account of the origin of mankind and of the history of the Jews in the Old Testament can no longer be implicitly accepted. Written by an oriental people and clothed in an oriental dress, the books of the Old Testament do not contain "objective" records, but history written for specific purposes. The history is a compilation, as may be illustrated from a comparison of Chronicles with Samuel–Kings, and frequently depicts the past in the light of the present. (*See* CHRONICLES.)

Scholars are now almost unanimously agreed that the internal features are best explained by the literary hypothesis associated with the work of Graf. Kuenen and Wellhausen. According to this, the historical traditions are mainly due to two characteristic though very complicated recensions, one under the influence of the teaching of Deuteronomy (Joshua to Kings), the other, of a more priestly character (akin to Leviticus), of somewhat later date (Genesis to Joshua, with traces in Judges to Kings). (*See* G. F. Moore, *Ency. Bibl.*, "Historical literature.") There are innumerable questions relating to the nature, limits and dates of these two recensions, of the incorporated sources, and of other sources (whether early or late) of independent origin; and here there is naturally room for much divergence of opinion. Older material (often of composite origin) has been used, not so much for the purpose of providing historical information, as with the object of showing the religious significance of past history; and the series Joshua–Kings is actually included among the "prophets" in the Jewish canon. (*See* further BIBLE: *Old Testament.*)

3. **Traditions of Origin.**—At the age when, as we have reason to suppose, the Old Testament historical writings were assuming their present form, it was possible to divide the immediately preceding centuries into three distinct periods: (*a*) That of the two rival kingdoms: Israel (Ephraim or Samaria) in the northern half of Palestine, and Judah in the south. Then (*b*) the former lost its independence towards the close of the 8th century B.C., when a number of its inhabitants were carried away; and the latter shared the fate of exile at the beginning of the 6th century, but succeeded in making a fresh reconstruction some 50 or 60 years later. Finally (*c*), in the "post-exilic" period, religion and life were reorganized under the influence of a new spirit; relations with Samaria were broken off, and Judaism took its definite character, perhaps about the middle or close of the 5th century. The term "Jew" means properly "man of Judah," *i.e.*, of that small district which, with Jerusalem as its capital, became the centre of post-exilic Judaism. The favourite name "Israel," with all its religious and national associations, is somewhat ambiguous in an historical sketch, since, although it is used as opposed to Judah (*a*), it ultimately came to designate the true nucleus of the worshippers of the national god, Yahweh, as opposed to the Samaritans, the later inhabitants of Israelite territory (*c*). A more general term is "Hebrew." (*See* HEBREW LANGUAGE, HEBREW RELIGION.)

The traditions which prevailed among the Israelites concerning their origin belong to a time not when Judah and Israel were "brother" or rival kingdoms, but when they formed one body and Judah was among the "sons" of Israel (or Jacob), the son of Isaac and grandson of Abraham. The names of the "sons," or rather tribes, vary in origin and, probably, also in age; and where they represent fixed territorial limits, the districts so described were in some cases certainly peopled by groups of non-Israelite ancestry. But as tribal names they invited explanation, and of the many characteristic traditions which were doubtless current, a number have been preserved, though not in any very early dress. Close relationship was recognized with the Aramaeans, with Edom, Moab and Ammon. Esau (Edom) is the "brother" of Jacob, Moab and Ammon are sons of Lot, Abraham's nephew. Abraham himself, it was traditionally narrated, came from Harran (Carrhae), primarily from Ur, of the Chaldees, and Jacob re-enters from Gilead

in the north-east, with his Aramaean wives and concubines and their families (Benjamin excepted). It is on this occasion that Jacob's name is changed to Israel. Such traditions of migration and kinship are in themselves not incredible; but the detailed accounts of the ancestors Abraham, Isaac and Jacob, as given in Genesis, are inherently doubtful as regards both the internal conditions, which the (late) chronological scheme ascribes to the first half of the 2nd millennium B.C., and the general circumstances of the life of these strangers in a foreign land.

The story of the settlement of the national and tribal ancestors in Palestine is interrupted by an account of the southward movement of Jacob (or Israel) and his sons into a district under the immediate influence of the kings of Egypt. After an interval of uncertain duration we find in Exodus (*q.v.*) a numerous people subjected to rigorous oppression. No longer "sons" of Jacob or Israel, whole tribes were led out by Moses and Aaron; and, after a series of incidents extending over 40 years, the "children of Israel" invaded the land in which their ancestors had lived. The traditions embodied in the books Exodus–Joshua are considerably later than the ostensible date of the events themselves For the details of their conflict *see* EXODUS, (THE). The story of the "exodus" is that of the religious birth of "Israel," joined by covenant with the national god, Yahweh (*see* JEHOVAH; TETRAGRAMMATON), whose aid in times of peril and need proved his supremacy. In Moses (*q.v.*) was seen the founder of Israel's religion and laws; in Aaron (*q.v.*) the prototype of the Israelite priesthood. Yahweh had admittedly been the God of Israel's ancestors, but his name was only now made known (Exod. iii. 13 *sqq*, vi. 2 *seq.*), and this conception of a new era in Yahweh's relations with the people is associated with the family of Moses and with small groups from the south of Palestine who reappear in religious movements in later history (*see* KENITES; RECHABITES). Amid a great variety of motives the prominence of Kadesh in south Palestine is to be recognized; but it is uncertain what clans or tribes were at Kadesh, and it is possible that traditions, originally confined to those with whom the new conception of Yahweh is connected, were subsequently adopted by others who came to regard themselves as the worshippers of the only true Yahweh. Two quite distinct views can be distinguished. The one associates itself with the settlement of the ancestors of the Hebrews and has an ethnic character. The other, part of the religious history of "Israel," is essentially bound up with the religious genius of the people, and is partly connected with clans from the south of Palestine whose influence reappears later.

4. **The Monarchy of Israel.**—The book of Joshua continues the fortunes of the "children of Israel" and describes a successful occupation of Palestine by the united tribes, in striking contrast to other records of the partial successes of individual groups (Judges i.). It is, however, based upon the account of victories by the Ephraimite Joshua over confederations of petty kings to the south and north of central Palestine, apparently the traditions of Ephraim describing from its own standpoint the conquest of Palestine. The book of Judges represents a period of unrest after the settlement of the people. External oppressions (Moab, Ammon, Philistines, etc.) and internal rivalries rent the Israelites; and the religious philosophy of a later (Deuteronomic) age represents the period as one of alternate apostasy from and of penitent return to the Yahweh of the "exodus," and their deliverance by "judges." The best narratives relate to Israel and Gilead; Judah scarcely appears, and in an old poetical account of a great fight of the united tribes against a northern adversary lies outside the writer's horizon or interest (Judges v., *see* DEBORAH). Stories of successful warfare and of temporary leaders (*see* ABIMELECH; EHUD; GIDEON; JEPHTHAH) form an introduction to the institution of the Israelite monarchy, an epoch of supreme importance in biblical history.

The heroic figure who stands at the head is Saul ("asked"), and there are conflicting accounts of his rise. (*See* SAMUEL, BOOKS OF.) The Philistines (*q.v.*) newly settled in the land, held the people in subjection; and their defeat is ascribed by the later account to the godly prophet-judge, Samuel, and by the earlier to Saul. The first of a series of annals of the kings of Israel ascribes to Saul conquests over the surrounding peoples to an extent which implies that the district of Judah formed part of his kingdom (1 Sam. xiv. 47 *seq.*). His might is also attested by the fine elegy (2 Sam. i. 17 *sqq.*) over the death of two great Israelite heroes, Saul and Jonathan, knit together by mutual love, inseparable in life and death, whose overthrow by the Philistines on the plain of Jezreel was a national misfortune. The court was removed across the Jordan to Mahanaim, where Saul's son, Ishbaal (Ish-bosheth), thanks to his general, Abner, recovered some of the lost prestige, and reigned two years over Israel and Gilead (2 Sam. ii. 8–10; contrast the figure in v.11). But at this point the scanty annals are suspended and the history of the age is given in more popular sources. Israelite national history has come down to us through Judaean hands, with the result that much of it has been coloured by late Judaean feeling, and the Judaean account of the beginning of the monarchy.

5. **David and Solomon.**—Certain traditions of Judah and Jerusalem appears to have looked back upon a movement from the south, traces of which underlie the present account of the "exodus." The land was full of "sons of Anak," giants who had terrified the scouts sent from Kadesh. Caleb alone had distinguished himself by his fearlessness, and the (semi-Edomite) clan Caleb drove them out from Hebron in south Judah (Josh. xv. 14 *sqq.*; *cf.* also xi. 21 *seq.*). David and his followers are found in the south of Hebron, and as they advanced northwards into a hostile district they encountered wondrous heroes between Gath and Jerusalem (2 Sam. xxi. 15 *sqq.*; xxiii. 8 *sqq.*). (*See* PHILISTINES.) After strenuous fighting the district was cleared, and Jerusalem, taken by the sword, became the capital. Tradition saw in David the head of a lengthy line of kings, the founder of the Judaean monarchy, the psalmist and the priest-king who inaugurated religious institutions now recognized to be of a distinctly later character. As a result of this backward projection of later conceptions the recovery of the true historical nucleus is difficult. The rise of Jerusalem, the centre of post-exilic Judaism, demanded explanation. Israelite tradition had ascribed the conquest of Jerusalem, Hebron and other cities of Judah to the Ephraimite Joshua; Judaean tradition, on the other hand, relates the capture of the sacred city from a hostile people (2 Sam. v.). The famous city, within easy reach of the southern desert and central Palestine (to Hebron and to Samaria the distances are about 18 and 35 m. respectively), had entered into Palestinian history in the "Amarna" age and had an old religious history (*see* HEBREW RELIGION). But Judaean tradition dated the sanctity of Jerusalem from the installation of the Ark (*q.v.*), a sacred movable object, the symbol of the presence of Yahweh. It is associated with the half-nomad clans in the south of Palestine, or with the wanderings of David and his own priest, Abiathar (1 Ki. ii. 26). It is ultimately placed within the newly captured city. But canonical tradition associates it with the invasion of all the tribes of Israel from beyond the Jordan.

Other narratives describe the life of the young David at the court of the first king of the northern kingdom. The scenes cover the district which he took with the sword, and the brave Saul is represented in an unfavourable light. One must allow for the popular tendency to idealize great figures, and for the Judaean origin of the compilation. To David is ascribed the sovereignty over a united people. But the stages in his progress are not clear. After being the popular favourite of Israel in the little district of Benjamin, he was driven away by the jealousy and animosity of Saul. Gradually strengthening his position by alliance with Judaean clans, he became king at Hebron at the time when Israel suffered defeat in the north. His subsequent advance to the kingship over Judah and Israel at Jerusalem is represented as due to the weak condition of Israel, and the compliance of Saul's general, Abner; partly, also, to the long-expressed wish of the Israelites that their old hero should reign over them. Saul had been chosen by Yahweh to free his people from the Philistines; he had been rejected for his sins, and had suffered continuously from this enemy; Israel at his death was left in the unhappy state in which he had found it; it was the Judaean David, the faithful servant of Yahweh, who was now chosen to deliver Israel, and to the last the people gratefully remembered their debt. David accomplished the conquests of Saul, but on a grander scale; "Saul hath slain his

thousands and David his tens of thousands" is the popular couplet comparing the relative merits of the rival dynasts. A series of campaigns against Edom, Moab, Ammon and the Aramaean states, friendly relations with Hiram of Tyre, and the recognition of his sovereignty by the king of Hamath on the Orontes, combine to portray a monarchy which was the ideal. (*See* further, DAVID; SAMUEL; SAUL.)

David, the warrior, was followed by his son Solomon, as "peaceful" as his name signifies, famous for his wealth, wisdom and piety, above all for the magnificent Temple which he built at Jerusalem. Phoenician artificers were enlisted for the purpose, and with Phoenician sailors successful trading-journeys were regularly undertaken. Commercial intercourse with Asia Minor, Arabia, Tarshish (in Spain), and Ophir (*q.v.*) filled his coffers, and his realm extended from the Euphrates to the border of Egypt. Tradition depicts him as a worthy successor to his father, and represents a state of luxury and riches impressive to all who were familiar with the great oriental courts. (*See* SOLOMON.) Judah and Israel dwelt at ease, or held the superior position of military officials, while the earlier inhabitants of the land were put to forced labour. But another side of the picture shows the domestic intrigues which darkened the last days of David. The accession of Solomon had not been without bloodshed, and Judah, together with David's old general, Joab, and his faithful priest, Abiathar, were opposed to the son of a woman who had been the wife of a Hittite warrior. The era of the Temple of Jerusalem starts with a new *régime*, another captain of the army and another priest — Zadok of Jerusalem. Moreover, the employment of Judaeans and Israelites for Solomon's palatial buildings, and the heavy taxation for the upkeep of a court which was the wonder of the world, caused grave discontent. External relations, too, were unsatisfactory. The Edomites, who had been almost extirpated by David in the valley of Salt, south of the Dead sea, were now strong enough to seek revenge; and the powerful kingdom of Damascus, whose foundation is dated to this period, began to threaten Israel on the north and north-east. These troubles, we learn, had affected all Solomon's reign, and even Hiram, the Phoenician, appears to have acquired a portion of Galilee. In the approaching disruption writers saw the punishment for the king's apostasy, and they condemn the sanctuaries in Jerusalem which he erected to the gods of his heathen wives. Nevertheless, these places of cult remained some 300 years until almost the close of the monarchy, when their destruction is attributed to Josiah (Sec. 11). At Solomon's death the opportunity was seized to request from his son, Rehoboam, a more generous treatment. The reply is memorable: "My little finger is thicker than my father's loins; my father chastised you with whips, but I will chastise you with scorpions." These words were calculated to inflame a people whom history proves to have been haughty and high-spirited, and the great Israel renounced its union with the small district of Judah. Jeroboam (*q.v.*), once one of Solomon's officers, became king over the north, and the history of the divided monarchy begins (about 937 B.C.) with the Israelite power on both sides of the Jordan and with Judah extending southwards from a point a few miles north of Jerusalem.

6. **The Rival Kingdoms.**—The history of the two kingdoms is contained in Kings and the later and relatively less trustworthy Chronicles, which deals with Judah alone. In the former a separate history of the northern kingdom has been curiously combined with Judaean history by means of synchronisms (*see* BIBLE: *Old Testament Chronology;* KINGS, BOOKS OF). Moreover, the Judaean compiler finds in Israel's troubles the punishment for its schismatic idolatry; nor does he spare Judah, but judges its kings by a standard which agrees with the standpoint of Deuteronomy and is scarcely earlier than the end of the 7th century B.C. He looks back upon the time when each kingdom laid the foundation of its subsequent fortunes. Judah enjoys an unbroken dynasty, which survived the most serious crises, a temple which grew in splendour and wealth under royal patronage, and a legitimate priesthood which owed its origin to Zadok, the successful rival of David's priest, Abiathar. Israel, on the other hand, signed its death-warrant by the institution of calf-cult, a cult which, however, was scarcely recognized as contrary to the worship of Yahweh before the denunciations of Hosea (*see* CALF, GOLDEN). Judah had natural connections with Edom and southern Palestine; Israel was more closely associated with Gilead and the Aramaeans of the north. That Israel was the stronger may be suggested by the acquiescence of Judah in the new situation. A diversion was caused by Shishak's invasion (*c.* 930), but of this reappearance of Egypt after nearly three centuries of inactivity little is preserved in biblical history. Only the Temple records recall the spoilation of the sanctuary of Jerusalem, and traditions of Jeroboam I. show that Shishak's prominence was well known (*cf.* 2 Chron. xii. 8). Although both kingdoms suffered, common misfortune did not throw them together. On the contrary, the statement that there was continual warfare is supplemented in Chronicles by the story of a victory over Israel by Abijah, the son of Rehoboam.

Jeroboam's son, Nadab, perished in a conspiracy whilst besieging the Philistine city of Gibbethon, and Baasha of (north) Israel seized the throne. Incessant war prevailed between him and Abijah's successor, Asa. The newly arisen state of Baasha was in league with Damascus, which had once been hostile to Solomon (1 Ki. xi 24 *seq.*). Upon whom Asa could rely is not stated. Baasha seized Ramah about 5 m. N. of Jerusalem, and the existence of Judah was threatened. Asa utilized the treasure of the Temple and palace to induce the Syrians to break off their relations with Baasha. These sent troops to harry north Israel, and Baasha was compelled to retire. Asa, it would seem, was too weak to achieve the remarkable victory ascribed to him in 2 Chron. xiv. Baasha's short-lived dynasty resembles that of his predecessors. His son, Elah, after a reign of two years (like Ishbaal and Nadab), was slain in a drunken carousal by his captain, Zimri. Meanwhile, the Israelite army was again besieging the Philistines at Gibbethon, and the recurrence of these conflicts points to a critical situation in a district in which Judah itself (although ignored by the writers) must have been vitally concerned. The army preferred their general, Omri, and, marching upon Zimri at Tirzah, burnt the palace over his head A fresh rival immediately appeared, the otherwise unknown Tibni. Israel was divided into two camps, until, on the death of Tibni and his brother Joram, Omri became sole king (*c.* 887 B.C.). The scanty details of these important events stand in contrast to the comparatively full accounts of earlier Philistine wars and internal conflicts in narratives which, in point of fact, probably date from this or a later age.

7. **The Dynasty of Omri.**—Omri (*q.v.*), the founder of one of the greatest dynasties of Israel, was contemporary with the revival of Tyre under the priest-king, Ithobaal, whose daughter was married to Omri's son, Ahab. Omri's most notable recorded achievement was the subjugation of Moab (*q.v.*). Moreover, Judah (now under Jehoshaphat) was bound intimately to Israel; and traditions of intermarriage, and of co-operation in commerce and war, imply what was practically a united Palestine. Alliance with Phoenicia gave the impulse to extended intercourse; trading expeditions were undertaken from the Gulf of 'Akaba, and Ahab built himself a palace decorated with ivory. The cult of the Baal of Tyre followed Jezebel to the royal city, Samaria, and even found its way into Jerusalem. This, the natural result of matrimonial and political alliance, already met with under Solomon, receives the usual denunciation. The conflict between Yahweh and Baal and the defeat of the latter are the characteristic notes of the religious history of the period, the records of which are now more abundant.

Although little is preserved of Omri's history, the fact that the northern kingdom long continued to be called by the Assyrians after his name is a significant indication of his reputation. Assyria was now making itself strongly felt in the west Assur-nasir-pal II. had exacted tribute from north Syria (*c.* 876 B.C.), and his successor, Shalmaneser III., in the course of a series of expeditions, succeeded in gaining the greater part of that land. Irhuleni of Hamath and Adad-idri (the biblical Ben-hadad) of Damascus, formed a coalition with the kings of Cilicia, Phoenicia, Ammon, the Arabs of the Syrian desert and "Ahabbu Sirlai." In the last we recognize the Israelite Ahab whose contribution of 10,000 men and 2,000 chariots perhaps included levies from Judah and Moab (*cf.* for the number 1 Ki. x. 26). In 853 the

allies at least maintained themselves at the battle of Karkar. Other indecisive battles were fought later, but the precise constitution of the coalition is not recorded. In 842–841 Shalmaneser records a campaign against Hazael, the new king of Damascus; no coalition is mentioned, although a battle was fought at Sanir (Hermon, Deut. iii. 9), and the cities of Hauran to the south of Damascus were spoiled. Tribute was received from Tyre and Sidon; and Jehu, the new king of Israel, sent gifts of gold, silver, etc. The "Black Obelisk" (now in the British Museum), which records the submission of the petty kings, gives an interesting representation of the humble Israelite emissaries, with their long, fringed robes and strongly marked physiognomy (*see* DRESS). Yet another expedition in 837 would seem to show that Damascus was neither crushed nor helpless, but thenceforth, for a number of years, Assyria was fully occupied elsewhere and the west was left to itself.

Biblical tradition associates the changes in the thrones of Israel and Damascus with the work of the prophets Elijah and Elisha, but without a reference to Assyria Ahab, it seems, had aroused popular resentment by encroaching upon the rights of the people to their landed possessions; had it not been for Jezebel, the tragedy of Naboth would not have occurred The worship of the Tyrian Baal roused a small circle of zealots, and again the Phoenician marriage was the cause of the evil. Elijah of Gilead inspired the revolt which culminated in the accession of Jehu, the son of one Jehoshaphat (or, otherwise, of Nimshi). The work which Elijah began was completed by Elisha, who supported Jehu and the new dynasty. The royal families of Israel and Judah perished in a massacre. While the extirpation of the cult of Baal was furthered in Israel by Jonadab the Rechabite, it was the "people of the land" who undertook a similar reform in Judah. Jehu (*q v.*) became king, as the champion of the purer worship of Yahweh. The descendants of the detested Phoenician marriage were rooted out, and unless the close intercourse between Israel and Judah had been suddenly broken, it would be supposed that the new king at least laid claim to the south. Here, however, Athaliah, daughter of Jezebel, destroyed the Judaean court Only the babe, Jehoash, was preserved, and six years later, the priests slew the queen, overthrew the cult of Baal, and crowned the young child.

8. **Damascus, Israel and Judah.**—Hazael of Damascus, Jehu of Israel, and Elisha the prophet, are the three men of the new age linked together, as though commissioned for like ends (*see* 1 Ki. xix. 15–17). Elisha had sent to anoint Jehu as king, and, while on intimate terms with Bar-hadad (Ben-hadad) of Damascus, recognized Hazael as its future ruler. But after the accession of Jehu the situation changed "In those days Yahweh began to cut short" (or, amending the text, "to be angry with") "Israel." This brief notice heralds Hazael's attack upon Israelite territory east of the Jordan (2 Ki. x. 32). The cause of the attack is obscure. Certain traditions, it is true, indicate that Israel had been at war with the Aramaeans from before 853 to 841, and that Hazael was attacking Gilead at the time when Jehu revolted; but in the midst of these are other traditions of the close and friendly relations between Israel and Damascus. (On the problems of the Elijah–Elisha period, see *Camb. Anc. Hist*, iii. 364 *sqq.*) The southern kingdom suffered little in the disastrous wars between Damascus and Israel. Hazael indeed advanced upon Gath, and Jerusalem was only saved by a timely bribe There were internal troubles, and Jehoash perished in a conspiracy. His son, Amaziah, had some difficulty in gaining the kingdom, and showed conspicuous leniency in sparing the children of his father's murderers. Israel, on the other hand, was almost annihilated by the Syrians. These seized Gilead, crossed over into Palestine, and occupied the land. Jehu's son, Jehoahaz, saw his army made "like the dust in threshing," and the desperate condition of the country recalls the straits in the time of Saul (1 Sam. xiii. 6, 7, 19–22), and the days before the great overthrow of the northern enemy as described in the Song of Deborah (Judges v. 6–8). The atrocities committed by Damascus and its Ammonite allies upon Gilead were not forgotten (Amos i. 3, 13), and they illustrate a remarkable interview between Elisha and Hazael (2 Ki. viii. 12). Several of the situations can be more vividly realized from the stories of Syrian wars ascribed to the time of Omri's dynasty, but more probably relating to the dynasty of Jehu. Under Joash, son of Jehoahaz, the tide turned. Elisha was apparently the champion, and posterity told of his exploits when Samaria was visited with the sword. Thrice Joash smote the Syrians—in accordance with the last words of the dying prophet—and Aphek in the Sharon plain, famous in history for Israel's disasters, now witnessed three victories. The enemy under Hazael's son, Ben-hadad, was driven out and Joash regained the territory which his father had lost (2 Ki. xiii. 25); it may reasonably be supposed that a treaty was concluded (*cf.* the anonymous 1 Ki. xx. 34). But the peace does not seem to have been popular. The story of the last scene in Elisha's life ascribes to Joash an easily contented disposition which hindered him from completing his successes. Syria had not been crushed, and the failure to utilize the opportunity was an act of impolitic leniency for which Israel was bound to suffer (2 Ki. xiii. 19). Elisha's indignation can be illustrated by the denunciation passed upon an anonymous king by the prophetic party on a similar occasion (1 Ki. xx. 35–43).

At this stage it is necessary to notice the fresh invasion of Syria by Hadad (Adad)-nirari, who besieged Mari, king of Damascus, and exacted a heavy tribute (*c.* 802 B C). A diversion of this kind would explain the Israelite victories; the subsequent withdrawal of Assyria would afford the occasion for Damascus to retaliate. Men in Israel who remembered the wars between Assyria and Damascus, and the recuperative power of the Aramaeans, would perceive the danger of the lenient policy of Joash. Hadad-nirari claims tribute from Tyre, Sidon and Beth-Omri (Israel), also from Edom and Palaštu (Philistia). There are no signs of an extensive coalition as in the days of Shalmaneser; Ammon is probably included under Damascus; the position of Moab—which had freed itself from Jehoram of Israel—can hardly be calculated. But the absence of Judah is surprising. Both Jehoash (of Judah) and his son, Amaziah, left a great name; and the latter was comparable only to David (2 Ki. xiv. 3). He defeated Edom in the Valley of Salt, and it is conceivable that Amaziah's kingdom extended over both Edom and Philistia. A vaunting challenge to Joash (of Israel) gave rise to one of the two fables that are preserved in the Old Testament (for the other *see* Judges ix. 8 *seq.*). It was followed by a battle at Beth-shemesh; the scene would suggest that Philistia also was involved. The result was the rout of Judah, the capture of Amaziah, the destruction of the northern wall of Jerusalem, the sacking of the temple and palace and the removal of hostages to Samaria (2 Ki. xiv. 12 *sqq*). Only a few words are preserved—taken apparently from an Israelite source—but the details, when carefully weighed, are extremely significant. This disaster was scarcely the outcome of a challenge to a trial of strength; it was rather the sequel to a period of smouldering jealousy and hostility, and, according to one chronological scheme, 27 years passed before Judah had another king (Uzziah).

9 **Jeroboam and Uzziah.**—The defeat of Syria by Joash (of Israel) was not final. The decisive victories were gained by Jeroboam II. He saved Israel from being blotted out, and "the children of Israel dwelt in their tents as of old" (2 Ki. xiii. 5, xiv. 26 *seq.*). Syria must have resumed warfare with redoubled energy, and a state of affairs is presupposed which can be pictured with the help of narratives that deal with similar historical situations. In particular, the overthrow of Israel as foreshadowed in 1 Ki. xxii. implies an Aramaean invasion (*cf. vv.* 17, 25), after a treaty (xx. 34 *sqq.*), although this can scarcely be justified by the events which followed the death of Ahab, in whose time they are now placed. Under Jeroboam II. (*c.* 785) the borders of Israel were restored, and the disastrous Aramaean wars avenged. For a time the kingdom of Van (Urartu, Ararat) was the most important factor in the north, and the Hebrews may well have come into close touch with peoples who were the descendants of the Hittite, Mitanian and other non-Semitic stock of old. Moab was probably tributary; the position of Judah and Edom is involved with the chronological problems. According to the Ju-

daean annals the "people of Judah" set Azariah (Uzziah) upon his father's throne; and to his long reign of 52 years are ascribed conquests over Philistia and Edom, the fortification of Jerusalem and the reorganization of the army. The two great kings Uzziah and Jeroboam were contemporary, but upon the relations between them we have no information; yet had Amaziah suffered at the hands of Israel, and when, at the death of Jeroboam, Israel hastened to its end amid anarchy and dissension, it is unlikely that the southern kingdom was unmoved. All that can be recognized from the biblical records, however, is the period of internal prosperity which Israel and Judah enjoyed under Jeroboam and Uzziah (*qq.v.*) respectively.

The events which inaugurated the dynasty of Jehu, the terrible Aramaean wars, Yahweh's "arrow of victory," and at length the rise of Jeroboam, make the century (*c.* 850–750 B.C.) one of the most conspicuous epochs in Hebrew history. The traditions relating to it are, not improbably, older, relatively speaking, than those that tell of the original founding of the monarchy, centuries earlier. The descriptions of the older periods are, in their present form, at least, later than the Jehu dynasty, and this dynasty culminates in the rise of the great Hebrew prophets (Amos, Hosea, Isaiah, Micah, etc.). That these had predecessors in the stirring days before them is to be expected—for there is much in prophecy that makes it far from unique or necessarily elevated. But they strike so distinctive a note, their teaching is so fundamental, and its effects so evident, that the question arises whether the religious conditions they condemn are those as set forth in the literature referring to earlier periods. In fact, the modern historical and religious study of the Old Testament turns upon the interpretation of the great prophets, and the relation between them, on the one hand, and the Pentateuch and historical recensions (*see* sec. 2, p. 43) on the other. (*See* further HEBREW RELIGION, PROPHET, and the articles on the several prophets.)

10. **The Fall of the Israelite Monarchy.**—Israel's prosperity under Jeroboam II. proved her undoing. The disorders that hastened the end find analogy in the events of the more obscure period after the death of the earlier Jeroboam. Only the briefest details are given. Zechariah was slain after six months by Shallum ben Jabesh in Ibleam; but the usurper fell a month later to Menahem (*q.v.*), who only after much bloodshed established his position. Assyria again appeared upon the scene, under Tiglath-pileser III.; on his approach a coalition was soon formed which was overthrown in 738. Among those who paid tribute were Rasun (the biblical Rezin) of Damascus, Menahem of Samaria, the kings of Tyre, Byblos and Hamath and the queen of Aribi (the Syrian desert). Israel was once more in league with Damascus and Phoenicia, and the biblical records must be read in the light of political history. Judah was probably holding aloof. Its king, Uzziah, was a leper in his latter days, and his son and regent, Jotham, claims notice for a circumstantial reference to his subjugation of Ammon—the natural allies of Damascus—for three years (2 Chron. xxvii., *cf.* xxvi. 8). Scarcely had Assyria withdrawn before Menahem lost his life in a conspiracy, and Pekah, with the help of Gilead, made himself king. The new movement was evidently anti-Assyrian, and strenuous endeavours were made to present a united front. Judah was the centre of attack. Rasun and Pekah directed their blows from the north, Philistia threatened the west flank, and the Edomites, who drove out the Judaeans from Elath (on the Gulf of 'Akaba), were no doubt only taking their part in the concerted action. A more critical situation could scarcely be imagined. The throne of David was then occupied by a youth—Ahaz, the son of Jotham. In this crisis we meet with Isaiah (*q.v.*), perhaps the grandest of Hebrew prophets. The disorganized state of Egypt and the uncertain allegiance of the desert tribes left Judah without direct aid; on the other hand, opposition to Assyria among the conflicting interests of Palestine and Syria was rarely unanimous. Either in the natural course of events—to preserve the unity of his empire—or influenced by the rich presents of gold and silver with which Ahaz accompanied his appeal for help, Tiglathpileser intervened with campaigns against Philistia (734 B.C.) and Damascus (733–732). Israel was punished by the ravaging of the northern districts, and the king claims to have carried away the people of "the house of Omri." Pekah was slain, and one Hoshea (*q.v.*) was recognized as his successor. Assyrian officers were placed in the land and Judah thus gained its deliverance at the expense of Israel. But the proud Israelites did not remain submissive for long; Damascus had indeed fallen, but neither Philistia nor Edom had yet been crushed.

When Israel began to regain confidence, its policy halted between obedience to Assyria and reliance upon Egypt—though whether Mizraim (*q.v.*) refers to Egypt proper or includes some more easterly area is open to dispute. The situation is illustrated in the writings of Hosea (*q.v.*). Tiglath-pileser died in 727 and the slumbering revolt became general. Israel refused the usual tribute to its overlord, and definitely threw in its lot with "Egypt." In due course Samaria was besieged for three years by Shalmaneser V. The alliance with So (Seveh, Sibi) of "Egypt," upon whom hopes had been placed, proved futile, and the forebodings of keen-sighted prophets were justified. Although no evidence is at hand, it is probable that Ahaz of Judah rendered service to Assyria by keeping the allies in check; possible, also, that the former enemies of Jerusalem had now been induced to turn against Samaria. The actual capture of the Israelite capital is claimed by Sargon (722), who removed 27,290 of its inhabitants and 50 chariots. Other peoples were introduced, officers were placed in charge, and tribute re-imposed. Another revolt was planned in 720 in which the province of Samaria joined with Hamath and Damascus, with the Phoenician Arpad and Ṣimura, and with Gaza and "Egypt." Two battles, one at Karkar in the north, another at Rapiḥ (Raphia) on the border of Egypt, sufficed to quell the disturbance. The desert peoples who paid tribute on this occasion still continued restless, and in 715 Sargon removed men of Tamūd, Ibādid, Marsiman, Hayāpa (*cf.* the Midianite Ephah, Gen xxv. 4), "the remote Arabs of the desert," and placed them in the land of Beth-Omri Sargon's statement is significant for the later history of Samaria; but the biblical historians take no further interest in the fortunes of the northern kingdom, and see in Judah the sole survivor of the Israelite tribes (*see* 2 Ki. xvii. 7–23). Yet the situation in this neglected district must continue to provoke enquiry.

11. **Judah and Assyria.**—Amid these changes the history of Judah was intimately connected with the south Palestinian peoples. Ahaz had recognized the sovereignty of Assyria and visited Tiglathpileser at Damascus. The Temple-records describe the innovations he introduced on his return. Under his son, Hezekiah, there were fresh disturbances in the southern states, and anti-Assyrian intrigues began to take a more definite shape among the Philistine cities. Ashdod openly revolted and found support in Moab, Edom, Judah and "Egypt." This step may possibly be connected with the attempt of Marduk (Merodach)-baladan in south Babylonia to form a league against Assyria (*cf.* 2 Ki. xx 12); at all events Ashdod fell after a three years' siege (710) and for a time there was peace. But with the death of Sargon in 705 there was another great outburst; practically the whole of Palestine and Syria was in arms, and Sennacherib's empire in the west was threatened. In both Judah and Philistia the anti-Assyrian party was not without opposition, and those who adhered or favoured adherence to the great power were justified by the result. The inevitable lack of cohesion among the petty States weakened the national cause. At Sennacherib's approach, Ashdod, Ammon, Moab and Edom submitted; Ekron, Ascalon, Lachish and Jerusalem held out strenuously. The southern allies (with "Egypt") were defeated at Eltekeh. Hezekiah was besieged and compelled to submit (700). The small kings who had remained faithful were rewarded by an extension of their territories, and Ashdod, Ekron and Gaza were enriched at Judah's expense. These events are related in Sennacherib's inscription; the biblical records preserve their own traditions (*see* further HEZEKIAH).

In the long reign of his son, Manasseh (*c.* 692), later writers saw the deathblow to the Judaean kingdom. Much is said of his wickedness, but few details have come down. The land was practically under the control of Assyria. Both Esar-haddon

(681–669) and Assur-bani-pal (669–*c.* 626) number among their tributaries Tyre, Ammon, Moab, Edom, Ascalon, Gaza and Manasseh himself, and cuneiform dockets unearthed at Gezer suggest the presence of Assyrian garrisons there, and no doubt also elsewhere. The situation favoured the spread of foreign customs, and the condemnation passed upon Manasseh thus, perhaps, becomes more significant. It is possible that Manasseh merely assimilated the older Yahweh-worship to Assyrian form; politics and religion were inseparable, and the supremacy of Assyria weakened that of Yahweh.

If Judah was compelled to take part in the Assyrian campaigns against Egypt, Arabia (the Syrian desert) and Tyre, this would only be in accordance with a vassal's duty. But since tradition preserves some recollection of an offence for which Manasseh was taken to Babylon to explain his conduct (2 Chron. xxxiii.), also of the settling of foreign colonists in Samaria by Esar-haddon (Ezra iv. 2), it is possible that Judah attempted to regain its liberty. According to Assur-bani-pal all the western lands were inflamed by the revolt of his brother, Shamash-shum-ukin. What part Judah took in the Transjordanic disturbances, in which Moab fought invading Arabian tribes on behalf of Assyria, is unknown. Manasseh's son, Amon, fell in a court intrigue and "the people of the land," after avenging the murder, set up in his place the infant Josiah (637). The circumstances imply a regency; but upon this the records are silent. The decay of Assyria doubtless awoke the national feeling of independence and an account is given of Josiah's religious reforms, based upon a source partly identical with that which describes the work of Jehoash (2 Kings xi. *seq.*). In an age when the oppression and corruption of the ruling classes had been such that those who cherished the old worship of Yahweh dared not confide in their most intimate companions (*cf.* Mi. vii. 5), no reforms were possible; but now the young Josiah, the popular choice, was upon the throne. A roll, it was said, had been found in the Temple; its contents terrified the priests and king, and it led to a solemn covenant before Yahweh to observe the provisions of the law-book which had been so opportunely recovered. The writer, as has been recognized since the days of Jerome, is describing the discovery of Deuteronomy (*q.v.*). It is, however, very doubtful whether it was the book in its present form; although the biblical writer believed that Josiah successfully put down the high places and centralized the religion. In any case Josiah's reforms were of no lasting effect, to judge from Jeremiah (xxv. 3–7, xxxvi. *seq.*) and Ezekiel (xvi., xxiii.). On the other hand Deuteronomy has a characteristic social-religious side; its humanity, philanthropy and charity are the distinctive features of its laws, and Josiah's reputation (Jer. xxii. 15 *seq.*) and the circumstances in which he was chosen king may suggest that he, like Jehoash (2 Ki. xi. 17; *cf.* xxiii.3), had entered into a reciprocal covenant with a people who, as Micah's writings would indicate, had suffered grievously.

12. **The Fall of the Judaean Monarchy.**—A new era was beginning in the history of the world (*see* PALESTINE: *History*, sec. 8). Assyria was rapidly decaying and Egypt, under Psammetichus (Psamtek) I. had recovered from the blows of Assur-bani-pal, to which the Hebrew prophet, Nahum, refers (iii. 8–10). Chaldean prince, Nabopolassar, set himself up in Babylonia. It was, perhaps, after this that an inroad of the Scythians occurred (*c.* 626 B.C.); if it did not actually touch Judah, the advent of the people of the north appears to have caused great alarm (Jer. iv.–vi.: Zephaniah). Nineveh fell in 612, and Harran, whither the court had been removed, was taken in 610. Thus fell an empire which had dominated Palestine for two centuries, and whose history in the West went back for a millennium. On the exultation caused by the events (*see* NAHUM), Necho, son of Psammetichus, marched through Palestine to aid Assyria. Josiah interposed; possibly he had hopes of extending his kingdom (2 Chron. xxxv. 20 *seq.* is more reliable than 2 Ki. xxiii. 29 *seq.*). That he had authority over a much larger area than Judah alone is suggested by 2 Ki. xxiii. 19, and by the references to the border at Riblah, 45 m. south of Hamath (Ezek. vi. 14, xi. 10 *seq.*). He was slain at Megiddo, and Egypt, as in the long distant past, again held Palestine and Syria. The Judaeans made Jehoahaz (or Shallum) their king, but the Pharaoh banished him to Egypt three months later and appointed his brother, Jehoiakim.

Meanwhile, Nabopolassar recognized in Necho a dangerous rival, and sent his son Nebuchadrezzar, who overthrew the Egyptian forces at Carchemish (605). The battle was the turning-point of the age. The succession of the new Chaldean or Babylonian kingdom was assured, though the relations between Egypt and Judah were not broken off. Jehoiakim was inclined to rely upon Egypt. He died just as Nebuchadrezzar, after seeing his warnings disregarded, was preparing to lay siege to Jerusalem. His young son, Jehoiachin, surrendered after a three months' reign, with his mother and the court; they were taken away to Babylonia, together with a number of artisans (597). Jehoiakim's brother, Mattaniah, or Zedekiah, was set in his place under an oath of allegiance, which he broke, preferring Hophra, the new king of Egypt. A few years later the second siege took place. It began on the tenth day of the tenth month, Jan. 587. The looked-for intervention of Egypt was unavailing, although a temporary raising of the siege inspired wild hopes. Desertion, pestilence and famine added to the usual horrors of a siege, and at length on the ninth day of the fourth month, 586, a breach was made in the walls. Zedekiah fled towards the Jordan valley but was seized and taken to Nebuchadrezzar at Riblah. His sons were slain before his eyes, and he himself was blinded and carried off to Babylon after a reign of 11 years. The Babylonian Nebu-zaradan was sent to take vengeance upon the rebellious city, and on the seventh day of the fifth month 586 B.C. Jerusalem was destroyed. The Temple, palace and city buildings were burned, the walls broken down, the chief priest, Seraiah, and other leaders were put to death, and many people again carried off. The disaster became the great epoch-making event in Jewish history and literature.

Throughout these stormy years the prophet Jeremiah (*q.v.*) had realized that Judah's only hope lay in submission to Babylonia. Stigmatized as a traitor, scorned and imprisoned, he had not ceased to warn deaf ears, although Zedekiah himself was, perhaps, open to persuasion. Now the penalty had been paid, and the Babylonians, whose policy was less destructive than that of Assyria, contented themselves with appointing as governor a certain Gedaliah. The new centre was Mizpah, a commanding eminence and sanctuary, about 5 m. N.W. of Jerusalem; and here Gedaliah issued an appeal to the people to be loyal to Babylonia and to resume their former peaceful occupations. The land had not been devastated, and many gladly returned from their hiding-places in Moab, Edom and Ammon. But discontented survivors of the royal family under Ishmael intrigued with Baalis, king of Ammon. The plot resulted in the murder of Gedaliah and an unsuccessful attempt to carry off various princesses and officials who had been left in the governor's care. This new confusion and a natural fear of Babylonia's vengeance led many to feel that their only safety lay in flight to Egypt, and, although warned by Jeremiah that even there the sword would find them, they fled south and took refuge in Tahpanhes (Daphnae, *q.v.*), afterwards forming small settlements in other parts of Egypt. But the thread of the history is broken, and apart from an allusion to the favour shown to the captive Jehoiachin (with which the books of Jeremiah and Kings conclude), there is a gap in the records, and subsequent events are viewed from a new standpoint.

13. **Internal Conditions and the Exile.**—Many of the exiles accepted their lot and settled down in Babylonia (*cf.* Jer. xxix. 4–7); Jewish colonies, too, were being founded in Egypt. The agriculturists and herdsmen who had been left in Palestine formed, as always, the staple population, and it is impossible to imagine either Judah or Israel as denuded of its inhabitants. The peasants were left in peace to divide the land among them, and new conditions arose as they took over the ownerless estates. Here, as already in Israel, the fall of the monarchy involved a reversion to a pre-monarchical state, and it is impossible to sever too rigorously two sections of Hebrews who had so much in common. Indeed, kings of Judah might well have been tempted to restore the kingdom of their traditional founder, or Assyria might have been complaisant towards a faithful Judaean vassal. But Israel,

after the fall of Samaria, is ignored by the Judaean writers, and lies as a foreign land; although Judah itself had suffered from the intrusion of foreigners in the preceding centuries of war and turmoil, and strangers had settled in her midst, had formed part of the royal guard, or had served as janissaries.

Samaria had experienced several changes in its original population. Settlement upon new soil involved dependence upon its god, and a priest was sent to instruct the colonists in the fear of Yahweh. Thenceforth they continued the worship of the Israelite Yahweh along with their own native cults (2 Ki. xvii. 24–28, 33). Their descendants claimed participation in the privileges of the Judaeans (*cf.* Jer. xli. 5), and must have identified themselves with the old stock (Ezra iv. 2). Whatever recollection they preserved of their origin and of the circumstances of their entry would be retold from a new standpoint. To the prophets the religious position was lower in Judah than in the "sister" Samaria (Jer. iii. 11 *sqq.*, xxiii. 11 *sqq.*; Ezek. xvi. 51). The prevalence of heathen elements in Jerusalem, as detailed in the reforms of Josiah or in the writings of the prophets (*cf.* Ezek. viii.), would at least suggest that the destruction of the State was not entirely a disaster. The political disasters not only meant a shifting of population, they also brought into prominence the old popular and non-official religion, the character of which is not to be condemned off-hand. When there were sects like the Rechabites (Jer. xxxv.), when the Judaean fields could produce a Micah (*q.v.*), and when Israel had men who inherited the spirit of a Hosea, the nature of the underlying conditions can be more justly appreciated. The writings of the prophets were cherished, not only in the unfavourable atmosphere of courts (*see* Jer. xxxvi., 21 *sqq.*), but also in the circles of their followers (Isa. viii. 16). In the smaller sanctuaries the old-time beliefs were maintained, and the priests, often perhaps of the older native stock, were the recognized guardians of the religious cults. The stories of earlier days encircle places which are not regarded as illegitimate, and in the form in which the dim traditions of the past are now preserved they reveal an attempt to purify popular belief and thought. It may be, therefore, that Deuteronomy and the popular narratives J. and E. (in their present form), belong here. (*See* HEBREW RELIGION, sec. 11 *sqq.*)

14. **Restoration of Judah.**—The course of events from the middle of the 6th century B.C. to the close of the Persian period is extremely obscure, although much indirect evidence indicates that this age holds the key to the growth of written biblical history. It was an age of literary activity, which manifested itself, not in contemporary historical records—only a few of which have survived—but rather in the special treatment of previously existing sources (*see* EZRA and NEHEMIAH). In 561 B.C. the captive Judaean king, Jehoiachin, received special marks of favour from Nebuchadrezzar's son, Amil-marduk (2 Ki. xxv. 27 *sqq.*; Jer. lii. 31–34). A little later Tyre received as its king, Merbaal (555–552), who had been fetched from Babylonia. If Babylon was assured of the allegiance of its vassals further acts of clemency may well have followed. But the later recension of Judaean history—our only source—entirely ignores the elevation of Jehoiachin, and, passing over the exile, proceeds at once to the first years of Cyrus, who proclaims as his Divine mission the rebuilding of the Temple (538) (2 Chron. xxxvi.). The Judaean Sheshbazzar (a corruption of some Babylonian name) brought back the Temple vessels which Nebuchadrezzar had carried away and prepared to undertake the work at the expense of the royal purse. A large body of exiles is said to have returned to Jerusalem under Zerubbabel, who was of Davidic descent, and the priest Jeshua or Joshua, the grandson of the murdered Seraiah (Ezra i.–iii.; v. 13–vi. 5). When these refused the proffered help of the people of Samaria, men of the same faith as themselves (iv. 2), their troubles began, and the Samaritans retaliated by preventing the rebuilding.

The next historical notice is dated in the second year of Darius (520), when two prophets, Haggai and Zechariah (*qq.v.*) kindled the Judaeans to new efforts. Despite opposition, the work went steadily onwards, thanks to the favour of Darius, and the Temple was completed four years later, 516 B.C. (Ezra v. 2, vi. 13 *sqq.*). On the other hand, from the independent writings ascribed to these prophets, it appears that no considerable body of exiles could have returned—it is still an event of the future (Zech. ii. 7, vi. 15); little, if anything, had been done to the Temple (Hag. ii. 15); and Zerubbabel is the one to take in hand and complete the great undertaking (Zech. iv. 9). The prophets address themselves to men living in comfortable abodes with olive-fields and vineyards, suffering from bad seasons and agricultural depression, and, though the country is unsettled, there is no reference to any active opposition on the part of Samaritans. So far from drawing any lesson from the brilliant event in the reign of Cyrus, the prophets imply that Yahweh's wrath was still upon the unfortunate city, and that Persia was still the oppressor. Consequently, although small bodies of individuals no doubt came back to Judah from time to time, and some special mark of favour may have been shown by Cyrus, the opinion has gained ground since the early arguments of E. Schrader (*Studien und Kritiken*, 1867, pp. 460–504), that the compiler's representation of the history is less trustworthy than the independent evidence of the prophetical writings. His main object is to make the new Israel, the post-exilic community at Jerusalem, continuous, as a society, with the old Israel.

Unfortunately, the internal conditions in the 6th century B.C. can be only indirectly estimated, and the political position must remain for the present quite uncertain. In Zerubbabel the people beheld once more a ruler of the Davidic race. The new temple heralded a new future; the mournful fasts commemorative of Jerusalem's disasters would become feasts; Yahweh had left the Temple at the fall of Jerusalem, but had now returned to sanctify it with his presence; the city had purged its iniquity and was fit once more to become the central sanctuary. So Haggai sees in Zerubbabel the representative of the ideal kingdom, the trusted and highly favoured minister who was the signet-ring upon Yahweh's hand (contrast Hag. ii. 23 with Jer. xxii 24). Zechariah, in his turn, proclaims the overthrow of all difficulties in the path of the new king, who shall rule in glory supported by the priest (Zech. vi.). What political aspirations were revived, what other writers were inspired by these momentous events are questions of inference. Again there is a gap in the history. (For the view that there was an important movement of semi-Edomite clans to north Judah after the fall of Jerusalem, see *Camb. Anc. Hist.*, vi. ch. vii.; *see* also KINGS, BOOK OF.)

15. **Nehemiah.**—The history passes abruptly from the time of Zerubbabel to the reign of Artaxerxes I. (but A. II. according to Torrey). The enthusiastic hopes have melted away, the Davidic scion has disappeared and Jerusalem has been—as it would seem—the victim of another disaster. The country is under Persian officials, the nobles and priests form the local government, and the ground is being prepared for the erection of a hierocracy. It is the work of rebuilding and reorganization, of social and of religious reforms, which we encounter in the last pages of biblical history, and in the records of Ezra and Nehemiah we stand in Jerusalem in the very centre of epoch-making events. Nehemiah, the cup-bearer of Artaxerxes at Susa, distressed at the news of the desolation of Jerusalem, obtained permission from the king to rebuild the ruins. Provided with an escort and with the right to obtain supplies of wood for the buildings, he returned to the city of his fathers' sepulchres (the allusion may suggest his royal ancestry). He aroused the people to the necessity of fortifying and repopulating the city. Sanballat of Horon, Tobiah the Ammonite, and Gashmu the Arabian (? Edomite) unceasingly opposed him. Tobiah and his son, Johanan, were related by marriage to Judaean secular and priestly families, and active intrigues resulted, in which nobles and prophets took their part. It was insinuated that Nehemiah had his prophets to proclaim that Judah had again its own king, and that he was intending to rebel against Persia! Nehemiah naturally gives us his version; the earlier enthusiasm of Haggai and Zechariah for Zerubbabel would illustrate the feelings of Nehemiah's partisans. But Tobiah and Johanan themselves were worshippers of Yahweh (as their names show), and consequently, with prophets taking different sides and with the Samaritan claims summarily repudiated (Neh. ii. 20; *cf* Ezra iv.

3), it is difficult to gather all the facts.

Nevertheless the undaunted Judaean pressed on unmoved by the threatening letters which were sent around, and succeeded in completing the walls within 52 days. Nehemiah also appears as governor of the small district of Judah and Benjamin. Famine, the avarice of the rich, and the necessity of providing tribute had brought the humbler classes to the lowest straits. Faced with old social abuses, he vehemently contrasted the harshness of the nobles with the generosity of the exiles, who would redeem their poor countrymen from slavery. He himself had always refrained from exacting the usual provision which other governors had claimed; indeed, he had readily entertained over 150 officials and dependants at his table, apart from casual refugees (Neh. v.). We hear something of a 12 years' governorship and of a second visit; but the evidence does not enable us to determine the sequence (xiii. 6). Neh. v. is placed in the middle of the building of the walls in 52 days; the other reforms during the second visit are closely connected with the dedication of the walls, and with the events which immediately follow his first arrival, when he had come to rebuild the city. Nehemiah also remedies religious abuses. He found the busy agriculturists and traders (some from Tyre) pursuing their usual labours on the Sabbath, now more strictly observed, and he pointed to the disasters which had resulted in the past from such profanation (Neh xiii 18; *cf.* Jer. xvii. 20 *sqq.*; Ezek. xx. 13–24; Isa. lvi. 2, 6; lviii. 13).

Moreover, the maintenance of the Temple servants called for supervision; the customary allowances had not been paid to the Levites, who had come to Jerusalem after the smaller shrines had been put down, and they had forsaken the city His last acts were the most significant. Jews had married women of Ashdod, Ammon and Moab, and the impetuous governor indignantly adjured them to desist from the historic cause of national sin Even members of the priestly families had intermarried with Tobiah and Sanballat; the former had a chamber in the Temple, the daughter of the latter was the wife of a son of Joiada, the son of the high priest, Eliashib. Tobiah was cast out, the offending priest expelled and a general purging followed, in which the foreign elements were removed. With this Nehemiah brings the account of his reforms to a conclusion, and the words "Remember me, O my God, for good" (xiii. 31) have a meaning. According to Josephus (*Ant.* xi. 7, 2), a certain Manasseh, the brother of Jaddua and grandson of Joiada, refused to divorce his wife, the daughter of Sanballat. For this he was driven out, and, taking refuge with the Samaritans, founded a rival temple and priesthood upon Mt. Gerizim, to which repaired other priests and Levites who had been guilty of mixed marriages. There is little doubt that Josephus refers to the same events; but he places the schism and the foundation of the new Temple in the time of Alexander the Great. At all events, there is now a complete rupture with Samaria, and thus, in the concluding chapter of the last of the historical books of the Old Testament, Judah maintains its claim to the heritage of Israel and rejects the right of the Samaritans to the title.

16. **Ezra.**—In this separation of the Judaeans from religious and social intercourse with their neighbours, the work of Ezra (*q.v.*) requires notice. The story of this scribe (now combined with the memoirs of Nehemiah) crystallizes the new movement inaugurated after a return of exiles from Babylonia. The age can also be illustrated from Isa. lvi.–lxvi. and Malachi (*q v.*). There was a poor and weak Jerusalem, its Temple stood in need of renovation, its temple-service was mean, its priests unworthy of their office. On the one side was the poverty of the poor; on the other the pride of the governors. There were two religious parties: one exclusive, the other more cosmopolitan and syncretising, extended a freer welcome to strangers, and tolerated the popular and superstitious cults of the day (Isa. lxv. *seq.*). But the former won and, realizing that the only hope of maintaining a pure worship of Yahweh lay in a forcible isolation from foreign influence, it took measures to ensure the religious independence of their assembly. It is related that Ezra, the scribe and priest, returned to Jerusalem with priests and Levites, lay exiles, and a store of vessels for the Temple. He was commissioned to enquire into the religious condition of the land and to disseminate the teaching of the Law to which he had devoted himself (Ezra vii.). On his arrival the people were gathered together, and he read "the book of the Law of Moses" daily for seven days (Neh. viii.). They entered into an agreement to obey its teaching, undertaking in particular to avoid marriages with foreigners (x. 28 *sqq.*). An account is given of this reform (Ezra ix. *seq.*), and Ezra's horror at the intermarriages, which threatened to destroy the distinctive character of the community, sufficiently indicates the attitude of the stricter party. The true seed of Israel separated themselves from all foreigners (not, however, without some opposition) and formed an exclusively religious body or "congregation." Dreams of political freedom gave place to hopes of religious independence, and "Israel" became a church, the foundation of which it sought in the desert of Sinai a thousand years before. (*See* SAMARITANS and for Torrey's views, EZRA AND NEHEMIAH, BOOKS OF; NEHEMIAH)

17. **Post-exilic Judaism.**—With Nehemiah and Ezra we enter upon the era of normative Judaism. Judah was a religious community whose representative was the high priest of Jerusalem. Instead of sacerdotal kings, there were royal priests, anointed with oil, arrayed with kingly insignia, claiming the usual royal dues in addition to the customary rights of the priests. With his priests and Levites, and with the chiefs and nobles of the Jewish families, the high priest directs this small State, and his death marks an epoch as truly as did that of the monarchs in the past. This hierarchical government, which can find no foundation in the Hebrew monarchy, is the forerunner of the Sanhedrin (*q v.*); it is an institution which, however inaugurated, set its stamp upon the narratives which have survived. Laws were recast in accordance with the requirements of the time, with the result that by the side of usages evidently of very great antiquity, details now appear which were previously unknown or wholly unsuitable.

The post-exilic priestly spirit represents a tendency which is not to be found in the "Deuteronomic" book of Kings, but is conspicuous in the later, and to some extent parallel, book of Chronicles (*q.v.*). The "priestly" traditions of the Creation and of the patriarchs are in marked contrast to the earlier narratives, and appear in a further developed form in the still later book of Jubilees (*q.v*) or "Little Genesis," where they are used to demonstrate the pre-Mosaic antiquity of the priestly or Levitical institutions. There is also an unmistakable development in the laws; and the priestly legislation, though ahead of both Ezekiel and Deuteronomy, not to mention still earlier usage, not only continues to undergo continual internal modification, but finds a further distinct development in the way of definition and interpretation, outside the Old Testament—in the Talmud (*q.v.*). Though one may often be repelled by the post-exilic priestly literature, their lack of spontaneity and their ritualism, it must be recognized that they placed Monotheism upon a firm basis. "It was a necessity that Judaism should incrust itself in this manner; without those hard and ossified forms the preservation of its essential elements would have proved impossible. At a time when all nationalities, and at the same time all bonds of religion and national customs, were beginning to be broken up in the seeming cosmos and real chaos of the Graeco-Roman empire, the Jews stood out like a rock in the midst of the ocean. When the natural conditions of independent nationality all failed them, they nevertheless artificially maintained it with an energy truly marvellous, and thereby preserved for themselves, and at the same time for the whole world, an eternal good." (Wellhausen.)

Yet the whole experience of subsequent history, through the heroic age of the Maccabees (*q.v.*) and onwards, proves that the minuteness of ritual procedure could not cramp the heart. The work represented in Nehemiah and Ezra, and effected by the supporters of an exclusive Judaism, certainly won the day, and it left its impress upon the historical traditions. But Yahwism, like Islam, had its sects and tendencies, and the opponents to the stricter ritualism always had followers. Whatever the predominant party might think of foreign marriages, the tradition of the half-Moabite origin of David serves, in the beautiful idyll of Ruth (*q.v.*), to emphasize the debt which Judah and Jerusalem

owed to one of its neighbours. Again, although some desired a self-contained community opposed to the heathen neighbours of Jerusalem, the story of Jonah (*q.v.*) implicitly contends against the attempt of Judaism to close its doors. The conflicting tendencies were incompatible, but Judaism retained the incompatibilities within its limits, and the two tendencies, prophetical and priestly, continue, the former finding its further development in the rise of Christianity.

(S. A. C.)

GREEK DOMINATION

Hebraism and Hellenism.—The Jews came into contact with Greek culture when they were fully conscious of their own. They had been moulded by suffering: they had already achieved a history. They could look back to a kingdom which, for several centuries, had stood happily and honourably, which had fallen heroically and which had reared a race whose religion and patriotism neither misfortune could kill nor prosperity corrupt. Their memories of the past were vivid, enshrining traditions of divine messages and teachings of great prophets. This spiritual heritage fortified them in captivity to preserve their identity and to live with unquenchable hope for the day of return. They had, in process of time, achieved their desire and they had consolidated their state anew. Ezra had rescued the Torah and his institutions had schooled the Jews to meet alike the onslaught of enemies and the influence of foreign cultures, without loss of individuality. Therefore, the work of the past was now accomplished: present and future were assured. Judaism was safe in the custody of the Jew. At this juncture he was confronted with Hellenism. Alexander swept into Asia with ease: he planted Greek seeds on an Oriental soil and his tree flourished. The kingdom of Bactria which he founded was an outpost of Greek civilization: his settlers, artists and craftsmen, introduced elements which never disappeared entirely. Indian statuary has preserved traces of the models which these Greeks in Bactria showed to their Indian pupils and apprentices. The reasons for Alexander's swift success, for the absence of difficulties and for the results he achieved need not be discussed here. The contrasts between the conditions he encountered in Asia and those which prevailed in Palestine will readily suggest themselves. But if it be accurate to hold that his work further East so largely decayed through the indifference, inertia and lack of homogeneity of the populations over which he imposed his sway, no similar verdict can apply to Palestine. Here none of these qualities can be held responsible. The advent of Alexander mattered little to the Jews because the Jew had already made up his mind what his destiny was to be and what his mission demanded of him.

Compared with Rome, Greece has touched the Jew but slightly. To this day the Jew sits down to a Passover celebration in which many details of Roman table etiquette survive. From Whitechapel to Cochin, from New York to Cairo, Jews, poor and rich alike, unconsciously reproduce on Passover night the habits of the *triclinium* and dine as Horace dined at the feasts of Maecenas. No other people, no cultural force, has left so deep an imprint on the Jew. Neither Egypt, Persia, Greece, nor the Renaissance penetrated Jewish culture as deeply as did Rome, the power, moreover, that destroyed the Temple and finally broke up the Jewish State. The influence of the Greeks on the Jews was postponed until long after the Greeks had lived. When mediaeval Jews set themselves to translate Aristotle and transmit his philosophy to Europe, the two cultures may be said to have met. But it was Aristotle the master, not Alexander the disciple, who brought about the meeting. Two causes may be held responsible for this. It may be that the premature death of Alexander prevented the fulfilment of his plans, which his successors had not the breadth of vision to complete, or it may be that the Jewish mind was essentially practical and temperamentally incapable of reacting to Athenian culture: the Torah and Plato's *Republic* are by some regarded as representing different and incongruent expressions of life. It may be alleged that the loss of one individual, however influential, is powerless to stem a cultural flood, nevertheless it would seem that in this case the death of Alexander is the more correct answer. Jew and Greek did in fact meet. Μηδὲν ἄγαν is as Jewish as it is Greek in spirit. There are books in the Old Testament canon as well as in the Apocrypha which reflect Greek thought. Job is a Hebrew *Prometheus Vinctus,* Esther is composed on the stylistic model of a Euripidean drama and the parallels between Canticles and Theocritus, though often exaggerated, are not to be overlooked. Philo strove to make Jewish literature known to the Greeks while, at last, Paul, an offshoot of Judaism, combined Jewish-Christian teaching with Hellenic method and expression. During four centuries the Jews were under Greek influence because from the time of Alexander until the destruction of Jerusalem, Greek culture prevailed in Palestine, irrespective of the nationality of the governor of the province.

Alexander the Great.—Josephus gives an account of a friendly visit of Alexander to Jerusalem: the historicity of this incident has been challenged but whether the meeting with the High Priest be historically true in the letter or not, it is certainly true that between Alexander and the Jews cordial relations existed. There is no reason to doubt either that they were given privileges in his army by which they were enabled to observe their religion (already in 419 B.C. Darius II. issued orders enabling his Jewish soldiers at Elephantine to observe the Passover and abstain from leaven [*see* pp. 60 *seq.* of A. Cowley's *Aramaic papyri of the Fifth Century B.C.,* Oxf., 1923]), or that a quarter was assigned to them in his newly founded city in Egypt. In his honour, Jews adopted his name as a *shĕm qādhōsh, i.e.,* a Jewish as opposed to a Gentile name; and this indicates the esteem in which Alexander was regarded by the Jews. It is a noteworthy fact of history that great conquerors, Alexander, Caesar and Napoleon, have always treated the Jews well: they recognized their religious function and sought to give it freedom to develop, for their own advantage as well as for that of the Jews. On the other hand, lesser men, endowed with narrower outlooks, have failed to recognize the Jew and have sought to crush him. In their desire to impose an artificial uniformity, they "broke down the boundaries of peoples and put down the inhabitants" (Isa. x. 13). But such Procrustean methods are contrary to nature, and tyranny, whether towards Jews or towards any others, has never secured permanent results. The same policy of religious unification has characterized subsequent dynasties, from the Assyrians to the Romanoffs, and the same fate has overtaken them. The Jew has survived their disappearance.

The Diadochi.—No sooner was Alexander dead (323 B.C.) than his successors, the *Diadochi,* struggling for his possessions and having broken up his empire, endeavoured to carry out his schemes of Hellenization. But they lacked his foresight. On the whole the Ptolemies realized that culture must be diffused by kindness, while the Seleucids believed in compulsion. Yet Palestine suffered at the hands of the former within three years of Alexander's death. In 320 Ptolemy invaded the country from Egypt and captured Jerusalem on a Sabbath. Palestine was lost to Antigonus in 315 but re-won in 312 at Gaza. Constant warfare ensued between the houses of Seleucus and Ptolemy until, in 198, Antiochus the Great (III., 222–187) defeated Scopas, the general of Ptolemy V., at Panium in north Palestine, and the country definitely passed to the Seleucids. Between the death of Alexander and this period, two notable events must be recorded On the Seleucid side there was the establishment of the Seleucidean era (*see* CHRONOLOGY: *Jewish*) while in Egypt the Pentateuch, and subsequently the rest of the Bible, was translated into Greek. (*See* SEPTUAGINT.) This was the first known version of the Scriptures. During this time the *Diaspora* or dispersion of the Jews was spreading. The Jews abroad seem to have enjoyed a peaceful existence, so far as the relatively meagre and uneventful information implies. Thus the *Prologue* to the Greek translation of the *Wisdom of Sirach* (*Ecclesiasticus*), as well as the book itself, affords every indication of quiet and prosperity. Apamea was a centre of Phrygian Jewry and the Jews seem to have taken a prominent part in its trade.

Antiochus Epiphanes.—Palestine was involved in the struggle between Egypt and Syria. The orthodox Jews preferred the tolerant rule of the Ptolemies: they wished to abstain from politics and develop their religion and culture in isolation. But there was another class, which looked to the Seleucids and favoured nationalism. These two streams of thought have both previously and subsequently been paralleled in Jewish history. Solomon, Ahab and Herod all wished to make the Jews a great nation politically at the expense of religion: such schemes have never won success. The mission of the Jew is cast on other lines. When Antiochus IV. (Epiphanes, 175–164) succeeded his brother, the opportunity of the nationalists was at hand. They desired to see a strong Jewish nation which would be an integral part of a great Hellenic empire and command respect, not in consequence of the heritage of the Torah, but by reason of the adoption of Greek institutions. They looked to Antiochus, who made the error of assuming them to represent the majority of the Jews. Antiochus was a strange character: as depicted by the historians he presents, in his belief in his own inspiration, in his assumption of artistic gifts, in his self-persuaded mission to impose his national culture by force, in his whimsical impulsiveness and his egoism, a striking parallel to Wilhelm II.

On his accession Antiochus appointed a new high priest, Jesus, the brother of Onias, who changed his name to Jason and proceeded to turn Jerusalem into a Greek city. He built a gymnasium, introduced the Greek cap, popularized Greek customs and endeavoured to suppress everything Jewish. The young priests and nobles flocked to the *Palaestra:* as they had to appear nude—an act in itself shocking to the Jewish mind—the evidence of their Judaism became visible. They adopted surgical means to obliterate the mark of the circumcision and this treacherous device has ever since become proverbial as the worst form of apostasy. The Jews of Jerusalem were counted as citizens of Antioch, in order to degrade their capital. The High Priest himself paid for a sacrifice to Heracles at Tyre and by every means in his power sought at once to crush Judaism and ingratiate himself with Antiochus. But a rival, Menelaus, brother of Simon, the treasurer of the Temple, offered to raise more tribute for Antiochus, and Jason was superseded. Riots, fighting and massacres ensued. Antiochus, ordered by Rome to quit Egypt, came to Jerusalem and pillaged the Temple (168). He razed the walls and planted a garrison of Greeks and apostate Jews in the city. Measures were taken to enforce his policy of unification. Judaism was an eccentricity and needed ruthless and systematic elimination. The Jerusalem Temple was devoted to Zeus Olympius, that at Garizim to Zeus Xenius. The Jewish religion was definitely interdicted and that of Athens was to be imposed by force. Swine's blood was offered on the altar on *Kislev* 25; ten days after the "Abomination of desolation" (Dan. xi., 31: xii., 11: Matt. xxiv., 15: Mark xiii., 14); an image had been erected there. Harlots were brought to the Temple The Torah was burnt Every Jewish rite was proscribed.

Varieties of Greek Culture.—Two circumstances are noteworthy at this juncture. First, though an Athenian was deputed to be the new guide to the Jews, it was not true Hellenism that he brought to their notice. In the *Diaspora,* the Jews grew acquainted with genuine Athenian culture: in Palestine they saw but the dregs, the debased provincialism which lacked the pure spirit of Hellas. The travelling Jew could visit the Stoa: the Alexandrine Jew could study in Greek schools. But in the homeland all that came from Greece was brought by the soldier, the trader, the slave dealer or the brothel-keeper. It was not against the teachings of Plato but against Antioch and the groves of Daphne[1] that loyal Jews rose in revolt. Secondly it would seem that the cities were more easily won by Antiochus than was the countryside. The perversion of the Temple, accompanied by the treason of the High Priest and many of his subordinates, may largely account for this. Jerusalem and Garizim followed the State religion also because, to gain obedience for the royal decrees, force was at hand, which was absent elsewhere.

[1] "Four miles west (of Antioch) lay the paradise of Daphne . . . the beauty and lax morals of which were celebrated all over the western world. . . Antioch shared in both these titles to fame Its amenities awoke both the enthusiasm and the scorn of many writers of antiquity. . . . The mass of the population seems to have been only superficially Hellenic" D. G Hogarth in *Enc Brit* ed. xi, vol. ii, pp. 130–31.

Rise of the Maccabees.—Resistance came soon. At Modein, a small town north-west of Jerusalem, when the officer of Antiochus raised a heathen altar and invited the people to sacrifice on it so as to demonstrate their acceptance of the new cult, Mattathias, an aged priest of the order of Jehoiarib, slew both the officer and a Jew who stepped forward to comply with the royal order.

In order to strengthen their position and gain adherents, the loyal Jews fled to the mountains. This is undoubtedly alluded to in Mark. xiii., 14, and Matt. xxiv., 15 ("When ye see the abomination of desolation . . . let them that are in Judaea flee unto the mountains"), where a possible Roman desecration of the Temple or Temple-site analogous to that by Antiochus, is contemplated. (*See* C. G. Montefiore, *Synoptic Gospels,* Lond, 1927, vol. i., p. 300: vol. ii., p. 311.) Whether Mattathias himself led the band is uncertain. The leader very soon was Judas, his third son, who, with his four brothers, collected the scattered Jews and prepared for defence. The brothers are known by two names, (1) Hasmoneans, Ἀσμωναῖος (Jos. *Ant.* xii., § 1, etc.) or חשמונאי (*Middoth* I., 6) from Hasmonai, the grandfather of Mattathias and (2) Maccabees. This name was strictly applied to Judas only. The etymology is doubtful. The suggestion is that the initials of מי כמוך באלים ("who is like unto Thee among the Gods, O Lord," Exod. xv., 11) which was said to have been emblazoned on Judas's banner, cannot stand because Maccabee is spelled מקבי not מכבי. The derivation from √נקב, *i.e.,* "hammerer" (*cf.* Charles Martel) is unlikely, if only because the root means "to pierce" and not "to hammer." Curtiss suggests √כבה as the origin, while others favour מחבא, "He who hides himself" (*sc.* in the mountains) in defiance of the Hebrew orthography. The most plausible solution is that offered by F. Luzzatto, *i e*, βιαιόμαχος or μάχη βίαιος. H. Hirschfeld, in *Jew. Quart. Rev.,* new series, vol. xviii., No. 1., July, 1927, p. 57, rejects Perles's hypothesis (*loc. cit. ib.*) that מקבי is correct and favours מכבי which he derives from √כאב expressing "a family tragedy coinciding with the birth of the future hero . . . or anxiety about the political state of the country." The name Benjamin = Benoni would offer a parallel[1]

The Campaigns of Judas.—Antiochus's generals, Seron, from Syria, and Apollonius, from Samaria, failed to overcome Judas, who defeated them by sudden night attacks, winning the battle of Beth Horon. At this time the Parthians were revolting against the Seleucids, Mithridates I. (170–138) was making himself independent, and Antiochus was seriously embarrassed. He determined to deal with the Parthians in person but he ordered Lysias, his Viceroy in Syria, to suppress the Jews. Lysias sent 47,000 men, infantry and cavalry, under Nicanor, Gorgias and Ptolemy. Judas defeated Nicanor at Emmaus and Gorgias's army fled. Fresh Syrian forces, under Timotheus and Bacchides, were despatched from the south. Either Judas routed them at Beth Zur, by Hebron, or else they retired in consequence of the death of Antiochus. In any case, Judas gained his end. The road to Jerusalem lay open to him, though the Greek garrison still held out and could not be dislodged. But the Temple was free. It was cleansed and rededicated on 25 *Kislev,* three years to a day from the time when it had been defiled.

Sabbath Observance.—Scholars are generally agreed that the book of Daniel was probably composed during the Maccabean struggle: its purpose was to encourage the faithful to endure martyrdom. At the same time Mattathias succeeded in obtaining the adoption of a new and important principle. Hitherto the Jews had refused in all circumstances to fight on the Sabbath and the enemy had both noted this rule and profited thereby. Thus Antiochus had entered Jerusalem on the Sabbath and under Mattathias some of the earliest defenders had been slain without resistance on the sacred day. It was now ordained that Jews should defend themselves on the Sabbath if attacked. It is possible that on this account the Maccabees became unpopular with

[1] A new theory was advanced by Prof. A. A. Bevan at the Cambridge Theological Society in December 1928.

the *Ḥasīdhim* or pious party. But if this step had not been taken, the Jews would have been annihilated in a short time. The fact that the Maccabees are scarcely ever mentioned in the Talmud and that they were disliked by the Pharisees is to be accounted for with greater likelihood, by their assumption of royal power in combination with the High Priesthood and by their subsequent aims, which were nationalist rather than religious.

Judas in Power.—After securing the Temple, Judas proceeded to consolidate his position: he united the Jews and dealt firmly with the apostates. But he knew that victory was not yet secure. Antiochus, previous to his death, obstinately refused to regard Judas as the Jewish representative and when he sent Menelaus, the renegade High Priest, to "encourage" the Jews (2 Macc. xi., 32), no reference to Judas was made. In 163 B.C. Lysias defeated Judas at Beth Zachariah but Judas recovered himself, mainly because a pretender arose in Antioch and Lysias desired peace. Judas now became the recognized Jewish leader and Menelaus was slain. In 162 Demetrius, now supreme in Syria, made Jakim or Alkimus, the chief of the Hellenizing Jews, High Priest. As he was a Cohen (*q.v.*) the *Ḥasīdhim*, or pious party, acquiesced in his appointment. But at the outset he slew 60 of them and this determined Judas to fight for political independence. It is often stated that the Jewish Messianic expectations were exclusively nationalist. But in no case did the *Ḥasīdhīm* fight against their overlord unless religion was threatened and religious freedom was at stake. Alkimus could maintain himself only by the aid of the army of Bacchides. He retired before Judas to Antioch and induced Nicanor to come to his aid. Nicanor and Judas at first became friends but warfare soon broke out. In 161, on "Nicanor's Day" (13 *Adar*), long observed by the Jews as a joyful anniversary, the Syrian general was defeated and killed. Judas then made a treaty with Rome, buying immediate security at the price of future disaster. Judas repeated the error which had led, in similar circumstances before, to the downfall of the kingdom of Judah. Foreign alliances were nothing but entanglements. Rome, like Assyria and Babylonia, would have intervened spontaneously if a tributary or rival extended unduly: an alliance with the world power against Syria was unnecessary, and an alliance was inevitably the first step towards loss of independence. In "peace and quietude" would have been success, but to refrain is harder than to act. Finally Judas was killed at Elasa (1 Macc. ix., 18) and Bacchides placed garrisons in Judaea.

The Maccabean Brothers.—Judas was succeeded by his brother Jonathan, who, after two years, was recognized by Bacchides. In 153 Jonathan was called upon to decide between the offers of Demetrius, king of Syria, and his rival, Alexander Balas, who claimed to be a son of Antiochus Epiphanes. Each desired to win Jonathan to his side. Alexander offered the High Priesthood and Jonathan, who realized that Demetrius was not to be trusted, threw in his lot with Alexander. On Tabernacles 152 B.C. Jonathan became High Priest. In 150 Alexander defeated Demetrius and became king of Syria. In 147 Demetrius II., son of Demetrius, attacked Alexander. Jonathan destroyed the army of the governor of Coele-Syria, who had turned against Alexander. Meanwhile the Syrian garrisons, excepting those in Akra and Beth Zur, had been withdrawn from Judaea. After the death of Balas, Jonathan attacked Akra but made peace with Demetrius II., receiving the addition of three Samaritan districts in return for abandoning Beth Zur. Later he assisted Demetrius II. to quell an insurrection at Antioch. In 145 B.C. Trypho, an officer of Alexander Balas, made Alexander's son king (Antiochus VI.). This gave Jonathan the opportunity of taking Beth Zur, Jaffa, Gaza and Askelon, of fortifying the Temple and of blocking up the citadel. In spite of Jonathan's friendship with Trypho, the latter seized him at Ptolemais, and afterwards treacherously slew him. Jonathan was succeeded by his brother Simon, who beat off Trypho's army. Trypho next killed Antiochus VI. and made himself king. Simon sided with Demetrius, in return for an amnesty and immunity from taxation and tribute. In 142 Simon secured independence and the people began to date their documents from "the first year of Simon, High Priest, commander and leader of the Jews." The Temple was now safe because on 23 *Iyyar* 142 B.C., Simon gained possession of the citadel and demolished it. Simon was murdered at Dok, near Jericho, in 135 by Ptolemy, his son-in-law, the governor of Jericho. During his rule prosperity had increased and his death was a great disaster. With him perished two of his sons, Mattathias and Judas: he was succeeded by his surviving son, John Hyrcanus (135–105)

John Hyrcanus.—In the meanwhile Mithridates II. of Parthia had defeated and captured Demetrius II in 139. Antiochus VII. (Sidetes 138–129), the brother of Demetrius, fought Trypho, who was beaten. As a result Antiochus VII. sent an army into Judaea, demanding tribute from Simon After the death of the latter, Hyrcanus continued the resistance. He was besieged in Jerusalem but, in 132, made peace with Antiochus VII. They became allies and Hyrcanus furnished a contingent for the army of Antiochus. When Antiochus VII. died, Hyrcanus increased his power. He forced the Idumeans to accept Judaism and he destroyed the Samaritan Temple on Garizim. During Hyrcanus's rule Judaea prospered and in the *Diaspora, e.g.*, in Egypt and Cyprus, the condition of the Jews was good. Hyrcanus quarrelled with the Pharisees (*q.v.*), who objected to the combination of the High Priesthood with temporal power, and joined their opponents, the Sadducees (*q.v.*). He died in 105, and was succeeded by his eldest son, Judas Aristobulus, who conquered Ituraea and planted Judaism there by force. Judas was succeeded by another son of Hyrcanus, Alexander Jannaeus (103–78), whose continued support of the Sadducees rendered him disliked. Alexander intrigued with Cleopatra of Egypt and with Ptolemy. His reign was full of warfare, rebellion and bloodshed. On his deathbed he directed his wife Alexandra (76–69) whom he had destined for the succession, to reverse his policy and make peace with the Pharisees. As a result, her elder son, Hyrcanus, became High Priest. The Pharisees, whom Alexander's massacres had driven to flight, returned. The queen was supported by Simon ben Shatah and Judah ben Ṭabbai, whose famous mottoes, inculcating care and impartiality in the judicial office, are preserved in *Aboth* i., 8, 9. (*See* Singer, *Authorized Daily Prayer Book,* London, p. 135, all eds.) When Alexandra died in 69 B.C., Aristobulus disputed the succession of Hyrcanus, his brother. War ensued, in which Hyrcanus besieged Aristobulus in Jerusalem, having, on the advice of his Idumean councillor, Antipater, enlisted the help of Aretas (Ḥárith) the king of the Nabataean Arabs.

Intervention of Rome.—In 66 B.C. Pompey had defeated Mithridates VI. of Pontus and his son-in-law Tigranes. Learning of the war in Judaea he sent in 65 B.C. M. Aemilius Scaurus, Sulla's stepson, to intervene and to him both Hyrcanus and Aristobulus appealed The latter won by bribery. Aretas retired and Aristobulus appeared to have triumphed. But Scaurus's superior was at hand Pompey reached Damascus and immediately deputations followed him there. Aristobulus and Hyrcanus, the latter exploited by Antipater, sent their delegations and one more came from the Jewish nation, begging for the abolition of the kingship and the restoration of the sacerdotal theocracy. Pompey made Hyrcanus High Priest and so Antipater secured power. Warfare broke out between the adherents of the two brothers: the Roman legions participated. Pompey captured Jerusalem and a terrible massacre ensued, the priests being slain at the altar. Over 12,000 Jews perished.

Roman Rule.—Rome now became the ruler. Aristobulus, his daughters and his sons, Alexander and Antigonus, were taken by Pompey to grace his triumph, but on the journey Alexander escaped and raised a revolt in Judaea. In this the Pharisees took no part: no religious issue was at stake. Aulus Gabinius, the proconsul, crushed the revolt. Hyrcanus was appointed guardian of the Temple and the country was split up into five districts governed by synods. Alexander and Aristobulus continued their raids. Antipater supported Gabinius and in return could do as he liked. In 54 B.C. M. Crassus, who succeeded Gabinius, plundered the Temple. He was defeated and slain by the Parthians in the next year. Cassius opposed the Parthian invasion of Syria and Antipater, whose policy was to stand well with Rome whatever happened, aided him. In 51 B.C. Taricheae was captured and 30,000 Jews, who had espoused the Parthian cause, were sold as

slaves. When Julius Caesar made himself master of Rome, he released Aristobulus and sent him, with two legions, to Judaea, in 49. But Pompey's emissaries contrived to poison him on the journey and Pompey beheaded his son Alexander at Antioch. In 48 B.C. Pompey himself was defeated and slain, whereupon Antipater joined Caesar's party. Hyrcanus was confirmed as High Priest and Antipater made procurator of Judaea. Caesar conferred privileges on the Jews and Suetonius (*Caesar* 84) mentions that his death was lamented by them especially.

Herod the Great.—At this point one of the most remarkable figures in the history of Judaea becomes prominent. This was Herod, one of Antipater's sons, who, at the early age of 25, was appointed prefect of Galilee, his brother Phasael being prefect of Jerusalem. After Caesar's departure, one Hezekiah attacked the Syrians. Josephus, whose source was Nicolaus of Damascus, depicts Hezekiah as a brigand. But Nicolaus was a client of Herod and it is not unlikely that his estimate was biased and that Hezekiah was fighting for patriotic motives. Herod seized and executed him and a number of his followers. For this he earned the gratitude of Sextus Caesar, the governor of Syria, and the detestation of the Jews. He was summoned to appear before the Ṣanhedrin (*q.v.*) but he came to his trial with an armed bodyguard, overawing his judges with the exception of Shammai (see *Aboth*, i., 10–15. Singer *op. cit.*, p. 185), who warned his colleagues of the future. Sextus promoted Herod, who raised an army to attack Hyrcanus, but at Antipater's request he desisted. In 43 B.C. Antipater was poisoned. Confusion arose in Judaea. Herod repulsed a raid by Antigonus, the son of Aristobulus.

After the defeat of Cassius at Philippi (42 B.C.) Antony became master of Asia. Deputations approached him in Bithynia, one from the Jews accusing Herod and Phasael of usurping the power of Hyrcanus. But the last-named was aware of the power of Antipater, Antony's friend and of his sons. These became virtually kings of the Jews. Step by step the Hasmonean dynasty was giving place to the Idumean Antipater. In 40 B.C. the Parthians, with Antigonus, invaded Syria. They captured Hyrcanus and Phasael, but Herod escaped to Rome. Hyrcanus was carried away to Parthia and mutilated so as to make him unfit for the High Priesthood. Antigonus took his uncle's place, and Herod was recognized as ruler by the Roman senate. Herod returned and captured Jerusalem with Roman aid. Antigonus was beheaded. Herod strove to conciliate the Jews. He married the grandniece of Hyrcanus, not only because he loved her passionately, but because he hoped to gain favour by allying himself with the Hasmoneans. When, in a fit of insane jealousy, he had her put to death, he was plunged into uncontrollable remorse. Her image haunted him all his life. He rebuilt the Temple with great magnificence and at enormous cost. He encouraged the Pharisees and he conformed to Judaism. Religion was free so long as politics were eschewed. Abtalion's words of caution (*see* Singer, *loc. cit.*) evidently apply aptly to the conditions of the day. During this period the *Diaspora* increased and converts multiplied Saints such as Hillel were among the notable teachers of the people. For the influence of these men, A. Büchler's *Types of Jewish-Palestinian Piety*, from 70 B.C.E. to 70 C.E. (1922) may be consulted. Herod preserved peace in his dominions until his death in 4 B.C.

Herod's Successors.—Herod divided his kingdom by will into tetrarchies, to which he appointed his sons, Archelaus, the elder son of his Samaritan wife Malthace, being named king and Antipas, her second son, tetrarch of Galilee and Peraea. Philip, a son by another wife, was given the north-east. Archelaus was about to set off to Rome, that he might be confirmed in his title by Augustus. But a revolt broke out in consequence of the execution, by Herod, shortly before his death, of Judah and Mattathias, two rabbis who endeavoured to remove the Roman eagles which they regarded as emblems of idolatry. Archelaus was asked to punish their murderers. On his refusal riots broke out. Fighting between the Jews and the Romans and massacre took place. Deputations reached Augustus putting forward rival claims and also the desire of the nation to get rid of the Herodians. In the end Augustus reaffirmed Herod's will, counselling Archelaus to deal gently with his people. He did not, however, follow this advice. He removed the High Priest and he violated the law of the levirate marriage. (*See* Deut. xxv., 5–10; but his brother had left issue and so [verse 5] the marriage should not have taken place.) His treatment of his subjects was so tyrannical that a joint deputation of Jews and Samaritans accused him to Augustus, who summoned him to Rome and then banished him to Gaul.

The Procurators.—With this removal of their king at their own request the Jews obtained their desire but forfeited their political independence. Now the last trace of national liberty was gone: the power passed to the Roman procurators. The error of the Maccabees in invoking Roman aid had reached its logical consequence. No longer—save for a brief interval—was Judaea governed by a Jew. If the procurators had been capable and honest, no great harm would have intervened. Roman provincial government was uneven. Very seldom were the two requisites combined in one administrator and the harm done by the bad holders of the office was far greater than good predecessors or followers could counteract. At the outset trouble arose when the first procurator, Coponius, who was accompanied by P. Sulpicius Quirinius, the legate of Syria, endeavoured to take a census (A.D. 6–7) according to Roman methods, which conflicted with those of the Jews. If this is the census to which Luke (ii., 1) refers, the birth of Jesus would have to be dated in that year, but this is too late. (The difficulty is discussed by Montefiore, *op. cit.* 11., 376.) The people submitted to the census but this and similar incidents led to the formation of the Zealots. This party, which was formed by Judas of Galilee and a Pharisee called Saduq, ultimately brought about the disaster of A.D. 70. As a whole the Pharisees were ready to wait and bear with patience attacks on their religion which were not too outrageous, but the Zealots were ever eager for warfare. The Zealots made headway in Galilee, then ruled by Herod Antipas. His policy was to conciliate the Jews, by observing Judaism and to stand well with Tiberius, in whose honour he founded the city of Tiberias. Herod, who had married the daughter of Aretas (Ḥárith), the Arabian king, divorced her in order to marry Herodias, the wife of his half-brother. The first consequence was trouble with the Arabs. In A.D. 36 disaster overtook his forces and Tiberius, his patron, died before help could be sent. The second consequence was his denunciation by John the Baptist (Mark vi, 14–29), whom he executed at the request of Herodias. But Antipas himself suffered through following the counsel of Herodias. He petitioned Caligula for the title of king but his presumption was resented. He was banished and (apparently) slain in A.D. 39.

Pontius Pilate, under whom Jesus was crucified, was procurator from A.D. 26 to 36. He outraged Jewish feelings in all ways and the picture of him in the Gospels hardly bears out his character, in view of his acts. Not only Josephus but also Philo record the way in which he goaded the people to revolt. As soon as he arrived he broke the existing compromise under which only standards which did not bear the imperial image were brought to Jerusalem, since the images were held to be idols, as the emperors were deified. The Jews petitioned Pilate to remove the standards. He refused and when they importuned him for six days he threatened them with death, yielding only when they were ready to accept martyrdom. He next used Temple money for an aqueduct and proceeded to other forms of annoyance.

Caligula's succession in A.D. 37 was welcomed by the Jews. One of his friends was Agrippa, the grandson of Herod I. and the Jews hoped to win Caligula's favour through Agrippa's presence at court. But trouble arose when Caligula laid claim to divinity and the Jews, alone of his subjects, were unwilling, out of religious motives, to acknowledge his godhead. Thereupon the Alexandrians attacked the Jews, set up the images of the emperor in the synagogues, sacked the Jewish quarter, insulted Jewish ladies and scourged the Jewish elders. Through Agrippa's influence, the governor was degraded, but ill-feeling between the Jews and their fellow-citizens continued. In A.D. 40 each side sent embassies to plead their cause, Philo acting as the Jewish spokesman. Philo's account of the embassy (*Against Apion*) sheds an interesting light on the restless, irresponsible character of the emperor. By chance an imperial rescript, containing the decision

of Claudius, Caligula's successor, has been discovered. This interesting document, with others of equal importance, has been edited and translated by H. J. Bell (*Jews and Christians in Egypt,* Lond., Brit. Mus., 1924). It is interesting to observe that no definite charge is urged against the Jews. The emperor reprimands the Alexandrians for their intolerance. He blames the Jews for sending a separate embassy "as though they lived in two cities, a thing unheard of" (*μηδὲ ὥσπερ ἐν δυσὶ πόλεσι ατοικοῦντας δύο πρέσβεις ἐκπέμπειν τοῦ λοιποῦ, ὃ μὴ πρότερόν ποτε ἐπράχθη*), warns them not to strive in gymnasiarchic or cosmetic games (*μηδὲ ἐπισπαίρειν γυμνασιαρχικοῖς ἢ κοσμητικοῖς ἀγῶσιν*) and not to introduce or invite Jews who sail down to Alexandria from Syria or Egypt. These are not very heinous crimes and the accusers of the Jews must have been hard pressed if they could discover no graver accusations. While the embassy was still awaiting Caligula's decision, the emperor commanded his statue to be erected in the Temple but at Agrippa's intercession, he cancelled the order. In A.D. 41 Caligula was assassinated.

Claudius, who succeeded Caligula, made Agrippa king over all the districts that his grandfather had ruled. Once more the Jews had their own king, a popular monarch, who followed the Pharisees and was a strict Jew. He is mentioned in Acts (xxv., 13, etc.). He died in A.D. 44 and the rule of the procurators was restored. Under Cuspius Fadus, the robber gangs were put down for the time. Theudas, who claimed to be a prophet, was followed by a number of people who looked for him to cleave the Jordan He was captured and beheaded. After Fadus came Tiberius Alexander, an apostate Jew from Egypt, a nephew of Philo. During his administration Helena, the queen of Adiabene, embraced Judaism and purchased corn to relieve a famine in Judaea. The next procurator, Ventidius Cumanus (48–52) provoked the Jews to riot A massacre took place in the Temple and bloodshed occurred between Samaritans and Galileans. Cumanus was ultimately banished by the emperor and replaced by Felix (52–60), under whom the revolutionary movement grew to greater dimensions.

The country was once more full of robbers, the High Priest was murdered in the Temple False prophets appeared. Felix tried in vain to restore order. He was recalled by Nero. The succeeding procurators (Porcius Festus, 60–62: Albinus, 62–64: Gessius Florus, 64–66) did no better. Sacrilege and exaction, misunderstanding and ill-will grew worse and more frequent. The Jews, roused to fury, massacred a body of Roman soldiers, while the citizens of Caesarea slaughtered all the Jews in their town. Various Jewish forces were warring against each other and finally Vespasian was sent by Nero to crush the rebellion. He advanced from his winter quarters in Antioch early in 67. He was joined by Titus: the Roman armies entered Galilee. The historian Josephus was at the head of a Jewish army. He has been misjudged because, convinced of the hopelessness of a struggle with Rome, he urged his co-religionists to sue for peace. But it is in the highest degree unjust to call him a traitor or a coward. His army was confronted by that of Vespasian and fled. After the fall of the fortress, Jotapata, Josephus gave himself up. The Roman forces swept the country.

While Jerusalem was invested, Johanan ben Zakkai had himself conveyed out of the city and, coming to the Roman general, craved a boon. He asked to be allowed to establish a school at Jabneh. His request was granted and this seemingly trivial concession saved Judaism. Johanan saw that Judaism could survive the Temple, that its future lay in the school and that the Bible was the Jews' portable fatherland. On the 10th of *Ab* in the year 70, amid circumstances of unparalleled horror, Jerusalem fell. The Temple was burnt and the Jewish State was no more.

Judaea Capta.—From 70 to 135 the only hope lay in the "vineyard" of Jamnia. The Sicarii and Zealots held out until, one by one, their fortresses were reduced. In Egypt and Cyrene they continued their fruitless but heroic efforts. The Egyptian temple of Onias, which had existed for 243 years, was first closed and then destroyed. Under Vespasian and Titus the Jews of Rome enjoyed freedom of conscience and political rights. Domitian inaugurated a persecution which Nerva ended. In Trajan's reign the Jews of Cyrene revolted but were subdued. Finally, in 132, Hadrian's proscription of Judaism roused the last remnants of Palestinian Jewry to die for their faith. A bitter struggle ensued. Bar-Kochba was acclaimed as Messiah by the great Rabbi Aqiba, though some of Aqiba's colleagues, *e.g.,* Johanan ben Torta, repudiated Bar-Kochba's pretensions. For three years the hopeless conflict raged, the Jews fought with the energy of despair, but in 135 the end came. Jerusalem and then Bethar fell. The holy city was thenceforth prohibited to the Jews, though the Christians, who had taken no share in the war, were allowed to come and go there freely. Many scholars date the breach between Judaism and Christianity (*see* JUDAISM) to this event.

MEDIAEVAL PERIOD

Rabbinical Learning in the East.—The ruthless suppression of the rising of Bar-Kochba had decimated the population of Judaea. The centre of Jewish life in Palestine moved in consequence northwards, to Galilee. Though local insurrections continued sporadically at any favourable opportunity, serious political aspirations were now at an end. Henceforth, the dominant position in the national life came to be occupied more and more by spiritual and intellectual leaders, the rabbis of this period being known as *Tanaim.* Pharisaism, in its finest sense, became an increasingly strong force in daily life. Political leadership was taken over by the presidents of the sanhedrin, or patriarchs, who ultimately obtained formal recognition from the Roman authorities, and enjoyed additional consideration among the people in virtue of their descent from Hillel (*q.v.*), and hence by tradition from David The office, which had become firmly established by Gamaliel II. of Jamnia (Jabneh) after the destruction of Jerusalem, reached its zenith in his grandson, Judah I. (135–217), known as "Rabbi" *par excellence* He is remembered for having codified the oral law by the redaction of the Mishnah, the basis of all the vast rabbinical literature of later times.

The intellectual activity of the latter half of the second century seems to have been somewhat artificial Owing to the ravages caused by constant wars and revolts, as well as by adverse economic conditions, the importance of Palestine was declining. The great centre of Jewish population lay already outside the country, particularly in Mesopotamia, where the "exile" had continued throughout the days of the second temple. Babylonian students had been accustomed to come to Palestine and sit at the feet of its renowned teachers By the time of the death of Judah I. the younger settlement had become intellectually self-supporting. Abba Arika (*q.v.*), commonly known as *Rab* or "Master," who had been a pupil of the great Palestinian patriarch, set up at Sura a famous school of rabbinical learning which retained its prominence until the 11th century. His younger contemporary, Samuel (famous for his momentous maxim that "the law of the state is Law"), presided at Nehardea over an academy which long rivalled the other. During its temporary suspension owing to the sack of the city by Odenathus (Zenobia's husband) in 259, there arose in the neighbourhood the school of Pompedita. These three academies co-operated with the dwindling schools in Palestine in maintaining the traditions of Jewish learning, the teachers now being called *Amoraim.* The discussions which went on in them, centred in the text of the Mishnah (especially at the biennial *Kallah* assemblage), were ultimately redacted as the *Gemara,* the whole body together forming the Talmud. The foundations of the less important compilation made in the decaying academies of Palestine were laid by Rabbi Johanan of Tiberias (died *c.* 279); but it survives in a fragmentary state, and probably was never finished. Palestinian, too, was the Midrash—a vast compilation of homiletics, ethics, legend, and folk-lore in the form of a commentary on the Bible. The fuller Talmud of Babylon, which exercised a pre-

ponderating influence upon Jewish life in later times, reached its final form at the close of the 6th century. It was far from being merely a code of religious practice. It was a whole literature, comprising law and theology, science, folk-lore, and every other conceivable branch of intellectual activity, somewhat amorphously grouped about the text of the Mishnah. It was this which remained, after the Bible, the principal guide to life and object of study, and which gave Judaism unity, cohesion, and resilience in the difficult period which lay before it.

The Muslim Conquest.— In spite of the intolerant theory and beginnings of Islam, the Muslim conquest considerably ameliorated the condition of the Jews in the east. The Caliphs, once their original missionary zeal abated, showed themselves willing to accord an almost boundless toleration in return for a slender poll-tax. By this time the political connection of the Jews with Palestine had almost ceased, though the country remained the focus of their prayers and hopes, and the patriarchate had been finally abolished by Theodosius II. on the death of Gamaliel VI. without male heirs (425). In Mesopotamia, however, intellectual activity continued with renewed vigour after the downfall of Zoroastrian intolerance. The secular dignity of Prince of the Captivity, or Exilarch (*q.v.*), which had existed from remote antiquity, was revived with renewed magnificence. Spiritual authority, however, resided in the Gaon (*q.v.*), the head of the Academy, who continued to expound and develop the principles of the Talmud with an authority which was extended by the conquests of the Crescent. The widening of intellectual horizons which the Muslim influence ultimately brought about was typified in the Gaon Saadiah (*q.v.*) (882–942), who first exemplified the fruitful combination of Helleno-Arabic and Jewish culture. Jewish philology and philosophy both start with him, being necessitated by the threatening Karaite schism, for the check of which his labours were principally responsible. This double organization, under Gaon and Exilarch, continued until the 11th century, by which time the Jewries of the occident were strong enough to stand by themselves.

The Diaspora in the West.—Already, before the destruction of Jerusalem, the Diaspora had been a familiar phenomenon in Europe. The prisoners captured in innumerable wars and distributed through the Empire as slaves had been followed (if not preceded) by merchants and traders Latin writers from the period of Augustus onwards show the extent to which Jewish practices were spread throughout the civilized world of their day Paul found them in Greece and Italy, and the infant church consistently advanced where the synagogue had blazed out the way. By the beginning of the 4th century, settlements were to be found as far afield as Spain and the Rhineland. Indeed, it is probable that, before the Roman empire had begun to decay, Jews were present in all of its greater cities. By the constitution of Caracalla (212), they had been admitted to the privileges as well as the burdens of Roman citizenship and henceforward they occupied a position which was privileged by comparison with that of members of other dissenting religions.

With the christianization of the empire, however, their condition was altered. It is true that they were comprised in the toleration accorded by the edict of Milan, but their status was immediately and radically changed. The differentiatory policy of the church was adopted almost in its entirety by the state. From an *insignissima religio, certe licita,* Judaism became the *secta nefaria* or *sacrilegi coetus* which figure in the edicts of the first Christian emperors. The policy of the church was far from being merely persecutory. Its intention was rather to prevent the inroads of Judaism by keeping its adherents from positions of authority and restricting social intercourse with them. At the same time, it regarded their preservation (if in ignominy) as evidence for the truth of Christianity, and frowned upon the use of force to bring them into the path of conformity. The Papacy, true to the tradition set by Gregory the Great, figured down to modern times alternately as the protector of the Jews from violence and the repressor of their "insolence," departing from this standard most frequently on the side of leniency; and Rome was almost the only city of Europe to preserve its Jewish community undisturbed from remote antiquity down to the present day. The secular rulers, however, did not show the same discrimination; and in the Byzantine empire in particular (especially from Justinian, who was the first emperor to interfere with their religious institutions) discrimination degenerated rapidly into oppression. The embodiment of the new principles in the *Codex Theodosianus* ultimately permeated the whole of western law with the idea of Jewish inferiority.

Renascence of Jewish Culture.—With the barbarian invasions a momentary improvement had come about in the position of the Jews. The new rulers displayed at first that tolerance which arises from indifference, while those who adopted the Arian form of Christianity were sympathetically inclined towards the adherents of a stricter monotheism. Later, however, a reaction followed. In the 7th century there was a simultaneous wave of forced conversion throughout Europe from Constantinople to Toledo, reaching its height under the Visigoths in Spain, where the practice of Judaism was for a time utterly proscribed. It was the Arab invasion which brought salvation. The ancient communities in northern Africa, especially at Cairo and Kairouan, which had waned under Byzantine intolerance, awakened to a new life. In Spain there came about a remarkable revival. The Jew knew no restriction upon his activities. His linguistic or financial abilities won him high place in the administration. Under the aegis of Hasdai ibn Shaprut (*c.* 915–970) and Samuel haNagid (993–1055) there was a remarkable renascence, in which the old traditions of the schools of Palestine and Mesopotamia, the manifold interests of the Moors, and the rediscovered sciences of ancient Greece were marvellously blended Jewish poetry came to a new life, based on Arabic models, with Jehudah haLevi (1086–1141) and Solomon ibn Gabirol (1021–1056). Moses Maimonides (1135–1204) represents in his many-sided activities, as physician, Talmudist, codifier, and philosopher, the Spanish school at its best. This tradition was proof against the intolerance introduced by the fanatical Almoravides and Almohades in the 12th century; for, partly from reasons of policy and partly imitatively, the earlier Moorish toleration was adopted by the growing Christian kingdoms.

Meanwhile, under the favourable rule of the Carolingians important Jewish settlements had come into being in northern France and the Rhineland. Cultural life inevitably followed But the tendencies of northern Jewry were sterner than those of Spain and centred in the interpretation and development of Talmudic law rather than in humanism or philosophy. The first great name is that of Gershom, "the light of the exile," who published about the year 1000 the famous ordinance which forbade amongst western Jews the polygamy long since abandoned in practice. Solomon ben Isaac of Troyes ("Rashi") (1040–1105) summed up the tendency, his writings preserving for after-generations the old traditions of rabbinic scholarship. An extensive body of Tosaphists, or "supplementers," whose activities extended to almost every township of north-eastern France, carried on his work. But these were only varying faces of an intellectual activity which knew no boundary of country. A remarkably comprehensive educational system, insisted upon as a religious duty, resulted in a general distribution of culture unequalled in any other section of the population. The speculative tendency everywhere found its outlet in a vast mystical literature, afterwards grouped about the Zohar. The 13th century renascence was forwarded in no small measure by the translations from the Arabic made by, or with the help of, Jewish scholars—sometimes under the sedulous patronage of monarchs like Alfonso the Wise of Castille and Robert of Anjou. In Immanuel of Rome (1270–1330), Dante's parodist if not his friend, Hebrew poetry became infused with something of the careless spirit of Italian verse, in which he was equally proficient. The Jewish physician or astronomer, living under the highest patronage, was fully as characteristic a figure as the merchant or financier.

The Jews of Europe of the 11th century onwards were economically far removed from their ancestors in Palestine and Mesopotamia The original settlers had included agriculturalists and the calling lingered on in many places, particularly in the

south, to a late date. But the peaceful immigrant into a country already inhabited cannot easily settle on the land, and the growth of the feudal system, from which the Jew was naturally excluded as a stranger, tended to accentuate his divorce from the soil. Accordingly, there was an inevitable tendency for him to specialize in commerce, for which his acumen and ubiquity gave him especial qualifications. In the dark ages the commerce of western Europe was largely in his hand, in particular the slave-trade, and in the Carolingian cartularies Jew and merchant are used as almost interchangeable terms. With the growth of a mercantile class, however, they became excluded from commerce, particularly in northern Europe. Hence they were forced to employ their capital in the only way left open to them, by lending it at interest. The attitude of the church in endeavouring to suppress "usury" naturally tended to concentrate the profession more and more in the hands of those to whom the canonical prohibitions did not apply. Ultimately, all other professions were closed to them by law in the greater part of Europe, though in Spain and Sicily they remained to some extent addicted to handicrafts and agriculture. The high probabilities of violence or expropriation naturally resulted in forcing up the rates of interest, though in point of fact the Jews charged no more than other usurers. Yet the advantage accrued rather to the Crown, which did not scruple to avail itself to the utmost limit of its rights of taxation. The floating wealth of the country was soaked up by the Jews, who were periodically made to disgorge into the exchequer. The holy Roman emperors in particular, as heirs to Vespasian, claimed exclusive proprietary rights, and their claims were imitated by other rulers. As *servi camerae regis,* those of any particular place or country could be pledged, alienated, or even expelled without compunction.

The Christian Reaction.—The third and fourth Lateran councils (1179–1215), roused to suspicion through the Albigensian movement, marked the growth of the reaction against the Jew. Besides renewing the old restrictions forbidding Gentiles to enter into Jewish service or to be otherwise subordinated, they ordered the infidels to be distinguished by a special badge and forbade the faithful so much as to lodge amongst them, thus laying the foundation of the infamous Ghetto system (*q.v.*). These regulations were not everywhere immediately or consistently enforced, but they remained a part of the ecclesiastical panoply, to come again into prominence in the 15th century, in the wake of the Hussite wars and the preaching of John of Capistrano, and in the 16th, as a consequence of the reformation. The counter-offensive against heresy found its expression also in conversionist sermons at which attendance was enforced; in the censorship or confiscation of Hebrew books; and in compulsory religious disputations, the most important of which were those of Paris before Louis IX. in 1240 and of Tortosa under the patronage of the anti-pope Benedict XIII. in 1413–14. The inevitable result of all this was to make the popular prejudice still stronger.

The last country of western Europe to be settled by the Jews had been England, whither they penetrated in the wake of the Norman Conquest (in the Scandinavian countries, they never figured to any appreciable extent). This marked the culmination of the western sweep which had been going on since the beginning of the Christian era, and had made the Jews into an essentially European people. The backward swing of the pendulum began almost immediately. With the First Crusade (1096), there took place in the Rhineland the first of the long series of massacres which made the middle ages one long martyrdom for the Jews and ultimately had the effect of driving them back again towards the east. These were henceforth renewed on every conceivable pretext in almost every country of Europe. To reinforce racial and religious prejudice, the infamous ritual murder accusation (*q.v.*) became common from the 12th century, and the even more fantastic charge of the desecration of the Host was formulated at the beginning of the 13th century after the recognition of the doctrine of transubstantiation. Meanwhile, the growth of the financial activities of the Lombards and Cahorsins rendered the Jew less necessary in the field which he had previously tended to monopolize, and drove him into the meaner calling of pawnbroking.

The logical outcome of the changed condition of affairs was, in current opinion, to drive the infidel away altogether. This had previously happened in isolated cities or regions, but the first country to rid itself of the Jews entirely was England, whence they were expelled by Edward I. in 1290. This was followed a few years later by the more deadly expulsion of the far more important communities of France (1306), which a couple of partial recalls (1315 ff. and 1350–94) utterly failed to make good. From Germany, by reason of its special political conditions, there was no general expulsion It figures instead as the classical land of Jewish martyrdom, where banishment was employed only locally and sporadically to complete the work of the long series of massacres. These reached their climax, though not their close, at the period of the black death, when the absurd charge of poisoning the wells became current. Some of the refugees crossed the Alps into Italy, where, owing to the tolerant example of the Holy See, conditions were better. But the vast majority turned their steps towards Poland, where their settlement was especially encouraged by Casimir the Great (1333–70). This was the origin of the vast nuclei of Jews in the old Russian empire, who still retain the German dialect which their ancestors brought with them from the West and imposed upon the indigenous communities which they found on their arrival.

In Spain the condition of the Jews, even under the Christian rulers, compared very favourably with that of their brethren in northern Europe. However, with the passage of time and the growth of national and religious feeling, their situation deteriorated. In 1391, and again in 1411, a wild wave of massacre swept through the Peninsula. Following the example of their fathers in Gothic times, many Jews (less stout-hearted than their brethren elsewhere) sought refuge in baptism. To cope with the problem of these so-called Marranos, who remained true at heart to their old faith, the Inquisition was introduced (1478). But the presence in the country of Jews true to their religion seemed a constant encouragement for their converted brethren to relapse. Accordingly, four months after the capture of Granada (which did away with all need for further conciliating the religious minority), Ferdinand and Isabella issued the edict of expulsion which put an end to the settlement of the Jews in Spain after so many centuries (March 31, 1492). This included the more distant possessions of the crown of Aragon—Sicily and Sardinia—in spite of the fact that the problem of the crypto-Jew was unknown in them. It was in vain that Isaac Abrabanel (1437–1508), the last of the long line of Jewish scholar-statesmen in the Peninsula, begged for reconsideration. The edict was imitated in Portugal[1] (1496) and in Navarre (1498) after a very brief interval. Almost simultaneously, the last remnant of the ancient French communities was banished from Provence. An expulsion from the kingdom of Naples (1510 and, more completely, 1548) and from the duchy of Milan (1597) followed the Spanish occupation.

The whole of western Europe was now closed to the Jews, except parts of northern Italy and a few regions of Germany, together with the exiguous papal possessions in France. The Marranos, indeed, continued a surreptitious existence in the Peninsula, handing on their traditions in secret from generation to generation at the risk of their lives. It was their descendants, fleeing from the fires of the Inquisition, who founded the modern communities in France, Holland, England, and even America Of the earlier refugees the vast majority made their way, with indescribable difficulty, to the Muslim countries of the Mediterranean littoral. With them they brought their native Spanish tongue, which is spoken by their descendants to the present day The greatest haven of refuge was Turkey, where the newcomers were sedulously encouraged by the Sultans and treated with a favour which reached its climax in the meteoric career of Joseph Nasi, duke of Naxos (d. 1579) (*q.v.*). The greatest masses of the Jewish people were thus to be found once more in the East, in the Polish and Turkish empires. The second westerly movement, which has continued to our own days, may be said to begin

[1]For the importance of the Portuguese Jews *see* PORTUGAL: *History.*

with the deadly Chmielnicki massacres of 1648–49 in the former country. The few communities suffered to remain in western Europe were meanwhile subjected at last to all the restrictions which earlier ages had usually allowed to remain an ideal; so that, in a sense, the Jewish dark ages may be said to begin with the Renaissance. (C. R.)

PERIOD OF EMANCIPATION

The ghetto, which had prevailed more or less rigorously for a long period, was not formally prescribed by the papacy until the beginning of the 16th century. The same century was not ended before the prospect of liberty dawned on the Jews. Holland from the moment that it joined the union of Utrecht (1579) deliberately set its face against religious persecution (*Jewish Encyclopedia*, i. 537). Maranos, fleeing to the Netherlands, were welcomed; the immigrants were wealthy, enterprising and cultured. Many Jews, who had been compelled to conceal their faith, now came into the open By the middle of the 17th century the Jews of Holland had become of such importance that Charles II. of England (then in exile) entered into negotiations with the Amsterdam Jews (1656) In that same year the Amsterdam community was faced by a serious problem in connection with Spinoza. They brought themselves into notoriety by excommunicating the philosopher—an act of weak self-defence on the part of men who had themselves but recently been admitted to the country, and were timorous of the suspicion that they shared Spinoza's then execrated views. It is more than a mere coincidence that this step was taken during the absence in England of one of the ablest and most notable of the Amsterdam rabbis. At the time, Menasseh ben Israel (*q v*) was in London, on a mission to Cromwell. The Jews had been expelled from England by Edward I.; Cromwell in 1655, tacitly assented to their return and at the restoration his action was confirmed.

The English Jews "gradually substituted for the personal protection of the crown, the sympathy and confidence of the nation" (L. Wolf, *Menasseh ben Israel's Mission to Cromwell*, p lxxv). The City of London was the first to be converted to the new attitude. "The wealth they brought into the country, and their fruitful commercial activity, especially in the colonial trade, soon revealed them as an indispensable element of the prosperity of the city. As early as 1668, Sir Josiah Child, the millionaire governor of the East India company, pleaded for their naturalization on the score of their commercial utility. For the same reason the city found itself compelled at first to connive at their illegal representation on 'Change, and then to violate its own rules by permitting them to act as brokers without previously taking up the freedom. At this period they controlled more of the foreign and colonial trade than all the other alien merchants in London put together. The momentum of their commercial enterprise and stalwart patriotism proved irresistible. From the exchange to the city council chamber, thence to the aldermanic court, and eventually to the mayoralty itself, were inevitable stages of an emancipation to which their large interests in the city and their high character entitled them. Finally the city of London—not only as the converted champion of religious liberty but as the convinced apologist of the Jews—sent Baron Lionel de Rothschild to knock at the door of the unconverted House of Commons as parliamentary representative of the first city in the world" (Wolf, *loc. cit.*).

The pioneers of this emancipation in Holland and England were Sephardic (or Spanish) Jews—descendants of the Spanish exiles. In the meantime the Ashkenazic (or German) Jews had been working out their own salvation. The chief effects of the change were not felt till the 18th century. In England emancipation was of democratic origin and concerned itself with practical questions. On the Continent, the movement was more aristocratic and theoretical; it was part of the intellectual renaissance which found its most striking expression in the principles of the French Revolution. Throughout Europe the 18th century was less an era of stagnation than of transition. The condition of the European Jews seems, on a superficial examination, abject enough. But, excluded though they were from most trades and occupations, confined to special quarters of the city, disabled from sharing most of the amenities of life, the Jews nevertheless were gradually making their escape from the ghetto and from the moral degeneration which it had caused.

Where there were no rights, privileges had to be bought. While the court Jews were the favourites of kings, the protected Jews were the protégés of town councils. Many Jews found it possible to evade laws of domicile by residing in one place and trading in another. Nor could they be effectually excluded from the fairs of the 18th century. Peddling had been forced on the latter by the action of the gilds which were still powerful in the 18th century on the Continent. Another cause may be sought in the Cossack assaults on the Jews at an earlier period. Crowds of wanderers were to be met on every road; Germany, Holland and Italy were full of Jews who, pack on shoulder, were seeking a precarious livelihood at a time when peddling was neither lucrative nor safe.

But underneath all this were signs of a great change. The 18th century has a goodly tale of Jewish artists in metal-work, makers of pottery, and (wherever the gilds permitted it) artisans and wholesale manufacturers of many important commodities. The last attempts at exclusion were irritating enough; but they differed from the earlier persecution Such strange enactments as the *Familianten-Gesetz*, which prohibited more than one member of a family from marrying, broke up families by forcing the men to emigrate. In 1781 Dohm pointed to the fact that a Jewish father could seldom hope to enjoy the happiness of living with his children In that very year, however, Joseph II. initiated in Austria a new era for the Jews. "By this new departure (19th of October 1781) the Jews were permitted to learn handicrafts, arts and sciences, and with certain restrictions to devote themselves to agriculture. The doors of the universities and academies, hitherto closed to them, were thrown open. . . . An ordinance of November 2 enjoined that the Jews were everywhere considered fellow-men, and all excesses against them were to be avoided."

"The Leibzoll (body-tax) was also abolished, in addition to similar imposts which had stamped the Jews as outcast, for they were now (Dec. 19) to have equal rights with the Christian inhabitants." The Jews were not, indeed, granted complete citizenship, and their residence and public worship in Vienna and other Austrian cities were circumscribed and even penalized "But Joseph II. annulled a number of vexatious, restrictive regulations, such as the compulsory wearing of beards, the prohibition against going out in the forenoon on Sundays or holidays, or frequenting public pleasure resorts. The emperor even permitted Jewish wholesale merchants, notables and their sons, to wear swords (January 2, 1782), and especially insisted that Christians should behave in a friendly manner towards Jews (Graetz)."

The Mendelssohn Movement.—This notable beginning to the removal of "the ignominy of a thousand years" was causally connected with the career of Moses Mendelssohn (1729–1786; *q.v.*). He found on both sides an unreadiness for approximation: the Jews had sunk into apathy and degeneration, the Christians were still moved by hereditary antipathy. The failure of the hopes entertained of Sabbatai Zebi (*c.* 1650, *q.v.*) had plunged the Jewries of the world into despair. Despite all this, one must not fall into the easy error of exaggerating the degeneration into which the Jewries of the world fell from the middle of the 17th till the middle of the 18th century. For Judaism had organized itself; the *Shulhan aruch* of Joseph Qaro (*q.v*), printed in 1564 within a decade of its completion, though not accepted without demur, was nevertheless widely admitted as the code of Jewish life. If in more recent times progress in Judaism has implied more or less of revolt against the rigors and fetters of Qaro's code, yet for 250 years it was a powerful safeguard against demoralization and stagnation. No community living in full accordance with that code could fail to reach a high moral and intellectual level.

It is truer to say that on the whole the Jews began at this period to abandon as hopeless the attempt to find a place for themselves in the general life of their country. Perhaps they even ceased to desire it. Their children were taught without any regard to outside conditions, they spoke and wrote a jargon, and their whole

training, both by what it included and by what it excluded, tended to produce isolation from their neighbours Moses Mendelssohn, both by his career and by his propaganda, for ever put an end to these conditions; he more than any other man. Two results emanated from Mendelssohn's work. A new school of scientific study of Judaism emerged, to be dignified by the names of Leopold Zunz (*q.v.*), and many other scholars. On the other hand Mendelssohn by his pragmatic conception of religion (specially in his *Jerusalem*) weakened the belief of certain minds in the absolute truth of Judaism, and thus his own grandchildren (including the famous musician Felix Mendelssohn-Bartholdy) as well as later Heine, Börne, Gans and Neander, embraced Christianity. Within Judaism itself two parties were formed, the Liberals and the Conservatives. Holdheim (*q.v.*) and Geiger (*q.v.*) led the reform movement in Germany and at the present day the effects of the movement are widely felt in America on the Liberal side and on the opposite side in the work of the neo-orthodox school founded by S. R. Hirsch (*q.v.*). Modern seminaries were established first in Breslau by Zacharias Fränkel (*q.v.*) and later in other cities. Jews, engaged in all the professions and pursuits of the age, came to the front in many branches of public life; the names of Rathenau and Einstein are well known.

Effect of the French Revolution.—In close relation to the German progress in Mendelssohn's age, events had been progressing in France, where the Revolution did much to improve the Jewish condition, thanks largely to the influence of Mirabeau. In 1807 Napoleon convoked a Jewish assembly in Paris. The decisions of this body proclaim the acceptance of the spirit of Mendelssohn's reconciliation of the Jews to modern life. They declare their readiness to adapt the law of the synagogue to the law of the land, as for instance in the question of marriage and divorce. Napoleon, after the report of the assembly, established the consistorial system which remained in force, with its central consistory in the capital, until the recent separation of church and state.

Modern Italy.—Similar developments occurred in other countries, though it becomes impossible to treat the history of the Jews, from this time onwards, in general outline. We must direct our attention to the most important countries in such detail as space permits. And first as to Italy, where the Jews in a special degree have identified themselves with the national life. The revolutions of 1848, which greatly affected the position of the Jews in several parts of Europe, brought considerable gain to the Jews of Italy. During the war against Austria in the year named, Isaac Pesaro Marogonato was finance minister in Venice. Previously to this date the Jews were still confined to the ghetto, but in 1859, in the Italy united under Victor Emanuel II., the Jews obtained complete rights, a privilege which was extended also to Rome itself in 1870. The Italian Jews devoted themselves with ardour to the service of the state. Isaac Artom was Cavour's secretary, L'Olper a counsellor of Mazzini. "The names of the Jewish soldiers who died in the cause of Italian liberty were placed along with those of their Christian fellow soldiers on the monuments erected in their honour" (*Jewish Encyclopedia*, vii. 10). More recently men like Wollemberg, Ottolenghi Nathan and Luzzatti rose to high positions as ministers of state. Most noted of recent Jewish scholars in Italy was S. D. Luzzatto.

Austria.—Austria, which had founded the system of "Court Jews" in 1518, had expelled the Jews from Vienna as late as 1670, when the synagogue of that city was converted into a church. But as the commerce of Austria suffered by the absence of the Jews, it was impossible to exclude the latter from the fairs in the provinces or from the markets of the capital. But Maria Theresa (1740–1780) was distinguished for her enmity to the Jews, and in 1744 made a futile attempt to secure their expulsion from Bohemia. At about this period the community of Prague, in a petition, "complain that they are not permitted to buy victuals in the market before a certain hour, vegetables not before 9 and cattle not before 11 o'clock; to buy fish is sometimes altogether prohibited; Jewish druggists are not permitted to buy victuals at the same time with Christians" *Jew Enc.* II. 330 Taxation was exorbitant and vexatious. To pay for rendering inoperative the banishment edict of 1744, the Jews were taxed 3,000,000 florins annually for ten years. In the same year it was decreed that the Jews should pay "a special tax of 40,000 florins for the right to import their citrons for the feast of booths." Nevertheless, Joseph II. (1780–1790) inaugurated a new era for the Jews of his empire.

This enlightened policy was not continued by the successors of Joseph II. Under Francis II. (1792–1835) economic and social restrictions were numerous; indeed the Vienna congress of 1815 practically restored the old discriminations against the Jews. As time went on, a more progressive policy intervened, the special form of Jewish oath was abolished in 1846, and in 1848, legislation took a more liberal turn. In 1867 the new constitution "abolished all disabilities on the ground of religious differences," though anti-Semitic manipulation of the law by administrative authority has led to many instances of intolerance. Many Jews have been members of the Reichsrath, some have risen to the rank of general in the army, and Austrian Jews have contributed their quota to learning, the arts and literature. The law of 1890 makes it "compulsory for every Jew to be a member of the congregation of the district in which he resides, and so gives to every congregation the right to tax the individual members" (*op. cit*). A similar obligation prevails in parts of Germany. A Jew can avoid the communal tax only by formally declaring himself as outside the Jewish community. The Jews of Hungary shared with their brethren in Austria the same alternations of expulsion and recall. By the law "De Judaeis" passed by the Diet in 1791 the Jews were accorded protection. The "toleration-tax" was abolished in 1846. During the revolutionary outbreak of 1848, the Jews suffered severely in Hungary, but as many as 20,000 Jews are said to have joined the army. Kossuth succeeded in granting them temporary emancipation, but the suppression of the War of Independence led to an era of royal autocracy which, while it advanced Jewish culture by enforcing the establishment of modern schools, retarded the obtaining of civic and political rights. As in Austria, so in Hungary, these rights were granted by the constitution of 1867. But one step remained The Hungarian Jews did not consider themselves fully emancipated until the Synagogue was "duly recognized as one of the legally acknowledged religions of the country." This recognition was granted by the law of 1895–1896 (*Jewish Encyclopedia*, vi. 503).

OTHER EUROPEAN COUNTRIES

According to M. Caimi the present Jewish communities of Greece are divisible into five groups: (1) Arta (Epirus); (2) Chalcis (Euboea); (3) Athens (Attica); (4) Volo, Larissa and Trikala (Thessaly); and (5) Corfu and Zante (Ionian Islands). The Greek constitution admits no religious disabilities, but anti-Semitic riots in Corfu and Zante in 1891 caused much distress and emigration. In Spain there has been of late a more liberal attitude towards the Jews, and there is a small congregation (without a public synagogue) in Madrid. In 1858 the edict of expulsion was repealed. Portugal, on the other hand, having abolished the Inquisition in 1821, has since 1826 allowed Jews freedom of religion, and there are synagogues in Lisbon and Faro. In Holland the Jews were admitted to political liberty in 1796. At present more than half of the Dutch Jews are concentrated in Amsterdam, being largely engaged in the diamond and tobacco trades Among famous names of recent times foremost stands that of the artist Josef Israels. In 1675 was consecrated in Amsterdam the synagogue which is still the most noted Jewish edifice in Europe. Belgium granted full freedom to the Jews in 1815, and the community has since 1808 been organized on the state consistorial system, which till recently also prevailed in France. It was not till 1874 that full religious equality was granted to the Jews of Switzerland.

In Sweden the Jews have all the rights which are open to non-Lutherans; they cannot become members of the council of state. In Norway there is a small Jewish settlement (especially in Christiania) who are engaged in industrial pursuits and enjoy complete liberty. Denmark has for long been distinguished for its liberal policy towards the Jews. Since 1814 the latter have been eligible

as magistrates, and in 1849 full equality was formally ratified. Many Copenhagen Jews achieved distinction as manufacturers, merchants and bankers, and among famous Jewish men of letters may be specially named Georg Brandes.

The story of the Jews in Russia was a black spot on the European record. In the remotest past Jews were settled in much of the territory now included in Russia, but they were treated as aliens. They were restricted to the pale of settlement which was first established in 1791. Under the May laws of 1892 the congestion of the Jewish population, the denial of free movement, and the exclusion from the general rights of citizens were rendered more oppressive than ever before. Fierce massacres (pogroms) occurred in Nijni-Novgorod in 1882, in Kishinev in 1903, and elsewhere. Much was hoped from the duma, but this body proved bitterly opposed to the Jewish claim for liberty.

THE UNITED KINGDOM

The Jews came to England at least as early as the Norman Conquest; they were expelled from Bury St. Edmunds in 1190, after the massacres at the coronation of Richard I.; they were required to wear badges in 1218. At the end of the 12th century was established the "exchequer of the Jews," which chiefly dealt with suits concerning money-lending, and arranged a "continual flow of money from the Jews to the royal treasury," and a so-called "parliament of the Jews" was summoned in 1241; in 1275 was enacted the statute *de Judaismo* which, among other things, permitted the Jews to hold land. But this concession was illusory, and as the statute prevented Jews from engaging in finance—the only occupation which had been open to them—it was a prelude to their expulsion in 1290. There were few Jews in England from that date till the Commonwealth.

Charles II. in 1664 continued Cromwell's tolerant policy. No serious attempt towards the emancipation of the Jews was made till the Naturalization Act of 1753, which was, however, immediately repealed. Jews no longer attached to the Synagogue, such as the Herschels and Disraelis, attained to fame. In 1830 the first Jewish emancipation bill was brought in by Robert Grant, but it was not till the legislation of 1858–1860 that Jews obtained full parliamentary rights. In other directions progress was more rapid. The office of sheriff was thrown open to Jews in 1835 (Moses Montefiore, sheriff of London was knighted in 1837); Sir I. L. Goldsmid was made a baronet in 1841, Baron Lionel de Rothschild was elected to Parliament in 1847 (though he was unable to take his seat), Alderman (Sir David) Salomons became lord mayor of London in 1855 and Francis Goldsmid was made a Q.C. in 1858 In 1873 Sir George Jessel was made a judge, and Lord Rothschild took his seat in the House of Lords as the first Jewish peer in 1886. A fair proportion of Jews have been elected to the House of Commons, and Mr. (afterwards Sir) Herbert Samuel rose to cabinet rank in 1909. Sir Matthew Nathan has been governor of Hong-Kong and Natal, Lord Reading Viceroy of India, E. S. Montagu, Secretary of State for India, and among Jewish statesmen in the colonies Sir Julius Vogel and V. L. Solomon have been prime ministers (Hyamson: *A History of the Jews in England,* Sec. ed., 1928, pp. 290 foll.).

It is unnecessary to remark that in the British colonies the Jews everywhere enjoy full citizenship. In fact, the colonies emancipated the Jews earlier than did the mother country. Jews were settled in Canada from the time of Wolfe, and a congregation was founded at Montreal in 1768, and since 1832 Jews have been entitled to sit in the Canadian parliament. There are some thriving Jewish agricultural colonies in the same dominion. In Australia the Jews from the first were welcomed on perfectly equal terms. The oldest congregation is that of Sydney (1817); the Melbourne community dates from 1844. Reverting to incidents in England itself, in 1870 the abolition of university tests removed all restrictions on Jews at Oxford and Cambridge, and both universities have since elected Jews to professorships and other posts of honour. The communal organization of English Jewry is somewhat inchoate. (*See* UNITED SYNAGOGUE.) Anglo-Jewry is rich, however, in charitable, educational and literary institutions, full accounts of which are given in the *Jewish Year-Book* published annually.

THE AMERICAN CONTINENT

Jews made their way to America early in the 16th century, settling in Brazil prior to the Dutch occupation. Under Dutch rule they enjoyed full civil rights. In Mexico and Peru they fell under the ban of the Inquisition. In Surinam the Jews were treated as British subjects; in Barbadoes, Jamaica and New York they are found as early as the first half of the 17th century. During the War of Independence the Jews of America took a prominent part on both sides, for under the British rule many had risen to wealth and high social position. After the Declaration of Independence, Jews are found all over America, where they have long enjoyed complete emancipation, and have enormously increased in numbers, owing particularly to immigration from Russia. The American Jews bore their share in the Civil War (7,038 Jews were in the two armies), and have always identified themselves closely with national movements such as the emancipation of Cuba. They have attained to high rank in all branches of the public service, and have shown most splendid instances of far-sighted and generous philanthropy. For the religious organizations of the Jews in the United States *see* UNITED SYNAGOGUE, *America.*

There have been Jewish members of the United States senate, and of the national House of Representatives. Besides filling many diplomatic offices, a Jew (O. S. Straus) has been a member of the cabinet. Many Jews have filled professorial chairs at the universities, others have been judges, and in art, literature (there is a notable Jewish publication society), industry and commerce have rendered considerable services to national culture and prosperity. American universities have owed much to Jewish generosity, a foremost benefactor of these (as of many other American institutions) being Jacob Schiff. Such institutions as the Gratz and Dropsie colleges are further indications of the splendid activity of American Jews in the educational field. Full accounts of American Jewish institutions are given in the *American Jewish Year-Book,* published annually since 1899. For ANTI-SEMITISM and ZIONISM *see* the respective articles.

EFFECTS OF THE WORLD WAR

The War completely changed the face of the Jewish world. In the Russian Empire it brought the Jews political emancipation, but it also brought them unspeakable suffering and ended by submerging them in the flood of anarchy which accompanied the continued Civil War. Finally, the War led up to the Balfour Declaration, which foreshadowed the establishment under international guarantees of a national home for the Jews in Palestine.

Eastern Europe.—The crowded Jewries of eastern Europe felt the full impact of the War from the outset. The Russian pale of settlement became almost at once a theatre of operations. So, too, did Galicia, with its poverty-stricken Jewish population of over 800,000. The Jews were bound in any case to suffer in common with their neighbours, but their miseries were aggravated by wholesale deportations. Within a year of the outbreak of war, nearly 1,500,000 Jewish refugees had been set adrift. To make matters worse, the Polish Nationalists vigorously pursued their vendetta against the Jews and revived the boycott which began in Warsaw in 1912. So pitiful was the condition of the Jews that the Russian Government which had already made substantial grants to the Petrograd Jewish Relief Committee, eventually issued, as a temporary measure, a decree permitting the Jews to reside freely in any of the towns of the Empire, with certain specified exceptions, of which the most important were Petrograd and Moscow. This decree was dated Sept. 3, 1915. The concessions thus granted gave the Jews some relief, though its effect was minimised by the illiberal spirit in which it was administered.

Public opinion was ripe for much more sweeping reforms. Of this there was ample evidence in the friendly welcome which the Jewish refugees received from their Christian neighbours in their new homes, in the action of a number of important public bodies who petitioned the Government in favour of the emancipation of the Jews, and in the protest of many enlightened Russian patriots against a policy which they regarded as detrimental to Russian interests and inconsistent with the spirit of unity which

the national crisis demanded. But the reactionary traditions of the old régime were too powerful. Nothing was done for the Jews in 1916, and the inquiries of other Allied Governments, which were sympathetically interested in their case, showed that they had nothing to hope for.

It was not until the March Revolution that their emancipation became a possibility. The Jews whole-heartedly supported the revolution, and one of the first acts of the Lvoff Government was to issue a decree, dated April 3, 1917, for the repeal of "all restrictions of a religious and national character." This decree at one stroke relieved the Jews of all disabilities, and it only remained for them to take their place in the new Russia. There was much discussion in Jewish circles as to what that place should be, and there was a strong feeling in favour of what was called national autonomy, the suggestion being that the Jews should be recognised as a national unit and enjoy, in common with every other nationality in Russia, a limited measure of self-government.

The Jews had hardly been emancipated before these dreams were rudely shattered by the seizure of power by the Bolsheviks. Among the Bolshevik leaders and their satellites were a certain number of Jews, none of whom, however, played any part in the Jewish community, or had any ties with it beyond their Jewish birth. The great majority of the Jews sided with the moderates and suffered accordingly under the Soviet régime. The communal organisations were broken up, and many of their leaders were imprisoned. Living, as most of them did, by trade, the Jews suffered severely from the economic débâcle which the Bolshevik revolution brought with it, and to add to their distress it became increasingly difficult to send them relief from abroad.

Jews in Southeast Europe.—In Rumania the Jews had previously been subjected to much the same treatment as in Russia. In one respect their position was even worse. Jews, as such, were deemed by the Rumanian Government to be aliens, even though they were native-born and had no claim to any other nationality. As a sequel to the Berlin Treaty of 1878, under which the Powers recognised her independence, Rumania undertook in 1880 to give the Jews liberal facilities for naturalisation. Had this pledge been fulfilled, their status would have been gradually regularised, but the spirit in which it was carried out is shown by the fact that between 1880–1913, about 200 Jews were actually naturalised out of a Jewish population, mainly native-born, of over 200,000. The Rumanian declaration of war on Bulgaria in 1913 brought 15,000 Jewish reservists to the colours. This produced a certain revulsion of feeling and it looked for a moment as though at last the Jewish soldiers would now be naturalised *en bloc*. A few individual applications were granted, but the anti-Jewish forces soon regained the upper hand, and the elections of 1914 brought into power a reactionary Government from which Jews had nothing to hope.

The Jews did not suffer from the War in the same degree as in Russia. On May 11, 1917, representatives of the committee of native Jews were received by the King, who gave them vague but encouraging assurances. There, however, the matter ended and nothing was done for the Jews until a limited measure of emancipation was dictated by the Germans in the Treaty of Bucharest. The relief thus granted was of little practical value, and there was no change in the policy of the Rumanian Government, which continued to harass the Jews, and treated them with exceptional harshness in the occupied province of Bessarabia.

Since the War the emancipation of the Jews has been almost completed and only a few exceptional cases remain in dispute. The Government has intervened with energy to put an end to sporadic anti-Semitic outbreaks and to improve the lot of Jewish citizens, for whom there is now every prospect of a peaceful future.

THE JEWS UNDER THE PEACE TREATIES

The territorial changes which followed the War closely affected the Jews of eastern and south-eastern Europe. Two-fifths of them were taken over by Poland, which had more than 3,500,000 Jews among its 27,000,000 inhabitants. About 250,000 Jews were included in Lithuania, about 100,000 in Latvia and about 8,000 in Estonia. Only 3,000,000 Jews remained under Russian rule, as compared with about 7,000,000 in 1914. Of these, two-thirds were in the Ukraine. About 350,000 Jews were left in Austria and about 500,000 in Hungary, as compared with about 2,250,000 in the former Austro-Hungarian Empire. Of the remainder, about 350,000 passed to Czechoslovakia, while as a result of the annexation of Transylvania and the Bukowina, together with the Russian province of Bessarabia, Rumania increased her Jewish population from a little over 200,000 to more than 1,000,000. These changes of allegiance were in themselves not necessarily for the worse, but they involved the disruption of old-established communities and broke them up in fragments, each of which had at once to reorganise its internal life and establish a *modus vivendi* with new and in most cases none too friendly rulers.

The Peace Conference.—It was in these circumstances that the Jewish problem was brought to the attention of the Peace Conference. It presented itself in a twofold aspect. The Allies had already undertaken to facilitate the establishment of a national home for the Jews in Palestine. This undertaking held good, but it was none the less necessary to define and safeguard the rights of the Jewish minorities in eastern and southeastern Europe. As to what those rights should be Jewish opinion was divided. The east European Jews themselves, speaking through their representatives on a body known as the committee of Jewish delegations at the Paris Peace conference, demanded the recognition of the Jews in the succession states as "national minorities" enjoying a substantial measure of self-government. This view was supported by the Jewish delegates from the United States but was opposed by those from Great Britain and France, who limited themselves to a programme of "minority rights" not implying the creation of anything in the nature of a state within the state.

This more moderate claim was eventually conceded in the Minority Treaties, of which the first was signed by Poland on the one hand and the principal Allied and Associated Powers on the other on June 28, 1919 This treaty makes it impossible for Poland to create a class of foreigners possessing no national status, such as the Jews had been in pre-War Rumania Racial, religious and linguistic minorities are to enjoy complete equality before the law, the free use of their own languages, the right to control their own religious, educational and social institutions and an equitable share of public funds allotted to educational, religious or charitable purposes.

Over and above these provisions, which apply to minorities generally, the treaty specifically empowers the Jews to appoint local committees for the management of their own schools and provides that they shall not be under any disability by reason of their refusal to attend courts of law or vote at elections on the Sabbath. Poland recognises these stipulations as matters of international concern and agrees that they shall be guaranteed by the League of Nations. The league formally guaranteed the treaty on Feb. 13, 1920.

Similar obligations, in each case guaranteed by the league, were accepted by Czechoslovakia, Yugoslavia, Rumania, Austria, Hungary and Bulgaria. One important result of these transactions was the emancipation of the Jews in Rumania, including the inhabitants of the old kingdom, as well as of the territories annexed as a result of the War. After the close of the Peace Conference, undertakings on the lines of those contained in the Minority Treaties, though on the whole less stringent, were secured by the Council of the League from Lithuania, Latvia and Estonia. It was only in the exceptional case of Poland that it was thought necessary to make express provision for the Jews, but if the rights which they shared with other minorities were respected, they had little to fear.

Jews in Eastern Europe.—While the Minority Treaties were being negotiated in Paris a dangerous situation was developing in eastern and southeastern Europe. The Jews were in an unenviable position, both in the succession states, where an intolerant Nationalism was in the ascendant, and in what was left of the dismembered empires, where scapegoats had to be found for the humiliations of the peace settlement. They were peculiarly exposed to attack in the atmosphere created by Bolshevism in Russia and its momentary irruption into Hungary

The Tsarist régime had subjected the Jews to a pitiless and systematic persecution. Most of them threw themselves, when the revolution came, on to the side of the Moderates, but among them were some who, goaded to desperation, developed what may be called a destructive mania. There was no Jewish blood in Lenin himself, but both in Russia and in Hungary a prominent part in the Bolshevik movement was played by men who were of Jewish birth. In both countries the overwhelming majority of the Jews were anti-Bolshevik, not only on grounds of principle, but also because the bulk of them were traders and belonged to the very class which had most to lose from a Bolshevik victory. Nevertheless, the enemies of the Jews branded them indiscriminately as Bolsheviks, and the alarm which the Bolshevik menace excited in Europe at the close of the War gave an impetus to reactionary forces which singled out the Jews as their targets.

In Poland the Armistice was followed by a series of anti-Jewish excesses which led the British Government to send out Sir Stuart Samuel on a mission of inquiry. The Samuel report shows that in disorders which occurred in the year after the War not less than 348 Jews were killed and a much larger number wounded. The more serious excesses were confined to the areas of Lemberg, Pinsk and Vilna, where Poland was still at war with the Ukrainians and the Bolsheviks, but there were spasmodic outbreaks in many parts of Poland proper, and throughout the country the Jews were suffering from a sustained commercial boycott.

In Hungary, the collapse of the Bolshevik revolution under Béla Kun led to a violent reaction, which vented itself in attacks on Jewish life and property, while the sufferings of the Jewish population were aggravated by acute economic distress. There were also disturbing, though less violent, outbreaks of anti-Semitism in Austria and in various parts of Germany, more especially in Bavaria. But the principal storm-centre was in southern Russia, where the Poles, the Bolsheviks and the armies of Gen. Denikin fought over the body of the still-born Ukrainian Republic. The British Minister in Warsaw reported in June 1920 that "the massacres of Jews by Ukrainian peasant bands can find, in their extent and thoroughness, no parallel except in the massacres of Armenians in the Turkish Empire" (Sir H. Rumbold to Lord Curzon, in *Report of Sir S. Samuel on His Mission to Poland*, Cmd. Paper 674, 1920). It was not until 1921 that the storm began to die down. By 1922 the Soviet Government which was now in possession, had restored some measure of order, but massacre was succeeded by famine and pestilence Early in 1923 there were reported to be 100,000 homeless Jewish orphans in the Ukraine, and in Odessa the Jewish death-rate in 1922 is said to have reached 200 per 1,000. In Soviet Russia there were no massacres, but though order was fairly well maintained, the Jews suffered from the Communist régime, which deprived them of their livelihood as traders, waged war on Judaism in common with other religions, and was ruthless in its measures against "counter-revolutionaries," with whom it was disposed to class the Zionists and, indeed, all Jews who clung to their religious or national traditions

As a result of the conditions thus created in eastern Europe, 200,000 destitute Jewish refugees were set adrift in the borderland between Russia, Poland and Rumania. Responsibility for their maintenance and eventual evacuation was assumed by the Jewish Colonisation Association and other Jewish bodies As late as the end of 1925 there was still a residue to be provided for, but the bulk of the refugees had by that time either been repatriated to Russia or been enabled to find new homes in the United States, Canada, Cuba, Argentina, Mexico or Palestine. This was only one, though it was the most poignant, aspect of the problem of the Jewish emigration. Throughout the crowded Jewries of eastern Europe there was a growing desire to escape from conditions which seemed to hold out little prospect of a tolerable future. Between 1919–23, 238,000 Jews emigrated to the United States, while between 1919–25, 67,000 Jews emigrated to Palestine. In 1924 the Johnson law virtually closed the United States to emigrants from eastern Europe. There was no longer room for immigrants in Great Britain, and Palestine stood by itself as the one country in which the Jews had in principle an assured right of entry under an international guarantee.

United States.—As already stated, one result of the disruption of Jewish life in eastern Europe was that the centre of gravity tended to shift to the United States. An American Jewish relief committee, later incorporated in the joint distribution committee, was founded in 1914 and took the lead in organising relief work among the Jews in the stricken areas in eastern Europe and elsewhere. The funds raised for this purpose in the United States during the War and the post-War period are stated to have reached a total of $60,000,000. American Jewry was also active in the defence of Jewish rights in eastern Europe, though in this field at least an equally prominent part was played by the English Jews, who also contributed considerable sums for relief work. At the same time, the American Jews began to play a part of growing importance in the Zionist movement, and were concerned in the negotiations leading up to the Balfour Declaration, of which President Wilson was a consistent and influential advocate. (*See* ZIONISM.)

Population.—The Jewish population of the world on the outbreak of War in 1914 may be estimated at about 14,900,000. Of these, two-thirds were concentrated in eastern and south-eastern Europe, including (in round figures) just under 7,000,000 in Russia, 2,250,000 in Austria-Hungary and nearly 250,000 in Rumania. Of the remainder, about two-thirds lived in the United States, which had a Jewish population of close on 3,000,000, leaving a balance of about 1,500,000 for other parts of the world. There were about 600,000 Jews in Germany, and about 500,000 in the British Empire, including 250,000 in Great Britain and Ireland.

(H. M. J. L.)

It is no exaggeration to say that the seventeen years, 1910–27, have been to Israel a period of woe and disaster, as well as of consolation and hope, such as no similar period since the Dispersion

Russia.—The darkest part of the picture is Russia, which, before the World War, was the home of one-half of the world's Jewish population. When the period opened, Mendel Beilis, and with him Judaism as a religion and the whole Jewish people, stood arraigned in the courts of the tsar at Kieff to answer the hideous charge of ritual murder. In vain the friends of humanity in England, France and Germany protested that this accusation of religious cannibalism was an utterly baseless libel on Judaism, an insult to Western culture, and a dishonour to those who formulate it The Russian bureaucracy recoiled from no means that would ensure the conviction of Beilis, as it would have furnished a convenient apologia for pogroms, past and future. However, in Nov. 1913 an all-Russian jury acquitted Beilis.

One other instance, to show the atmosphere in which Russian Judaism had to live during the last years of the Romanoffs. In the same year, at the International Congress for the Suppression of the White Slave Traffic held in London, Hertz called the attention of the world to the infamy of the tsarist "yellow ticket," by which any Jewish woman, if she was willing to be registered as a prostitute, was permitted free and unrestricted residence through-

out the empire; whereas all other Jews and Jewesses were confined to the "Pale of Settlement." That same territory was one of the fiercest battlegrounds of the World War. The Jewish cities were taken and retaken by the rival armies, with attendant bombardments, burnings and pillagings. Added to these were the summary expulsions and calculated inhumanities which the Russian military authorities perpetrated against the Jewish population. As a result, important communities were ruined, and their religious institutions, their rabbinical academies, together with every form of Jewish cultural activity, destroyed to their foundations. Of the surviving communities, hundreds were later annihilated during the massacres of the Jewish population in the Ukraine during the years 1919–21, massacres that for thoroughness and extent are surpassed by those in Armenia alone.

The Russian revolution continued the break-up of Russian Jewry and its religious life. At first constitutional, the revolution brought full religious emancipation to all; but in the unique persecution of all religion that began soon after the Bolshevists came into power, Judaism had to suffer most. Jewish communists have, from the first, taken a sinister delight in the proscription of all Jewish religious teaching. Synagogues were confiscated and converted into workmen's clubs (as late as Sept. 14, 1925), and even into stables.

During 1925 the bitter fight against religion seemed to have relaxed somewhat, and Christian and Mohammedan bodies are now allowed to give religious instruction to small "groups" of their children after school hours. In the case of Jews, however, two children have been declared to constitute a school, and subject to the dire penalties for teaching religion or Bible to children at a school. Religious instruction is therefore given clandestinely, underground or in lofts and at midnight, as in the days of the Inquisition. In Dec. 1925 two teachers were sentenced at Kieff to six months' imprisonment with hard labour for this offence; and 200 children were imprisoned at Vinnitza, Podolia, for refusing to betray the name and whereabouts of their religious teachers. Zionists are pursued with a tsar-like ferocity as counter-revolutionaries and "agents of British Imperialism," hundreds of them having been banished to Siberia. The use of Hebrew is suppressed as a "bourgeois" language

These persecutions called forth among the faithful remnant a new fervour and a deeper self-sacrifice for their faith; but Jewish institutional religion became paralysed in Soviet Russia, and the religious outlook for the growing generation is dark indeed. Before the war, the intense religious and intellectual life of Russian Jewry was duly reflected in the works of a whole galaxy of rabbinical, Hebrew and Yiddish writers. With the outbreak of hostilities all Hebrew and Yiddish publications of any kind were forbidden by the tsarist authorities. After the revolution there was a brief literary revival, which was soon strangled by the Bolshevists.

Poland, Baltic and Balkan States.—Jewish religious life has in the main resumed its pre-war aspect in Poland, the Baltic and the Balkan countries, despite the economic ruin of a large portion of the Jewries wrought by racial hatred and social unrest in those politically immature States. In Poland a widely ramified net of Hebrew-speaking schools, both elementary and secondary, has been founded by the *Tarbuth* organization, and is recognized by the Government. In Greece, the large Jewish community of Salonika is declining in consequence of the failure of the Greek Government to keep the solemn pledges it gave to respect the Jewish Sabbath In Turkey, the status of all religions has undergone violent transformation under the secularizing Kemalist *régime*. The activities of the chief rabbinate, which hitherto had practically the same powers as the patriarchates of other denominations, are now limited to ecclesiastical matters, and the congregations are organized on autonomous lines. The chief rabbi, Chacham Bashi Bijerano, introduced far-reaching reforms in the Jewish law of divorce. These have, however, not found recognition with the rabbinic authorities of other lands.

France, Italy, Central Europe.—Judaism in France has been strengthened by the accession of the important religiously conservative congregations of Alsace-Lorraine, as well as by the Moroccan communities now under French control. In 1924 the grand rabbi of France, M. Israel Levi, appealed to the leaders of East European orthodoxy to consider the enactment, in accordance with rabbinic law, of modifications in certain aspects of the Jewish marriage and divorce law (Agunah). Italian Jewry found itself threatened by the new education law, with its compulsory Catholic instruction. Even a graver danger is its dearth of native rabbis. In Geneva, Jewish questions of great religious consequence are often discussed. In Feb. 1925 a proposal was submitted to the League of Nations Commission of Inquiry into the reform of the calendar to introduce "blank days" (*i.e.*, the last day or days of the year to be considered outside the calendar). As one result of this would be a constantly backward moving day of rest, the proposal was strongly and successfully opposed by the representatives of the Jewries of the East and of the West. In Germany, Czechoslovakia, Austria and Hungary, the war and the dire conditions that followed it are responsible for the impoverishment of the Jewish schools of learning and the thinning of the ranks of the scholars and students.

Among the noteworthy productions in the study of Judaism written during the period under review by Central European scholars are the works of the neo-Kantian philosopher, Hermann Cohen, *Die Religion der Vernunft aus den Quellen des Judentums* (1919); of Immanuel Loew, *Flora der Juden;* of Simon M. Dubnow, *Weltgeschichte des judischen Volkes* (World History of the Jewish People), in 10 vol., appearing in German and Hebrew (1925, etc); of Ismar Elbogen, *Der judische Gottesdienst* (on the Jewish Liturgy); of S. Krauss, *Talmudische Archaologie,* 3 vol, on Jewish life in Talmudic times; and the *Monumenta Talmudica* (1914, etc). The following savants died in the period under review: Wilhelm Bacher, Abraham Berliner, David Hoffmann, D. H. Muller, A. Harkavy, A. Epstein, Hermann Cohen, Jakob Guttmann and H. P. Chajes.

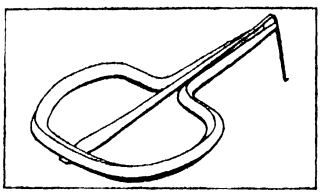
British Empire.—In England Dr. Hermann Adler, the chief rabbi of British Jewry, died in 1911, and was succeeded by Dr J. H. Hertz. In 1913 a Yeshivah—an institution devoted exclusively to Talmudic instruction—was for the first time opened in London. After the cessation of hostilities, a comprehensive educational scheme was launched as a Jewish war memorial; and in 1920 the chief rabbi started on the first pastoral tour ever undertaken to the Jewish communities of the British overseas dominions The Liberal Jewish movement, inaugurated at the beginning of the century, finally established itself by the erection of a synagogue in 1925. An attempt to attach a Liberal wing to Jews' college—the theological seminary of the Orthodox congregations—met with strong opposition. In Anglo-Jewish scholarship there are Principal Buchler's learned monographs; Israel Abrahams' *Studies in Pharisaism and the Gospels* (1917, etc); Jacob Mann's *Jews in Egypt* (1920–22); and M. Gaster's *Exempla of the Rabbis* (1924). *The Pharisees* (1924)—by R. T Herford, a Christian scholar—is a remarkable achievement. Israel Zangwill produced a translation of Ibn Gabirol, *Selected Religious Poems* (1923); Nina Salaman, of Yehudah Halévy; and Dr A. Cohen, of *Berakhoth*, the first tractate of the Babylonian Talmud (1921) Among popular works, there are C. G. Montefiore's books on *Liberal Judaism* (1903, 1924) and the chief rabbi's *A Book of Jewish Thoughts* (1917, 1920) and *Affirmations of Judaism* (1927)

The United States.—The 3,600,000 Jews of America have now their own English version of the Bible, the result of many years' labour on the part of a group of scholars, among them Solomon Schechter and Joseph Jacobs America has acquired great Jewish libraries, that of the New York Jewish Theological seminary (including the Elkan Adler collection) being the largest in the world. The older rabbinical colleges are workshops of Jewish learning. To these have been added the Yitzchak Elchanan Yeshivah and the Jewish Institute of Religion, representing the two religious poles in American Judaism. Of scholarly works, there appeared Schechter's *Studies in Judaism,* 3rd series (1924), H. Malter's *Saadia Gaon* (1921), J. Jacobs' *Jewish Contributions to Civilization* (1919), Israel Davidson's *Thesaurus of Mediaeval Hebrew Poetry,* vol. i. (1924), Margoli and Marx's *History of the Jewish People* (1927), George Foote Moore's *Judaism in the First Centuries of the Christian Era* (1927), and Yehoash's noteworthy translation of the Scriptures into Yiddish.

The New Diaspora.—Eastern European Jewish emigrants,

fleeing from racial hatred and economic ruin, find the doors of the United States all but barred and bolted to them. In consequence, they are scattered and dispersed to distant lands where grave dangers await their Jewishness and Judaism. Outside the Argentine Republic, the fresh arrivals find in most Latin-American countries little organized Jewish life and, too often, total abandonment of Judaism on the part of the earlier settlers. The Jewish Colonization Association of Paris appointed I. Raffalovich as grand rabbin of Brazil to lay the religious foundations of the new Jewish centres in the youngest diaspora. Mention must also be made of the praiseworthy efforts of Dr. J. Faitlovich to bring the forgotten Jewish tribes of Abyssinia—the Falashas—into touch with the general body and religious currents of European Jewry.

Palestine.—The brightest spot on the Jewish horizon throughout this period is Palestine. The beginnings of the Jewish revival in the Holy Land date from long before the Balfour Declaration, when Eliezer ben Yehudah began his gigantic undertaking to make Hebrew the language of everyday speech, as well as of instruction in schools. One half of his monumental *Dictionary of the Hebrew Language, Ancient, Mediaeval and Modern,* was published in his lifetime. Palestine became the home of the philosopher of Zionism, Ahad Ha'am (1856–1927) and of Ch. N. Bialik, the great neo-Hebrew poet. A rabbinate for the whole of Palestine was called into existence, with A. I. Kook (Ashkenazi) and Jacob Meir (Sephardi) as joint chief rabbis



The zenith of the spiritual revival was reached when the Hebrew university was opened by the earl of Balfour on April 1, 1925. It may be some time before the Jerusalem university fulfils the hope of being the sanctuary of the Jewish genius; but a land focuses a people and calls forth, as nothing else can, its spiritual potentialities. It is the ardent faith of the architects of the New Palestine that the resurrection of the Jewish people on its own soil will reopen its sacred fountains of creative energy. As of old, only a remnant will return to the land of their fathers. But it is the national rejuvenation of that remnant that may open a new chapter in the annals of the human spirit.

(J. H Hz.)

JEWSBURY, GERALDINE ENDSOR (1812–1880), an English writer of fiction, daughter of Thomas Jewsbury, a Manchester merchant, was born in 1812 at Measham, Derbyshire. Her first novel, *Zoe: the History of Two Lives,* was published in 1845, and was followed by *The Half Sisters* (1848), *Marian Withers* (1851), and others. For many years she was a frequent contributor to the *Athenaeum* and other journals and magazines. Carlyle described her, after their first meeting in 1841, as "one of the most interesting young women I have seen for years; clear delicate sense and courage looking out of her small sylph-like figure." From this time till Mrs. Carlyle's death in 1866, Geraldine Jewsbury was the most intimate of her friends. The selections from Geraldine Jewsbury's letters to Jane Welsh Carlyle (1892, ed. Mrs. Alexander Ireland) cover a quarter of a century. In 1854 Miss Jewsbury removed from Manchester to London to be near her friend. To her Carlyle turned for sympathy when his wife died; and at his request she wrote down some "biographical anecdotes" of Mrs. Carlyle's childhood and early married life. Carlyle's comment was that "few or none of these narratives are correct in details, but there is a certain mythical truth in all or most of them"; and he added, "the Geraldine accounts of her (Mrs. Carlyle's) childhood are substantially correct." He accepted them as the groundwork for his own essay on "Jane Welsh Carlyle," with which they were therefore incorporated by Froude when editing Carlyle's *Reminiscences.* For Miss Jewsbury's influence on Froude's biography of Carlyle *see* CARLYLE, THOMAS. She died in London on Sept. 23, 1880.

JEW'S EARS, the popular name of a fungus, known botanically as *Auricularia auricula-Judae* (class Basidiomycetes), so called from its shape, which somewhat resembles a human ear It is very thin, flexible, flesh-coloured to dark brown, and one to three inches broad. It is common on branches of elder and is also found on elm, willow, oak and other trees.

JEW'S HARP or **JEW'S TRUMP,** a small musical instrument of percussion, known for centuries all over Europe. "Jew's trump" is the older name. Attempts have been made to derive "Jew's" from "jaws" or Fr. *jeu,* but, though there is no apparent reason for associating the instrument with the Jews, it is certain that "Jew's" is the original form. The instrument consists of a slender tongue of steel riveted at one end to the base of a pear-shaped steel frame; the other end of the tongue being left free so that it can be set in vibration by the player, while firmly pressing the branches of the frame against his teeth. At the beginning of the 19th century Heinrich Scheibler, in Germany, achieved astonishing effects by employing a number of Jew's harps combined in one instrument which he called an Aura. Another German virtuoso, Eulenstein, a native of Württemberg, created a sensation in London in 1827 by playing on no fewer than 16 of the instruments. In 1828 Sir Charles Wheatstone published an essay on the acoustics of the Jew's harp in the *Quarterly Journal of Science.*

JEW'S HARP; FOUND IN ALL PARTS OF THE WORLD UNDER VARIOUS NAMES

JEX-BLAKE, SOPHIA (1840–1912), British physician, was born Jan. 21, 1840, at Hastings, Sussex. She studied at Queen's College for Women, London, where she became mathematical tutor. In 1865 she went to America to study education under Dr. Lucy Sewell, but three years later, she was recalled to England by the death of her father. In 1869 after some difficulty she was admitted to classes in medicine at Edinburgh and in 1871 to hospitals. Following an unsuccessful attempt to compel the university authorities to grant her a degree, she returned to London in 1874 and was largely instrumental in establishing the London School of Medicine for Women and in gaining in 1876 the opening of the medical profession to women In 1877 she obtained the M.D. of Berne and became a licentiate of the College of Physicians, Dublin. In 1878 she began practice in Edinburgh, where in 1886 she established the Edinburgh School of Medicine for Women. She retired in 1899 and died at Rotherfield, Sussex, Jan 7, 1912. Her written works include *Medical Women* (1872) and *American Schools and Colleges* (1886).

See M. Todd, *Life of Sophia Jex-Blake* (1918).

JEZEBEL, daughter of Ethbaal "king of the Sidonians" and priest of Astarte, became the wife of Ahab, king of Israel. She was a woman of virile character, and offended Israelite political and religious feeling, the former by introducing those autocratic theories of monarchy so common in the east, the latter by her attempt to supersede the worship of Yahweh by that of the Tyrian Ba'al, Melkart. The first tendency is illustrated by the story of Naboth (I Kings xxi.), the second by her persecution of the prophets of Yahweh (I Kings xviii. 4–13). In both directions the national feeling found expression in the prophet Elijah, whose challenge to the authority of Ba'al on Mount Carmel resulted in the destruction of the Tyrian prophets (I Kings xx. 20–46), while his curse on Ahab and Jezebel was fulfilled in the massacre of the house of Ahab by Jehu (*q.v.*). Jezebel's name is often used in modern English as a synonym for an abandoned woman.

JEZREEL, an ancient city of Palestine, in the tribe of Issachar, and capital of the Northern Kingdom under Ahab: mod. *Zer'in,* a stone village on a spur of Mt. Gilboa. The name is also applied to the Eastern part of the great plain Esdraelon.

Jezreel was the scene of the battle between Saul and the Philistines, when Saul was slain. Ishbosheth had it for some time, and it was the residence of Ahab and Jezebel. Close by, on the eastern side, was the vineyard of Naboth. It was called Esdraelon in the book of Judith; to the Crusaders it was *Parvum Gerinum*

The modern village stands at a height of 500 feet The remains

of rock-hewn presses and a few scattered sarcophagi proclaim the antiquity of the site, but the ruins that were once there have disappeared. The foundation mentioned in 1 Sam. xxix. 1 is, perhaps, *'Ain Maiyiteh*, about 1 m. to the north-east. A second Jezreel, in the hill-country of Judah, in the neighbourhood of Hebron, is indicated by Joshua xv. 56. (E. Ro.)

JHABUA, a state of Central India, in the Bhopawar agency. Area, with the dependency of Rutanmal, 1,336 sq.m. Pop. (1921), 80,889. More than half the inhabitants belong to the aboriginal Bhils. The chief, whose title is raja, is a Rajput of the Rathor clan, descended from a branch of the Jodhpur family, and has a salute of 11 guns

The town of JHABUA (pop. 3,354) stands on the bank of a lake, and is surrounded by a mud wall. A dispensary and a guest-house were constructed to commemorate Queen Victoria's Diamond Jubilee in 1897.

JHALAWAR, an Indian state in the Rajputana agency, pop. (1921) 96,182; area 810 sq m. The ruling family of Jhalawar belongs to the Jhala clan of Rajputs, and their ancestors were petty chiefs of Halwad in Kathiawar. Early in the 18th century, a cadet of the house, Madhu Singh, found favour with the maharaja of Kotah, and received from him an important post, which became hereditary. On the death of one of the Kotah rajas (1771), the country was left to the charge of Zalim Singh, a descendant of Madhu Singh. From that time Zalim Singh was the real ruler of Kotah. In 1838 it was resolved, with the consent of the chief of Kotah, to dismember the state, and to create the new principality of Jhalawar as a separate provision for the descendants of Zalim Singh. A later Zalim Singh, who had succeeded in 1875 was deposed in 1896, "on account of persistent misgovernment and proved unfitness for the powers of a ruling chief." He went to live at Benares, on a pension of £2,000; and the administration was placed in the hands of the British resident. After much consideration, the government resolved in 1897 to break up the state, restoring the greater part to Kotah, but forming the two districts of Shahabad and the Chaumahla into a new state, which came into existence in 1899, and of which Kunwar Bhawani Singh, a descendant of the original Zalim Singh, was appointed chief. He enjoys the title of maharaja rana and a salute of 13 guns; and under his rule the state has much advanced.

The chief town is PATAN, or JHALRAPATAN (pop. 6,083), founded close to an old site by Zalim Singh in 1796, by the side of an artificial lake. It is the centre of trade, the chief exports of the state being oil-seeds and cotton. The palace is at the cantonment 4 m. north. The ancient site near the town was occupied by the city of Chandrawati, said to have been destroyed in the time of Aurangzeb. The finest feature of its remains is the temple of Sitaleswar Mahadeva (*c.* 600).

JHANG, a town and district of British India, in the Punjab. The town, which forms one municipality with the newer and now more important quarter of Maghiana, is about 3 m. from the right bank of the river Chenab. Pop. (1921) 30,139. Maghiana has manufactures of leather, soap and metal ware.

The DISTRICT OF JHANG extends along both sides of the Chenab, including its confluences with the Jhelum and the Ravi. Area, 3,452 sq.m. Pop. (1921) 570,559. The district which was formerly for the most part a wilderness, has been entirely transformed by the introduction since 1892 of irrigation from the Lower Chenab and Lower Jhelum canals. The principal industries are the ginning, pressing and weaving of cotton.

Jhang contains the ruins of Shorkot, identified by some with one of the towns taken by Alexander. In modern times the history of Jhang centres in the famous clan of Sials, who exercised an extensive sway over a large tract between Shahpur and Multan, with little dependence on the imperial court at Delhi, until they finally fell before the all-absorbing power of Ranjit Singh. In 1847, after the establishment of the British agency at Lahore, the district came under the charge of the British government; and in 1848 Ismail Khan, the Sial leader, rendered important services against the rebel chiefs. During the Mutiny of 1857 the Sial leader again proved his loyalty by serving in person on the British side.

JHANSI, a city, the headquarters of a district and a division of the United Provinces in British India. The city is the centre of what used to be the Indian Midland railway system, now absorbed in the G.I.P. railway. Pop. (1921) of city and cantonment, 66,432. Formerly the capital of a Mahratta principality, which lapsed to the British in 1853, it was during the Mutiny the scene of disaffection and massacre. It was then made over to Gwalior, but has been taken back in exchange for other territory. Even when the city was within Gwalior, the civil headquarters and the cantonment were at Jhansi Naoabad, under its walls. Jhansi is the principal centre for the agricultural trade of the district, but its manufactures are small

The DISTRICT OF JHANSI was enlarged in 1891 by the incorporation of the former district of Lalitpur, which extends farther into the hill country, almost entirely surrounded by Indian states. Combined area, 3,634 sq m. Pop. (1921), 606,499. The district forms a portion of the hill country of Bundelkhand, sloping down from the outliers of the Vindhyan range on the south to the tributaries of the Jumna on the north. The extreme south is composed of parallel rows of long and narrow-ridged hills. Through the intervening valleys the rivers flow down impetuously over ledges of granite or quartz. North of the hilly region, there is a considerable expanse of black cotton soil. The district is intersected or bounded by three principal rivers—the Pahuj, Betwa and Dhasan. Its principal crops are millet, cotton, oil-seeds, pulses, wheat, gram and barley. The destructive *kans* grass has proved as great a pest here as elsewhere in Bundelkhand. Jhansi is especially exposed to blights, droughts, epidemics, and famine.

The Jhansi Division is composed of the four districts of Jhansi, Jalaun, Hamirpur and Banda. Area 10,440 sq m. and pop. (1921) 2,065,297. Nothing is known with certainty as to the history of this tract before the period of Chandel rule, about the 11th century. To that epoch must be referred the artificial reservoirs and ruined fortresses of the hilly region; though the division is not lacking in far more ancient monuments such as the famous Gupta temple at Deogarh. The Chandels were succeeded by their servants the Khangars, who built the fort of Karar, lying just outside the British border. About the 14th century the Bundelas poured down upon the plains, and gradually spread themselves over the whole region which now bears their name. The Mohammedan governors were frequently making irruptions into the Bundela country; and in 1732 Chhatar Sal, the Bundela chieftain, called in the aid of the Mahrattas, who were rewarded by the bequest of one-third of his dominions. Their general founded the city of Jhansi, and peopled it with inhabitants from Orchha state. In 1806 British protection was promised to the Mahratta chief, and in 1817 the peshwa ceded to the East India Company all his rights over Bundelkhand In 1853 the raja died childless, and his territories lapsed to the British. The widow of the raja considered herself aggrieved because she was not allowed to adopt an heir, and because the slaughter of cattle was permitted in the Jhansi territory; and when the Mutiny broke out in 1857, she put herself at the head of the rebels, and died bravely in battle.

JHELUM or **JEHLAM,** a town and district of British India, in the Punjab. The town is situated on the right bank of the river Jhelum, here crossed by a bridge of the North-Western railway, 103 m N. of Lahore Pop. (1921), 18,060 It is a modern town with river and railway trade (principally in timber from Kashmir), boat-building and cantonments

The DISTRICT OF JHELUM stretches from the river Jhelum almost to the Indus. Area 2,773 sq m. Pop. (1921), 477,068 Salt is quarried at the Mayo mine in the Salt Range. There are two coal-mines from which the North-western railway obtains part of its supply of coal. The chief centre of the salt trade is Pind Dadan Khan (pop. 9,919). The river Jhelum is navigable throughout the district. The backbone of the district is formed by the Salt Range, a treble line of parallel hills running in three long forks from east to west throughout its whole breadth. The range rises in bold precipices, broken by gorges, clothed with brushwood and traversed by streams which are at first pure, but soon become impregnated with the saline matter over which they pass. Between the line of hills lies a picturesque table-land, in which the beautiful little lake of Kallar Kahar nestles amongst

the minor ridges. North of the Salt Range, the country extends upwards in an elevated plateau, diversified by countless ravines and fissures, until it loses itself in tangled masses of Rawalpindi mountains.

The history of the district dates back to the semi-mythical period of the *Mahābhārata*. Hindu tradition represents the Salt Range as the refuge of the five Pandava brethren during the period of their exile, and every salient point in its scenery is connected with some legend of the national heroes. Modern research has fixed the site of the conflict between Alexander and Porus as within Jhelum district, although the exact point at which Alexander effected the passage of the Jhelum (or Hydaspes) is disputed. After this event, we have little information with regard to the condition of the district until the Mohammedan conquest. During the flourishing period of the Mogul dynasty, the Ghakkar chieftains were prosperous and loyal vassals of the house of Babur; but after the collapse of the Delhi Empire Jhelum fell, like its neighbours, under the sway of the Sikhs. In 1849 the district passed, with the rest of the Sikh territories, into the hands of the British. The population is a martial one and during the World War 38·7% of the males of military age were mobilized.

JHELUM (*Hydaspes* of the Greeks), a river of northern India. It is the most westerly of the "five rivers" of the Punjab. It rises in the north-east of the Kashmir state, flows through the city of Srinagar and the Wular lake, issues through the Pir Panjal range by the narrow pass of Baramula, and enters British territory in the Jhelum district. Thence it flows through the plains of the Punjab, forming the boundary between the Jech Doab and the Sind Sagar Doab, and joins the Chenab at Timmu after a course of 450 miles. The surplus water of the Jhelum is largely utilized for irrigation. The Triple Canals Project, completed in 1917, which includes the Upper Jhelum, Upper Chenab, Upper Bari Doab canals, provides 433 m. of main canals and distributaries. Practically the whole of the land between the Jhelum and the old bed of the Beas has been brought under cultivation. A large colony in the Shahpur district of the Punjab, with Sargodha as capital, has been formed on land brought under cultivation with water from the Lower Jhelum canal. Large areas are used by the Army Remount Depot.

JHERING, RUDOLF VON (1818–1892), German jurist, was born on Aug. 22, 1818, at Aurich in East Friesland, where his father practised as a lawyer. He entered the University of Heidelberg in 1836, and visited successively Göttingen and Berlin. He lectured at various universities, and in 1868 went to be professor of Roman law at Vienna, where he had an extraordinary success, and was given a title of nobility in 1872. In the same year he went back to Göttingen. He had already established a leading position among civilians with his *Geist des römischen Rechts* (1852–65), and from now till his death on Sept. 17, 1892, he was as predominant as Savigny had been in the first half of the century. Of his many works perhaps the best known are *Der Kampf um's Recht* (1872) and *Der Zweck im Recht*, and the *Jurisprudenz des täglichen Lebens* (Eng. trans. 1904). His great works, the *Geist* and *Rechtsgeschichte*, were left unfinished as works of that scope might well be.

Jhering's work is in a sense a development of the "historical" jurisprudence of Savigny, and yet contributed to the breakdown of the theory at the end of the century. The basis of Savigny's theory is a rigid individualism; the purpose of law in this theory is to allow the fullest measure of freedom to the individual will consistent with equal freedom for others. Jhering's view is a social utilitarianism and his view is definitely teleological. For him law does not flow peacefully and inevitably; it is changed, deliberately and by conflict. "Whereas the philosophical jurist considered that the principles of justice and right are discovered *a priori* . . . and the historical jurist taught that the principles of justice are found by experience. . . . Jhering held that means of serving human ends are discovered by experience and fashioned consciously into laws" (Roscoe Pound in 24 *Harvard Law Review*). Of his theories of Roman law the most important are his discovery of the dualism (religious and political) in the Roman system, and his view that remedies are prior to rights, which are deductions from existing remedies. Pushing this process further back, Jhering came to the social interests promoted by the remedies, and thence directly to his main position.

Among others of his works, all of them characteristic of the author and sparkling with wit, may be mentioned the following: *Beiträge zur Lehre von Besitz*, first published in the *Jahrbücher für die Dogmatik des heutigen römischen und deutschen Privatrechts*, and then separately; *Der Besitzwille*, and an article entitled "Besitz" in the *Handwörterbuch der Staatswissenschaften* (1891), which aroused at the time much controversy, particularly on account of the opposition manifested to Savigny's conception of the subject; *Scherz und Ernst in der Jurisprudenz* (1885); *Das Schuldmoment im römischen Privat-recht* (1867); *Das Trinkgeld* (1882); and among the papers he left behind him his *Vorgeschichte der Indoeuropäer*, a fragment which has been published by v. Ehrenberg (1894).

See M. de Jonge, *Rudolf v. Jhering* (1888); A. Merkel, *Rudolf von Jhering* (1893).

JIB-BOOM: *see* RIGGING.

JIBUTI (DJIBOUTI), the chief port and capital of French Somaliland, in 11° 35′ N., 43° 10′ E. Jibuti is situated at the entrance to and on the southern shore of the Gulf of Tajura about 150 m. S.W. of Aden. The town is built on a horseshoe-shaped peninsula partly consisting of mud flats, which are spanned by causeways In spite of the warm climate, the European quarter, built of stone, has a prosperous appearance with its white houses and laurel avenues. It is the terminal station of the railway to Abyssinia. There is a good water supply, drawn from a reservoir about 2½ m. distant. The harbour is land-locked and capacious. Ocean steamers are able to enter it at all states of wind and tide. Adjoining the mainland is the native town, consisting mostly of roughly made wooden houses with well thatched roofs. In it is held a large market, chiefly for the disposal of live stock, camels cattle, etc. The port is a regular calling-place and also a coaling station for the steamers of the Messageries Maritimes, and there is a local service to Aden. Trade is confined to coaling passing ships and to importing goods for and exporting goods from southern Abyssinia via Harrar, there being no local industries. (For statistics *see* SOMALILAND, FRENCH.) The inhabitants are of many races—Somali, Danakil, Gallas, Armenians, Jews, Arabs, Indians, besides Greeks, Italians, French and other Europeans. The population is about 8,000.

Jibuti was founded by the French in 1888 in consequence of its superiority to Obok both in respect of harbour accommodation and in nearness to Harrar. It has been the seat of the governor of the colony since May 1896.

JIČIN, a town in north-eastern Bohemia on the river Cidlina. Situated in the middle of a large fertile plain it has always exercised an influence in Czech history since its establishment as a town by Wenceslas II. in 1302. Much of its past prosperity and many of its beautiful buildings, *e.g.*, the castle and the church after the model of the pilgrims' church of Santiago de Compostela in Spain, it owes to the interest of Wallenstein who owned it in the 17th century and made it the capital of the Duchy of Frydlant. Its development since has been that of a typical market centre of collection and distribution with small associated industries, *e.g.*, agricultural machinery, tanneries and brickyards. Pop., mostly Czech, 10,478.

JIDDA, on the Arabian coast of the Red sea 21° 28′ N., 39° 10′ E, chief sea-port of Hijaz and principal landing place for pilgrims to Mecca, about 46 m. away: it contains about 30,000 permanent inhabitants of numerous different stocks—Arab, Persian, Indian, negro, etc.,—and is surrounded by a wall dotted at intervals with bastions and pierced by 3 gates (Bāb Madīna on N., Bāb Mecca on E., and Bāb Sharīf on S.); besides these there are 3 subsidiary gates connecting with Customs warehouses and wharves outside town. The main Suq (bazaar) runs N. and S. for about ¾ the length of the town, and an important secondary Suq runs up from the Customs gate across the main bazaar to the Mecca gate; this is partly roofed over with corrugated iron. Much of the W. part of Jidda has been built on land reclaimed from the sea and, the subsoil water being briny or brackish, the

town depends for its drinking-water on sea-water condensed by two plants capable together of producing 200 tons a day. Formerly there was a piped supply from wells about 7 m. distant, but this ceased when the sources dried up. A further source of supply lies in the subterranean cisterns (*Sahrij*) which catch and store the flood-water in the rainy season (Nov. to Feb.). The N. quarter is most favoured for residential purposes and here reside all the consuls and agents of various states—Great Britain, France, Italy, Holland, U.S.S R., Turkey, Egypt and Persia. Five European commercial firms (2 British, 2 Dutch and 1 Italian) are established at Jidda, whose European population, including consuls, is about 50 souls. The houses are mostly built of coral-rock with much picturesque woodwork which Lawrence described as "gimcrack Elizabethan." The chief public buildings are the custom-house, the municipal offices, the condensers, the Government offices and, outside the N. gate, the barracks and aeroplane hangar. The tomb of Eve, formerly a favourite pilgrim resort especially for women, was demolished by the Wahhabi government in 1927; it had no claim to authenticity or even to great age. At varying distances outside Jidda are scattered villages occupied by Arab fisher-folk or African negroes and formerly notorious as active slave-marts; these are Ruwais and Bani Mālik to N , Nuzla Yamāniya to E. and Nuzla Takarina close to S E. corner of town.

Jidda has a governor (Qāim-maqām) at the head of the general administration and a municipal committee under a president for purely domestic administration. The old site of the town appears to have been at Ras al Aswad about 12 m. S. and the present location of Jidda does not date back more than 300 years. The original settlement is attributed to Persian merchants during the Califate of 'Uthman, but its commercial importance dates from the 15th century when it was apparently a trade-centre between India and Egypt; the general introduction of steamers rapidly deprived Jidda of its position as an emporium though this loss was made good by its increasing importance as a pilgrim-port. Jidda successfully resisted the Wahhabi attacks of early 19th cent. and remained in the Ottoman Empire till June 1916, when the Turks surrendered to a British naval bombardment and the town became part of the new Hijaz kingdom. During the World War it was important as the political centre of the Hijaz operations. From Nov. 1924 to Dec. 1925 it was besieged by the Wahhabis and on Dec. 23rd it surrendered to Ibn Sa'ud after the abdication and withdrawal of King 'Ali. Since then its prosperity has rapidly increased and in 1927 there was a record overseas pilgrimage of 130,000 as against a pre-war average of 70,000 to 80,000. Its trade statistics are not available in any reliable form but its imports (£1,400,000 in 1904) now probably exceed £5,000,000 p.a. Exports (mainly hides and *saman*) are small and the adverse balance is met from the cash proceeds of the annual pilgrimage. (H. St. J. B. P.)

JIG is a device used for accurately locating a piece of work for machining. When a casting or forging has to be machined to shape and size it must be held firmly in the lathe, or the drilling, boring, planing, milling or other machine, a chuck, vice or bolts and clamps being used for the purpose. Careful setting is necessary, which sometimes takes a considerable time. In mass production, or even in dealing with a moderate number of pieces, this setting can be reduced considerably by providing a jig or a fixture which is constructed with means for accurately locating the article by certain surfaces, and of then clamping it with total absence of slip. A fixture holds without exercising any other function, while a jig holds and also has means for guiding the tool exactly to position, a necessity in most drilling, reaming and boring. The guide or guides take the form of top or side plates, with holes of suitable size to receive the tools as they pass down on to the work, and usually the holes are filled each with a hardened steel bush of long wearing qualities.

Jigs may be of plate or open type, or of box type. The former are simple and suited to many of the flatter objects, or those which need drilling on a top face, from which the jig plate can be set by its ledges embracing the sides. A box jig surrounds the casting or forging, and locates by several spots, while a hinged cover is often fitted rapidly to release the piece and to put a fresh one in. Sometimes the location is effected by means of a part already machined instead of from a rough untooled portion, either a flat, or a cylindrical, or a bored hole. Fig. 1 shows this feature in regard to a familiar motor car detail, the swivel-axle, the box jig taking the turned part through a hole at the back, and locating the main holes by a long mandrel passed through. Then the two holes are drilled with the bushes for guides. Many jigs

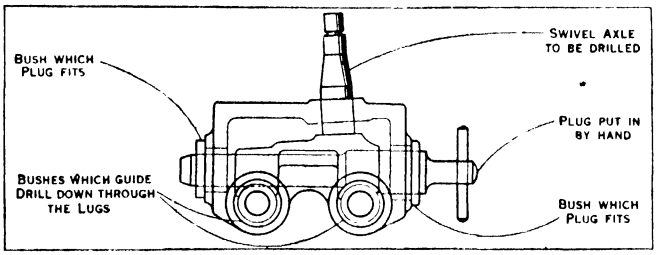

FIG. 1.—DRILLING JIG WHICH ACCURATELY LOCATES AND HOLDS A SWIVEL AXLE

are built to turn over on to various faces so as to drill holes from each side, or may swivel on trunnions for a similar reason. With a conveyor system running past the machines, as in car factories, the jigs are mounted on wheels.

Fixtures are used in the lathe, planer, shaper, slotter, miller, grinder, gear-cutter, also on broaching machines, and frequently for use in assembling mechanisms quickly. The clamping arrangements have to be devised for quickness, and in some cases automatic clamps are fitted which loosen and tighten at the correct periods.

Other jigs which are not concerned with cutting processes include those for holding articles in correct position for soldering or brazing, and the moulds which hold connecting-rods and bearings while being run up with white metal. Forms vary according to the shape of the work, but an angle-plate shape, seen in fig. 2, is suitable to clamp a half-bearing against the upright face, while a half-mandrel of appropriate radius is bolted also, leaving a space for the white metal to run into, so forming a new bearing surface.

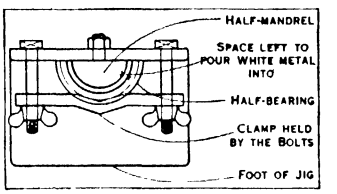

FIG. 2.—METALLING JIG FOR HOLDING A HALF-BEARING AND HALF-MANDREL OR CORE

Jig refers also to a reciprocating movement, such as that of a jig-saw which operates similarly to a fret-saw, and is designed either for wood or metal, in the latter case being much used for cutting dies. A jigging screen also possesses the to and fro action necessary to keep material in motion while being separated or sifted. The jig for concentrating minerals consists of a series of boxes with a shaft running above and having eccentrics that impart the jigging motion. A water supply is provided. Diamonds and other precious stones are recovered in this kind of jig. (F. H)

JIG, a brisk lively dance, the quick and irregular steps of which have varied at different times and in the various countries in which it has been danced (*see* DANCE). The music of the "jig," or such as is written in its rhythm, is in various times and has been used frequently to finish a suite, *e.g.*, by Bach and Handel. The word has usually been derived from or connected with Fr. *gigue,* Ital. *giga,* Ger. *Geige,* a fiddle. The idea of jumping, jerking movement has given rise to many applications of "jig" and its derivative "jigger" to mechanical and other devices, such as the machine used for separating the heavier metal-bearing portions from the lighter parts in ore-dressing. The word "jigger," a corruption of the West Indian *chigoe,* is also used as the name of a species of flea, the *Sarcopsylla penetrans,* which burrows and lays its eggs in the human foot, generally under the toe nails, and causes great swelling and irritation (*see* FLEA).

JIGGER, a hoist or winch of moderate power, which can be arranged in any fashion, on a floor, wall, pillar or in any confined situation, to perform lifting and hauling. The hydraulic jigger has a cylinder, ram and pulleys to operate the hoisting rope, and the latter may be led off in any desired direction. For general use,

e g. in unloading ships, the hydraulic jigger is mounted on a low frame with trolley wheels. On some electric cranes an electric jigger runs up and down the underside of the jib, and is employed for light lifting, but more usually to assist the main hoisting hook by being attached to some part of the suspended load. In a bridge-erecting crane the jigger hoist is used to bring the various girders and other structural members into exact position for final attachment. In mining, a jigger or shaker conveyor is used to transport coal from the face to the tubs, or as a gate conveyor. A long trough is built up in sections to the required length, and mounted on rollers at intervals. An electric or air-driven jigger engine is coupled up to the trough so as to impart a succession of jerks or kicks, causing the coal to travel along the trough.

JIGGER, CHIGGER or **CHIGOE,** the name given to a small flea of the West Indies and South America and to a minute scarlet mite of southern U S.A.

The female of the flea (*Sarcopsylla penetrans*) burrows when gravid into the skin of man. Here she swells to the size of a pea and remains embedded in the skin until the eggs hatch. Tobacco juice is sometimes used to destroy the insect. An allied species (*S. gallinacea*) attacks the eyelids of poultry and may in young birds even cause death. The effect of the bite is allayed by salt water. (*See* ENTOMOLOGY; FLEA; PARASITOLOGY)

JIHĀD (*Arabic,* lit. striving, effort), the religious duty inculcated in the Qur'ān (II., 214–215; viii., 39–42; ix., 5–6, 29) on the followers of Muḥammad to wage war upon those who do not accept the doctrines of Islam. (*See* ISLAMIC INSTITUTIONS.)

Modern Muslim apologists maintain that Jihād in the Qur'ān does not mean the waging of war, and explain it in terms of the spiritual life.

BIBLIOGRAPHY.—C. Snouck Hurgronje, *The Holy War "made in Germany"* (1915); Cheragh Ali, *A critical exposition of the popular Jihad* (1885); Muhammad Ali, *The Holy Qur-an, with translation and commentary* (1917) (v. Index).

JIHLAVA, an old town of Moravia, Czechoslovakia, in the upper valley of the Jihlava, a tributary of the Morava, at the junction of routes from Prague to Vienna and Prague to Brno. This critical strategic position led to an early settlement and contributed to an interesting history of struggles for control of the site. Silver mines in the vicinity are believed to have been worked in the ninth century. During the 13th century a mint and mining office were established. The town is remarkable for the collection of municipal and mining laws, dating back to the 14th century. Jihlava is an important market and in the middle ages held the largest fairs between Linz and Pilsen, a prosperity evident from its fine monuments and churches Trade is in the commodities of the district, timber and cereals, and in the products of its industries, also closely allied to its physical surroundings, *e.g.*, linen and woollen goods, shoes, tobacco, beer, pottery and glass. Pop. (1923), 25,634, about 50% German.

JIMÉNEZ (or XIMÉNEZ) DE CISNEROS, FRANCISCO (1436–1517), Spanish cardinal and statesman, born at Torrelaguna (Castile). He studied at Alcalá de Henares and at Salamanca, took holy orders and in 1459 went to Rome. On his return to Spain (1465), he claimed (1473) the archpriestship of Uzeda (Toledo) in virtue of an "expective" letter from the pope. Carrillo, archbishop of Toledo, opposed him, and threw him into prison, restoring him to his benefice in 1480 only. This Jiménez changed almost at once for a chaplaincy at Sigüenza under Cardinal Mendoza, bishop of Sigüenza, who shortly appointed him vicar-general of his diocese. Abruptly resolving to become a monk, Jiménez threw up all his benefices and entered the Franciscan monastery of San Juan de los Reyes, recently founded by Ferdinand and Isabella at Toledo. He added voluntary austerities to the ordinary severities of the noviciate. He slept on the bare ground, wore a hair-shirt, doubled his fasts, and scourged himself, with much fervour. His private life was continuously and rigorously ascetic, even at the acme of his greatness. In 1492, at Mendoza's recommendation and against his will, he became Isabella's confessor. The post was politically important, for Isabella submitted to the judgment of her father-confessor not only her private affairs but also matters of State. Appointed in 1494 provincial of the order of St. Francis, Jiménez reduced the laxity of the Conventual to the strictness of the Observantine Franciscans; he met with intense opposition, but his stern inflexibility, backed by the influence of the queen, subdued every obstacle. At the death of Cardinal Mendoza (1495) Jiménez was nominated to his diocese of Toledo, the richest and most powerful in Spain, second perhaps to no other dignity of the Roman Church save the papacy. With the primacy of Spain was associated the lofty dignity of high chancellor of Castile, but though Jiménez was forced to live in a style befitting his rank, the outward pomp only concealed his private asceticism. In 1499 Jiménez accompanied the court to Granada, where he joined the mild and pious archbishop of Talavera in his efforts to convert the Moors. But Jiménez's coercive methods provoked open revolt, which was quelled with difficulty.

Upon Isabella's death on Nov. 24, 1504, Ferdinand resigned in favour of Joanna and her husband, the archduke Philip. The latter died suddenly in 1506, Joanna's intellect gave way completely, their son Charles was still a child and Ferdinand was at Naples. In this crisis, the nobles of Castile entrusted affairs to Jiménez, and on Ferdinand's return in 1507, he was made cardinal and grand inquisitor-general for Castile and Leon. At his own expense he fitted out expeditions (1505 and 1509) against the Moorish city of Oran; his religious zeal, supported by the prospect of the political gain that would accrue to Spain from the possession of such a station inspiring him. Oran was captured in a day, and leaving the army to make fresh conquests, Jiménez returned to his diocese, where he sought to recover from the regent the expenses of the expedition. Ferdinand died in 1516, leaving Jiménez as regent: Charles, then a youth of 16 in the Netherlands, appointed Adrian, dean of Louvain, as his choice. Jiménez admitted Adrian to a nominal equality and, in violation of the laws, acceded to Charles's desire to be proclaimed king His position was rendered peculiarly difficult by the haughty turbulent Castilian nobility and the jealous intriguing councillors of Charles; He ruled, notwithstanding, in a firm and even autocratic manner. In 1517, Charles landed in the Asturias; Jiménez, who had hastened to meet him, fell ill on the way and received a cold note from his king thanking him for his services and dismissing him to his diocese. He died—some say without seeing the letter—at Roa on Nov. 8, 1517.

Jiménez was a bold and determined statesman. Sternly and inflexibly, with a confidence at times overbearing, he carried through what he had decided to be right, with as little regard for the convenience of others as for his own. In the midst of a corrupt clergy his morals were irreproachable. Liberal to all, he endowed very many benevolent institutions in his diocese. His whole time was devoted either to the State or to religion; his only recreation was in theological or scholastic discussion. In 1500 he founded the university of Alcalá de Henares, within whose walls at one time 7,000 students met. In 1836 the university was removed to Madrid, and the magnificent buildings were left vacant. He revived the Mozarabic liturgy, and endowed a chapel at Toledo, in which it was to be used. His most famous literary service was the printing at Alcalá (Lat. *Complutum*) of the Complutensian Polyglott, the first edition of the Scriptures in the original text. He was aided in this work by López de Stuñiga, Fernando Núñez, Vergara, Nebrija, the Cretan Ducas and by three Jewish converts. The work was begun in 1502, the New Testament finished in Jan. 1514 and the whole in April 1517. The text occupies five volumes and a sixth contains a Hebrew lexicon, etc. The second edition (1572), the *Biblia Regia* or *Filipina,* was revised by Arias Montano and reprinted by the Antwerp firm of Plantin at the expense of Philip II.

The work by A Gomez de Castro, *De Rebus Gestis a Francisco Ximenio* (1650, Alcalá), has provided material for biographies of Jiménez—Spanish by Robles (1604), and Quintanilla (1653); French by Baudier (1635), Fléchier (1693), Marsollier (1694), and Richard (1705); German by Hefele (1844; Eng. trans. by Canon Dalton, 1860), by Havemann (1848); English by Barrett (1813). *See* also Prescott, *Ferdinand and Isabella, Revue des Deux Mondes* (May 1841) and *Mém. de l'Acad. d. hist. de Madrid,* vol. iv.

JIMÉNEZ DE QUESADA, GONZALO (*c.* 1500–1579), Spanish conqueror of New Granada (Colombia), was born about

the year 1500, probably in Granada, Spain, where he was carefully trained for the law. In 1535 he accompanied Pedro Fernández de Lugo, *adelantado* of Santa Marta (northern Colombia), as auditor and *justicia mayor* of his colony; and in the following year, although he had had no military experience, Lugo chose him to command an expedition to the headwaters of the Magdalena. For 150 leagues Quesada forced his way through almost insuperable obstacles along the Magdalena, to its junction with the Opón at La Tora. Here he sent the ships, which followed him up the river, back to Santa Marta with the sick, and set out with 200 picked soldiers and about 60 horses to scale the cordillera. In Jan. 1537, he found himself on the great central plain of Colombia, inhabited by a race called Chibchas, who had attained a high state of aboriginal culture. The ruler of the country, the zipa of Bogotá, fled at the approach of the Spaniards and Quesada occupied his capital. From this strategic point the country was explored and subdued. On Aug. 6, 1538, a new capital, called Santa Fé de Bogotá, was founded near the site of the old one, and toward the end of the year Quesada was preparing to start for the coast, when two more conquerors suddenly appeared—Sebastián Benalcázar from Quito and Nicolás Federman from Venezuela. Quesada successfully maintained the priority of his rights, and on July 8, 1539, sailed from Cartagena for Spain to urge his claims to the government of the lands he had conquered, but his efforts were of no avail. The next ten years Quesada spent in France, Italy and Spain, engaged mainly in literary pursuits. In 1550, Philip awarded him the titles of marshal of New Granada and alderman of Bogotá, and a salary, but no jurisdiction. On his return to New Granada he became at once the most influential person in the colony, protecting the colonists from the severity of officials, and restraining the impetuosity of the *comenderos*. In 1569 he set out with 500 men on a quest for the fabulous El Dorado which carried him into the trackless swamps of the Orinoco, whence he returned after nearly two years' wanderings, with only 25 of his original company. Retiring to La Suesca, his country house, he turned to literature and composed *Los Ratos de Suesca,* and a series of *Sermones.* Early in 1579 he moved to Mariquita, where he died on Feb. 16, of leprosy. In 1598 his remains were removed to the cathedral in Bogotá. Quesada ranks with Cortés as one of the very few conquerors who combined intellectual discipline with physical prowess. He was religious and naturally humane.

Quesada is supposed to have been the author of several works, none of which have been preserved to us. Besides *Los Ratos de Suesca* and the *Sermones,* already mentioned, there are attributed to him *Apuntamientos y noticias sobre la historia de Paulo Giovio* (1568–69?); *Anales del Emperador Carlos V.; Las diferencias de la guerra de los dos mundos;* and, questionably, with *Epítome de la conquista del Nuevo Reino de Granada.*

No critical treatment of the life of Quesada has yet appeared in English, though R. B. Cunninghame-Graham, *The Conquest of New Granada* (Boston, 1922), and C. R. Markham, *The Conquest of New Granada* (1912), give interesting accounts of his career. In Spanish, *see* F. M. Groot, *Historia eclesiástica y civil de Nueva Granada* (2nd ed., Bogotá, 1889); Joaquín Acosta, *Compendio histórico del descubrimiento y colonización de la Nueva Granada en el siglo décimosexto* (2nd ed., Bogotá, 1901); Soledad Acosta de Samper, *Biografías de hombres ilustres o notables* (Bogotá, 1883). (W. B. P.)

JIND, an Indian State, within the Punjab, one of the Cis-Sutlej states, under British influence since 1809. The territory consists of three isolated tracts, amid British districts. Total area, 1,259 sq.m. Pop. (1921), 308,183. Estimated gross revenue £210,000. The chief, whose title is Maharaja, is a Sikh of the Sidhu Jat clan and of the Phulkian family. The principality was founded in 1763, and recognized by the Mogul emperor in 1768. The dynasty has been conspicuously loyal to the British, especially during troubled times, and it has received accessions of territory. In 1857 the chief of Jind was actually the first man, European or Indian, who took the field against the mutineers; and his contingent collected supplies in advance for the British marching upon Delhi, besides rendering excellent service during the siege. The State troops served again with distinction in 1914–18 in East Africa and the State contributed liberally to the war Jind, the former capital, has a station on the S. Punjab railway. Pop. (1921), 10,840. The present capital and residence of the chief since 1827 is Sangrur; pop. (1921), 10,799.

JINGAL: *see* MILITARY TERMS.

JINGO, a legendary empress of Japan, wife of Chūai, the 14th mikado (191–200). On her husband's death she assumed the government, and fitted out an army for the invasion of Korea (*see* JAPAN: *History*). She returned to Japan completely victorious after three years' absence. Subsequently her son Ojen Tenno, afterwards 15th mikado, was born, and later was canonized as Hachiman, god of war. The empress Jingo ruled over Japan till 270. She is still worshipped. The derivation of the English oath, "By Jingo," is doubtful. The identification with the name of Gingulph or Gengulphus, a Burgundian saint, was a joke on the part of R. H. Barham, author of the *Ingoldsby Legends.* Some explain the word as a corruption of Jainko, the Basque name for God. It has also been derived from the Persian *jang* (war), St. Jingo being the equivalent of the Latin god of war, Mars; and is even explained as a corruption of "Jesus, Son of God," Je-n-go.

The political use of the word as indicating an aggressive patriotism originated in 1877, during the weeks of national excitement preluding the despatch of the British Mediterranean squadron to Gallipoli, which frustrated the Russian designs on Constantinople. A bellicose music-hall song, with the refrain "We don't want to fight, but, by Jingo, if we do," etc, was produced in London by a singer known as "the Great MacDermott," and instantly became very popular. Thus the war-party came to be called Jingoes, and Jingoism has ever since been the term applied to those who advocate a national policy of arrogance and pugnacity.

JINN, the name of a class of spirits (*genii*) in Arabian mythology. They are the offspring of fire, but in their form and the propagation of their kind they resemble human beings. They are ruled by a race of kings named "Sulayman," one of whom is considered to have built the pyramids. Their central home is the mountain Kāf, and they manifest themselves to men under both animal and mortal form and become invisible at will. There are good and evil jinn, and these in each case reach the extremes of beauty and ugliness.

JIREČEK, JOSEF (1825–1888), Czech scholar, was born at Vysoké Mýto in Bohemia on Oct. 9, 1825. He entered the Prague bureau of education in 1850, and became minister of the department in the Hohenwart cabinet in 1871. His efforts to secure equal educational privileges for the Slav nationalities in the Austrian dominions brought him into disfavour with the German element. He became a member of the Bohemian Landtag in 1878, and of the Austrian Reichsrat in 1879. In 1875 he was elected president of the royal Bohemian academy of sciences. He died in Prague on Nov. 25, 1888. He published in Czech an anthology of Czech literature (3 vols., 1858–61), a biographical dictionary of Czech writers (2 vols., 1875–76), a Czech hymnology, editions of Blahoslaw's Czech grammar and of some Czech classics, and of the works of his father-in-law PAVEL JOSEF SAFAŘIK (1795–1861).

His brother HERMENEGILD JIREČEK, Ritter von Samakow (1827–1909), Bohemian jurisconsult, born at Vysoké Mýto on April 13, 1827, was also an official in the education department. He died in Hohenmauth on Dec. 29, 1909. Among his important works on Slavonic law were *Codex juris bohemici* (11 parts, 1867–92), and a *Collection of Slav Folk-Law* (Czech, 1880), *Slav Law in Bohemia and Moravia down to the 14th Century* (Czech, 3 vols., 1863–73).

JIREČEK, KONSTANTIN JOSEF (1854–1918), archaeologist and historian, son of Josef, died in Vienna on Jan. 10, 1918. The bulk of Konstantin's writings deal with the history and literature of the southern Slavs. They include a *History of the Bulgars* (Czech and German, 1876), *The Principality of Bulgaria* (1891), *Travels in Bulgaria* (Czech, 1888), etc.

JIVARAN, an independent linguistic stock of South American Indians, so called from the best known tribe, the Jivaros The Jivaran tribes live in eastern Ecuador and the adjacent

portions of Peru in the area comprising the basins of the Santiago, Morona and upper Pastaza rivers. Rivet has enumerated the large number of tribes belonging to this group. The Jivaros proper live on the upper Pastaza, and may be taken as representatives of the stock. They are a warlike and numerous tribe, widely known from their practice of preparing the shrunken human heads, called "tsantsas," often seen in museum collections. The head, taken from an enemy, is carefully skinned, sewed up the back and then shrunk and dried by an elaborate process accompanied by much ceremony. The finished "tsantsa" is about the size of the head of a small monkey, and preserves strikingly the human expression. The Jivaros are to be carefully distinguished from the Jeberos living in their immediate vicinity, a tribe of the Mainan (*q.v.*) stock with whom they have often been confounded.

See P. Rivet, *Les Indiens Jivaros* (*L'Anthropologie,* vol. xvii, pp. 333—vol. xix., pp. 235–260); R. Karsten, *Blood-revenge, war and victory feasts among the Jivaro Indians of eastern Ecuador* (Bull. 79, Bureau of American Ethnology).

JIZAKH, a town of Asiatic Russia in the Uzbekistan S.S.R., on the Transcaspian railway, 71 m. N.E. of Samarkand. Pop. (1926) 13,469. It was formerly a fortress of Bukhara and was captured by the Russians in 1866.

JOAB, in the Bible, the son of Zeruiah, David's sister (1 Chron. ii 16) His brothers were Asahel and Abishai. All three were renowned warriors and played a prominent part in David's history. Abishai on one occasion saved the king's life from a Philistine giant (2 Sam. xxi. 17), and Joab as warrior and statesman was directly responsible for much of David's success. Joab won his spurs, according to one account, by capturing Jerusalem (1 Chron. xi 4–9); with Abishai and Ittai of Gath he led a small army against the Israelites who had rebelled under Absalom (2 Sam. xviii 2); and he superintended the campaign against Ammon and Edom (2 Sam xi 1, xii. 26; 1 Kings xi. 15). He showed his sturdy character by urging the king, after the death of Absalom, to place his duty to his people before his grief for the loss of his favourite son (2 Sam. xix. 1–8), and by protesting against David's proposal to number the people, an innovation which may have been regarded as an infringement of their liberties (2 Sam. xxiv., 1 Chron xxi. 6).

JOACHIM I. (1484–1535), surnamed Nestor, elector of Brandenburg, elder son of John Cicero, elector of Brandenburg, was born on Feb. 21, 1484. He became elector in January 1499, and married Elizabeth, daughter of John, king of Denmark. By stern and cruel measures he succeeded in restoring some degree of order in Brandenburg. He improved the administration of justice, aided the development of commerce, and befriended the towns. In the imperial election of 1519, Joachim voted for Charles. But relations between the emperor and the elector were not friendly, and Joachim was frequently in communication with Charles's enemies. Joachim was a pugnacious adherent of Catholic orthodoxy. He urged upon the emperor the enforcement of the Edict of Worms, and at several diets was prominent among the enemies of the Reformers. His wife adopted the reformed faith, and in 1528 fled for safety to Saxony. Joachim, who was a patron of learning, established the university of Frankfort-on-the-Oder in 1506. He died at Stendal on July 11, 1535.

See T. von Buttlar, *Der Kampf Joachims I. von Brandenburg gegen den Adel* (1889); L. Zscharnack, *Das Werk Luthers in Brandenburg von Joachim I. bis zum grossen Kurfürsten* (1917).

JOACHIM II. (1505–1571), surnamed Hector, elector of Brandenburg, the elder son of Joachim I, elector of Brandenburg, was born on Jan. 13, 1505. He became elector of Brandenburg on his father's death in July 1535, and undertook the government of the old and middle marks, while the new mark passed to his brother John. He was twice married, his second wife being Hedwig, daughter of Sigismund, King of Poland. Joachim made repeated attempts to make peace between the Protestants and the emperor Charles V. at Frankfort in 1539, and elsewhere. In 1542 he led the German forces on an unsuccessful campaign against the Turks. With Maurice, elector of Saxony, he persuaded Philip, landgrave of Hesse, to surrender to Charles after the imperial victory at Mühlberg in April 1547, and pledged his word (which Charles failed to honour) that the landgrave would be pardoned. He supported the *Interim,* which was issued from Augsburg in May 1548, and took part in the negotiations for the Treaty of Passau (1552), and the religious peace of Augsburg (1555). In domestic politics he consolidated the power of his house by treaties with neighbouring princes, and secularized the bishoprics of Brandenburg, Havelberg and Lebus. In 1539 he allowed free entrance to the reformed teaching in the electorate. He took the communion himself in both kinds, and established a new ecclesiastical organization in Brandenburg, but retained much of the ceremonial of the Church of Rome. His position was not unlike that of Henry VIII. in England, and may be partly explained by a desire to replenish his impoverished exchequer with the wealth of the Church. By his lavish expenditure on public buildings he piled up a great accumulation of debt, which was partly discharged by the estates of the land in return for important concessions. He secured the archbishopric of Magdeburg and the bishopric of Halberstadt for his son Frederick in 1551; on Frederick's death in 1552, the sees passed to his brother Sigismund. Joachim died at Köpenick on Jan. 3, 1571, and was succeeded by his son, John George.

See Steinmuller, *Einfuhrung der Reformation in die Kurmark Brandenburg durch Joachim II.* (1903).

JOACHIM, JOSEPH (1831–1907), Hungarian violinist and composer, was born at Kittsee, near Pressburg, on June 28, 1831, the son of Jewish parents. His family moved to Budapest when he was two years old, and he studied there under Serwaczynski, who brought him out at a concert when he was only eight years old, and then under the elder Hellmesberger and Joseph Böhm in Vienna. In 1843 he went to Leipzig to enter the newly founded conservatorium. Mendelssohn, after testing his musical powers, pronounced that the regular training of a music school was not needed, but recommended that he should receive a thorough general education in music from Ferdinand David and Moritz Hauptmann.

In 1844 he visited England, and made his first appearance at Drury Lane theatre, where his playing of Ernst's fantasia on *Otello* made a great sensation; he also played Beethoven's concerto at a Philharmonic concert conducted by Mendelssohn. In 1847–49 and 1852 he revisited London, and he appeared regularly at the famous Monday and Saturday popular concerts from 1859 onwards. On Liszt's invitation he accepted (1850) the post of *Konzertmeister* at Weimar, but his sympathies were with the older school of Schumann, and he was probably glad to leave Weimar for Hanover, where, in 1853, he became *Konzertmeister* to the king. In 1869 Joachim was appointed head of the newly founded *königliche Hochschule für Musik* in Berlin. The famous Joachim Quartet was started in the *Sing-Akadamie* in the following year. The original members of the quartet were Joachim, Ernst Schiever, Heinrich de Ahna and Wilhelm Müller. Of Joachim's later life, continually occupied with public performances, there is little to say except that he remained, even in a period which saw the rise of numerous violinists of the finest technique, the acknowledged master of all. He died on Aug. 15, 1907.

Joachim interpreted Bach, Mozart, Beethoven and Brahms with a degree of insight that has never been surpassed, and thereby established a standard of performance by which all subsequent players have been judged. His absolute freedom from tricks or mannerisms, his dignified bearing and his unselfish character won the respect of all, though his devotion to the highest ideals, combined with a certain austerity and massivity of style, brought against him an accusation of coldness from admirers of a more effusive temperament His biographer (1898), Andreas Moser, expressed his essential characteristic in the words: "He plays the violin, not for its own sake, but in the service of an ideal."

Joachim's compositions are distinguished also by a certain austerity of character; but they are full of beauty of a grave and dignified kind. His "Hungarian" concerto for the violin, the Romance in B flat for violin and the variations for violin and orchestra are among his finest things. But he is remembered, not as a composer, but as a great musician and a great interpreter.

See A. Moser, *Joseph Joachim, ein Lebensbild* (1898; enl. ed., 2 vols.,

1907–10; Eng. trans., 1901). Moser also published (1908) Joachim's correspondence with Brahms, and with himself (3 vols., 1911–13; Eng. trans. by N. Bickley, 1914).

JOACHIM OF FLORIS (*c.* 1145–1202), Italian mystic theologian, was born at Celico, near Cosenza, in Calabria. He was brought up at the court of Duke Roger of Apulia. At an early age he went to visit the holy places. After seeing his comrades decimated by the plague at Constantinople he resolved to change his mode of life, and, on his return to Italy, after a rigorous pilgrimage and a period of ascetic retreat, became a monk in the Cistercian abbey of Casamari. In August 1177 he was abbot of the monastery of Corazzo, near Martirano. In 1183 he went to the court of Pope Lucius III. at Veroli, and in 1185 visited Urban III. Later he retired to Pietralata, and founded with some companions under a rule of his own creation the abbey of San Giovanni in Fiore, on Monte Nero, in the *massif* of La Sila Innocent III, on Jan. 21, 1204, approved the "ordo Florensis" and the "institutio" which its founder had bestowed upon it. Joachim died in 1202, probably on March 20

The authenticated works of Joachim are. the *Concordia novi et veteris Testamenti* (first printed at Venice in 1519), the *Expositio in Apocalypsin* (Venice, 1527), the *Psalterium decem chordarum* (Venice, 1527), together with some "libelli" against the Jews or the adversaries of the Christian faith. It is very probable that these "libelli" are the writings entitled *Concordia Evangeliorum Contra Judaeos, De articulis fidei, Confessio fidei* and *De unitate Trinitatis.* The last is perhaps the work which was condemned by the Lateran council in 1215 as containing an erroneous criticism of the Trinitarian theory of Peter Lombard

It is impossible to enumerate here all the works attributed to Joachim Some served their avowed object with great success, being powerful instruments in the anti-papal polemic and sustaining the revolted Franciscans in their hope of an approaching triumph. Among the most widely circulated were the commentaries on Jeremiah, Isaiah and Ezekiel, the *Vaticinia pontificum* and the *De oneribus ecclesiae* Of his authentic works the doctrinal essential is very simple. Joachim divides the history of humanity, past, present and future, into three periods, which, in his *Expositio in Apocalypsin* (bk i ch. 5), he defines as the age of the Law, or of the Father; the age of the Gospel, or of the Son; and the age of the Spirit, which will bring the ages to an end The third is the age of contemplation, the monastic age *par excellence,* the age of a monachism wholly directed towards ecstasy, more Oriental than Benedictine. Joachim does not conceal his sympathies with the ideal of Basilian monachism In his opinion—which is, in form at least, perfectly orthodox—the church of Peter will be, not abolished, but purified; actually, the hierarchy effaces itself in the third age before the order of the monks, the *viri spirituales* The entire world will become a vast monastery in that day, which will be the resting-season, the sabbath of humanity.

The Joachimite ideas soon spread into Italy and France, and especially after a division had been produced in the Franciscan order. The rigorists, who soon became known as "Spirituals," represented St. Francis as the initiator of Joachim's third age. (*See* FRANCISCANS.) In 1260 a council held at Arles condemned Joachim's writings and his supporters, who were very numerous in that region. The Joachimite ideas were equally persistent among the Spirituals, and acquired new strength with the publication of the commentary on the Apocalypse. This book, probably published after the death of its author and probably interpolated by his disciples, contains, besides Joachimite principles, an affirmation of the elect character of the Franciscan order, as well as extremely violent attacks on the papacy.

The Joachimite literature is extremely vast. From the 14th century to the middle of the 16th, Ubertin of Casale (in his *Arbor Vitae crucifixae*), Bartholomew of Pisa (author of the *Liber Conformitatum*), the Calabrian hermit Telesphorus, John of La Rochetaillade, Seraphin of Fermo, Johannes Annius of Viterbo, Coelius Pannonius, and a host of other writers, repeated or complicated *ad infinitum* the exegesis of Abbot Joachim. A treatise entitled *De ultima aetate ecclesiae,* which appeared in 1356, has been attributed to Wycliffe, but is undoubtedly from the pen of an anonymous Joachimite Franciscan. The heterodox movements in Italy in the 13th and 14th centuries, such as those of the Segarellists, Dolcinists, and Fraticelli of every description, were penetrated with Joachimism; while such independent spirits as Roger Bacon, Arnaldus de Villa Nova and Bernard Délicieux often comforted themselves with the thought of the era of justice and peace promised by Joachim. Dante held Joachim in great reverence, and has placed him in Paradise (*Par.,* xii 140–141).

Haupt, "Zur Gesch. des Joachimismus" in *Briegers Zeitschrift fur Kirchengesch,* vol. vii. (1885). *See* also the relevant articles in the *Catholic Encyclopaedia.*

JOAN, a mythical female pope (*fl* 855), between Leo IV (847–855) and Benedict III (855–858). A French Dominican, Steven of Bourbon (d. *c.* 1261) gives the legend in his *Seven Gifts of the Holy Spirit,* and was followed by many later writers This explosion of the tale was first seriously undertaken by David Blondel, a French Calvinist, in his *Éclaircissement de la question si une femme a été assise au siège papal de Rome* (1647); and *De Joanna Papissa* (1657). The refutation was completed by Johann Dollinger in his *Papstfabeln des Mittelalters* (1863; Eng. trans. 1872).

JOANES (or JUANES), **VICENTE** (1506–1579), head of the Valencian school of painters, and often called "the Spanish Raphael," was born at Fuente de la Higuera in the province of Valencia in 1506. He is said to have studied his art for some time in Rome, with which school his affinities are closest, but the greater part of his professional life was spent in the city of Valencia, where most of the extant examples of his work are now to be found. All relate to religious subjects, and are characterized by dignity of conception, accuracy of drawing, truth and beauty of colour and minuteness of finish He died at Bocairente (near Jativa) while engaged upon an altarpiece in the church there, on Dec 21, 1579

JOANNA THE MAD, "LA LOCA" (1479–1555), queen of Castile and mother of the emperor Charles V, daughter of the Catholic rulers, Ferdinand and Isabella, was born at Toledo on Nov. 6, 1479. She married (1496) the archduke Philip, son of the German king, Maximilian I., and by the death of her brother John, of her eldest sister Isabella, queen of Portugal, and of the latter's infant son Miguél, became heiress of the Spanish kingdoms. Soon after 1502, her reason began to give way. She mourned extravagantly for her absent husband, whom at length she joined in Flanders: there her passionate jealousy, although justified by Philip's conduct, led to deplorable scenes His death (1506) completely unhinged her mind; she remained nominally queen, but perforce took no part in the business of State, and died after a miserable existence at Tordesillas on April 11, 1555.

See R. Villa, *La Reina doña Juana la Loca* (1892); Rosler, *Johanna die Wahnsinnige* (1890); Prescott, *Hist. of Ferdinand and Isabella* (1854); H. Tighe, *A Queen of Unrest* (1907).

JOANNA I. (*c.* 1327–1382), queen of Naples, was the daughter of Charles, duke of Calabria (d 1328), and became sovereign of Naples in succession to her grandfather King Robert in 1343. Her first husband, Andrew, son of Charles Robert, king of Hungary, was assassinated (1345) at Aversa, possibly with his wife's connivance, and at once Joanna married Louis, son of Philip, prince of Taranto. King Louis of Hungary then came to Naples to avenge his brother's death, and the queen took refuge in Provence—which came under her rule at the same time as Naples—purchasing pardon from Pope Clement VI. by selling to him the town of Avignon, then part of her dominions Having

returned to Naples in 1352 after the departure of Louis, Joanna lost her second husband in 1362, and married James, king of Majorca (d. 1375), and later Otto of Brunswick, prince of Taranto. The queen had no sons, and as both her daughters were dead she made Louis I. duke of Anjou, brother of Charles V. of France, her heir. Charles, duke of Durazzo, who regarded himself as the future king of Naples, then seized the city. Joanna was captured and was put to death at Aversa on May 22, 1382. The queen sought the society of the poets and scholars of her time, including Petrarch and Boccaccio.

See Crivelli, *Della prima e della seconda Giovanna, regine di Napoli* (1832); G. Battaglia, *Giovanna I., regina di Napoli* (1835); W. St. C Baddeley, *Queen Joanna I. of Naples* (1893); Scarpetta, *Giovanna I. di Napoli* (1903); and Francesca M. Steele, *The Beautiful Queen Joanna I. of Naples* (1910).

JOANNA II. (1371–1435), queen of Naples, was descended from Charles II of Anjou through his son John of Durazzo. She had been married to William, son of Leopold III. of Austria, and at the death of her brother King Ladislaus in 1414 she succeeded to the Neapolitan crown. Although now a widow of forty-five, she chose as her lover Pandolfo Alopo, a youth of twenty-six, whom she made seneschal of the kingdom He and the constable Muzio Attendolo Sforza completely dominated her, and the barons determined to provide her with a husband who would break her favourites and yet not make himself king. The choice fell (1415) on James of Bourbon. James at once declared himself king, had Alopo killed and Sforza imprisoned, and kept his wife in a state of semi-confinement; this led to a counter-agitation on the part of the barons, who forced James to liberate Sforza, renounce his kingship, and eventually to quit the country. The queen now sent Sforza to re-establish her authority in Rome, whence the Neapolitans had been expelled after the death of Ladislaus; Sforza entered the city and obliged the *condottiere* Braccio da Montone, who was defending it in the pope's name, to depart (1416).

But when Oddo Colonna was elected pope as Martin V., he allied himself with Joanna, who promised to give up Rome, while Sforza returned to Naples. The queen was, however, completely dominated by her new lover Giovanni (Sergianni) Caracciolo. Sforza then favoured the pretensions of Louis III. of Anjou to Naples as Joanna's successor. Joanna refused to adopt Louis as her heir, and appealed to Alfonso of Aragon, promising to make him her heir. War broke out between Joanna and the Aragonese on one side and Louis and Sforza, supported by the pope, on the other. After much fighting by land and sea, Alfonso entered Naples, and in 1422 peace was made. But dissensions broke out between the Aragonese and Catalans and the Neapolitans, and Alfonso had Caracciolo arrested; whereupon Joanna, fearing for her own safety, invoked the aid of Sforza, who with difficulty carried her off to Aversa. There she was joined by Louis whom she now adopted as her successor. Sforza was accidentally drowned, but when Alfonso returned to Spain, leaving only a small force in Naples, the Angevins with the help of a Genoese fleet recaptured the city. For a few years there was peace in the kingdom, but in 1432 Caracciolo, having quarrelled with the queen, was seized and murdered by his enemies. Internal disorders broke out, and Gian Antonio Orsini, prince of Taranto, led a revolt against Joanna in Apulia; Louis of Anjou died while conducting a campaign against the rebels (1434), and Joanna herself died on Feb 11, 1435, after having appointed his son René her successor.

JOAN OF ARC, SAINT (1412–1431), French patriot. Joan of Arc was known in the country-side of Domrémy as Jeannette, with the surname of Arc or Romée. She is alluded to in contemporary documents as Jeanne, commonly called The Maid. She was born on Jan. 6, 1412, at Domrémy on the Meuse in a house in the shadow of the church. Her father was Jacques d'Arc, a native of Ceffonds in Champagne, and her mother Isabelle de Vouthon, called "la Romée," either because she had made a pilgrimage to Rome, or, more probably, from a family name Both husband and wife were of farming stock, and devout Catholics. Jacques owned horses and cattle; he was the doyen of the village, and was its spokesman in a law-suit. He may be regarded, in fact, as the headman of Domrémy, a kind of mayor. With others he rented the Château de l'Ile, its gardens, and pasturage. Hardly anything is known of Joan's childhood; from her mother she learnt her prayers and the lives of the Saints, and she played till she was 12 or 13 with the other village children. The boys of Domrémy, who were French in their sympathies, were at frequent odds with the boys of the Burgundian village, on the other side of the Meuse. Saint Remy, patron saint of the cathedral of Reims, was also that of the church at Domrémy. Joan, who was baptized by the *curé* Minet, was a pious child, and often went with her companions to bear wreaths of flowers to Notre Dame de Bermont. She had heard, without believing, the story of the fairies who haunted the spring among the bushes. She was almost certainly ignorant of Merlin's prophecy that a maid should come from the Bois Chenu to do great deeds.

Joan helped her parents in tillage, tended the animals, and was skilled with her needle and in other feminine arts. She was pious, and often went to church when the other girls were dancing. She was in her 13th year when, in her father's garden, she heard for the first time a voice from God. Thereupon she vowed to remain a virgin and to lead a godly life. During the next five years she heard the voices two or three times a week. Among them she distinguished those of Saint Catherine and Saint Margaret, who appeared to her, in the guise of queens, wearing rich and precious crowns. Sometimes their coming was heralded by Saint Michael With these visions Joan became still more serious, and more given to prayer. The troubles of Domrémy between 1419 and 1428 made her early acquainted with the horrors of war. Her voices commanded her to go to France, and to raise the siege of Orleans, which had been begun in Oct. 1428.

We do not know the exact moment at which Joan decided to obey her voices, and to go to France. The captain of the fortified town nearest to Domrémy on the French side was Robert de Baudricourt, commandant at Vaucouleurs, four leagues away Joan approached him for the first time in May 1428, accompanied by a relative on her mother's side, one Durand Laxart ou Lassois. She was in her 16th year. At this time an army was being raised in England for the conquest of the Dauphin's territory south of the Loire. The journey was made without the knowledge of her family, for when Joan had spoken of going into France, her father had said that he would rather drown her with his own hands. She told the Dauphin's commandant that she was sent by Our Lord, and asked him to write to the Dauphin saying that, by the will of God, she was to lead him to his crowning. Baudricourt attached no importance to the visit, and sent her back to her parents. At home Joan talked more and more of her great mission. In July 1428, the governor of Champagne, Antoine de Vergy, undertook to subdue the country round Vaucouleurs for the English. The people of Domrémy retreated with their cattle to Neufchâteau where Joan spent a fortnight with a woman called La Rousse, who kept an inn. This is the origin of the false Burgundian legend that she was a light woman, liking the company of men-at-arms and horses. Some time after, she was summoned for breach of promise of marriage, before the magistrates of Toul, by a young man who had sought her hand. On the return of the family to Domrémy, they found the village burned to the ground, and Joan had to attend the church of Greux. Towards the end of October, she learned that Orleans was besieged by the English, who had garrisoned the towns along the Loire.

To break the resistance on the Loire by taking Orleans was indeed a hazardous undertaking. The English made careful preparations, and amassed a large quantity of military material for the siege. Salisbury had assembled a force of about 2,500, to which were joined spearmen and archers under Bedford. The English army may have numbered about 10,000 men, in addition to the Burgundian forces, which were soon withdrawn. Orleans was strongly fortified, and possessed two hundred and fifty cannon of various calibres. To invest the town the English had surrounded it with about a dozen bastions, which were then called

bastilles. The siege began on Oct. 12, and on the 24th Salisbury was mortally wounded by a bullet as he was about to reconnoitre the town from one of the windows of the Tourelles. The citizens of Orleans were commanded by Dunois, the Bastard of Orleans and by the famous La Hire. The fighting amounted to no more than skirmishing, and French reinforcements continued to enter the beleaguered town. Although the situation was not so critical as it has been represented, the news of the siege aroused great emotion throughout France. When it reached Domrémy, Joan decided to set out. About Jan. 12, 1429, she left the village to go to her cousins, the Lassois of Petit Burey. She soon reached Vaucouleurs, and stayed there three weeks, seeking to convince the incredulous captain, Robert de Baudricourt, of her mission. She met there a bold young squire, Jean de Metz, in whom she confided. Her idea was that the country should save itself rather than wait for the help of the Scots, and the arrival of little Margaret, the daughter of James of Scotland, who was to marry Louis, the son of the Dauphin.

When she realized that Robert de Baudricourt would do nothing to bring her to the Dauphin, she borrowed clothes from Jean de Metz, and set out for France. The duke of Lorraine having sent her a safe-conduct as far as Nancy, she went first to him. She begged him to allow his son-in-law Réné to escort her to France, promising to pray for the duke's better health. Joan and her companions returned to Vaucouleurs, where Baudricourt, who had just learned of the disaster of Vouvray, was less unwilling to let the Maid try her fortune. He authorized her departure for Chinon, and Jean de Metz and Bertrand de Poulengy advanced money for the journey. The people of Vaucouleurs bought her a horse, and Joan exchanged her suit of red cloth for a page's dress. Baudricourt gave her a sword saying: "Go, and let come what may." Travelling by night the little band evaded English and Burgundian marauders. They passed through Saint Urbain, Auxerre, Gien and Fierboys, near Chinon, to which soldiers made pilgrimages to invoke Saint Catherine. From there, Joan wrote to the Dauphin, asking for permission to go to Chinon to give him information which she alone possessed. The Council met to discuss whether he should hear her or not. Louis de Bourbon, the count of Vendôme, brought her into the presence of the king, who kept back in the midst of his knights. Joan came forward with meekness and simplicity, and said to him, "Most noble Dauphin, I have come from God to help you and your Kingdom." The Dauphin took her aside, and talked with her for more than two hours. According to her confessor, Pasquerel, the Maid said to him, *"Je te dis de la part de Messire que tu es le vrai héritier de France et fils du roi"* (I am God's messenger, sent to tell you that you are the king's son, and the true heir to France). This was doubtless the sign which Joan would never explain. Lodged in the tower of Coudray, Joan was burning to be at work, but the king was unwilling to make use of her until she had been examined by an assembly of learned theologians. She was sent therefore to Poitiers, the seat of the chief university and of the courts of justice. She lived in the household of Jean Rabuteau, the advocate-general, and was examined by a commission presided over by Friar Séguin, professor of theology. She assured them that she would raise the siege and have the king crowned, and dictated a letter commanding the English to depart. The Poitiers commission made enquiry at Domrémy. Nothing but what was honest and true was reported of Joan, and in April they pronounced in her favour. Joan was accordingly sent to Tours to take up arms. She lodged with the lady in waiting upon the Dauphin's mother-in-law, the Queen of Sicily. In this city, famous for its armourers, she put on "white armour." She had brought to her from the church of Saint Catherine de Fierboys a sword on which were five crosses, doubtless an *ex voto* which she had seen in its place behind the altar. At the wish of the Dauphin she appointed a suite, including a confessor, Jean Pasquerel, a squire, Jean d'Aulon and two pages. Like other company commanders, she carried a banner; on it she had painted the King of heaven holding an orb, with the motto "Jesus Maria."

The French army for the relief of Orleans numbered about four thousand men This force left Tours for Blois, and, on April 28, escorted by a procession of priests, arrived before Orleans along the left bank of the Loire, accompanied by a convoy of cattle and several boats. They were met by Dunois. The Loire was crossed with a favourable wind. On the night of April 28, Joan entered Orleans, bringing hope to the beleaguered citizens She was taken to the church of the Holy Cross, and then to the house of Jacques Boucher, treasurer to the duke of Orleans. On April 30 Joan summoned the English to be gone. Next day she sent them a further proclamation. On May 5, the Maid and her companions stormed the "bastille" of the Augustines, and on the 7th, they captured the Tourelles, which commanded the head of the bridge. Joan herself planted the first scaling-ladder, and was wounded in the shoulder by an arrow. Orleans was saved. On May 8 was held the first thanksgiving procession, the origin of the great festival of Orleans. Within a week the French captured Jargeau, where the earl of Suffolk was taken prisoner, and Beaugency. Sir John Falstolf was defeated at Patay. Joan entered Orleans in triumph, followed the king to Gien, and prevailed upon him to march on Reims. She reached Troyes on July 10th and Reims on the 14th. Two days later the king was crowned. Beside him stood the Maid, a banner in her hand. "Gentle King," she said, kneeling before him, "now is fulfilled the will of God that I should raise the siege of Orleans, and lead you to the city of Reims to receive the holy coronation, to show that you are indeed the king, and the rightful lord of the realm of France." It was agreed to advance on Paris on July 18. Bedford was aware of the plan, and had informed the English council. Charles, however, wasted time over negotiations with the envoys of the duke of Burgundy, whom Joan had commanded to make peace with France, and she did not leave Reims till July 21. Instead of marching on Compiègne, which was preparing to receive him, the king turned back towards the Loire. The Maid wished to continue the march on Paris, whence Bedford had withdrawn his army. Between Aug. 18 and 22 the king and the Maid received the submission of Compiègne, Senlis and Beauvais, from which they expelled the bishop Pierre Cauchon.

Regnault de Chartres, archbishop of Reims and chancellor of the kingdom, supported the policy of detaching the English from the Burgundians. On Aug. 23 Joan left the king at Compiègne, and arrived at Saint Denis on the 26th. On the 28th an armistice was signed between France and Burgundy. On Tuesday, Sept. 8, Joan, at the head of the royal forces, made an assault on the *porte Saint Honoré* at Paris. It failed. Joan was wounded in the thigh by an arrow, but they had to drag her from the field by force. Since the king of France had disbanded his army, she had now to rejoin the court and remain there practically inactive. In Oct. 1429, however, she took part in the capture of Saint Pierre le Moustier. At La Charité, which was held by Perrinet Gressart for the duke of Burgundy, she suffered a reverse. In recognition of what she had done for France she was ennobled on Dec. 29, 1429, and her village was exempted from taxation.

The truce with Burgundy, which was to last till Easter, was drawing to a close. Philip the Good had moreover succeeded in persuading Bedford to promise him Champagne in return for allowing recruitment by the English among his subjects As a counter stroke to the coronation of Charles VII., the English were preparing to bring to France the young King Henry VI. The Anglo-Burgundian allies made a great effort to ensure the safety of Paris by repossessing themselves of the neighbouring towns. Compiègne was their first objective.

Joan, who followed these plans attentively, decided to bring help to her "good friends" of Compiègne. Leaving Sully-sur-Loire where she had been in the care of la Trémouille, she set out, with a few companions but no official instructions. She passed from Melun to Lagny and Senlis and, after a brisk series of skirmishes, arrived at Compiègne, which she entered without resistance on May 23. The town was commanded by Captain Guillaume de Flavy. The Burgundian camp was at Margny opposite the bridgehead; the forces of the veteran Burgundian, Jean de Luxembourg were at Clairoix, and the English, under Montgomery, at Venette Towards five o'clock in the afternoon, Joan, Poton the Burgundian, and some other captains with four or five hundred men

made a sortie over the bridge against the Burgundian camp. Their men fell to looting, and were driven back into the town. Flavy had the draw-bridge raised in order to secure their retreat. Joan, who had charged the enemy in an attempt to save her comrades, was left outside, and was taken prisoner, together with her brothers and Jean d'Aulon. Her captor was an archer in the service of the Bastard of Wandomme. She was taken to the Burgundian camp, and interviewed by Philip the Good, while the Bastard was ordered to surrender his prisoner to his chief, Jean de Luxembourg.

Bedford realized the importance of destroying the influence of the Maid on the people by whom she was regarded as a saint; he hoped in this way to discredit the king, whom she had awakened from his lethargy. The English did not wish summarily to execute her, as they could have done, but to defame her by condemnation in a spiritual court. Both the university of Paris, which was strongly Burgundian, and the vicar-general of the inquisition wrote as early as May 26 to the duke of Burgundy to ask that Joan should be surrendered to the ecclesiastical court. The English had from the outset announced their intention of burning her alive if they could get hold of her; but members of the university and French lawyers took the first practical steps to send her on her way to the stake. A letter from Regnault de Chartres, archbishop of Reims, to the people of the city, who loved the Maid, shows that no grief was felt in the king's council over her capture; on the contrary, the bishop of Embrun was alone in exhorting Charles to make every effort to recover her. The king did, in fact, nothing at all. On July 14 Pierre Cauchon, bishop of Beauvais, who had been driven from his bishopric by French soldiers, appeared at Jean de Luxembourg's camp before Compiègne; he was an ambitious man who hoped to obtain the vacant see of Rouen, and whose sole desire was to serve his masters. He asked to be allowed to judge the prisoner, and maintained that Henry VI. had the right to redeem any prisoner of war for an indemnity of ten thousand *livres*.

Joan was taken first to Beaulieu, then to Beaurevoir to the castle of the Luxembourgs. She thought of nothing but the people of Compiègne, and after a long consultation with her "voices" made an attempt to go to their assistance by jumping from the tower. She injured herself, but not seriously. She was then taken to Arras, in Burgundian territory. Jean de Luxembourg decided to sell her to the English, and she was moved to Crotoy On Nov. 21 the university of Paris accused Cauchon of lack of zeal, and urged that, for the glory of God, Joan should be tried in Paris. The English then decided to take her to Rouen, their military centre in France. She was imprisoned in a tower of the castle of Philip Augustus, chained in a dark cell, under the guard of John Gray and William Talbot, in the charge of the earl of Warwick.

On Jan. 3, 1431, Joan was handed over to Cauchon, who was to be her judge. The English, having bought her, declared that they would seize her again, if she was not convicted for her many crimes, and of high treason against God. The authentic records of the trial have been preserved; they are among the most pathetic documents in history, and are the best source of information as to Joan herself. The original, which still bears the remains of Pierre Cauchon's seal, is now preserved in the library of the *Chambre des Députés*. The tribunal, skilfully selected by Cauchon, consisted of ten members of the university of Paris, strong Burgundians and intolerant theologians, 22 canons of Rouen who were all completely in the hands of the English government owing to the vacancy in the see, and some monks of different orders, minor friars or Dominicans. A judge who declared the procedure irregular was imprisoned, and a certain number of others withdrew from the case.

The interrogatory began on Feb. 21. There were no sittings between February 24 and 27. This was probably due to Joan's illness. On March 12 the vice-inquisitor appeared, accompanied by a Dominican friar; on the 15th Joan was asked if she would submit to the judgment of the Church. The judgment was to be based on a list of twelve points. They included the opinion of her judges as to the worthlessness of her visions, and her different accounts of the sign given to the king; they denied her the gift of prophecy, censured her masculine dress, her disobedience to her parents, her attempt to escape, and the sinful pride which had led her to believe that she would go to Paradise, and that she was responsible only to God and not to the Church which the judges represented. The last offence was that which chiefly incensed the theologians, and led to her condemnation. On April 18 Cauchon visited her in her cell to try the effect of mild exhortation. Delegates were sent to Paris with the 12 points. On May 2 Cauchon pronounced a public admonition against her in the hall of the castle, and Joan appealed to be sent before the pope. On May 9 she was taken to the torture chamber, but in spite of the opinion of several advisers the Maid was spared the torture. Joan was by this time worn out by the length and severity of the examination. On May 23 she was taken to the cemetery of Saint-Ouen and had read to her the sentence which condemned her to be burned unless she submitted. Without clearly understanding its terms, she signed an abjuration, of which the text has been lost, and was taken back to her prison amidst the noisy protests of the English. She was condemned to imprisonment for life. "We will recapture her," said Warwick in a rage. A woman's gown was brought to her, and she was asked to put it on. She remained in prison between May 24 and 27, and it was rumoured that she had resumed masculine dress. Cauchon came to see for himself; the prisoner, he found, had relapsed. The judges then decided that she must be delivered to the secular arm, and she was ordered to appear on May 30 in the Old Market Square of Rouen.

These facts are known to us only by means of a non-official report, annexed to the minute of condemnation. They bear, however, the stamp of probability, and it is certain that Joan regretted her momentary and easily understood weakness in the tumult of the cemetery of Saint-Ouen, with the thought of the stake before her. She received communion in her prison, and was once more dressed as a woman before being taken to the stake prepared in the Old Market Square. She listened patiently to the sermon of Nicolas Midy, and Cauchon read the sentence, delivering her over to the secular arm. Joan asked the priests present to say each a mass for her soul, and was then handed over to the bailiff of Rouen. An English soldier gave her a cross made of two pieces of wood, but she asked Massieu to bring her the cross from the neighbouring church. She kissed it while she was being chained to the stake, and as the smoke went up, she was heard to call in a loud voice: "Jesus." Her ashes were thrown into the Seine from the bridge of Rouen.

The account of the trial of Joan of Arc was published far and wide Five authentic copies still exist today. This monument of an iniquitous deed, a masterpiece of composition and procedure, drawn up in Latin by Thomas de Courcelles, a rising light of the university, bore fruit. Joan's condemnation by the Church appeared to be in order. The English Government could send to the chancellories of Europe a copy of the sentence, together with an account of the whole matter which placed the king of France in a most unfavourable light. The report of the trial became a useful weapon. Pierre Cauchon did not obtain the see of Rouen, which he had administered both spiritually and temporarily. The Holy See appointed him in 1432 bishop of Lisieux with the customary papal commendation. At the Congress of Arras he maintained the right of Henry VI. to the crown of France. He narrowly escaped being taken prisoner when the French retook Paris in 1436, and paid several visits to England, where he assisted in making terms of peace between the two countries. He died in 1442, rich and honoured, and was buried in the magnificent Chapel of the Virgin at Lisieux, which he had rebuilt and decorated at his own expense.

It was not until after Normandy had been conquered that Charles VII. made the slightest effort to wipe out the stain cast on his name by the sentence of 1431. In 1450 he instituted a preliminary enquiry, but nothing further was done until the arrival in France of Cardinal d' Estouteville, the legate of Pope Nicolas V. The first attempt was checkmated, owing to the English protesting to the Holy See. Charles VII.'s Government found a way out of the difficulty by giving place as petitioner to Joan's family Her mother, Isabelle Romée, who was living in

retirement at Orleans with her two sons, Pierre and Jean du Lys, obtained from Calixtus III. permission to draw up the case. To this end the pope appointed Jean Jouvenel des Ursins, archbishop of Reims, Guillaume Chartier, bishop of Paris and Richard Olivier, bishop of Coutances, to act in concurrence with the grand inquisitor of France. It was admitted that the university of Paris had been led into error by the fraudulent drawing up of the 12 articles. All the blame for this was cast on the dead bishop of Beauvais. Enquiries were held at Domrémy, at Orleans, in Paris and at Rouen, and evidence was given by all the surviving witnesses of Joan's early days and of her gallant deeds (Dunois, Jean d'Aulon, the duke of Alençon, etc.). Their statements, though made long after the event, are extremely interesting. The grand inquisitor, Jean Bréhal, published a long memorandum establishing Joan's orthodoxy. On June 16, 1456, the judgment of 1431 was annulled.

No authentic portrait of Joan can be traced to-day, although contemporary drawings were in existence. At Arras, for instance, she saw in the hand of a Scotsman a painting in which she was shown kneeling and presenting a letter to the king. The little pen drawing by the clerk Fauquembergue on May 10, 1429, on a register of the *parlement* of Paris is simply a note which served him as a reference. The contemporary German tapestry which shows her mounted and in armour is of value only for the costume. The charming drawing of a helmeted head in the museum at Orleans, is a Saint Maurice; the *ex voto* in the museum at Versailles, a Catalan painting, has nothing whatever to do with Joan of Arc; the equestrian statue in the Cluny museum is a Saint George or a Saint Maurice to which the inscription has been added. We know, however, from contemporary testimony that Joan was handsome, well-built, with a bright and smiling face, and that she had dark hair cut short like a soldier's. (One of her hairs could still be seen at the beginning of the 19th century in the waxen seal of a letter which she wrote to the people of Riom.) She was courtesy itself, liked a good horse and a good sword and fine clothes. She was indifferent to pain and fatigue, and was always ready to run physical risks.

Her heroic and charming figure was soon surrounded by legend, as may be seen from the chronicles of Morosini and Eberhardt von Windecke. She is the heroine of the *Mystère du Siège d' Orléans* which dates from the end of the reign of Charles VII., or the beginning of that of Louis XI Chapelain (1656) made her the subject of a fine poem, and Voltaire, when he wrote *La Pucelle* (1756), did not perhaps intend to give the impression of cynicism which it conveys. His article in the *Dictionnaire philosophique* is more respectful. Shakespeare has represented her as a witch in his Henry VI. Schiller's celebrated romantic play (1802) has elements drawn from both Shakespeare and Voltaire. The only two dramatic authors who have made the figure of Joan interesting on the stage are Charles Péguy (1897) and Bernard Shaw (1924).

The true Joan of Arc is not to be found in works of imagination, but in the authentic story of her life, first put together by Edmund Richer, head of the Faculty of Theology of Paris in the 17th century (a work for many years kept in manuscript at the Bibliothèque Nationale, Paris fr. 10,448, and published in 1911 by Ph H. Dunand); then by Lenglet Du Fresnoy (1753), and finally by the learned Jules Quicherat (1841–49), who has put together the records of the two trials, and all the evidence relating to Joan. Since this publication, Germain Lefèvre-Pontalis has published the journal of Morosini a Venetian merchant, and the German testimony of Eberhardt von Windecke. Noël Valois has published a document from the Vienna library regarding her mission (*Un nouveau témoignage sur Jeanne d'Arc*, 1907). Finally Father Denifle has searched the archives of the Vatican, and discovered several unknown documents regarding the judges of Joan of Arc (*Chartularium Universitatis Parisiensi IV.*).

Joan was beatified in Rome in 1909 and canonized by Benedict XV. in 1919. The festival of Joan of Arc was kept annually on May 8, the anniversary of the procession commemorating the capture of the Tourelles, from 1435–1793. The local festival was re-established by Bonaparte in the year X and was declared a *fête nationale* in 1920: "The French Republic will celebrate yearly the *fête* of Joan of Arc, a festival of patriotism." (P. C.)

BIBLIOGRAPHY.—The innumerable works on the history of Joan of Arc are listed by Ulysse Chevalier in his *Jeanne d'Arc, Bibliographie* (1878); Lanéry d'Arc, *Le Livre d'Or de Jeanne d'Arc, Bibliographie* (1894) and *Memoirs et consultations en jureur de Jeanne d'Arc* (1889); A. Molinier, *Les sources de l'Histoire de France*, iv. (1901, etc.). The documents relating to Joan have been collected by Jules Quicherat, *Procès de condamnation et de réhabilitation de Jeanne d'Arc* (5 vols., *Soc. de l'Hist. de France* 1849). Pierre Champion has published the text and a translation of the *Procès de Condamnation*, with a substantial introduction and notes (1921). The papers relating to the canonization may be found in the *Sacra rituum congregatione* (1907–11). A. Marty, in *L'Histoire de Jeanne d'Arc* (1907), has published a collection of facsimiles of Joan's letters and the documents concerning her portraits. The most complete ms. of the annulment is in the British Museum.

The most important works on Joan of Arc are: G Görres, *Die Jungfrau von Orleans* (1835); Vallet de Viriville, *Histoire de Charles VII*, vol. ii. (1863); H. Martin, *Jeanne d'Arc* (1856); H. Wallon *Jeanne d'Arc* (1860); M. Sepet, *Jeanne d'Arc* (1868); Dufresne de Beaucourt, *Histoire de Charles VII.* vol. ii. (1882); S. Luce, *Jeanne d'Arc à Domrémy* (1886); J. Michelet, *Jeanne d'Arc 1412–1432* (1888); Canon P. Dunand, *Jeanne d'Arc* (1899); A France, *Vie de Jeanne d'Arc* (1907); A. Lang, *The Maid of France* (1908); G. Hanotaux, *Jeanne d'Arc* (1911); G. Goyau, *Sainte Jeanne d'Arc* (1920).

JOASH or **JEHOASH,** the name of two kings in the Bible

1. Son of Ahaziah (*see* JEHORAM, 2) and king of Judah. He obtained the throne by means of a revolt in which Athaliah (*q.v.*) perished, and his accession was marked by a solemn covenant, and by the overthrow of the temple of Baal and of its priest Mattan (-Baal). In this the priest Jehoiada took the leading part 2 Chronicles adds several new details, including a tradition of a conflict between the king and priests after the death of Jehoiada (xxii. 11; xxiv. 3, 15 *sqq.*). The king perished in a conspiracy, the origin of which is not clear.

2. Son of Jehoahaz and king of Israel. Like his grandfather Jehu, he enjoyed the favour of the prophet Elisha, who promised him a triple defeat of the Aramaeans at Aphek (2 Kings xiii 14 *sqq.* 22–25). The cities which had been taken from his father by Hazael, the father of Ben-hadad, were recovered and the relief gained by Israel prepared the way for its speedy extension of power. When challenged by Amaziah of Judah, Joash uttered the famous fable of the thistle and cedar, and a battle was fought at Beth-shemesh, in which Israel was completely successful

JOB. The book of Job in the Bible is an acknowledged masterpiece, both as an expression of religious experience and as a work of poetic genius. Its theme is the struggle of a deeply religious soul with the doubts aroused by undeserved suffering.

Contents.—Job is a man of exemplary piety, but in heaven "the adversary" charges that he is pious because he is prosperous. To disprove this God permits the destruction of Job's property, his children and his health. Job's patient endurance under these afflictions at length gives way to bitter lamentation His friends—Eliphaz, Bildad and Zophar—maintain that he is suffering for his sins, but this he indignantly denies. One after another they reason with him, and to each he replies in turn A second and a third time they speak, advancing from gentle suggestions to specific accusations, while Job, vehemently asserting his innocence, is driven not only into anguished perplexity regarding God's ways but even to outright denial of His justice Nevertheless from the cruel dogmatism of his friends he turns again and again to God, increasingly confident that the very One who seems so unjust will ultimately vindicate him. A young man named Elihu now enters the debate and eloquently but vainly enlarges upon what the friends have been saying Finally in the majestic voice of a whirlwind the Almighty Himself replies to Job, reviewing the marvels of Creation until Job confesses that his denial of God's justice was due to ignorance. God then condemns the friends, declares that Job has spoken rightly of Him and restores the sufferer to wealth and happiness.

Literary Form and Relationships.—Two introductory chapters of prose narrative present the characters and bring the story to the point where Job's patience breaks down. The conclusion of the book, narrating the condemnation of the friends and the restoration of Job's fortunes, is also prose (xlii 7–17).

Between these lies the main body of the work, including Job's first passionate complaint (ch. iii.), the three successive rounds of argument with his friends (iv.–xxxi.), the long harangue of Elihu (xxxii.–xxxvii.) and the divine speeches with Job's submission (xxxviii.–xlii. 6). All this is written in the form of poetic dialogue.

Commentators have sometimes compared the book of Job with the Greek philosophical dialogue. Job's problem is distinctly philosophical, but its treatment is poetic. The author was more closely related to the dramatists than to the philosophers of Greece. Parallels between Job and the *Prometheus Bound* of Aeschylus have often been pointed out. A comparative study of these products of Aryan and Semitic thought, and of such modern works as *Faust* or *Manfred*, is very instructive, though the Greek poet's theme was the jealous hostility of the gods to man's progress in civilization rather than the difficulty created for ethical theism by a righteous man's suffering.

In form as well as subject Job somewhat resembles a Greek tragedy. Many interpreters, both ancient and modern, have treated it as a drama. Others object that there is no action, yet "the varying attitude of Job's mind toward God exhibits dramatic action and tragic interest of the highest kind, though the movement is internal" The fact that we find no other drama in ancient Semitic literature is not conclusive. Greek influence, though improbable at the time when Job was written, was not impossible. All interpretations of the book as a drama include portions which modern critics do not accept as belonging to the original work; but if the book as a whole fitted naturally into the classical form of the drama, only the most compelling critical arguments could outweigh that fact. As a matter of fact, this is not the case. Not a little revision is necessary to make Job a Greek tragedy, and the result proves only that the book can be arranged as a drama, not that it was so intended.

Hebrew literature developed its own forms. Peculiarly Hebrew is the group of writings known as the Wisdom literature (*q v.*). It deals with the lessons of practical experience. Religion is regarded as essentially a way of life. The value of rites and institutions is not considered, and if beliefs are discussed at all it is in relation to moral experience. The unique position and prerogatives of the Chosen People are not emphasized: only in the apocryphal books does this interest creep into the Wisdom literature.

For the antecedents of this type of writing we must look, not to the Greeks, but to the Egyptians and Babylonians. Long before the time of the Hebrew Wisdom literature the Egyptians had writings resembling them in form and spirit. None of these, however, have any noteworthy relationship to Job. Less material of this character has been found in Babylonian literature, yet there is one remarkable composition known to scholars as "the Babylonian Job." It is the poetic monologue of a pious king who, like Job, suffered grievous maladies until delivered by his god. Not only the situation but even the language reminds us of Job, but there is no dialogue nor any discussion of moral retribution. That the Hebrew writer was acquainted with this Babylonian poem is improbable. A few scholars believe that the book of Job is of Edomitic origin. The setting of the story, the personal names and the author's theology have been cited in support of this hypothesis. The folk-tale upon which the poem was doubtless based may have come from the Edomites. This would account for the setting and the names. We know too little about the Edomites to speak confidently of their theology, but the main problem of our book grows directly out of the historical situation of post-exilic Judaism.

Whatever may be said of the form and relationships of Job, there can be no difference of opinion regarding the sublimity of the style, the vividness and beauty of the figures, the keenness of the author's insight into human nature and the depth and earnestness of his thinking. His work has a universal quality and a note of reality which can be found only in the greatest literature.

Date, Integrity and Authorship.—"The tendency among recent scholars is to put the book of Job not earlier than the 5th century B.C. There are good reasons for putting it in the 4th century." Its place in the history of the problem of suffering among the Hebrews (*see* below) favors this date. There are also indications of literary dependence (*cf.* Job vii. 17 and Ps. viii. 4; Job iii. 3–12 and Jer. xx. 14–18). On the relation between Job and Is. xl. *seq.* scholars are not agreed. Ezekiel (xiv. 14, 20) mentions Job by name, but the reference may be merely to a hero of popular tradition.

Not all of the book was produced in the 4th century. The story may have circulated in both oral and written form considerably earlier. The opening and closing narratives of our book of Job were probably parts of such a composition, for they imply a conversation between Job and his friends quite different from the present dialogue. Apparently the poet has adapted the older book to his purpose by simply removing the middle portion and putting his own work in its place. There are also passages which must be later than the main body of the book. The speeches of Elihu "destroy the dramatic effect by introducing a lengthened break between Job's challenge and the answer of God." In style they differ from the rest of the book, while the arguments largely reproduce those of the friends. Furthermore there is no reference to Elihu anywhere else in the book. Most critics agree, therefore, that the whole section is a later addition. "The position taken by Elihu is almost that of a critic of the book"—perhaps this reveals the purpose for which he was created.

The lovely lyric on wisdom in ch. xxviii. is complete in itself and is out of place where it stands or anywhere else in the book We may be grateful, however, to the editor, who, by interpolating it, preserved it for us. Less perfect, though interesting and impressive, are the descriptions of Behemoth and Leviathan in ch. xl. 15–xli. They destroy the force of the second divine speech, making it only a weaker copy of the first, and if they are joined to ch. xxxviii.–xxxix. as one speech, their inferiority to those chapters becomes all the more evident. Possibly they were added by a writer who supposed that something had been lost from the second speech, which is very brief without them, and therefore undertook to restore the missing material after the pattern of the preceding chapters. In the third round of the dialogue the speech of Bildad is short, and Zophar has none. Moreover in some of the passages attributed to Job he says precisely what his friends have been urging against him. Both difficulties are met by rearranging the text. The dislocation, if not accidental, may have been designed to represent Job as convinced by the orthodox arguments of his friends. Possibly the book has suffered still further interpolation and dislocation. Several scholars have undertaken to restore the original poem. Only continued study can determine how far their schemes are justified, but in general they assume an almost incredible amount of alteration by scribes and editors.

Of the author we know only what we can infer from his work. That he was a lover and a keen observer of nature is evident. He was also conversant with the conditions and problems of human life, in the desert and in the city, and had either travelled widely or listened attentively to the reports of travellers. What he heard and saw, moreover, entered into his soul; he thought and felt profoundly. And he had a divine gift of utterance. Beyond this we cannot safely go. Like many others whose work is immortal, he himself is forgotten.

History of the Problem.—So long as primitive man believed that the beings to whose anger he attributed his misfortunes were capricious and irresponsible, there was no problem of divine justice. Even when men worshipped an ethical deity, who dealt with them according to their deeds, they might explain undeserved calamities by the malignity of other gods or spirits. Only when they believed their god to be omnipotent was this impossible. The problem of divine justice therefore presupposes ethical monotheism.

The early Hebrew prophets and historians felt no problem, because they thought in terms of the nation, which had sinned. The problem of individual retribution emerges with Jeremiah. Unable to understand why his fidelity only brought persecution, while sinners were at ease, Jeremiah found strength to endure

in consecration to his task and communion with God. Many of the Psalms emphasize the oppression of the righteous by the wicked, though it is not clear whether individuals are meant or Israel and its enemies. The Psalmists complain of God's apparent indifference, but neither question nor defend His justice. Intermediate between national and individual retribution was the doctrine that men suffered for their fathers' sins. This seemed to explain undeserved suffering; but to meet the objection that it was unfair, Ezekiel unequivocally asserts exact individual retribution. Whether the book of Ezekiel belongs to the exile or a later period, this doctrine was an accepted tenet of post-exilic Judaism and as such underlies all the Wisdom literature. It sets the problem for the book of Job.

When experience did not verify the doctrine, most of the Jews found comfort in believing that undeserved affliction and happiness were temporary (Ps. xxxiv., xxxvii., lxxiii.). The prosperity of the wicked was explained as part of God's plan for their destruction (Ps. xcii.); no explanation was attempted for the suffering of the faithful. For the nation promises of renewed glory were made by Ezekiel and Isaiah xl. *seq.* The latter also had an explanation for Israel's afflictions: as the Servant of the Lord, Israel suffered that the Gentiles might be saved. But apparently this was not generally accepted. Ps. xxii., though dependent upon Is. xl. *seq.*, has not the doctrine of vicarious suffering, nor is the idea developed in any of the later books of the Old Testament.

The period following the exile was one of hope deferred. Haggai and Zechariah traced the people's misfortunes to failure to rebuild the temple; when this was done, they repeated the earlier promises. Scepticism was evidently rife when Malachi wrote, but again we have only promises without explanation Habbakuk complains of Israel's oppression by a wicked nation, and the answer is that deliverance will come at the appointed time. Continued frustration forced the Jews to look beyond this life. In Ps. xlix. and lxxiii. the righteous sufferer takes refuge in a relationship with God which is apparently regarded as outlasting death. This conception is not found elsewhere in the Old Testament. More congenial to Judaism was the idea of resurrection, which played a prominent part in the apocalyptic hopes of the Greek and Roman periods. Only the beginnings of this development are found in the Old Testament (Is. xxvi. 19; Dan. xii. 2). In Daniel Israel is still the primary object of concern, though righteous and wicked within the nation are distinguished and the ideal of martyrdom is introduced. The book of Ecclesiastes shows that there were some who had no satisfying hope for the future. They could meet the problem only by resignation to the inevitable and unquestioning enjoyment of the good things in life, with a reasonable degree of piety and virtue.

While still largely attributing Israel's sufferings to the sins of the people and their fathers, a few books suggest another explanation. Zechariah represents "the Satan" as a supernatural enemy of God's servants. In the extra-canonical book of Enoch the nations are governed by angels who are responsible for wrongs done to Israel, and this may be the meaning of the "gods" of Ps. lxxxii. 1, 6 *seq.* (*cf.* lviii. 1, RV margin), the "high ones" of Is. xxiv. 21, and the "princes" of Dan. x. 13, 20; xii. 1. Doubtless all this reflects popular theology. In effect it is a reversion to primitive conceptions.

Purpose and Teaching.—The book of Job is a poem, not a treatise. "In the history of a soul, rather than the discussion of a problem, lies the supreme interest of the book" (Peake). But the author is interested in the problem. "No Hebrew writer is merely a poet or a thinker. He is always a teacher." Only the individual aspect of the problem is considered; like the other Wisdom writers, the poet is not concerned with the nation. According to the prologue Job's affliction was a test of his piety. That religion can be disinterested is the moral of the story (as, doubtless, of the original folk-tale). It is not, however, the theme of the book. Nor is the testing of the righteous the poet's own solution of his problem. The implication that what is inexplicable on earth is not so in heaven suits his purpose, but the function of the prologue in the present book is to show the reader in advance that the friends' explanation of Job's suffering was unfounded. The conception of "the Satan" (adversary), which is precisely that noted in Zechariah, was probably not taken literally by the poet. The dialogue revolves about the doctrine of retribution. Job's friends admitted that wicked men prospered but regarded such prosperity as short-lived. Adversity might lead to repentance, but one would not suffer if he had not sinned. "Job agreed that afflictions came directly from the hand of God, and also that God afflicted those whom He held guilty of sins. But his conscience denied the imputation of guilt, whether insinuated by his friends or implied in God's chastisement of him."

Modern scepticism, assuming God's goodness, questions His omnipotence. Job's God is the irresistible Power manifest in nature and destiny; what is doubtful is His justice. Having formerly believed that God was good to him, Job tries to reconcile God's past and present dealings with him. He can see no benevolence behind his affliction; therefore he concludes that what seemed kindness was but cruel deceit, designed to make his fall more crushing. It is a frightful thought, but he knows he is guiltless. Gradually his passionate sincerity leads him into a deeper spiritual experience. Faith reasserts itself: "he appeals from God to God, and beseeches God to pledge Himself that he shall receive justice from God (xvi. 19; xvii. 3)." The passage in which his growing assurance reaches its triumphant climax (xix. 25 *seq.*) seems to imply a vindication after death, but the text is uncertain Once before (xiv. 13) the idea of a resurrection has appeared, only to be rejected. Whether Job here adopts it must remain an open question; in any case the hope of future recompense does not solve Job's problem. Some commentators find a solution in the speeches of Elihu, but these were not a part of the original book, and what Elihu really adds to the debate "is not his position but his arguments." Even in the divine reply to Job, where, if anywhere, we should expect to find the author's view of the problem, God only rebukes Job's presumption and shows him his ignorance. The epilogue provides his vindication, though it does not state that he has lived righteously but that he has spoken rightly of God.

Taking the book as a whole, we must admit that its meaning is not altogether clear. The many interpretations offered have just one point in common: certainly the doctrine of exact retribution in this life is definitely rejected and refuted. Both its incompatibility with the facts of life and its evil consequences are demonstrated. In the friends it produces a false interpretation of Job's misfortunes which makes them miserable comforters indeed. In Job himself it leads to a denial of God's justice and a feeling of estrangement from Him. Many believe that this negative teaching exhausts the author's purpose. It is quite enough to mark the book as one of the greatest products of Hebrew thought.

More than this, however, is involved in the poem. No explanation of the mystery is given because man is not in a position to understand the government of the universe. The poet does not tell us whether or not he believes that God cares for the individual, though he forcibly suggests that the universe does not exist for man alone. What he emphasizes is that God's ways are beyond all human comprehension. It is presumptuous to suppose that man is or ought to be able to explain them.

But if an explanation is impossible, it is also unnecessary. Job does not understand, but he sees God. Unfortunately the significance of his final confession is uncertain; it hinges on the meaning of xlii. 6, which in the present text is ambiguous, if not unintelligible. Whether it implies loving trust or mere submission we cannot tell. In either case Job has had a personal experience of the reality and majesty of God Thus the poet shows how the heart may find peace, though neither tradition nor speculation can answer the questions of the intellect. The primary purpose of the book is therefore practical, including comfort for those who suffer undeservedly, emancipation from a dogma which puts an unnecessary strain upon their faith and hardens their friends against them, realization of the intellectual presumption of questioning God's justice, and satisfaction in immediate personal communion with Him

JOB ANALYSIS. This term, widely used since the World War, was applied by the personnel division of the American army to the analysis of occupational activities into their components, by means of which job specifications were drawn up showing exactly what a worker in each occupation was expected to do and be. On the basis of these specifications men were selected to fill positions such as those of chauffeur, gunsmith, etc. After the war the concept of job analysis was carried into industry, education and allied fields, where it is applied not only to the work involved in a trade, but also to the work involved in a profession.

Though the term "job analysis" is recent, the technique it employs is not new. Under the term "vocational analysis," investigators in vocational guidance have for some years analyzed vocational activities into their component parts so as to secure a basis on which a person can choose a vocation. A pioneer study of this nature, *The Machinist,* was made in 1910 by Frederick J Allen for the Vocation Bureau of Boston, Massachusetts. Similar studies have followed in a number of other communities and for a number of other occupations. Again, the technique, if not the name, was used by the efficiency engineers of the early part of the 20th century. Taylor and others, in endeavouring to discover the unnecessary motions made by workers in industrial operations and in establishing standards of efficient performance, made analyses, dividing each job into units as minute as possible.

Community Surveys.—Educators have used the term and the method in seeking to establish a scientific basis for organizing and teaching courses in vocational training. In 1914 the city of Richmond, Va , organized a survey of the community in order to discover its vocational opportunities and needs. Similar surveys followed in other cities, one of the most thorough being that of Cleveland. These surveys employed the method of job analysis, and their reports contain fairly detailed classification and descriptions of the operations involved in the various vocational activities in the communities. In addition to these surveys, analyses have been made in a more or less laboratory manner, having as their aim the dissection of vocational activities for the purpose of formulating methods of giving instruction. Under these circumstances Charles Allen formulates the steps to be taken as follows: (*a*) divide the work into unit operations; (*b*) divide each operation into operating points; (*c*) divide the operating points into two kinds, machine operating points and human operating points These are then taught to apprentices as units or are put together into projects and taught as larger units.

Analyses by even more strict laboratory procedure have been carried out, chiefly by psychologists, in the effort to discover facts about learning which could be put to use in the training of apprentices. Bryan and Harter investigated telegraphing and discovered the rate at which learners could receive and send at various stages of their progress W. F. Book made a similar study of typewriting. Wells and, later, Hoke investigated, among other things, the nature of the errors which a typist makes. On the basis of these facts a teacher of typewriting can direct a learner in the avoidance of errors and the more rapid acquisition of skill

Procedure.—Analysis should be made from a number of points of view. Especially is this necessary when made for the purpose of drawing up job specifications or qualifications that must be possessed by the worker. Economic questions should be answered, such as how much money may be earned, how the demand for workers fluctuates, etc From the physical point of view the analysis should specify the movements that the worker makes, the weights to be lifted and the like. Physiological data should be gathered showing such things as preferable age, height, sensory acuity and also liability to accident or to occupational disease. The psychological phase of the analysis involves a statement of the mental processes involved in the work, the degree of intelligence required, amount and kind of education and temperamental requirements. From the sociological point of view, enquiry should be directed toward the class of workers engaged in the occupation, their nationality, family status, etc. Thus true analysis requires and results in a complete view of occupational activity.

Prominent Errors.—In carrying out such complex investigations some mistakes are made, such as those due to the temptation to rely on opinions obtained by questioning workers and their employers. This "questionnaire method" has received severe condemnation from scientists and should be used sparingly by investigators in the field of job analysis. In the first place, it yields chiefly opinions showing what some one thinks the work is like. Secondly, it usually states the components of the job in general, abstract words such as "accuracy," "quickness" and the like, which do not characterize any occupation in particular, being required in hundreds of different jobs.

Too great dependence on psychological tests is another error. There is a procedure whereby a number of psychological tests are chosen which seem to resemble the work being analyzed. Those tests in which the good workers excel and the poor workers fall short are considered to call forth the same mental activities as those required in the job and to constitute therefore the analyzed components of the work. As a matter of fact, such an assumption is not valid The activities called forth by the tests are merely test-activities and nothing more

Scientific Method.—In formulating a procedure which promises scientifically valid results, and will be applicable regardless of the ends for which an analysis may be made, the underlying requirement is that the procedure must conform to the rigid technique of scientific method. It must be unbiased and dominated only by the desire for the exact determination of conditions. Thorough analysis can be carried on only by trained scientists, though they must have the co-operation and assistance of experts in the occupational fields as well.

In conducting an analytic investigation the first task is to survey the entire vocational field in which the activity lies, to determine its relation to the social organization, then to divide it into its occupational sections These are to be described in terms of their relations with each other and their relation to the whole field. Then each occupational section is described and divided into smaller units This division may be made by mere observation, and the operations may at first be described in qualitative terms, but the descriptions should also be couched in quantitative terms

Use of Measurements.—Measurement is an indispensable part of the process. The early quantitative analyses of F. W. Taylor were made with a stop-watch reading in fifths of a second. As the principle of measurement has become more widely extended, however, there has come a demand for measurements of greater precision, made with instruments used in the psychological laboratory for the measurement of intervals of time as small as one-thousandth of a second. For example, pictures have been made of the eye-movements made by proof-readers The chronocinematographic method of F. B and L. M. Gilbreth offers much promise for the exact measurement of motions and time intervals involved in work operations. Motion pictures of the worker at his work are taken, in which is placed a clock that measures time in millionths of an hour. The background in each picture is cross-sectioned into squares of predetermined size. By examining the exact position of the worker in each succeeding picture in relation to these squares and to the time-recorder, it is possible to determine how much he has moved and at what rate.

For developments in Great Britain *see* the article on FATIGUE IN INDUSTRY.

Some indication of the fundamental part which job analysis can play will be furnished by this list of ends which have motivated the various analyses that have been made: elimination of waste motions; determining standard day's tasks; wage setting; figuring accurate costs; arranging grades and routes of promotion; inventing trade tests; establishing a curriculum for vocational education; determining methods of teaching vocational activities; securing a

basis for choice of a vocation; securing job specifications for the selection of workers. *See* also INDUSTRIAL PSYCHOLOGY; INTELLIGENCE TESTS.

(H. D. K.)

JOBBER, a term used principally in America to denote an individual, firm or corporation engaged in business, as a merchant middleman, for the purpose of purchasing goods for re-sale to the retail trade. The wholesaler and the jobber constitute two separate and successive links in the chain of distribution mainly in marketing agricultural products. Originally, the jobber was a merchant middleman who specialized in buying and selling odd, isolated or "job" lots of merchandise. The wholesaler, on the other hand, maintained continuous stocks and specialized in buying and selling more or less complete offerings of certain lines of merchandise. This distinction in the marketing of manufactured products has almost completely disappeared. Manufactures have so greatly standardized production methods and improved distribution that they have fewer job lots to sell. Also, regular wholesalers, large scale retailers and department stores are constantly seeking available job lots. Some of these job lots are used for private branding and some for special sales, basement bargains, etc. The jobber, then, in the original sense of the term, has merged with the wholesaler in most lines of trade in manufactured products. The functions of the jobber may be listed as follows: (1) assembling, transporting and delivering stocks; (2) extending credit to customers; (3) assuming risks of price fluctuation, wastage and deterioration; (4) selling stocks through a regular sales force; (5) providing the retailer with advice and assistance in matters of stock turn, stock control and selling methods.

(G. R. C.)

JOBBER (STOCK EXCHANGE). Every member or applicant for re-election, admission, or re-admission to the London Stock Exchange must declare to its committee whether he proposes to act as a broker, a dealer, or a clerk. No member or authorized clerk is allowed to carry on business in the double capacity of broker and dealer. A dealer may not deal for or with a non-member of the Stock Exchange: he cannot, that is to say, buy or sell for a client outside the Stock Exchange. Partnerships between brokers and dealers are prohibited. The Stock Exchange dealer is nearly always termed a jobber, but the Stock Exchange rules, from which the foregoing statements are extracted, hardly use the word jobber, familiar as it is through use during more than a century. Put simply, the London Stock Exchange rules forbid jobbers to deal with anyone except a broker, or an authorized clerk, a fellow-jobber, while a broker acts as an agent between members of the public and members of the Stock Exchange.

The Jobber a Principal.—While the broker acts as intermediary or agent, the jobber's status is that of a principal. He buys from one man the securities that he hopes to sell to another; or he sells in the expectation of being able to replace the stock or shares at a lower figure. He has to deal in the dark, for the broker who approaches him with business in those shares in which he, the jobber, specializes, does not say whether the order is to buy or to sell. This is the reason for the double prices always quoted in the Stock Exchange. The jobber, in making a price, thereby commits himself to buy at the lower or to sell at the higher of the two prices mentioned. He is not compelled to make a price. In times of panic, when sellers greatly preponderate, it might be financial suicide for a jobber to continue making prices in stocks that he could feel practically certain would be sold to him, though he himself had little chance of finding buyers. In booming markets, he hesitates to continue making prices in some shares of which there may be only a scanty supply, since the brokers, acting for the public, would insist upon buying if he made a price. In the case of a slump, the jobber might find himself with much more stock than he wanted; in a boom, he might be left in the position of having sold shares that he could not get back again.

The Jobber's Book.—Such being the possible conditions in a Stock Exchange slump or boom, it will be seen that the jobber makes a book, and that this book may lead either to profit or to loss. The prices that the jobber makes are regulated mainly by the public supply and demand. If the jobber finds himself being left with more shares than he sells, he lowers his price; if he keeps on selling shares in response to demand, he puts it up, hoping to induce people either to buy from him or to sell to him, as the case may be. He is running risks all the time, through the system of making a price and not knowing whether he will be called upon to take, or to supply, the stock. If, having sold £500 War Loan to a fellow-member, he could be certain that his next bargain would be the purchase of £500 of the same stock at a fraction below the price of his previous sale, all would be plain-sailing; but uncertainty waits upon every bargain that a jobber books. There may be a profit: the double price gives the jobber room in which to turn round. On the other hand, the transaction may easily end in loss to the jobber. He takes the rough with the smooth and hopes that the profits will outweigh losses. If they did not, there would soon be no jobbers; but in a market where prices are moving rapidly under the influence of substantial public orders to buy or sell, or both, the jobber stands to be "shot at," as the expressive phrase goes. He frequently has the unpleasant experience of finding that, at the end of a day's heavy business, all the profits that he has made on jobbing are swallowed by a loss on his book: he may have bought more, on balance, than he has sold and the price has moved down against him; or he may have sold, and been unable entirely to replace, shares that have risen in price at the end of the day.

The Jobber a Specialist.—Whereas the Stock Exchange broker receives orders in stocks and shares of every description, the jobber confines his book to a specialized market. If he deals in Coats, he will not touch Canadian Pacifics The dealer in Shell Transports has nothing to do with British Celanese. Where there are partners in a firm of jobbers, some of them will probably act in various markets, but one man confines his attention to a particular class or set of securities. He studies the companies, knows the brokers who are likely to be buyers or sellers of his own special shares, and may keep a stock of these shares on his book for the brokers who, he hopes, will come and buy them from him on behalf of their clients. Experience gives him a sense of possible movements, rise or fall; though, in practice, even experience can prove a very misleading guide. As a principal, liable to make either loss or profit, the jobber is not tied down by any official scale of minimum remuneration. He makes what he can, competition serving to keep the "turns" within reasonable limits. The jobber's life involves more risks, more excitement, and more stagnation—according to the state of public interest in the jobber's market—than the life of a broker. The jobber has shorter hours than the broker, his expenses are on a more modest scale, and the drudgery is much less; but the fact that a census of London Stock Exchange members usually reveals about the same number acting in each class proves that the profits are divided more or less evenly between brokers and jobbers.

(W. L.)

JOBST or JODOCUS (*c.* 1350–1411), margrave of Moravia, was a son of John Henry of Luxemburg, margrave of Moravia, and grandson of John, the blind king of Bohemia. He became margrave on his father's death in 1375, and was chosen German king on Oct. 1, 1410, in opposition to Sigismund, who had been elected a few days previously. He died on Jan. 17, 1411.

See J. Heidemann, *Die Mark Brandenburg unter Jobst von Mähren* (1881); J. Aschbach, *Geschichte Kaiser Sigmunds* (1838–45).

JOB'S TEARS, in botany, the popular name for *Coix Lachryma-Jobi,* a species of grass, of the tribe *Maydeae,* which also includes the maize (*see* GRASSES). The seeds, or properly fruits, are

contained singly in a stony involucre or bract, which does not open until the enclosed seed germinates. The young involucre surrounds the female flower and the stalk supporting the spike of male flowers, and when ripe has the appearance of bluish-white porcelain. Being shaped somewhat like a large drop of fluid, the form has suggested the name. The fruits are esculent and the involucres are used for making necklaces and other ornaments. The plant is a native of India, but is now widely spread throughout the tropical zone. It grows in marshy places; and is cultivated in China, the fruit having a supposed value as a diuretic and anti-phthisic. Forms of it are used as cereal foods in parts of eastern Asia and in the Philippines where it is called *adlay*.

JOCASTA: *see* OEDIPUS.

JOCKEY, a professional rider of race-horses, now the current usage (*see* HORSE-RACING). The word is by origin a diminutive of "Jock," the Northern or Scots colloquial equivalent of the name "John."

JODELLE, ÉTIENNE, seigneur de Limodin (1532–1573), French dramatist and poet, belonged to the Pléiade (*see* DAURAT) and proceeded to apply the principles of the reformers to dramatic composition. Jodelle aimed at creating a classical drama that should be in every respect different from the moralities and *soties* then occupying the French stage. His first play, *Cléopâtre captive,* was represented before the court at Reims in 1552. Jodelle himself took the title rôle, and the cast included his friends, Remy Belleau and Jean de la Péruse. In honour of the play's success the friends organized a little fête at Arcueil when a goat garlanded with flowers was led in procession and presented to the author—a ceremony exaggerated by the enemies of the Ronsardists into a renewal of the pagan rites of the worship of Bacchus. Jodelle wrote two other plays, *Eugène* and *Didon se sacrifant*. Jodelle died in poverty in July 1573.

Jodelle's works are collected (1868) in the *Pléiade française* of Charles Marty-Laveaux.

JODHPUR or **MARWAR,** the largest Indian state in the Rajputana agency. Area, 34,963 sq.m. Pop. (1921), 1,841,462. The general aspect of the country is that of a sandy plain, divided into two unequal parts by the river Luni, and dotted with picturesque conical hills, attaining in places an elevation of 3,000 ft. The river Luni rises in the sacred lake of Pushkar in Ajmere, and flows through Jodhpur in a south-westerly direction till it is finally lost in the marshy ground at the head of the Runn of Cutch. It is fed by numerous tributaries and occasionally overflows its banks, fine crops of wheat and barley being grown on the saturated soil. The famous salt-lake of Sambhar is situated on the borders of Jodhpur and Jaipur, and two smaller lakes of the same description lie within the limits of the state, from which large quantities of salt are extracted. Marble is mined in the north of the state and along the south-east border. Marwari traders are an enterprising class to be found throughout the length and breadth of India.

The principal crops are millets and pulses, but wheat and barley are largely produced in the fertile tract watered by the Lūni river. The manufactures comprise leather boxes and brass utensils; and turbans and scarfs and a description of embroidered silk knotted thread are specialities of the country.

The ruling house belongs to the Rathor clan of Rajputs, and claims descent from Rama. After the downfall of the Rathor dynasty of Kanauj in 1194, Sivaji, the grandson of Jai Chand, the last king of Kanauj, entered Marwar on a pilgrimage to Dwarka, and laid the foundation of the state, but it was not till the time of Rao Chanda, the tenth in succession from Sivaji, that Marwar was actually conquered. His grandson Jodha founded the city of Jodhpur, which he made his capital. In 1561 the country was invaded by Akbar, and the chief was forced to submit. Aurangzeb invaded Marwar in 1679, plundered Jodhpur, sacked all the large towns, and commanded the conversion of the Rathors to Mohammedanism. This cemented all the Rajput clans into a bond of union, and a triple alliance was formed by the three states of Jodhpur, Udaipur and Jaipur, to throw off the Mohammedan yoke. One of the conditions of this alliance was that the chiefs of Jodhpur and Jaipur should regain the privilege of marriage with the Udaipur family, which they had forfeited by contracting alliances with the Mogul emperors, on the understanding that the offspring of Udaipur princesses should succeed to the state in preference to all other children. The quarrels arising from this stipulation lasted through many generations, and led to the invitation of Mahratta help from the rival aspirants to power, and finally to the subjection of all the Rajput states to the Mahrattas. In 1818 Jodhpur was taken under British protection. In 1843, the chief having died without a son, and without having adopted an heir, the nobles and state officials were left to select a successor from the nearest of kin. Their choice fell upon Raja Takht Sinh, chief of Ahmednagar. This chief, who did good service during the Mutiny, died in 1873. Since 1896 there was a succession of minorities, during which Sir Pertab Singh of Idar carried on the government of the state as regent. The imperial service cavalry formed part of the reserve brigade during the Tirah campaign, and were on active service during the World War. The chief is a Maharaja, and his salute is 17 guns.

The city of JODHPUR is 64 m. by rail N.W. of Marwar junction, on the Rajputana railway. Pop. (1921), 73,480. It was built by Rao Jodha in 1459, and from that time has been the seat of government. It is surrounded by a strong wall nearly 6 m. in extent, with seven gates. The fort, which stands on an isolated rock, contains the maharaja's palace, a large and handsome building, completely covering the crest of the hill on which it stands, and overlooking the city, which lies several hundred feet below. The city contains palaces of the maharaja, and town residences of the *thakurs* or nobles, besides numerous fine temples and tanks. Building stone is plentiful and close at hand, and the architecture is solid and handsome. Five miles north of Jodhpur are the ruins of Mandor, the site of the ancient capital of the Parihar princes of Marwar, before its conquest by the Rathors.

The Jaswant college is affiliated to the B A. standard of the Allahabad university. To the Hewson hospital a wing for eye diseases was added in 1898.

JOEL. The second of the "Minor Prophets" in the Old Testament.

Contents.—The book falls into two parts: (*a*) i. 2–ii. 17, (*b*) ii. 18–iii. 21. (*a*) The occasion of the prophecy is a plague of locusts. Addressing the people the prophet vividly describes the calamity which threatens complete destruction owing to repeated ravages of the locusts: even the Temple services cannot be maintained because all agricultural produce is destroyed. In this visitation of locusts the prophet sees signs of the approaching "Day of Yahweh" (i. 15): there is no hope save in repentance and prayer, so the prophet urges priests and people to penitence and intercession that the "destruction from the Almighty" may be stayed. He bases his exhortation on an appeal to the obvious facts (i. 16–18). In ii. 1–17 the call to repentance and prayer is repeated and emphasized by a fuller description of the locust plague. This second description is influenced by experience of the scourge already well-known; the stress is laid not upon the result of the visitation but upon the irresistible terror of the approaching hordes. The locusts of this future visitation are the "army" of Yahweh used by him as his agents in "the Day of Yahweh" to execute final judgment. It is not too late to avert destructive judgment by solemn fast and penitence: it must be sincere repentance —"rend your heart and not your garments."

(*b*) Between ii. 17 and 18 there is an interval, during which it is left to be understood that the call to repentance (ii. 12–17) had been obeyed. (The verbs in ii. 18 are in the past tense, so R.V., not future as A.V.) The second part of the book (ii. 17–iii. 21) opens with Yahweh's promise to remove the plague of locusts and restore fruitful seasons. In the new prosperity of the land the union of Yahweh and his people will be sealed anew, spiritual gifts will descend upon them so that *all* will be endowed with clearer perception of divine truth. Signs in heaven and earth announce "the Day of Yahweh." In the crisis there will be no terror for the Jews, they will be delivered and restored; judgment will overtake the nations doomed to destruction for their oppression of Yahweh's people. A digression in prose (iii. 4–8) follows in which special mention is made of the doom of Phoenicia and Philistia.

Then (iii. 9–17) the nations are summoned to prepare for war, not against the Jews but against Yahweh and his supernatural warriors, by whom they will be annihilated. In contrast to the fate of the nations, Yahweh will be a "refuge unto his people," who, by his intervention, are set free to enjoy the benefits he will send. Henceforth Judah and Jerusalem will be secure.

Interpretation.—There has been difference of opinion as to whether the description of devastation by the locusts is to be regarded as literal or allegorical. Is the visitation of locusts with which the book begins historical, or is it a figurative description of an event yet future? In the latter case: are the locusts real locusts (in the future) which supply the imagery of the prophet's message? The allegorical interpretation is found in the Fathers, and was held by Pusey, who considered the book to have been written before Amos. Hilgenfeld, accepting a late date, took the four swarms of locusts to represent Persian invasions. Merx has suggested that the locusts are neither real nor symbolic but ideal, and the rest of the book a late compilation from the prophets. A distinction between the two parts of the book is made by Duhm: according to his view i. 1–ii. 17 deals with a historical visitation of locusts, and ii. 18–iii. 21 is a long apocalyptic expansion from the Maccabaean age. Sellin modifies this view: he considers that Joel used an earlier poem dealing with a historical plague of locusts; this poem, from the 1st century after the Exile, was transformed by Joel into an apocalypse. This transformation was based upon an older tradition which pictured locusts as a kind of demonic army forming one of the eschatological plagues (Gressmann).

A literal interpretation of the locust swarms is generally held by modern authorities and there is a tendency to regard the apocalyptic characteristics as interpolations into the original work of Joel. An argument advanced against the literal interpretation is the description of the locusts as "the northerner" (ii. 20, *haṣephōnī*). Locusts as a rule enter Palestine from the south or south-east; thus it is considered that "the northerner" can only refer to an invading army from the north, *e.g.*, Assyrians, Scythians, Babylonians. But it is evident from the rest of the verse that "the northerner" must refer to locusts. The expression has no connection with the origin of the locusts; it is an epithet denoting the dread which Hebrew thought associated with the north, the region of the uncanny and mysterious. By a common usage the etymological sense of "the northerner" is discarded and the term has assumed a symbolical significance—any agent through which calamity came (Wade).

With the possible exception of iii. 4–8 it appears unnecessary to regard the book as other than the work of one author. At a time when real locusts had brought calamity upon the land Joel calls the inhabitants to repentance. He then turns from the present to the future and describes "The Day of Yahweh" in language suggested to him by experience of actual locusts. The locusts of ii. 1–17 are eschatological, they usher in "the Day of Yahweh." The people repent either in direct response to the prophet's call, or, possibly, in the ideal future to which the prophet looks, and obtain mercy from Yahweh. Thus, in the ideal future as Joel wished to see it, when "the Day of Yahweh" comes it will bring punishment to Israel's foes, to Israel relief and hope.

Date.—The absence of any statement which serves to indicate the precise occasion of the prophecy has caused the book of Joel to be assigned to dates ranging over a period from 835 B.C. to 360 B.C. Many allusions are furnished by the general background of the book, but these are such as lend themselves to explanation in the circumstances of different periods.

Credner in 1831 argued that the conditions implied by internal evidence gave sufficient justification for dating the prophecy in the early days of Joash, king of Judah, 837–801, during whose minority the government was in the hands of Jehoiada the priest (2 Kings xi. 4–21). A division of the book has been suggested by Vernes and Rothstein, assigning i. and ii. 1–27 to the time of Joash, ii. 28-32 and iii. to the post-exilic period. On account of linguistic and other affinities with Jeremiah, König has placed the date in the last years of Josiah. Each of these views is open to serious objection in its interpretation of the evidence and fails to give a satisfactory explanation of a number of passages.

A post-exilic date was first proposed by Vatke; this view is now generally accepted. (Driver, Gray, G. A. Smith, Wade, Merx, Marti, Nowack, Wellhausen.) The style and language of the book have characteristics similar to the earlier prophetic books; but there are late elements, such as the general apocalyptic conceptions, which mark Joel as the work of a post-exilic writer who was acquainted with and influenced by earlier literature. Though in iii. 1 the phrase "bring again the captivity of Judah . . ." may be rendered "retrieve the fortune of Judah . . .," the statement (iii. 2, 3) that the Jews have been dispersed among the nations has no adequate explanation in any event except the overthrow of Judah in 586 and its subsequent effect upon the fortunes of the people. It is therefore necessary to seek a period after the exile when there is an undivided nation which maintains the true worship of Yahweh in the Temple. A time when there is no king: the elders and priests are the leaders of the people, Judah has suffered at the hands of foreign nations; these are not Assyrians nor Babylonians but the people of Tyre, Sidon, Philistia and Greece. Conditions such as these are only satisfied at a period after the settlement of the restored community at Jerusalem; and, since the worship is associated with the Temple, it is implied that the second Temple is in existence. Thus Joel must be later than Haggai and Zechariah i.–viii. (Driver) and cannot be earlier than *c.* 520 B.C. (Wade). The reference to "the wall" in ii. 7, 9 seems to imply that the wall of Jerusalem has been rebuilt and presupposes that the book was written after Nehemiah (*c.* 445 B.C.). Omission of any mention of the Persians as oppressive foes is due to the leniency with which they usually treated the Jews. It was not until the reign of Artaxerxes Ochus (358–337) that Jewish subjects were ill-treated: a period subsequent to this is not supported by internal evidence.

BIBLIOGRAPHY.—Bewer, *Obadiah, Joel and Jonah* (I.C.C.); S. R. Driver, *Joel and Amos* (Camb. B.); G. A. Smith, *The Book of the Twelve Prophets*, vol. ii. (Ex B.); Wade, *Micah, Obadiah, Joel and Jonah* (West. Com.), all of which give references to the earlier literature. (B. M. P.)

JOFFRE, JOSEPH JACQUES CÉSAIRE (1852–), French soldier, was born Jan. 12, 1852, at Rivesaltes, at the edge of the eastern Pyrénées. According to a tradition preserved in the family, his stock is Spanish and noble, and its proper name is Goffre. His great-grandfather fled from Spain for political reasons, came to France, gave his name the French spelling of Joffre, and became a merchant. The grandson of this first Joffre adopted the trade of a cooper. He had 11 children, one of them being the future victor of the Marne.

The studies of young Joffre at the École Polytechnique were interrupted by the Franco-German War and he took part in the defence of Paris in 1870. Afterwards he passed out from the Polytechnique into the engineers and worked on the fortification of Paris. In 1876 he was promoted captain The loss of his wife so affected him, however, that he applied for a transfer to Indo-China, where he took part in the occupation of Formosa in 1885 and remained three years at Hanoi as chief of engineers. In 1888 he returned with Gen. Mensier to Paris. In 1889 he entered the railway regiment. In 1892 he was sent to Senegal to build a railway from Kayes to Bafoulabe. At the end of 1893, a column commanded by Col. Bonnier marched on Timbuktu via the Niger. Joffre, who was a major, was ordered to form a second column, which was also to march to Timbuktu by the left bank of the river. He left Segou on Dec. 27, to receive the news at Goundam at the end of January that Col. Bonnier had been murdered on the 15th Nevertheless, he continued his march on Timbuktu undaunted, and entered the town on Feb. 12, 1894, after marching 813 kilometres Some years later he went to Madagascar to form the base at Diego-Suarez. He was appointed general of brigade in 1900 and general of division in 1905. While commander of the 2nd Army Corps at Amiens he was called to the Conseil Supérieur de la Guerre in 1910 This council, re-established in 1872, consisted of the generals who in time of war would have the chief commands. Gen Joffre was entrusted with the direction of the lines of communication

Under the system then existing, the vice-president of the Higher Council became in time of war commander-in-chief of the armies in the field. But in time of peace he had very little authority over his future subordinates. He could not determine either promotion or commands. The real authority lay with the chief of general staff of the army. Gen. Michel, vice-president of the Higher Council, resigned in July 1911, and the minister of war, M. Messimy, decided to unite the functions of vice-president and those of chief-of-staff of the army in one person, so that in the eventuality of war the chief of the general staff would become commander-in-chief. Who was to exercise these united duties, which constituted a position of considerable power? M. Messimy thought of Gen. Pau, who refused on the ground that he had only 18 months' more service on the active list. Gen. Galliéni was due to pass into the reserve even sooner. M. Messimy's choice accordingly fell on Joffre, who was only 59 years old, and had therefore five years more on the active list.

For three years Joffre exercised complete authority over the army. He had laid his plan of campaign, known as Plan 17, before the Conseil Supérieur on April 18, 1913. Germany having declared war on France on Aug. 3, 1914, he took up the post of commander-in-chief on the 5th. From this day on, the history of his life for more than two years was that of the War itself. This silent general, jealous of his authority but undismayed by the most tragic events, had to bear on his broad shoulders a weight which only his coolness and energy enabled him to sustain. After having attempted in vain to throw himself on the flank of the advancing Germans, he was obliged to withdraw his left wing a considerable distance. He resumed the offensive on Sept. 6, and threw the Germans back to the Aisne in the memorable battle of the Marne. He attempted then to turn their right wing, a frustrated manoeuvre which ended with the rival fronts resting on the sea. The Germans first made the attempt to break the allied line on the Yser in Nov. 1914, and they failed. The French, in turn, tried vainly to break the German front in Champagne, in the Woevre, in Artois, and simultaneously in Artois and Champagne (Sept. 1915).

These checks, following on rash promises and high hopes, had alarmed public opinion. A campaign was conducted against the commander-in-chief, on the one hand by the friends of Gen. Galliéni, who accused general headquarters of having stolen the glory of the Marne; and on the other by the yet more powerful friends of Gen. Sarrail, whom Gen. Joffre had relieved of his command in July 1915. They reproached general headquarters for their blind confidence in 1914. They accused Joffre of rejecting all superior authority and organizing a regular government at Chantilly. So long as Millerand was minister for war he protected the commander-in-chief. But Millerand was replaced on Oct. 30, 1915, by Gen. Galliéni, Joffre had served under the latter at Madagascar, and Galliéni had suggested Joffre to Messimy in 1911 for the post of chief of general staff. But at the beginning of the War, Galliéni, although designated successor to Joffre, had been left as military governor of Paris instead of being called to general headquarters. Then came the battle of the Marne, followed by rivalry, if not between the two commanders, at least among their general staffs. On Dec 3, 1915, however, Gen. Joffre received, instead of the simple command of the north and north-east, the supreme command of all the French armies, an appointment which put under his authority the Army of the Orient, commanded by none other than Gen. Sarrail. But trouble was not slow in arising. On Dec. 16 the minister for war demanded information on the state of the defences before Verdun. On the 18th he received a stiff reply from Gen. Joffre, who offered to resign. Galliéni answered on the 22nd that Joffre enjoyed the complete confidence of the Government. Nevertheless, two months later, on Feb. 21, 1916, the Germans attacked in front of Verdun, and the defences, which were incomplete, were forced in as far as the line of forts, to a depth of 8km. in four days. On March 7 Galliéni read to the council of ministers a memorandum pointing out the necessity of reforming the high command. His advice was not accepted; he was also ill; he therefore resigned, and was replaced on March 17 by General Rocques.

The new minister was a personal friend of Gen. Joffre. Nevertheless, the campaign against him lasted throughout 1916. This was partly due to the apparently indecisive result of the great Allied battle on the Somme, and the personal quarrel between Sarrail and Joffre continued. Finally, Gen. Nivelle, commander of the 2nd Army operating before Verdun, having retaken the fort of Douaumont, appeared as a possible successor to Joffre. A decree of Dec. 13, 1916, conferred on Joffre the title of technical adviser to the Government in matters concerning the direction of the War. He continued to hold the title of commander-in-chief of the French Armies. Gen. Nivelle received the command of the north and north-east—that is to say, of the French front. The Army of the Orient again became independent of general headquarters.

What was this post of commander-in-chief and technical adviser? The Senate demanded an explanation. In a secret committee, which sat from Dec. 19–23, M. Briand, as prime minister, explained the decree of the 13th. The title of commander-in-chief was left to a man who had played an historic part and who deserved every consideration but it implied no authority either over Gen. Nivelle or Gen. Sarrail, who remained free to conduct operations as they wished. Joffre would be consulting member in the War committee, which was merely an organ of preparatory work, its decisions being submitted to the council of ministers. However, on Dec. 13, M. Briand had made changes in the cabinet, and had called Gen. Lyautey to the ministry for war in place of Gen. Galliéni. Lyautey arrived in Paris on the 24th. He considered the post of commander-in-chief and technical adviser granted to Gen. Joffre as incompatible with the authority of the minister for war. These two offices were suppressed, but in compensation Gen. Joffre was created Marshal of France on Dec. 26 In the spring of 1917 he made a journey to North America. The *Académie française* made him a member on Feb. 14, 1918, and he took his seat there on Dec. 19. (H Bl.)

JOHANAN BEN ZACCAI, Palestinian rabbi, contemporary of the Apostles. He was a disciple of Hillel (*q.v.*), and after the destruction of the Temple of Jerusalem by Titus was the main instrument in the preservation of the Jewish religion. During the last decades of the Temple Johanan was a member of the Sanhedrin and a skilled controversialist against the Sadducees. He is also reported to have been head of a great school in the capital. In the war with Rome he belonged to the peace party, and finding that the Zealots were resolved on carrying their revolt to its inevitable sequel, Johanan had himself conveyed out of Jerusalem in a coffin. In the Roman camp the rabbi was courteously received, and Vespasian permitted him to found a college at Jamnia (Jabneh), which became the centre of Jewish culture. It practically exercised the judicial functions of the Sanhedrin. (*See* JEWS, § 40 *ad fin.*) The Mishnah was the outcome of the work begun at Jamnia.

JOHANNESBURG, 26° 13′ S., 28° 56′ E.; altitude 5,740 feet. Distance by rail from Cape Town (via Kimberley), 957 m.; from Port Elizabeth, 712 m.; from East London, 665 m.; from Durban, 482 m.; from Delagoa Bay (via Pretoria), 394 miles. Johannesburg is the largest urban centre in South Africa. In 1926 the white population, including that of its suburbs, numbered 170,543. In 1921 the non-Europeans, chiefly Bantu, totalled 130,612. On the Witwatersrand, as a whole, there were in 1926, 249,865 Europeans.

The main part of the city lies immediately north of the central

part of the main gold reef. The streets run in straight lines east and west, or north and south. The principal business streets are Eloff street, Commissioner street, Market street, President street and Pritchard street. Here, and in the shorter streets intersecting them, are the hotels, shops, banks, mining offices, newspaper offices and clubs, the majority being well built buildings of stone or brick, though often roofed with galvanized iron. Toward the north is Joubert's park, with an art gallery.

To the north of the city rises a sharp ridge, which has become the favourite residential quarter. The houses of brick or local stone are often well designed, and placed among pleasant gardens. The Union observatory, 3 m. N.E. of the city, is equipped with a 26½ in. telescope. On the far side of the ridge are the Zoological gardens, in a spacious, well laid out park, where the animals are well housed, and have plenty of room. The suburbs to the north and east of the city have various names—Jeppestown, Belgravia, Doornfontein, the Berea, Parktown, Yeoville, etc. Fordsburg lies to the west, and includes the gas, and electric light and power works. At Turffontein, 2 m. to the south of the city, is a well-known race-course.

South, east and west lie the mines, with their tall chimneys, battery houses and native labourers' compounds. They extend along the veld for about 50 miles. Characteristic of this belt are the great mounds of white dust, the refuse of the crushing machines. On them vegetation will not grow, and they provide much of the material carried about during the dust storms, which are so well known in and around Johannesburg. The mines in the municipal area, nearly 82 sq.m., are responsible for nearly half the total output of the Transvaal. Among the industries which have grown up in more recent times are flour milling, iron founding, furniture making, food, drink and tobacco manufactures. Large meat chilling installations have been erected.

The climate is cool and bracing in the winter (*see* SOUTH AFRICA), though the sudden changes of temperature are apt to be trying to delicate people. The infantile mortality is high, the figures for 1922, for infants under one year, being over 94 per 1,000. The city has a large hospital; close to it is the South African Institute for Medical Research. There are many large schools and a normal college. The University of the Witwatersrand, which was founded in 1903 as the School of Mines and Technology, and received its charter in 1921, is moving from its old buildings near the railway station into excellent new ones, still incomplete (1928), situated on the ridge to the north in Milner's park, 80 ac. of which were granted by the city as a site for the university. Johannesburg is the seat of a bishopric (Anglican), and a new cathedral is to be completed by 1929

The cost of living is relatively not so high as it formerly was. The price of houses is high, and imported clothing has had to pass a customs barrier, but food is comparatively cheap. The fruit supply is among the best in the country, drawing the best fruit from Natal and the Cape area. There is a good service of electric trams in the city and the suburbs, and the water supply and sewage scheme are satisfactory.

Johannesburg owes its existence to the discovery of gold in the local beds of conglomerate in 1886. It was named after Johannes Rissik, then surveyor-general of the Transvaal. The town was connected by railways with the Cape ports in 1892, and with Natal in 1895. The increased facility of transport caused a further development of mining activity. (*See* also TRANSVAAL: *History.*) After a period of military administration, and of government by a nominated town council, an election for a new council took place in Dec. 1903. In 1905 the town was divided into wards. On Sept. 5, 1928, it was created a city.

JOHANNISBERG, a village in the Prussian province of Hesse-Nassau, in the Rheingau, on the right bank of the Rhine, 6 m. E. of Rüdesheim by railway. Pop. (1925) 1,502. The Schloss crowns a hill overlooking the Rhine valley, and is surrounded by vineyards yielding the famous Johannisberger wine. Built in 1757–59 by the abbots of Fulda on the site of a Benedictine monastery founded in 1090, it was bestowed, in 1807, by Napoleon upon Marshal Kellermann. In 1814 it was given by Francis, emperor of Austria, to Prince Metternich.

JOHN, a masculine proper name common in all Christian countries (Heb. *Yôḥānān,* "Yahweh has been gracious," Lat. *Joannes,* Fr. *Jean,* Ger. *Johannes*); its popularity is due to its having been borne by the "Beloved Disciple" of Christ, St. John the Evangelist, and by the forerunner of Christ, St. John the Baptist

JOHN, THE APOSTLE, in the Bible, was the son of Zebedee, a Galilean fisherman, and Salome. It is probable that he was born at Bethsaida, where along with his brother James he followed his father's occupation. The family appears to have been in easy circumstances; at least we find that Zebedee employed hired servants, and that Salome was among those women who contributed to the maintenance of Jesus (Mark i. 20, xv. 40, 41, xvi. 1). John's "call" to follow our Lord occurred simultaneously with that addressed to his brother, and shortly after that addressed to the brothers Andrew and Simon Peter (Mark i. 19, 20). John speedily took his place among the twelve apostles, sharing with James the title of Boanerges ("sons of thunder," perhaps strictly "sons of anger," *i.e.* men readily angered), and became a member of that inner circle to which, in addition to his brother, Peter alone belonged (Mark v. 37, ix. 2, xiv. 33). John appears throughout the synoptic record as a zealous, fiery Jew-Christian. It is he who indignantly complains to Jesus, "We saw one casting out devils in Thy name, and he followeth not us," and tells Him, "We forbade him" for that reason (Mark ix. 38); and who with his brother, when a Samaritan village will not receive Jesus, asks Him, "Wilt thou that we command fire to come down from heaven and consume them?" (Luke ix. 54). The Book of Acts confirms this tradition. After the departure of Jesus, John appears as present in Jerusalem with Peter and the other apostles (i. 13); is next to Peter the most prominent among those who bear testimony to the fact of the resurrection (iii. 12–26, iv. 13, 19–22); and is sent with Peter to Samaria, to confirm the newly converted Christians there (vii. 14, 25). St. Paul tells us similarly that when, on his second visit to Jerusalem, "James," the Lord's brother, "and Cephas and John, who were considered pillars, perceived the grace that was given unto me, they gave to me and Barnabas the right hand of fellowship, that we should go unto the heathen, and they unto the circumcision" (Gal. ii. 9). John thus belonged in 46–47 to the Jewish-Christian school; but we do not know whether to the stricter group of James or to the milder group of Peter (ibid. ii. 11–14).

The subsequent history of the apostle is obscure. Polycrates, bishop of Ephesus (in Euseb., *H. E.* iii. 31; v. 24), attests in 196 that John "who lay on the bosom of the Lord rests at Ephesus"; but previously in this very sentence he has declared that "Philip one of the twelve apostles rests in Hierapolis," although Eusebius (doubtless rightly) identifies this Philip not with the apostle but with the deacon-evangelist of Acts xxi. 8. Polycrates also declares that John was a priest wearing the πέταλον (gold plate) that distinguished the high-priestly mitre. Irenaeus in various passages of his works, 181–191, holds a similar tradition He says that John lived up to the time of Trajan and published his gospel in Ephesus, and identifies the apostle with John the disciple of the Lord, who wrote the Apocalypse under Domitian, whom Irenaeus's teacher Polycarp had known personally and of whom Polycarp had much to tell. These traditions are accepted and enlarged by later authors, Tertullian adding that John was banished to Patmos after he had miraculously survived the punishment of immersion in burning oil. As it is evident that legend was busy with John as early as the time of Polycrates, the real worth of these traditions requires to be tested by examination of their ultimate source This inquiry has been pressed upon scholars since the apostolic authorship of the Apocalypse or of the Fourth Gospel, or of both these works, has been disputed. (*See* JOHN, GOSPEL OF ST, and APOCALYPSE.)

The opponents of the tradition lay weight on the absence of positive evidence before the latter part of the 2nd century, especially in Papias and in the epistles of Ignatius and of Irenaeus's authority, Polycarp. They find it necessary to assume that Irenaeus mistook Polycarp; but this is not a difficult task, since already Eusebius (*c.* 310–313) is compelled to point out that Papias testifies to two Johns, the Apostle and a presbyter, and that Ire-

naeus is mistaken in identifying those two Johns, and in holding that Papias had seen John the Apostle (*H.E.* iii. 39, 5, 2). Irenaeus tells us, doubtless correctly, that Papias was "the companion of Polycarp": this fact alone would suffice, given his two mistakes concerning Papias, to make Irenaeus decide that Polycarp had seen John the Apostle. The chronicler George the Monk (Hamartolus) in the 9th century, and an epitome dating from the 7th or 8th century but probably based on the *Chronicle* of Philip of Side (*c.* 430), declare, on the authority of the second book of Papias, that John the Zebedean was killed by Jews (presumably in 60–70). Adolf Harnack, *Chron. d. altchr. Lit.* (1897, pp. 656–680), rejects the assertion; but a number of scholars accept it as correct.

(F. v. H.)

JOHN I., pope from 523 to 526, Tuscan by birth, was consecrated pope on the death of Hormisdas. Theodoric sent him to Constantinople on an embassy to Justin to secure toleration for the Arians. He was suspected of lukewarmness in his mission, and was imprisoned by Theodoric on his return. He died in prison on May 18; his feast-day is May 27.

JOHN II., pope from 533 to 535, also named Mercurius, succeeded Boniface II. At the instance of Justinian he adopted the proposition *unus de Trinitate passus est in carne* as a test of the orthodoxy of certain Scythian monks accused of Nestorian tendencies. He was succeeded by Agapetus I.

JOHN III., pope from 561 to 574, successor to Pelagius, was descended from a noble Roman family. He is said to have prevented an invasion of Italy by the recall of the deposed exarch Narses, but the Lombards continued their incursions.

JOHN IV., pope from 640 to 642, a Dalmatian by birth, succeeded Severinus after an interval of four months. He adhered to the repudiation of the Monothelite doctrine by Severinus, but endeavoured to explain away the connection of Honorius I. with the heresy. His successor was Theodorus I.

JOHN V., pope from 685 to 686, a Syrian by birth, was in 680 papal legate to the sixth ecumenical council at Constantinople. He succeeded Benedict II., and was followed by Conon.

JOHN VI., pope from 701 to 705, born in Greece, succeeded to the papal chair two months after the death of Sergius I. He assisted the exarch Theophylact, who had been sent into Italy by the emperor Justinian II., and prevented him from using violence against the Romans. John induced Gisulf, duke of Benevento, to withdraw from the territories of the empire.

JOHN VII., pope from 705 to 707, successor of John VI., was also of Greek nationality. He seems to have acceded to the request of the emperor Justinian II. that he should give his sanction to the decrees of the Quinisext or Trullan council of 692. He was succeeded by Sisinnius.

JOHN VIII., pope from 872 to 882, successor of Adrian II., was a Roman by birth. He defended the Roman State and the authority of the Holy See at Rome from the Saracens, and from the nascent feudalism which was represented outside by the dukes of Spoleto and the marquises of Tuscany and within by a party of Roman nobles. He agreed in 875 to bestow the imperial crown on Charles the Bald. About the time of the death of Charles he was compelled to come to terms with the Saracens, who were only prevented from entering Rome by the promise of an annual tribute. Carloman, the opponent of Charles's son Louis, then invaded northern Italy, and demanded the imperial crown.

John attempted to temporize, but Lambert, duke of Spoleto, a partisan of Carloman, whom sickness had recalled to Germany, entered Rome in 878 with an overwhelming force, and for 30 days virtually held John a prisoner in St. Peter's. Lambert, however, won no concession from the pope, who after his withdrawal went to France. There he presided at the council of Troyes, which excommunicated the supporters of Carloman—amongst others Adalbert of Tuscany, Lambert of Spoleto, and Formosus, bishop of Porto, who was afterwards elevated to the papal chair. In 879 John returned to Italy accompanied by Boso, duke of Provence, whom he adopted as his son. He was compelled to promise his sanction to the claims of Charles the Fat, who received from him the imperial crown in 881. In order to secure the aid of the Greek emperor against the Saracens, he had already agreed to sanction the restoration of Photius to the see of Constantinople, and had withdrawn his consent on finding that he gained nothing from the concession. Charles the Fat gave him also no effectual aid. According to the annalist of Fulda, he was murdered (Dec. 16, 882) by members of his household. His successor was Marinus.

JOHN IX., pope from 898 to 900, confirmed the judgment of his predecessor Theodore II. in granting Christian burial to Formosus, but at a council held at Ravenna decreed that the records of the synod which had condemned him should be burned. John supported Lambert in preference to Arnulf, and also induced the council to determine that henceforth the consecration of the popes should take place only in the presence of the imperial legates. The sudden death of Lambert shattered the hopes which this alliance seemed to promise. John died on April 6, 900, and was succeeded by Benedict IV.

JOHN X., pope from 914 to 928, was deacon at Bologna when he attracted the attention of Theodora, the wife of Theophylact, the most powerful noble in Rome, through whose influence he was elevated first to the see of Bologna, then to the archbishopric of Ravenna, and finally to the papal chair, as the successor of Lando. He allied himself with Theophylact and Alberic, marquis of Camerino, then governor of the duchy of Spoleto. In December 915 he granted the imperial crown to Berengar. He took the field in person against the Saracens, over whom he gained a great victory on the banks of the Garigliano. The defeat and death of Berengar through the combination of the Italian princes, again frustrated the hopes of a united Italy. John perished through the intrigues of Marozia, daughter of Theodora. His successor was Leo VI.

JOHN XI., pope from 931 to 935, son of Marozia and reputed son of Sergius III., was chosen to succeed Stephen VII. at the age of twenty-one. He was the mere exponent of the purposes of his mother, until her son Alberic in 933 overthrew their authority. The pope was a virtual prisoner in the Lateran, where he is said to have died in 935. He was succeeded by Leo VII.

JOHN XII., pope from 955 to 964, was the son of Alberic, whom he succeeded as patrician of Rome in 954, being then only sixteen. His original name was Octavian, but when he assumed the papal tiara as successor to Agapetus II, he adopted the apostolic name of John. In order to protect himself against the intrigues in Rome and the power of Berengar II. of Italy, he called to his aid Otto the Great of Germany, to whom he granted the imperial crown in 962. Even before Otto left Rome the pope had begun to conspire against the new emperor. His intrigues were discovered by Otto, who, after he had defeated and taken prisoner Berengar, returned to Rome and summoned a council which deposed John, who was in hiding in the mountains of Campania, and elected Leo VIII. in his stead. On Otto's departure John returned, and Leo fled. Otto prepared to support Leo, but before he reached the city John had died (May 14, 964) and Benedict V. had mounted the papal chair.

JOHN XIII., pope from 965 to 972, a member of a noble Roman family, and bishop of Narni, succeeded Leo VIII. His election was confirmed by the emperor Otto, and his submissive attitude towards the imperial power was so distasteful to the Romans that they expelled him from the city. Otto secured his return, upon which he took savage vengeance on his enemies. Shortly after holding a council with the emperor at Ravenna in 967, he gave the imperial crown to Otto II. at Rome in assurance of his succession to his father; and in 972 he also crowned Theophano as empress immediately before her marriage. He died on Sept. 5, 972, and was succeeded by Benedict VI.

JOHN XIV. (Pietro Canepanova), pope from 983 to 984, successor to Benedict VII., was born at Pavia. He was bishop of Pavia and imperial chancellor of Otto II. Otto died shortly after his election, when Boniface VII, on the strength of the popular feeling against the new pope, returned from Constantinople and placed John in prison, where he died (Aug. 20, 984) either by starvation or poison.

JOHN XV., pope from 985 to 996, generally recognized as the successor of Boniface VII., the pope John who was said to have

ruled for four months after John XIV., being now usually omitted. John XV. was the son of Leo, a Roman presbyter. His authority was hampered by Crescentius, patrician of Rome, but the presence of the empress Theophano in Rome from 989 to 991 restrained the ambition of Crescentius. He was succeeded by Gregory V.

JOHN XVI. (Philagathus of Rossano), pope or antipope from 997 to 998, was a Calabrian Greek by birth, and a favourite of the empress Theophano, from whom he had received the bishopric of Placentia. In 995 he was sent by Otto III. on an embassy to Constantinople to negotiate a marriage with a Greek princess. On his way back he either accidentally or at the special request of Crescentius visited Rome. A little before this Gregory V., at the end of 996, had been compelled to flee from the city; and Philagathus took the papal tiara from the hands of Crescentius. On Otto's arrival in Rome in the spring of 998 John fled. He was discovered and brought back to Rome, where he was blinded in prison.

JOHN XVII., whose original name was Sicco, succeeded Silvester II. as pope on June 13, 1003, and died on Dec. 7 of the same year.

JOHN XVIII. (a Roman named Phasianus), pope from 1003 to 1009, was the mere creature of the patrician John Crescentius. He abdicated and retired to a monastery, where he died shortly afterwards. His successor was Sergius IV.

JOHN XIX. (Romanus, count of Tusculum), pope from 1024 to 1033, succeeded his brother Benedict VIII. He took orders to enable him to ascend the papal chair, having previously been a consul and senator. He agreed, on the payment of a large bribe, to grant to the patriarch of Constantinople the title of an ecumenical bishop, but the general indignation compelled him almost immediately to withdraw from his agreement On the death of the emperor Henry II in 1024 he gave his support to Conrad II., who was crowned at St. Peter's in Easter of 1027. John died in 1033. His successor was his nephew Benedict IX, a boy of twelve.

JOHN XXI. (Pedro Giuliano-Rebulo), pope from Sept. 8, 1276 to May 20, 1277 (should be named John XX., but there is an error in the reckoning through the insertion of an antipope), a native of Lisbon, educated for the church, became archdeacon and then archbishop of Braga (1271–75). He ingratiated himself with Gregory X. at the council of Lyons (1274) and he was taken to Rome as cardinal-bishop of Frascati, and succeeded Gregory after an interregnum of twenty days. As pope he excommunicated Alphonso III. of Portugal for interfering with episcopal elections and sent legates to the Great Khan. He was killed (May 20, 1277) by the fall of the roof in the palace he had built at Viterbo. His successor was Nicholas III. JOHN XXI. has been identified since the 14th century, most probably correctly, with Petrus Hispanus, a celebrated Portuguese physician and philosopher, author of several medical works—notably the curious *Liber de oculo,* trans. into German and well edited by A. M. Berger (Munich, 1899), and of a popular textbook in logic, the *Summulae logicales.* John XXI. is often referred to as a magician by ignorant chroniclers.

See *Les Registres de Grégoire X. et Jean XXI.*, published by J. Guiraud and E. Cadier in *Bibliothèque des écoles françaises d'Athènes et de Rome* (Paris, 1898); R. Stapper, *Papst Johann XXI.* (Munster, 1898); J. T. Köhler, *Vollständige Nachricht von Papst Johann XXI.* (Göttingen, 1760).

JOHN XXII., pope from 1316 to 1334, was born at Cahors, France, in 1249. His original name was Jacques Duèse. After studying with the Dominicans at Cahors, he studied law at Montpellier, and law and medicine in Paris, and finally taught at Cahors and Toulouse. At Toulouse he became intimate with the bishop Louis, son of Charles II., king of Naples. In 1300 he was elevated to the episcopal see of Fréjus by Pope Boniface VIII. at the instance of the king of Naples, and in 1308 was made chancellor of Naples by Charles, retaining this office under Charles's successor, Robert of Anjou. In 1310 Pope Clement V. summoned Jacques to Avignon, and instructed him to advise upon the affair of the Templars and also upon the question of condemning the memory of Boniface VIII. Jacques decided on the legality of suppressing the order of the Templars, holding that the pope would be serving the best interests of the church by pronouncing its suppression; but he rejected the condemnation of Boniface as a sacrilegious affront to the church and a monstrous abuse of the lay power. On Dec. 23, 1312, Clement appointed him cardinal-bishop of Porto. Clement had died in April 1314, but the cardinals assembled at Carpentras were unable to agree as to his successor The cardinals reassembled (June 28, 1316) at Lyons, and after deliberating for more than a month they elected Robert of Anjou's candidate, Jacques Duèse, who was crowned on Sept 5. He arrived at Avignon in October, and remained there for the rest of his life.

For the restoration of the papacy to its old independence and for the execution of the vast enterprises which the papacy deemed useful for its prestige and for Christendom, considerable sums were required; and to raise the necessary money John burdened Christian Europe with new taxes and a complicated fiscal system. The essentially practical character of his administration has led many historians to tax him with avarice, but later research on the fiscal system of the papacy of the period, particularly the joint work of Samaran and Mollat, enables us very sensibly to modify the severe judgment passed on John by Gregorovius and others.

John's pontificate was continually disturbed by his conflict with Louis of Bavaria and by the theological revolt of the Spiritual Franciscans. In Oct 1314 Louis of Bavaria and Frederick of Austria had each been elected German king by the divided electors. John affected to ignore the successes of Louis, and on Oct. 8, 1323, forbade his recognition as king of the Romans. After demanding a respite, Louis abruptly appealed at Nuremberg from the future sentence of the pope to a general council (Dec. 8, 1323). The conflict then assumed a grave doctrinal character. The doctrine of the rights of the lay monarchy sustained by Occam and John of Paris, by Marsilius of Padua, John of Jandun and Leopold of Bamberg, was affirmed by the jurists and theologians, penetrated into the parlements and the universities, and was combated by the upholders of papal absolutism, such as Alvaro Pelayo and Alonzo Trionfo. Excommunicated on March 21, 1324, Louis retorted by appealing for a second time to a general council, which was held on May 22, 1324, and accused John of being an enemy to the peace and the law, stigmatizing him as a heretic on the ground that he opposed the principle of evangelical poverty as professed by the strict Franciscans. On July 11, 1324, the pope laid under an interdict the places where Louis or his adherents resided, but this bull had no effect in Germany.

Louis penetrated into Italy and seized Rome on Jan. 7, 1328, with the help of the Roman Ghibellines led by Sciarra Colonna. Louis got himself crowned by the deputies of the Roman people; instituted proceedings for the deposition of John, whom the Roman people declared to have forfeited the pontificate (April 18, 1328); and finally caused a Minorite friar, Pietro Rainalucci da Corvara, to be elected pope under the name of Nicholas V. After Louis left Rome and Italy (1329) the antipope was abandoned by the Romans and handed over to John, who forced him to make a solemn submission with a halter round his neck (Aug. 15, 1330). Nicholas was condemned to perpetual imprisonment, and died in obscurity at Avignon; while the Roman people submitted to King Robert, who governed the church through his vicars. In 1317, in execution of a bull of Clement V., the royal vicariate in Italy had been conferred by John on Robert of Anjou, and this appointment was renewed in 1322 and 1324, with threats of excommunication against anyone who should seize the vicariate of Italy without the authorization of the pope.

John was accused of heretical opinions, of having preached that the souls of those who die in a state of grace do not enjoy the beatific vision until after the Last Judgment and the Resurrection. He appears to have retracted shortly before his death, which occurred on Dec. 4, 1334. On Jan. 29, 1336, Pope Benedict XII. pronounced a long judgment on this point of doctrine, a judgment which he declared had been included by John in a bull which death had prevented him from sealing

John had kindled very keen animosity, not only among the upholders of the independence of the lay power, but also among

the upholders of absolute religious poverty, the exalted Franciscans. Clement V., at the council of Vienne, had attempted to bring back the Spirituals to the common rule by concessions; John, on the other hand, in the bull *Quorundam exigit* (April 13, 1317), adopted an uncompromising and absolute attitude, and by the bull *Gloriosam ecclesiam* (Jan. 23, 1318) condemned the protests which had been raised against the bull *Quorundam* by a group of 74 Spirituals and conveyed to Avignon by the monk Bernard Délicieux. Shortly afterwards four Spirituals were burned at Marseilles. These were immediately hailed as martyrs, and in the eyes of the exalted Franciscans at Naples and in Sicily and the south of France the pope was regarded as antichrist. In the bull *Sancta Romana et universa ecclesia* (Dec. 28, 1318) John definitively excommunicated them and condemned their principal book, the *Postil* (commentary) on the Apocalypse (Feb. 8, 1326). The bull *Quia nonnunquam* (March 26, 1322) defined the derogations from the rule punished by the pope, and the bull *Cum inter nonnullos* (Nov. 12, 1323) condemned the proposition which had been admitted at the general chapter of the Franciscans held at Perugia in 1322, according to which Christ and the Apostles were represented as possessing no property, either personal or common The minister general, Michael of Cesena, though opposed to the exaggerations of the Spirituals, joined with them in protesting against the condemnation of the fundamental principle of evangelical poverty

The pope, by the bull *Quia quorundam* (Nov. 10, 1324), cited Michael to appear at Avignon at the same time as Occam and Bonagratia. All three fled to the court of Louis of Bavaria (May 26, 1328), while the majority of the Franciscans made submission and elected a general entirely devoted to the pope. But the resistance, aided by Louis and merged as it now was in the cause sustained by Marsilius of Padua and John of Jandun, became daily bolder. Treatises on poverty appeared on every side; the party of Occam clamoured with increasing imperiousness for the condemnation of John by a general council; and the Spirituals, confounded in the persecution with the Beghards and with Fraticelli of every description, maintained themselves in the south of France in spite of the reign of terror instituted in that region by the Inquisition.

JOHN XXIII. (Baldassare Cossa), pope, or rather anti-pope from 1410 to 1415, born of a good Neapolitan family, was a corsair before entering the service of the church under the pontificate of Boniface IX. He won the cardinal's hat and the legation of Bologna. On June 29, 1408, he and seven of his colleagues broke away from Gregory XII., and together with six cardinals of the obedience of Avignon, who had in like manner separated from Benedict XIII., they agreed to aim at the assembling of a general council, setting aside the two rival pontiffs, an expedient which they considered would put an end to the great schism of the Western Church, but which resulted in the election of yet a third pope This act was none the less decisive for Baldassare Cossa's future. Alexander V., the first pope elected at Pisa, was not perhaps, as has been maintained, merely a man of straw put forward by the ambitious cardinal of Bologna; but he reigned only ten months, and on his death (May 4, 1410), Baldassare Cossa succeeded him He seems to have received the unanimous vote of all the 17 cardinals gathered together at Bologna (May 17). He took the name of John XXIII., and France, England, and part of Italy and Germany recognized him as head of the Catholic church.

The struggle in which he and Louis II. of Anjou engaged with Ladislaus of Durazzo, king of Sicily, and Gregory XII.'s chief protector in Italy, at first went in John's favour. After the brilliant victory of Roccasecca (May 19, 1411) he dragged the standards of Pope Gregory and King Ladislaus through the streets of Rome. But he eventually abandoned the cause of Louis of Anjou, and recognized Ladislaus, his former enemy, as king of Naples. Ladislaus did not fail to salute John XXIII. as pope, abandoning Gregory XII. (June 15, 1412). This was a fatal step: John XXIII. was trusting in a dishonest and insatiable prince. John convened a sparsely attended council in Rome which held only a few sittings, and on March 3, 1413, he adjourned it till December. On Dec. 9 he issued the bull convening the council of Constance, under pressure from Sigismund, king of the Romans. Meanwhile (June 8, 1413) Ladislaus had turned against John, had sacked Rome, and expelled him.

On Nov. 5, 1414, John opened the council of Constance, where, on Christmas Day, he received the homage of the head of the empire, but where it was soon evident that his position was untenable. He had to take a solemn oath to abdicate if his two rivals, Benedict XIII. and Gregory XII., would do the same. On the night of March 20–21, having donned the garments of a layman, with a cross-bow slung at his side, he escaped from Constance, and took refuge first in the castle of Schaffhausen, then in that of Laufenburg, then at Freiburg-im-Breisgau, and finally at Brisach, whence he hoped to reach Alsace, and doubtless ultimately Avignon, under the protection of an escort sent by the duke of Burgundy. The news of the pope's escape was received at Constance with an extraordinary outburst of rage, and led to the subversive decrees of the 4th and 5th sessions, which proclaimed the superiority of the council over the pope. Duke Frederick of Austria was compelled to surrender John, who was brought back to Freiburg. He was suspended from his functions as pope on May 14, 1415, and deposed on May 29.

However irregular this sentence may have been from the canonical point of view (for the accusers do not seem to have actually proved the crime of heresy, which was necessary, according to most scholars of the period, to justify the deposition of a sovereign pontiff), the condemned pope was not long in confirming it. Baldassare Cossa, now as humble and resigned as he had before been energetic and tenacious, on his transference to the castle of Rudolfzell admitted the wrong which he had done by his flight, refused to bring forward anything in his defence, acquiesced entirely in the judgment of the council which he declared to be infallible, and, finally, ratified *motu proprio* the sentence of deposition, declaring that he freely and willingly renounced any rights which he might still have in the papacy. This fact has subsequently been often quoted against those who have appealed to the events of 1415 to maintain that a council can depose a pope who is *scandalizator ecclesiae*.

Cossa was held prisoner for three years in Germany, but in the end bought his liberty (1418) from the count palatine. He then threw himself on the mercy of the legitimate pope. Martin V. appointed him cardinal-bishop of Tusculum, a dignity which Cossa only enjoyed for a few months. He died on Dec. 22, 1419, and all visitors to the Baptistery at Florence may admire, under its high baldacchino, the sombre figure sculptured by Donatello of the dethroned pontiff, who had at least the merit of bowing his head under his chastisement, and of contributing by his passive resignation to the extinction of the series of popes which sprang from the council of Pisa.

JOHN I. (925–976), surnamed Tzimisces, East Roman emperor, was born of a distinguished Cappadocian family. After helping his uncle Nicephorus Phocas (*q.v.*) to obtain the throne and to restore the empire's eastern provinces he was deprived of his command by an intrigue, upon which he retaliated by conspiring with Nicephorus' wife Theophania to assassinate him (969). Having strengthened his position by concessions, John proceeded to justify his usurpation by the energy with which he repelled the foreign invaders of the empire. In a series of campaigns against the newly established Russian power (970–973) he drove the enemy out of Thrace, crossed Mt. Haemus and besieged the fortress of Dorystolon on the Danube. He broke the strength of the Russians so completely that they left him master of eastern Bulgaria. He further secured his northern

frontier by transplanting to Thrace some colonies of Paulicians whom he suspected of sympathising with their Saracen neighbours in the east. In 974 he turned against the Abbasid empire and easily recovered the inland parts of Syria and the middle reaches of the Euphrates. He died suddenly in 976 on his return from his second campaign against the Saracens.

See E. Gibbon, *The Decline and Fall of the Roman Empire*, vol. vi. (ed. Bury, 1896); G. Finlay, *History of Greece*, ii. 334–360 (ed. 1877); G. Schlumberger, *L'Épopée Byzantine*, i. 1–326 (1896).

JOHN II. (1088–1143), surnamed Comnenus and also Kalojoannes (John the Good), East Roman emperor, was the eldest son of the East Roman emperor Alexius, whom he succeeded in 1118. On account of his mild and just reign he has been called the Byzantine Marcus Aurelius. By the personal purity of his character he improved the manners of his age, but he displayed little vigour in internal administration or in extirpating the long-standing corruptions of the government. Nor did his various successes against the Hungarians, Servians and Seljuk Turks, whom he pressed hard in Asia Minor and proposed to expel from Jerusalem, add much to the stability of his empire. He was killed during a wild-boar hunt on Mt. Taurus, on April 8, 1143.

See E. Gibbon, *The Decline and Fall of the Roman Empire*, v. 228 *seq.* (ed. Bury, 1896); F. Chalandon, *Leo Comnenus II.* (1913).

JOHN III. (1193–1254), surnamed Vatatzes and also Ducas, East Roman emperor, earned for himself such distinction as a soldier that in 1222 he was chosen to succeed his father-in-law Theodore I. Lascaris at Nicaea He reorganized the remnant of the East Roman empire, and by his administrative skill made it the strongest and richest principality in the Levant. Having secured his eastern frontier by an agreement with the Turks, he set himself to recover the European possessions of his predecessors. While his fleet harassed the Latins in the Aegean Sea and extended his realm to Rhodes, his army, reinforced by Frankish mercenaries, recovered the last Latin conquests in Asia Minor (1241). Though unsuccessful in a siege of Constantinople, which he undertook in concert with the Bulgarians (1236), he obtained supremacy over the despotats of Thessalonica and Epirus. The ultimate recovery of Constantinople by the Rhomaic emperors is chiefly due to his exertions.

See E. Gibbon, *The Decline and Fall of the Roman Empire*, vi. 431–462 (ed. Bury, 1896); G. Finlay, *History of Greece*, iii. 196–320 (ed. 1877); A. Meliarakes, Ἱστορία τοῦ Βασιλείου τῆς Νικαίας καὶ τοῦ Δεσποτάτου τῆς Ἠπείρου, pp. 155–421 (1898).

JOHN IV. (*c.* 1250–*c.* 1300), surnamed Lascaris, East Roman emperor, son of Theodore II. His father dying in 1258, Michael Palaeologus conspired shortly after to make himself regent, and in 1261 dethroned and blinded the boy monarch, and imprisoned him in a remote castle, where he died a long time after.

See E. Gibbon, *The Decline and Fall of the Roman Empire*, vi. 459–466 (ed. Bury, 1896); A. Meliarakes, Ἱστορία τοῦ Βασιλείου τῆς Νικαίας, κ. τ. λ. (1898), pp. 491–528; A. Gardner, *The Lascarids of Nicaea* (1912).

JOHN V. or **VI.** (1332–1391), surnamed Palaeologus, East Roman emperor, was the son of Andronicus III., whom he succeeded in 1341. At first he shared his sovereignty with his father's friend John Cantacuzene, and after a quarrel with the latter was practically superseded by him for a number of years (1347–1355). His reign was marked by the gradual dissolution of the imperial power through the rebellion of his son Andronicus and by the encroachments of the Ottomans, to whom in 1381 John acknowledged himself tributary, after a vain attempt to secure the help of the popes by submitting to the supremacy of the Roman Church.

See E. Gibbon, *The Decline and Fall of the Roman Empire*, vi. 495 *seq.*, vii. 38 *seq.* (ed. Bury, 1896); E. Pears, *The Destruction of the Greek Empire*, pp. 70–96 (1903).

JOHN VI. or **V.** (*c.* 1292–1383), surnamed Cantacuzene, East Roman emperor, was born at Constantinople. Connected with the house of Palaeologus on his mother's side, on the accession of Andronicus III. (1328) he was entrusted with the supreme administration of affairs. On Andronicus' death in 1341, Cantacuzene was left regent, and guardian of his nine year old son John Palaeologus. Being suspected by the empress and opposed by a powerful party at court, he rebelled, and got himself crowned emperor at Didymoteichos in Thrace, while John Palaeologus and his supporters maintained themselves at Constantinople. The civil war which ensued lasted six years, during which the rival parties called in the aid of the Serbians and Turks, and engaged mercenaries of every description. It was only by the aid of the Turks, with whom he made a disgraceful bargain, that Cantacuzene brought the war to a termination favourable to himself. In 1347 he entered Constantinople in triumph, and forced his opponents to an arrangement by which he became joint emperor with John Palaeologus and sole administrator during the minority of his colleague. During this period, the empire, already broken up and reduced to the narrowest limits, was assailed on every side. There were wars with the Genoese, who had a colony at Galata and had money transactions with the court; and with the Serbians, who were at that time establishing an extensive empire on the north-western frontiers; and there was a hazardous alliance with the Turks, who made their first permanent settlement in Europe, at Callipolis in Thrace, towards the end of the reign (1354) Cantacuzene was far too ready to invoke the aid of foreigners in his European quarrels; and as he had no money to pay them, this gave them a ready pretext for seizing upon a European town. Heavy taxation caused discontent, and a strong party had always favoured John Palaeologus, who entered Constantinople at the end of 1354. Cantacuzene retired to a monastery (where he assumed the name of Joasaph Christodulus) and occupied himself in literary labours. He died in the Peloponnese and was buried at Mysithra in Laconia. His *History* in four books deals with the years 1320–1356.

Cantacuzene was also the author of a commentary on the first five books of Aristotle's *Ethics*, and of several controversial theological treatises, one of which (*Against Mohammedanism*) is printed in Migne (*Patrologia Graeca*, cliv.). *History*, ed pr. by J. Pontanus (1603); in Bonn, *Corpus scriptorum hist Byz*, by J. Schopen (1828–1832) and Migne, cliii., cliv. *See* also Val Parisot, *Cantacuzène, homme d'état et historien* (1845); E. Gibbon, *Decline and Fall*, ch. lxii.; and C. Krumbacher, *Geschichte der byzantinischen Literatur* (1897); E. W. Brooks in *Cambridge Medieval History*, vol. iv.

JOHN VI. or **VII.** (1390–1448), surnamed Palaeologus, East Roman emperor, son of Manuel II., succeeded to the throne in 1425. To secure protection against the Turks he visited the pope and consented to the union of the Greek and Roman Churches, which was ratified at Florence in 1439. The union failed of its purpose; but by his prudent conduct towards the Ottomans John retained possession of Constantinople, and in 1432 withstood a siege by Sultan Murad I.

See TURKEY: *History;* and also E Gibbon, *The Decline and Fall of the Roman Empire*, vi. 97–107 (ed. Bury, 1896); E. Pears, *The Destruction of the Greek Empire*, pp. 115–130 (1903).

JOHN II. (1397–1479), king of Aragon, son of Ferdinand I. and Eleanor of Albuquerque, born on June 29, 1397, was one of the most stirring and unscrupulous kings of the 15th century. He was in continual conflict from boyhood to old age His efforts to deprive Charles, prince of Viana, his son by his first wife, Blanche of Navarre, of his constitutional right to act as lieutenant-general of Aragon led to a long conflict with the Aragonese, which only ended with the death (1461) of the prince, caused, it was thought, by poison given him by his stepmother, Joan Henriquez. The Catalans had espoused Charles's cause and called in a succession of pretenders, until they were reduced in 1472 John's war with the French king, Louis XI, leading to the cession of Roussillon to France, continued until his death (Jan. 20, 1479). He was succeeded by Ferdinand, his son by his second wife, and king of Castile by his marriage with Isabella.

See *Crónicas de los reyes de Castilla* (Bib. de Autores Esp, lxvi., lxvii); G. Zurita, *Anales de Aragon* (Saragossa, 1610); W. H Prescott, *History of the Reign of Ferdinand and Isabella* (1854); G. Desderises du Dezert, *Don Carlos d'Aragón . . . Etude sur l'Espagne du Nord au XVe siècle* (Paris, 1889).

JOHN (1296–1346), king of Bohemia, was a son of the emperor Henry VII. by his wife Margaret, daughter of John I, duke of Brabant, and was a member of the family of Luxemburg Born on Aug. 10, 1296, he became count of Luxemburg in 1309, and about the same time was offered the crown of Bohemia, which, after the death of Wenceslas III, the last Premyslide king, in

1306, had passed to Henry, duke of Carinthia. The emperor accepted this offer on behalf of his son, who married Elizabeth (d. 1330), a sister of Wenceslas, and after Henry's departure for Italy, John was crowned king of Bohemia at Prague (Feb 1311). Henry of Carinthia was driven from the land, order restored, and Moravia again united with Bohemia.

As imperial vicar John represented his father at the diet of Nuremberg (Jan. 1313), and was leading an army to his assistance in Italy when he heard of the emperor's death (Aug. 1313). John's claim to the imperial throne was disregarded on account of his youth, and he became a partisan of Louis, duke of Upper Bavaria, afterwards the Emperor Louis the Bavarian whom he helped in his struggle against the rival claimant, Philip the Fair of Austria. While Bohemia, where John and his German followers were unpopular, relapsed into revolt and anarchy, he himself fought campaigns over all Europe. He fought against the citizens of Metz and against his kinsman, John III., duke of Brabant; he led the knights of the Teutonic Order against the heathen in Lithuania and Pomerania and promised Pope John XXII. to head a crusade; and claiming to be king of Poland he attacked the Poles and brought Silesia under his rule. He obtained Tirol by marrying his son, John Henry, to Margaret Maultasch, the heiress of the county, assisted the emperor to defeat and capture Frederick the Fair at the Battle of Mühldorf (1322) and was alternately at peace and at war with the dukes of Austria and with his former foe, Henry of Carinthia. He several times assisted his brother-in-law, Charles IV. of France and his successor Philip VI., whose son John, afterwards King John II., married a daughter of the Bohemian king. Soon after the battle of Mühldorf, the relations between John and the emperor became strained, partly owing to the king's growing friendship with the Papacy and with France, and partly owing to territorial disputes. An agreement, however, was concluded, and John invaded Italy with a small following, and made himself ruler of much of the peninsula (1331).

But John's soldiers were few and his enemies were many, and a second invasion of Italy in 1333 was followed by the dissipation of his dreams of making himself king of Lombardy and Tuscany, and even of supplanting Louis on the imperial throne. The fresh trouble between king and emperor, caused by this enterprise, was intensified by a quarrel over the lands left by Henry of Carinthia, and still later by the interference of Louis in Tirol; and with bewildering rapidity John was allying himself with the kings of Hungary and Poland, fighting against the emperor and his Austrian allies, defending Bohemia, governing Luxemburg, visiting France and negotiating with the pope. About 1340 the king was overtaken by blindness, but he continued to lead an active life, successfully resisting the attacks of Louis and his allies, and campaigning in Lithuania. In 1346, acting in union with Pope Clement VI., he secured the formal deposition of Louis and the election of his own son Charles, margrave of Moravia, as German king (July 1346). Then journeying to help Philip of France against the English, he fought at the battle of Crécy, where his heroic death (Aug. 26, 1346) was a fitting conclusion to his adventurous life.

John was a chivalrous and romantic personage; but as a ruler he was careless and extravagant, interested only in his kingdom when seeking relief from his constant pecuniary embarrassments. According to Camden the crest of three ostrich feathers, with the motto *Ich dien,* borne by the prince of Wales, was originally that of John of Bohemia and was first assumed by Edward the Black Prince after the battle of Crécy. There is no proof, however, that this badge was ever worn by John—it certainly was not his crest—and its origin must be sought elsewhere.

See J. Schötter, *Johann, Graf von Luxemburg und König von Bohmen* (Luxemburg, 1865); F. von Weech, *Kaiser Ludwig der Bayer und König Johann von Bohmen* (Munich, 1860), and U. Chevalier, *Répertoire des sources historiques,* tome v. (Paris, 1905).

JOHN I. (1358–1390), king of Castile, son of Henry II. and Joan, daughter of John Manuel de Villena. Brought into conflict with John of Gaunt, who claimed the Crown by right of his wife, Constance, daughter of Peter the Cruel, he bought off his English competitor by arranging a marriage (1387), between John of Gaunt's daughter Catherine and his son Henry. He settled his quarrel with Portugal, John of Gaunt's ally, by marrying Beatrix, daughter of the Portuguese king Ferdinand. On Ferdinand's death (1383), John claimed the Portuguese crown: he was resisted by the national sentiment and utterly defeated at Aljubarrota on Aug. 14, 1385. He died at Alcalá on Oct. 9, 1390.

JOHN II. (1405–1454), king of Castile, son of Henry III. of Castile and Catherine, daughter of John of Gaunt, born March 6, 1405. He succeeded his father on Dec. 25, 1406. One of the most incapable of kings, weak, amiable and dependent, he had no taste except for ornament, no serious interest except in amusements, verse-making and tournaments. At first the tool of his favourite, Alvaro de Luna, he was persuaded to overthrow him by his second wife, Isabella of Portugal (mother of Isabella the Catholic). He died at Valladolid, July 20, 1454.

JOHN (1167–1216), king of England, the youngest son of Henry II. by Eleanor of Aquitaine, was born at Oxford on Dec. 24, 1167. He was given the nickname of Lackland because, unlike his elder brothers, he received no apanage in the Continental provinces. When only five, John was betrothed to the heiress of Maurienne and Savoy, a principality which, as dominating the chief routes from France and Burgundy to Italy, enjoyed a consequence out of all proportion to its area. Later, when this plan had fallen through, he was endowed with castles, revenues and lands on both sides of the channel; the vacant earldom of Cornwall was reserved for him (1175); he was betrothed to Isabella the heiress of the earldom of Gloucester (1176); and he was granted the lordship of Ireland with the homage of the Anglo-Irish baronage (1177). Henry II. even provoked a civil war by attempting to transfer the duchy of Aquitaine from the hands of Richard Coeur de Lion to those of John (1183). In spite of the incapacity which he displayed in this war, John was sent a little later to govern Ireland (1185); but he returned in a few months, having alienated the loyal chiefs by his childish insolence and failed to defend the settlers from the hostile septs. He joined with his brother Richard and the French king Philip Augustus in the great conspiracy of 1189, and the discovery of his treason broke the heart of the old king (*see* HENRY II).

Richard on his accession confirmed John's existing possessions; married him to Isabella of Gloucester; and gave him, besides other grants, the entire revenues of six English shires; but excluded him from any share in the regency which was appointed to govern England during the third crusade; and only allowed him to live in the kingdom because urged to this concession by their mother. Soon after the king's departure for the Holy Land it became known that he had designated his nephew, the young Arthur of Brittany, as his successor. John at once began to intrigue against the regents with the aim of securing England for himself. He picked a quarrel with the unpopular chancellor William Longchamp (*q.v.*), and succeeded, by the help of the barons and the Londoners, in expelling this minister. Not being permitted to succeed Longchamp as the head of the administration, John next turned to Philip Augustus for help. A bargain was struck; and when Richard was captured by Leopold, duke of Austria (Dec. 1192), the allies planned a partition of his dominions. They were, however, unable to win either English or Norman support and their schemes collapsed with Richard's return (March 1194). He magnanimously pardoned his brother, and they lived on not unfriendly terms for the next five years. On his deathbed Richard, reversing his former arrangements, caused his barons to swear fealty to John (1199), although the hereditary claim of Arthur was by the law of primogeniture undoubtedly superior.

England and Normandy, after some hesitation, recognized John's title; the attempt of Anjou and Brittany to assert the rights of Arthur ended disastrously with the capture of the young prince at Mirebeau in Poitou (1202). Originally accepted as a political necessity, John was soon detested by the people as a tyrant and despised by the nobles for his cowardice and sloth. He inherited great difficulties—the feud with France, the dissensions of the continental provinces, the growing indifference of England to foreign conquests, the discontent of all his subjects

with a strict executive and severe taxation. But he cannot be acquitted of personal responsibility for his misfortunes. Astute in small matters, he had no breadth of view; his policy was continually warped by his passions or caprices; he flaunted vices of the most sordid kind with a cynical indifference to public opinion, and shocked an age which was far from tender-hearted by his ferocity to vanquished enemies. He treated his most respectable supporters with ingratitude, favoured unscrupulous adventurers, and gave a free rein to the licence of his mercenaries. Each of his great humiliations followed as the natural result of crimes or blunders. By his divorce from Isabella of Gloucester he offended the English baronage (1200); by his marriage with Isabella of Angoulême, the betrothed of Hugh of Lusignan, he gave an opportunity to the discontented Poitevins for invoking French assistance and to Philip Augustus for pronouncing against him a sentence of forfeiture. The murder of Arthur (1203) ruined his cause in Normandy and Anjou, though the story that the court of the peers of France condemned him for the murder is a fable. In the quarrel with Innocent III. (1207–13; *see* LANGTON, STEPHEN) he prejudiced his case by proposing a worthless favourite for the primacy and by plundering the clergy who bowed to the pope's sentences. Threatened with the desertion of his barons he drove all whom he suspected to desperation by his terrible severity towards the Braose family (1210); and by his misgovernment irrevocably estranged the lower classes.

When submission to Rome had somewhat improved his position he squandered his last resources in a new and unsuccessful war with France (1214), and enraged the feudal classes by new claims for military service and scutages. The barons were consequently able to exact, in Magna Carta (June 1215), much more than the redress of legitimate grievances; and the people allowed the Crown to be placed under the control of an oligarchical committee. When once the sovereign power had been thus divided, the natural consequence was civil war and the intervention of the French king, who had long watched for some such opportunity. John's struggle against the barons and Prince Louis (1216), afterwards King Louis VIII., was the most creditable episode of his career. He died on Oct. 19, 1216.

John's second wife, Isabella of Angoulême (d. 1246), who married her former lover, Hugh of Lusignan, after the English king's death, bore the king two sons, Henry III. and Richard, earl of Cornwall; and three daughters, Joan (1210–38), wife of Alexander II., king of Scotland, Isabella (d. 1241), wife of the emperor Frederick II., and Eleanor (d. 1274), wife of William Marshal, earl of Pembroke, and then of Simon de Montfort, earl of Leicester. John had also two illegitimate sons, and a daughter, Joan or Joanna, who married Llewelyn I. ab Iorwerth, prince of North Wales, and who died in 1236 or 1237.

BIBLIOGRAPHY.—The chief chronicles for the reign are Gervase of Canterbury's *Gesta regum,* Ralf of Coggeshall's *Chronicon,* Walter of Coventry's *Memoriale,* Roger of Wendover's *Flores historiarum,* the Annals of Burton, Dunstaple and Margan—all in the Rolls Series. The French chronicle of the so-called "Anonyme de Béthune" (Bouquet, *Recueil des historiens des Gaules et de la France,* vol. xxiv.), the *Histoire des ducs de Normandie et des rois d'Angleterre* (ed. F. Michel, 1840) and the metrical biography of William the Marshal (*Histoire de Guillaume le Maréchal,* ed. Paul Meyer, 3 vols., 1891, etc.) throw valuable light on certain episodes. H. S. Sweetman's *Calendar of Documents relating to Ireland,* vol. i. (Rolls Series); W. H. Bliss's *Calendar of Entries in the Papal Registers,* vol. i. (Rolls Series); Potthast's *Regesta pontificum,* vol. i. (Berlin, 1874); Sir T. D. Hardy's *Rotuli litterarum clausarum* (Rec. Commission, 1835) and *Rotuli litterarum patentium* (Rec. Commission, 1835) and L. Delisle's *Catalogue des actes de Philippe Auguste* (1856) are the most important guides to the documents. Of modern works W. Stubbs's *Constitutional history,* vol. i. (Oxford, 1897); the same writer's preface to *Walter of Coventry,* vol. ii. (Rolls Series); K. Norgate's *John Lackland* (1902); C. Petit-Dutaillis' *Étude sur la vie et le règne de Louis VIII.* (1894), W. S. McKechnie's *Magna Carta* (1905; 2nd ed. 1915) and *Magna Carta Commemoration Essays* ed. H. E. Malden (1917) are among the most useful. (H. W. C. D.)

JOHN I. (b. and d. 1316), king of France, son of Louis X. and Clemence, daughter of Charles Martel, who claimed to be king of Hungary, was born after his father's death, on Nov. 15, 1316, and lived only seven days. His uncle, afterwards Philip V., has been accused of having caused his death, or of having substituted a dead child in his place; but nothing was ever proved.

JOHN II. (1319–1364), surnamed the Good, king of France, son of Philip VI. and Jeanne of Burgundy, succeeded his father in 1350. At the age of 13 he married Bona of Luxemburg, daughter of John, king of Bohemia. His first act upon becoming king was to order the execution of the constable, Raoul de Brienne John surrounded himself with evil counsellors, Simon de Buci, Robert de Lorris, Nicolas Braque, who robbed the treasury and oppressed the people, while the king gave himself up to tournaments and festivities. Raids of the Black Prince in Languedoc led to the states-general of 1355, which readily voted money, but sanctioned the right of resistance against all kinds of pillage—a distinct commentary on the incompetence of the king. In Sept. 1356 John gathered the flower of his chivalry and attacked the Black Prince at Poitiers where he was defeated and made prisoner. Taken to England to await ransom, John was at first installed in the Savoy Palace, then at Windsor, Hertford, Somerton, and at last in the Tower. He was granted royal state with his captive companions, made a guest at tournaments, and supplied with luxuries imported by him from France. The treaty of Brétigny (1360), which fixed his ransom at 3,000,000 crowns, enabled him to return to France, but although he married his daughter Isabella to Gian Galeazzo Visconti of Milan, for a gift of 600,000 golden crowns, imposed a heavy feudal "aid" on merchandise, and various other taxes, John was unable to pay the ransom. He returned of his own free will to England in January 1364 and was received with great honour, lodged again in the Savoy, and was a frequent guest of Edward at Westminster. He died on April 8, and the body was sent back to France with royal honours.

See Froissart's *Chronicles;* Duc d'Aumale, *Notes et documents relatifs à Jean, roi de France, et à sa captivité* (1856); A. Coville, in Lavisse's *Histoire de France,* vol. iv., and authorities cited there.

JOHN (ZÁPOLYA) (1487–1540), king of Hungary, was the son of the palatine Stephen Zápolya and the princess Hedwig of Teschen, and was born at the castle of Szepesvár. He began his public career at the famous Rákos diet of 1505, when, on his motion, the assembly decided that after the death of the reigning king, Wladislaus II., no foreign prince should be elected king of Hungary. Henceforth he became the national candidate for the throne, which his family had long coveted In 1510 Zápolya sued in person for the hand of the Princess Anne in vain, and his appointment to the voivody of Transylvania (1511) was with the evident intention of removing him far from court. In 1513, he renewed his suit, which was again rejected. In 1514 he stamped out the peasant rising under Dozsa (*q.v.*) with incredible brutality. This increased his popularity with the gentry, and, on the death of Wladislaus II., the second diet of Rákos (1516) appointed him the governor of the infant king Louis II. He now aimed at the dignity of palatine also, but the council of state and the court party combined against him and appointed István Báthory instead (1519). The dissensions between Zápolya and Báthory were responsible for the fall of Belgrade (1521). In 1522 the court made Báthory sole captain-general, against the wishes of the diet; thereupon Zápolya attempted to depose the palatine and other great officers of state. In the following year, however, the revolutionary Hátvan diet drove out all the members of the council of state and made István Verböczy, the great jurist, and a friend of Zápolya, palatine. In the midst of this hopeless anarchy, Suleiman I, the Magnificent, invaded Hungary and the young king perished with his army at Mohács, Zápolya arriving too late to save the day. The court party accused him, but probably without ground, of deliberate treachery. The diets of Tokaj (Oct. 14) and Székesféhérvár (Nov. 10) then elected Zápolya king of Hungary, and he was crowned on Nov. 11.

A struggle with the rival candidate, the German king Ferdinand I., at once ensued (*see* HUNGARY: *History*), Zápolya receiving support from the Turks. In 1538, by the compact of Nagyvárad, Ferdinand recognized John as king of Hungary, but secured the right of succession on his death. Nevertheless John broke the compact by bequeathing the kingdom to his infant son John Sigismund under Turkish protection.

See Vilmos Fraknoi, *Ungarn vor der Schlacht bei Mohács* (Budapest, 1886); L. Kupelwieser, *Die Kämpfe Ungarns mit den Osmanen*

bis zur Schlacht bei Mohács (Vienna, 1895).

JOHN III. (SOBIESKI) (1624–1696), king of Poland, was the eldest son of James Sobieski, castellan of Cracow, and Theofila Danillowiczowna, grand-daughter of the great Hetman Zolkiewski. After being educated at Cracow, he made the grand tour with his brother Mark and returned to Poland in 1648. He served against Chmielnicki and the Cossacks and was present at the battles of Beresteczko (1651) and Batoka (1652), but when the Swedes invaded Poland in 1654 at once deserted to them and actually assisted them to conquer the Prussian provinces in 1655. Next year, however, he again changed coats and helped Czarniecki expel the Swedes from the central Polish provinces. For his subsequent services to King John Casimir, especially in the Ukraine against the Tatars and Cossacks, he received the grand bâton of the crown, or commandership-in-chief (1668). He had already (1665) succeeded Czarniecki as acting commander-in-chief. His military capacities were extraordinary, but he was unscrupulous and absolutely self-seeking.

At the election diet of 1669 he accepted large bribes from Louis XIV. to support one of the French candidates; after the election of Michael Wisniowiecki (June 19, 1669) he openly conspired, again in the French interest, against the king in an hour of the utmost national danger. The plot he had formed with the primate Prazmowski and others was discovered in 1670 and disavowed by Louis; the traitors then appealed to the Elector of Brandenburg against their own countrymen. Two years later they renewed the plot just as the Turks were advancing into Poland; and the king was consequently forced to sign the disgraceful peace of Buczacz (Oct. 17, 1672) whereby Poland ceded to the Porte the entire Ukraine with Podolia and Kamieniec.

Sobieski himself partially retrieved the situation by winning four victories in ten days. The peace of Buczacz was repudiated, and Sobieski defeated the Turks brilliantly at Khotin (Nov. 10, 1673). The same day king Michael died, and Sobieski, abandoning the frontier to its fate, hastened to the capital to secure the throne. Appearing at the elective diet of 1674 at the head of 6,000 veterans he overawed every other competitor, and despite the persistent opposition of the Lithuanians was elected king (May 21). He was then obliged to return at once to the Ukraine. He attempted to negotiate with the Sultan and the Tatar khan; to entrust the whole guardianship of the Ukraine to the Cossacks, and himself concentrate the regulars and militia at Lemberg. The Polish gentry however failed to support him, and he faced the Turk alone, with a few devoted lieutenants. Returning to Cracow to be crowned (Feb. 14, 1676), he renewed the campaign and at last recovered by special treaty two-thirds of the Ukraine, but without Kamieniec (treaty of Zaravno, Oct. 16, 1676).

Sobieski hoped now to establish absolute monarchy in Poland; but Louis XIV. looked coldly on the project and relations between France and Poland gradually grew more strained until on March 31, 1683, Sobieski signed the treaty with the Emperor Leopold against the Turks which was the prelude to the most glorious episode of his life, the relief of Vienna and the liberation of Hungary from the Ottoman yoke. The epoch-making victory of Sept. 12, 1683, was ultimately decided by the charge of the Polish cavalry led by Sobieski in person. Poland profited little by this triumph, being left to fight on in the Ukraine with whatever assistance she could obtain from the unwilling and unready Muscovites. The last twelve years of the reign of John III. were a period of humiliation and disaster. A treasonable senate, a mutinous diet, ungrateful allies, surrounded him.

His last campaign (in 1690) was an utter failure, and the last years of his life were embittered by the violence and the intrigues of his dotingly beloved wife, Marya Kazimiera d'Arquien, by whom he had three sons, James, Alexander and Constantine. He died on June 17, 1696, disillusioned and broken-hearted.

See E. H. R. Tatham, *John Sobieski* (Oxford, 1881); Kazimierz Waliszewski, *Archives of French Foreign Affairs*, 1674–1696, v. (Cracow, 1881); Ludwik Piotr Leliwa, *John Sobieski and His Times* (Pol.) (Cracow, 1882–85); Georg Rieder, *Johann Sobieski in Wien* (Vienna, 1882).

JOHN I. (1357–1433), king of Portugal, the natural son of Pedro I. (*el Justicieiro*), was born at Lisbon on April 22, 1357, and in 1364 was created grand-master of Aviz. On the death of his lawful brother Ferdinand I., without male issue, in 1383, efforts were made to secure the succession for Beatrice, the only child of Ferdinand I., who as heiress-apparent had been married to John I. of Castile (Spain). John was after violent tumults proclaimed protector and regent in the following December. In April 1385 he was unanimously chosen king by the estates of the realm at Coimbra. The king of Castile invaded Portugal, but his army was compelled by pestilence to withdraw, and subsequently by the decisive battle of Aljubarrota (Aug. 14, 1385) the stability of John's throne was permanently secured. Hostilities continued intermittently until John of Castile died, without leaving issue by Beatrice, in 1390. In 1415 Ceuta was taken from the Moors by his sons who had been born to John by his wife Philippa, daughter of John, duke of Lancaster. John I. died on Aug. 14, 1433, in a reign which had been characterized by great prudence, ability and success; he was succeeded by his son Edward or Duarte.

See J. P. Oliveira Martins, *Os filhos de D. João I.* and *A vida de Nun' Alvares* (Lisbon, 2nd ed. 1894; English translation with adds. etc. by T. T. Abraham, 1911); F. M. Esteves Pereira, *Livro da Montaria* (1918).

JOHN II. (1455–1495), the Perfect, king of Portugal, succeeded his father, Alphonso V., in August 1481. He first curtailed the overgrown power of his aristocracy; noteworthy incidents in the contest were the execution (1483) of the duke of Braganza for correspondence with Castile, and the murder, by the king's own hand, of the youthful duke of Viseu for conspiracy. This reign was signalized by Bartholomeu Diaz's discovery of the Cape of Good Hope in 1488. Maritime rivalry led to disputes between Portugal and Castile until their claims were adjusted by the famous treaty of Tordesillas (June 7, 1494). John II. died, without leaving male issue, in Oct. 1495, and was succeeded by his brother-in-law Emmanuel (Manoel) I.

See J. P. Oliveira Martins, *O principe perfeito* (Lisbon, 1895).

JOHN III. (1502–1557), king of Portugal, born at Lisbon, on June 6, 1502, succeeded his father Emmanuel I. in Dec. 1521. In 1524 he married Catherine, sister to the Emperor Charles V., who shortly afterwards married the infanta Isabella, John's sister. John III. became subservient to the clerical party among his subjects, with disastrous consequences to the commercial and social prosperity of his kingdom. He died on June 6, 1557, and was succeeded by his grandson Sebastian, a child aged three years.

JOHN IV. (1603–1656), the Fortunate, king of Portugal, founder of the Braganza dynasty, was born at Villaviciosa on March 19, 1603, succeeded to the dukedom of Braganza in 1630, and married Luisa de Guzman, eldest daughter of the duke of Medina Sidonia, in 1633. By the unanimous voice of the people he was raised to the throne of Portugal (of which he was held to be the legitimate heir) at the revolution effected in December 1640 against the Spanish king, Philip IV. His accession led to a protracted war with Spain, which only ended with the recognition of Portuguese independence in a subsequent reign (1668). He died on Nov. 6, 1656, and was succeeded by his son Alphonso VI.

JOHN V. (1689–1750), king of Portugal, was born at Lisbon on Oct. 22, 1689, and succeeded his father Pedro II. in Dec. 1706, being proclaimed on Jan. 1, 1707. One of his first acts was to intimate his adherence to the Grand Alliance, which his father had joined in 1703. Accordingly his general Das Minas, with Lord Galway, advanced into Castile, but was defeated at Almanza (April 14). In Oct. 1708 he married Maria Anna, daughter of Leopold I., thus strengthening the alliance with Austria; the series of unsuccessful campaigns which ensued ultimately terminated in a favourable peace with France in 1713 and with Spain in 1715. John was entirely under the domination of the clergy, and the title "Most Faithful King," was bestowed upon him and his successors by a bull of Pope Benedict XIV. in 1748. The army, navy and other branches of administration were neglected in favour of the church. John V. died on July 31, 1750, and was succeeded by his son Joseph.

JOHN VI. (1769–1826), king of Portugal, son of Peter III., was born at Lisbon on May 13, 1769, and received the title of prince of Brazil in 1788. In 1792 he assumed the reins of govern-

ment in name of his mother Queen Mary I., who had become insane. In 1799 he assumed the title of regent, which he retained until his mother's death in 1816. (For the political history of his regency, the French occupation and the English peninsular campaign *see* PORTUGAL.) In 1816 he was recognized as king of Portugal but he continued to reside in Brazil, whither he had fled from the French in 1807. The consequent spread of dissatisfaction resulted in the peaceful revolution of 1820, and the proclamation of a constitutional government, to which he swore fidelity on his return to Portugal in 1822. In the same year, and again in 1823, he had to suppress a rebellion led by his son Dom Miguel, whom he banished in 1824. John recognized the independence of Brazil in 1825. He died at Lisbon on March 26, 1826, and was succeeded by Pedro IV.

JOHN (JOHN NEPOMUK MARIA JOSEPH) (1801–1873), king of Saxony, son of Prince Maximilian of Saxony and his wife Caroline of Parma (d. 1804), was born at Dresden on Dec. 12, 1801. As a boy he took a keen interest in literature and art (also in history, law and political science), and studied with the greatest ardour classical and German literature (Herder, Schiller, Goethe). He soon began to compose poetry himself, and drew great inspiration from a journey in Italy (1821–1822), the pleasure of which was however darkened by the death of his brother Clemens. In Pavia the prince met with Biagioli's edition of Dante, and this gave rise to his lifelong and fruitful studies of Dante. The first part of his German translation of Dante was published in 1828, and in 1833 appeared the complete work, with a valuable commentary. Several new editions appeared under his constant supervision, and he collected a complete library of works on Dante.

By his marriage with Amalia of Bavaria, John became the brother-in-law of Frederick William IV., king of Prussia, with whom he had a deep and lasting friendship. His wife died on Nov. 8, 1877, having borne him nine children, two of whom, Albert and George, later became kings of Saxony.

On his return to Dresden, John was called in 1822 to the privy board of finance (*Geheimes Finanzkollegium*) and in 1825 became its vice-president. He entered the privy council in 1830. During the revolution in Saxony he helped in the pacification of the country, became commandant of the new national guard, the political tendencies of which he tried to check, and took part in the organization of the constitution of Sept. 4, 1831. On the death of his brother Frederick Augustus II., John became, on Aug. 9, 1854, king of Saxony. He advocated the formation of a confederation of the smaller German states independent of Prussia and Austria. He supported Austria against Prussia at the diet of Princes in 1863, but he rallied to the North German Confederation after 1866, and dismissed Beust (*q.v.*), who had hitherto directed Saxon foreign policy. In the war of 1870–71 with France his troops fought with conspicuous courage. He died at Dresden on Oct. 29, 1873.

See H. Ermisch, *Die Wettiner und die Landesgeschichte* (Leipzig, 1902); O. Kaemmel, *Sachsische Geschichte* (Leipzig, 1899, Sammlung Göschen). His son John George edited his correspondence with Frederick William IV. and Wilhelm I. (1911), and with George Ticknor (1920).

JOHN (1468–1532), called the Steadfast, elector of Saxony, fourth son of the elector Ernest, was born on June 30, 1468. In 1486, when his eldest brother became elector as Frederick III., John received a part of the paternal inheritance. He was an early adherent of Luther, and, becoming elector of Saxony by his brother's death in May 1525, helped Philip, landgrave of Hesse, to found the league of Gotha, formed in 1526 for the protection of the Reformers. He was active at the diet of Speyer in 1526, and the "recess" of this diet gave him an opportunity to reform the church in Saxony, where a plan for divine service was drawn up by Luther. He signed the protest against the "recess" of the diet of Speyer in 1529, being thus one of the original Protestants, and opposed Charles V. at the diet of Augsburg in 1530. He signed the Augsburg Confession, and was alone among the electors in objecting to the election of Ferdinand, afterwards the emperor Ferdinand I., as king of the Romans. He was among the first members of the league of Schmalkalden, assented to the peace of Nuremberg in 1532, and died at Schweidnitz on Aug. 16, 1532.

See J. Becker, *Kurfürst Johann von Sachsen und seine Beziehungen zu Luther* (Leipzig, 1890).

JOHN or **HANS** (1513–1571), margrave of Brandenburg-Cüstrin, was the younger son of Joachim I., elector of Brandenburg, and was born at Tangermünde on Aug. 3, 1513. In spite of the *dispositio Achillea* which decreed the indivisibility of the electorate, John inherited the new mark of Brandenburg on his father's death in July 1535. He had been brought up as a strict Catholic, but in 1538 ranged himself definitely on the side of the Reformers. He joined the league of Schmalkalden; but was won over to the imperial side. After the conclusion of the war, the relations between John and Charles became somewhat strained. The margrave opposed the Augsburg *Interim* (1548), and he was the leader of the princes who formed a league for the defence of the Lutheran doctrines in Feb. 1550. After some differences of opinion with Maurice, elector of Saxony, however, he returned to the emperor's side. His remaining years were mainly spent in the new mark, which he ruled carefully and economically. He purchased Beeskow and Storkow, and fortified the towns of Cüstrin and Peitz. He died at Cüstrin on Jan. 13, 1571. His wife Catherine was a daughter of Henry II, duke of Brunswick, and as he left no sons the new mark passed on his death to his nephew John George, elector of Brandenburg.

See Berg, *Beiträge zur Geschichte des Markgrafen Johann von Küstrin* (Landsberg, 1903).

JOHN I. (d. 1294), duke of Brabant and Lorraine, surnamed the Victorious, was the second son of Duke Henry III and Aleidis of Burgundy. In 1267 his elder brother Henry was deposed in his favour. In 1271 John married Margaret, daughter of Louis IX. of France, and following her death took as his second wife (1273) Margaret of Flanders, daughter of Guy de Dampierre. His sister Marie was espoused in 1275 to Philip III. (the Bold) of France. During the reign of Philip and his son Philip IV. there were close relations of friendship and alliance between Brabant and France. In 1285 John accompanied Philip III. in his expedition against Peter III, king of Aragon. After the death of Waleran IV. in 1279 the succession to the duchy of Limburg was disputed. His heiress, Ermengarde, had married Reinald I. count of Gelderland. She died childless, but her husband continued to rule in Limburg, although his rights were disputed by Count Adolph of Berg, nephew to Waleran IV. (*See* LIMBURG.)

Not being strong enough to eject his rival, Adolph sold his rights to John of Brabant, and hostilities broke out in 1283. Harassed by desultory warfare and endless negotiations, and seeing no prospect of holding his own against the powerful duke of Brabant, Reinald made over his rights to Henry III count of Luxemburg, who was a descendant of Waleran III. of Limburg. Henry III. was sustained by the archbishop of Cologne and other allies, as well as by Reinald of Gelderland. The duke of Brabant at once invaded the Rhineland and laid siege to the castle of Woeringen near Bonn. Here he defeated the forces of the confederacy on June 5, 1288. Limburg was henceforth attached to the duchy of Brabant. John consolidated his conquest by giving his daughter in marriage to Henry of Luxemburg (1291) He died of a wound received at a tournament at Bar (May 3, 1294).

F. Stallaert, *Gesch. v. Jan I. van Braband en zijne tijdvak* (Brussels, 1861); A. Wauters, *Le Duc Jean Ier et le Brabant sous le règne de ce prince* (Brussels, 1859).

JOHN (1371–1419), called the Fearless (*Sans Peur*), duke of Burgundy, son of Philip the Bold, duke of Burgundy, and Margaret of Flanders, was born at Dijon on May 28, 1371. On the death of his maternal grandfather in 1384 he received the title of count of Nevers, which he bore until his father's death. He married in 1385 Margaret, daughter of Duke Albert of Bavaria, an alliance which consolidated his position in the Netherlands. In the spring of 1396 he took arms for Hungary against the Turks and on the 28th of September was taken prisoner by the Sultan Bayezid I. at the bloody battle of Nicopolis, where he earned his surname of "the Fearless." He did not recover his liberty until 1397, and then only by paying an enormous ransom. He succeeded

his father in 1404, and immediately found himself in conflict with Louis of Orleans, the young brother of Charles VI. The history of the following years is filled with struggles between these two princes and with their attempts to seize the authority in the name of the demented king. John endeavoured to strengthen his position by marrying his daughter Margaret to the dauphin Louis, and by betrothing his son Philip to a daughter of Charles VI. Like his father, he looked for support to the popular party, to the tradesmen, particularly the powerful gild of the butchers, and also to the university of Paris. In 1405 he opposed in the royal council a scheme of taxation proposed by the duke of Orleans, which was nevertheless adopted. Louis retaliated by refusing to sanction the duke of Burgundy's projected expedition against Calais, whereupon John quitted the court in chagrin on the pretext of taking up his mother's heritage. He was, however, called back to the council to find that the duke of Orleans and the queen had carried off the dauphin. John succeeded in bringing back the dauphin to Paris, and open war seemed imminent between the two princes. But an arrangement was effected in October 1405, and in 1406 John was made by royal decree guardian of the dauphin and the king's children.

The struggle, however, soon revived with increased force. On Nov. 20, 1407, the two princes were formally reconciled by their uncle, the duke of Berry, but three days later Louis was assassinated by John's orders in the Rue Barbette, Paris. John abruptly left Paris. His vassals, however, showed themselves determined to support him in his struggle against the avengers of the duke of Orleans. The court decided to negotiate, and called upon the duke to return. John entered Paris in triumph, and instructed the Franciscan theologian Jean Petit (d. 1411) to pronounce an apology for the murder. But he was soon called back to his estates by a rising of the people of Liége against his brother-in-law, the bishop of that town. The queen and the Orleans party took every advantage of his absence and had Petit's discourse solemnly refuted. John's victory over the Liégeois at Hasbain on Sept. 23, 1408, enabled him to return to Paris, where he was reinstated in his ancient privileges. By the peace of Chartres (March 9, 1409) the king absolved him from the crime, and an edict of Dec. 27, 1409, gave John the guardianship of the dauphin. A new league was formed against the duke of Burgundy by Bernard, count of Armagnac, from whom the party opposed to the Burgundians took its name. The peace of Bicêtre (Nov. 2, 1410) prevented the outbreak of hostilities; but in 1411, in consequence of ravages committed by the Armagnacs in the environs of Paris, the duke of Burgundy was called back to Paris He relied more than ever on the support of the popular party, which then obtained the reforming *Ordonnance Cabochienne* (so called from Simon Caboche, a prominent member of the gild of the butchers). But the bloodthirsty excesses of the populace brought a change. John was forced to withdraw to Burgundy (August 1413), and the university of Paris and John Gerson once more censured Petit's propositions. Meanwhile John negotiated with the court and also with the English. His troops took no part in the battle of Agincourt (1415), where, however, two of his brothers, Anthony, duke of Brabant, and Philip, count of Nevers, fell fighting for France.

In 1417 John made an attack on Paris, which failed through his loitering at Lagny; but on May 30, 1418 a traitor, one Perrinet Leclerc, opened the gates of Paris to the Burgundian captain, Villiers de l'Isle Adam. The dauphin, afterwards King Charles VII., fled, and John betook himself to the king, who promised to forget the past. John, however, did nothing to prevent the surrender of Rouen, which had been besieged by the English, and on which the fate of the kingdom seemed to depend; and the town was taken in 1419. The dauphin then decided on a reconciliation, and on July 11 the two princes swore peace on the bridge of Pouilly, near Melun. A fresh interview was proposed by the dauphin and took place on Sept. 10, 1419 on the bridge of Montereau, when the duke of Burgundy was felled with an axe by Tanneguy du Chastel, one of the dauphin's companions, and done to death by the other members of the dauphin's escort. His body was removed to the Chartreuse of Dijon and placed in a magnificent tomb sculptured by Juan de la Huerta; the tomb was afterwards transferred to the museum in the *hôtel de ville.*

See A. G. P. Baron de Barante, *Histoire des ducs de Bourgogne* (Brussels, 1835–36); B. Zeller, *Louis de France et Jean sans Peur* (Paris, 1886); and E. Petit, *Itinéraire de Philippe le Hardi et de Jean sans Peur* (Paris, 1888).

JOHN, AUGUSTUS EDWIN (1879–), British painter, was born at Tenby, Wales, Jan. 4, 1879. He received his art education at the Slade School, London, and afterwards worked in Paris, later spending some time in Provence. He became a regular exhibitor at the New English Art Club, and in 1901–2 was teacher of art at University College, Liverpool, returning to London in 1902. His earlier work includes "The Way Down to the Sea" (1906), "The Kitchen Garden," "The Smiling Woman" (1910) and "The Mumpers" (1912). He was commissioned by Sir Hugh Lane to paint a series of decorative panels for the museum in Johannesburg, South Africa. For the Arts and Crafts Exhibition at Burlington House, London, 1916, he executed a mural decoration illustrating "Peasant Industry" During the World War he held a commission as official artist in the Canadian Corps, and exhibited at the Canadian War Memorial Exhibition, 1919, a cartoon for a large decoration, "Canadians opposite Lens." He was later commissioned to paint the chief characters of the Peace Conference. He also painted portraits of Lloyd George (1916), Bernard Shaw (1916), Lord Fisher (1917), Lord Sumner (1918), the Marchesa Casati (1918–9) and the Princess Bibesco (1924). His etchings form an important part of his work, the majority being produced between 1901–10. He is represented in the Tate Gallery by several pictures, including "The Smiling Woman," "Peasant Industry," "Robin" (1917–8), and "Rachael," in the Print Room of the British Museum, in the Walker Art Gallery, Liverpool; in the Birmingham Art Gallery; the Fitzwilliam Museum, Cambridge; the National Gallery, Dublin; the museums of Victoria and Melbourne, Australia, and in the Metropolitan Museum, New York. His early work, with its definite contour enclosing areas of colour, relates him to the *quattrocento* Italian painters. Distortion for personal emphasis and decorative effect is another marked characteristic. He was elected A.R.A. in 1921, R.A. in 1928.

See A. B., *Augustus John* (1923); C. Dodgson, *A Catalogue of Etchings by A. John 1901–1914* (1921).

JOHN, DON (1545–78), of Austria, was the natural son of the emperor Charles V. by Barbara Blomberg, the daughter of an opulent citizen of Regensburg. He was born in Regensburg on Feb. 24, 1545, and at first confided under the name of Geronimo to foster parents of humble birth, at a village near Madrid; but in 1554 transferred to the charge of Madalena da Ulloa, the wife of Don Luis de Quijada, and brought up in ignorance of his parentage at Quijada's castle of Villagarcia, near Valladolid. Charles V. in a codicil of his will recognized Geronimo as his son, and recommended him to the care of his successor. In September 1559 Philip II of Spain publicly recognized the boy as a member of the royal family, and he was known at court at Don Juan de Austria. Although first intended for a monk, Don John preferred a military career. In 1568 he commanded a fleet of galleys against Algerian corsairs; in 1569–70 he conducted operations against the rebel Moriscos in Granada; and in 1571 commanded the fleet which won the great victory of Lepanto against the Turkish fleet (Oct. 7, 1571).

This great triumph aroused Don John's ambition and filled his imagination with schemes of personal aggrandizement. He thought of erecting first a principality in Albania and the Morea, and then a kingdom in Tunis. But the conclusion by Venice of a separate peace with the sultan put an end to the league, and though Don John captured Tunis in 1573, it was again speedily lost. Philip II. refused to support Don John's schemes, and even withheld from him the title of infante of Spain. At last, however, he was appointed (1576) governor-general of the Netherlands, in succession to Luis de Requesens, in the hope that his prestige and activities would prove sufficient to put down the wide-spread revolt against Spanish rule headed by William of Orange. Confronted by the refusal of the states general to accept him as governor unless he assented to the conditions of the Pacification of

Ghent, swore to maintain the rights and privileges of the provinces, and to employ only Netherlanders in his service, Don John, after some months of fruitless negotiations, was obliged to give way and sign the "Perpetual Edict" complying with these terms (Huey, Feb. 12, 1577). On May 1 he entered Brussels, but he found himself governor-general only in name, and the prince of Orange master of the situation. In July he suddenly betook himself to Namur and withdrew his concessions. William of Orange forthwith took up his residence at Brussels, and gave his support to the archduke Matthias, afterwards emperor, whom the states-general accepted as their sovereign. Meanwhile Philip had sent large reinforcements to Don John under his cousin Alexander Farnese. Don John now attacked and defeated the patriot army at Gemblours (Jan. 31, 1578). Lack of funds prevented him, however, from following up his victory. After a summer of forced inactivity, he was attacked by fever and died on Oct. 1, 1578.

See Sir W. Stirling Maxwell, *Don John of Austria 1547–1575* (1883) and the bibliography under PHILIP II. OF SPAIN.

JOHN, DON (1629–1679), of Austria, the younger, was recognized as the natural son of Philip IV., king of Spain, his mother, Maria Calderon, or Calderona, being an actress. Scandal accused her of a prodigality of favours which must have rendered the paternity of Don John very dubious. He was, however, recognized by the king, received a princely education at Ocaña, and was amply endowed with commanderies in the military orders and other forms of income. Don John was sent in 1647 to Naples to support the viceroy against the popular rising led by Masaniello. He was then made viceroy of Sicily but in 1651 recalled to complete the pacification of Catalonia, presiding over the final siege of Barcelona and the convention which terminated the revolt in October 1652. On both occasions he had played the peacemaker, and this sympathetic part, combined with his own pleasant manners and handsome person with bright eyes and abundant raven-black hair—a complete contrast to the fair complexions of the Habsburgs—made him a popular favourite. In 1656 he was sent to command in Flanders, in combination with the prince of Condé, then in revolt against his own sovereign. At Valenciennes in 1656, Don John displayed brilliant personal courage at the head of a cavalry charge, but was completely defeated at the Dunes in 1658 by Turenne. During 1661 and 1662 he commanded against the Portuguese in Estremadura, with some success until in 1663 the Portuguese were reinforced by English troops, and put under the command of the Huguenot Schomberg. By him Don John was completely beaten at Estremos. The unsuccessful campaign was partly due to Don John's own indolence; but it was chiefly the jealousy of his father's wife, Queen Mariana, that caused him to be removed from command and sent to his commandery at Consuegra. After the death of Philip IV. in 1665 Don John became the recognized leader of the opposition to the government of Philip's widow, the queen regent, against whom he headed a rising of Aragon and Catalonia, which led to the expulsion of her favourite, Nithard (1669). Don John was, however, forced to content himself with the viceroyalty of Aragon. In 1677, the queen mother having aroused universal opposition, Don John was able to drive her from court, and establish himself as prime minister. Great hopes were entertained of his administration, but it proved disappointing and was of short duration. He died on Sept. 17, 1679.

JOHN, GRIFFITH (1831–1912), Welsh missionary, was born at Swansea on Dec. 14, 1831, and was brought up a Congregationalist. His work in China as a missionary covered a period of 55 years. In 1861 he went from Shanghai through the provinces of central China, which he was the first Christian missionary to penetrate, and he claimed that with his colleagues he had established over 100 stations of the London Missionary Society in Hu-peh and Hu-nan. He acquired an intimate knowledge of the Chinese language and literature, and translated the New Testament and a great part of the Old into more than one Chinese dialect. In the Yangtsze valley he founded a theological college for native preachers which bears his name. He died at Hampstead, London, on July 25, 1912.

JOHN, SIR WILLIAM GOSCOMBE (1860–), British sculptor, was born at Cardiff on Feb. 21, 1860, and studied at Cardiff and in London. After gaining the Royal Academy gold medal and travelling studentship, he spent a year in Paris (1890–91), and in 1892 gained honourable mention at the Paris Salon. He was elected A.R.A. in 1898 and R.A. in 1909. In 1900 the gold medal was awarded him at the Paris International Exhibition, and he was made corresponding member of the Institut de France. He was knighted at the investiture of the prince of Wales at Carnarvon castle in 1911. He is an expert technician. Among his best work are his portrait busts, especially of children, and medals. His principal works include "King Edward VII.," at Cape Town; "W. E. H. Lecky," at Trinity college, Dublin; "Thomas Sutton, founder of Charterhouse," at Charterhouse, Godalming; "The Rt. Hon. David Lloyd George," at Carnarvon; "The Duke of Devonshire," at Eastbourne; "The Marquis of Salisbury," in Westminster Abbey; equestrian statues of King Edward VII., at Liverpool; Viscount Wolseley, Horse Guards Parade, London; and Gen. Sir Stanley Maude, at Baghdad; and also many memorials, among which those of the Coldstream Guards and War Correspondents in St. Paul's cathedral may be mentioned. The Tate Gallery contains "The Boy at Play"; the Glasgow art gallery, "The Elf"; the Cardiff art gallery "Morpheus" and "St. John the Baptist."

JOHN, GOSPEL OF ST., the fourth and latest of the Gospels, in the Bible, and, next to that of St. Mark, the shortest. This article will first describe its general structure and more obvious contents, compare it with the Synoptic Gospels, and draw out its leading characteristics and final object; it will then apply the tests thus gained to the narratives special to this Gospel, and point out the book's special difficulties and limits, and its abiding appeal and greatness; and finally, consider the questions of its origin and authorship.

Analysis of Contents.—The book's chief break is at xiii. 1, the solemn introduction to the feet-washing; all up to here reports Jesus' signs and apologetic or polemical discourses to the outer world; hence onwards it pictures the manifestation of His glory to the inner circle of His disciples. These two parts contain three sections each.

1. (i.) Introduces the whole work (i. 1–ii. 11). (*a*) The prologue (i. 1–18). The Logos existed before creation and time; was with the very God and was God; and all things were made through Him. For in this Logos is Life, and this Life is a Light which, though shining in darkness, cannot be suppressed by it. This true Light became flesh and tabernacled amongst us; and we beheld His glory, as of an Only-Begotten from the Father, full of grace and truth. John the Baptist testified concerning Him, the Logos-Light and Logos-Life incarnate; but this Logos alone, who is in the bosom of the Father, hath declared the very God. (*b*) The four days' work (i. 19–51). On the first three days John declares that he is not the Christ, proclaims Jesus to be the Christ, and sends his own disciples away to Jesus. On the fourth day, Jesus Himself calls Philip and Nathanael. (*c*) The seventh day's first manifestation of the Incarnate Light's glory (ii. 1–11); Jesus at Cana turns water into wine.

(ii.) Records the manifestations of the Light's and Life's glory and power to friend and foe (ii. 22–vi. 71). (*d*) Solemn inauguration of the Messianic ministry (ii. 12–iii. 21): cleansing of the Temple and prophecy of His resurrection; discourse to Nicodemus on baptismal regeneration. (*e*) Three scenes in Judea, Samaria, Galilee respectively (iii. 32–iv. 54): the Baptist's second testimony; Jesus' discourse with the woman at the well concerning the spiritual, universal character of the new religion; and cure of the ruler's son, the reward of faith in the simple word of Jesus. (*f*) Manifestation of Jesus as the vivifying Life-Logos and its contradiction in Judea, v.: the paralytic's cure. (*g*) Manifestation of Jesus as the heaven-descended living Bread and its contradiction in Galilee, vi.: multiplication of the loaves; walking on the waters; and His discourse on the Holy Eucharist.

(iii.) Acute conflict between the New Light and the old darkness (vii.–xii.). (*h*) Self-manifestation of the Logos-Light in the Temple (vii 1–x. 39). Journey to the feast of tabernacles; invita-

tion to the soul athirst to come to Him (the fountain of Life) and drink, and proclamation of Himself as the Light of the world; cure of the man born blind; allegory of the good shepherd. The allegory continued at the feast of the dedication. They strive to stone or to take Him. (*i*) The Logos-Life brings Lazarus to life; effects of the act (x. 40–xii. 50). Jesus withdraws beyond Jordan, and then comes to Bethany, His friend Lazarus being buried three days; proclaims Himself the Resurrection and the Life; and calls Lazarus back to life Some who saw it report the act to the Pharisees; the Sanhedrim meets, Caiaphas declares that one man must die for the people, and henceforward they ceaselessly plan His death. Jesus withdraws to the Judean desert, but soon returns, six days before Passover, to Bethany; Mary anoints Him, a crowd comes to see Him and Lazarus, and the hierarchs then plan the killing of Lazarus also. Next morning He rides into Jerusalem on an ass's colt. Certain Greeks desire to see Him: He declares the hour of His glorification to have come: "Now My soul is troubled. . . . Father, save Me from this hour. But for this have I come unto this hour: Father, glorify Thy Name." A voice answers, "I have glorified it and will glorify it again": some think that an angel spoke; but Jesus explains that this voice was not for His sake but for theirs When lifted up from the earth, He will draw all men to Himself; they are to believe in Him, the Light. The writer's concluding reflection: the small success of Jesus' activity among the Jews. Once again He cries: "I am come a Light into the world, that whoso believeth in Me should not abide in darkness."

2. The Logos-Christ's manifestation of His life and love to His disciples, during the last supper, the passion, the risen life (xiii.–xx.).

(iv.) The Last Supper (xiii–xvii.). (*j*) Solemn washing of the disciples' feet; the beloved disciple; designates the traitor; Judas goes forth, it is night (xiii. 1–30). (*k*) Last discourses, first series (xiii. 31–xiv. 31): the new commandment, the other helper; "Arise, let us go hence." Second series (xv. 1–xvi. 33): allegory of the true vine; "Greater love than this hath no man, that he lay down his life for his friend"; the world's hatred; the spirit of truth shall lead them into all truth; "I came forth from the Father and am come into the world, again I leave the world and go to the Father"; "Be of good cheer, I have overcome the world." (*l*) The high-priestly prayer (xvii). "Father, glorify Thy Son . . . with the glory which I had with Thee before the world was . . . that to as many as Thou hast given Him, He should give eternal life." "I pray for them, I pray not for the world. I pray also for them that shall believe in Me through their word, that they may be all one, as Thou Father art in Me, and I in Thee."

(v.) The Passion (xviii.–xix). (*m*) In the garden: the Roman soldiers come to apprehend Him, fall back upon the ground at His declaration "I am He." Peter and Malchus. (*n*) Before Annas at night and Caiaphas at dawn; Peter's denials (xviii. 12–27). (*o*) Before Pilate (xviii. 28–40). Jesus declares, "My kingdom is not of this world. I have come into the world that I may bear witness to the truth: everyone that is of the truth, heareth My voice"; Pilate asks sceptically "What is truth?" and the crowd prefers Barabbas. (*p*) The true king presented to the people as a mock-king; His rejection by the Jews and abandonment to them (xix. 1–16). (*q*) Jesus carries His cross to Golgotha, and is crucified there between two others; the cross's title and Pilate's refusal to alter it (xix. 17–22). (*r*) The soldiers cast lots upon His garments and seamless tunic; His mother with two faithful women and the beloved disciple at the cross's foot; His commendation of His mother and the disciple to each other; His last two sayings in deliberate accomplishment of scripture "I thirst," "It is accomplished." He gives up the spirit; His bones remain unbroken; and from His spear-lanced side blood and water issue (xix. 23–37). (*s*) The two nobles, Joseph of Arimathaea and Nicodemus, bind the dead body in a winding sheet with one hundred pounds of precious spices, and place it in a new monument in a near garden, since the sabbath is at hand.

(vi.) The risen Jesus, Lord and God (xx.). (*t*) At early dawn on the first day of the week, Mary Magdalen, finding the stone rolled away from the monument, runs to tell Peter and the beloved disciple that the Lord's body has been removed. Peter and the other disciple run to the grave; the latter, arriving first, enters only after Peter has gone in and noted the empty grave-clothes—enters and believes. After their departure, Mary sees two angels where His body had lain and turning away beholds Jesus standing, yet recognizes Him only when He addresses her. He bids her "Do not touch Me, for I have not yet ascended," but to tell His brethren "I ascend to My Father and to your Father, to My God and to your God." And she does so. (*u*) Second apparition (xx. 19–23). Later on the same day, the doors being shut, Jesus appears amongst His disciples, shows them His (pierced) hands and side, and solemnly commissions and endows them for the apostolate by the words, "As the Father hath sent Me, so I send you," and by breathing upon them saying "Receive the Holy Spirit: whose sins ye remit, they are remitted to them; whose sins ye retain, they are retained." (*v*) Third apparition and culminating saying; conclusion of entire book (xx. 24–31). Thomas, who had been absent, doubts the resurrection; Jesus comes and submits to the doubter's tests. Thomas exclaims, "My Lord and my God"; but Jesus declares "Blessed are they that have not seen and yet have believed." "Now Jesus," concludes the writer, "did many other signs, . . . but these are written, that ye may believe that Jesus is the Christ, the Son of God, and that believing ye may have life in His name."

This analysis is rough, since the sections, indeed the two parts themselves, are interrelated by delicate complex references; also it omits the account of the adulteress (vii. 53–viii. 11)—a valuable report of an occurrence which probably belonged to some primitive document otherwise incorporated by the Synoptists—because it is un-Johannine in vocabulary, style and character, intercepts the Gospel's thread wherever placed, and is absent from its best mss. It also omits xxi. This chapter's first two stages contain an important early historical document of Synoptic type: Jesus' apparition to seven disciples by the Lake of Galilee and the miraculous draught of fishes; and Peter's threefold confession and Jesus' threefold commission to him. And its third stage, Jesus' prophecies to Peter and to the beloved disciple concerning their future, and the declaration "This is the disciple who testifies to these things and who has written them, and we know that his testimony is true," is doubtless written by the redactor of the previous two stages. This writer imitates, but is different from, the great author of the first twenty chapters.

Comparison With the Synoptists.—The following are the most obvious differences between the original book and the Synoptists. John has a metaphysical prologue; Matthew and Luke have historical prologues; and Mark is without any prologue. The earthly scene is here Judea, indeed Jerusalem, with but five breaks (vi. 1–vii. 10 is the only long one); whilst over two-thirds of each Synoptist deal with Galilee or Samaria. The ministry here lasts about three and a half years (it begins some months before the first Passover, ii. 13; the feast of v. 1 is probably a second; the third occurs vi. 4; and on the fourth, xi. 55, He dies); whilst the Synoptists have but the one Passover of His death, after barely a year of ministry. Here Jesus' teaching contains no parables and but three allegories, the Synoptists present it as parabolic through and through. Here not one exorcism occurs; in the Synoptists the exorcisms are as prominent as the cures and the preaching. John has, besides the passion, seven accounts in common with the Synoptists: the Baptist and Jesus (i. 19–34); cleansing of the Temple (ii. 13–16); cure of the centurion's (ruler's) servant (son) (iv. 46–54); multiplication of the loaves (vi. 1–13); walking upon the water (vi. 16–21); anointing at Bethany (xii. 1–8); entry into Jerusalem (xii. 12–16); all unique occurrences. In the first, John describes how the Baptist, on Jesus' approach, cries "Behold the Lamb of God, which taketh away the sins of the world"; and how he says "I saw the spirit descending upon Him, and I bore witness that this is the Son of God." But the Synoptists, especially Mark, give the slow steps in even the apostles' realization of Jesus' Messianic character; only at Caesarea Philippi, Simon alone, for the first time, clearly discerns it, Jesus declaring that His Father has revealed it to Him, and yet Simon is still scandalized at the thought of a suffer-

ing Messiah (Mark viii. 28–34). Only some two weeks before the end is He proclaimed Messiah at Jericho (x. 46–48); then in Jerusalem, five days before dying for this upon the cross (xi. 1–10, xv. 37). As to the Baptist, in all three Synoptists, he baptizes Jesus, and, in Mark i. 10, 11, it is Jesus who sees the Spirit descending upon Himself on His emerging from beneath the water, and it is to Himself that God's voice is addressed; in John, Jesus' baptism is ignored, only the Spirit remains hovering above him, as a sign for the Baptist's instruction. And in Matt. xi. 2–6, the Baptist, several months after the Jordan scene, sends from his prison to ascertain if Jesus is indeed the Messiah; in John, the Baptist remains at large so as again (iii. 22–36) to proclaim Jesus' heavenly provenance. The cleansing of the Temple occurs in the Synoptists four days before His death, and instantly determines the hierarchs to seek His destruction (Mark xi. 15–18); John puts it three years back, as an appropriate frontispiece to His complete claims and work.

The passion-narratives reveal the following main differences. John omits, at the last supper, its central point, the great historic act of the Holy Eucharist, carefully given by the Synoptists and St. Paul, having provided a highly doctrinal equivalent in the discourse on the living Bread, here spoken by Jesus in Capernaum over a year before the passion (vi. 4), the day after the multiplication of the loaves. This transference is doubtless connected with the change in the relations between the time of the Passover meal and that of His death: in the Synoptists, the Thursday evening's supper is a true Passover meal, the lamb had been slain that afternoon and Jesus dies some twenty-four hours later; in John, the supper is not a Passover meal, the Passover is celebrated on Friday, and Jesus, proclaimed here from the first, the Lamb of God, dies whilst the paschal lambs, His prototypes, are being slain. The scene in the garden is without the agony of Gethsemane; a faint echo of this historic anguish appears in the scene with the Greeks four days earlier, and even that peaceful appeal to, and answer of, the Father occurs only for His followers' sakes. In the garden Jesus here Himself goes forth to meet His captors, and these fall back upon the ground, on His revealing Himself as Jesus of Nazareth. The long scenes with Pilate culminate in the great sayings concerning His kingdom not being of this world and the object of this His coming being to bear witness to the truth, thus explaining how, though affirming kingship (Mark xv. 2), He could be innocent. In John He does not declare Himself Messiah before the Jewish Sanhedrim (Mark xiv. 61) but declares Himself supermundane regal witness to the truth before the Roman governor. The scene on Calvary differs as follows: In the Synoptists the soldiers divide His garments among them, casting lots (Mark xv. 24); in John they make four parts of them and cast lots concerning His seamless tunic, thus fulfilling the text, "They divided My garments among them and upon My vesture they cast lots": the parallelism of Hebrew poetry, which twice describes one fact, being taken as witnessing to two, and the tunic doubtless symbolizing the unity of the Church, as in Philo the high priest's seamless robe symbolizes the indivisible unity of the universe, expressive of the Logos (*De ebrietate,* xxi.). In the Synoptists, of His followers only women—the careful, seemingly exhaustive lists do not include His mother—remain, looking on "from afar" (Mark xv. 40); in John, His mother stands with the two other Marys and the beloved disciple beneath the cross, and "from that hour the disciple took her unto his own (house)," while in the older literature His mother does not appear in Jerusalem till just before Pentecost, and with "His brethren" (Acts i. 14). And John alone tells how the bones of the dead body remained unbroken, fulfilling the ordinance as to the paschal lamb (Exod. xii. 46), and how blood and water flowed from His spear-pierced side: thus the Lamb "taketh away the sins of the world" by shedding His blood which "cleanseth us from every sin"; and "He cometh by water and blood," historically at His baptism and crucifixion, and mystically to each faithful soul in baptism and the eucharist. The story of the risen Christ (xx.) shows dependence on and contrast to the Synoptic accounts. Its two halves have each a negative and a positive scene. The empty grave (1–10) and the apparition to the Magdalen (11–18) together correspond to the message brought by the women (Matt. xxviii. 1–10); and the apparition to the ten joyously believing apostles (19–23) and then to the sadly doubting Thomas (24–29) together correspond to Luke xxiv. 36–43, where the eleven apostles jointly receive one visit from the risen One, and both doubt and believe, mourn and rejoice.

The Johannine discourses reveal differences from the Synoptists so profound as to be admitted by all. Here Jesus, the Baptist and the writer speak so much alike that it is sometimes impossible to say where each speaker begins and ends: *e.g.*, in iii 27–30, 31–36 The speeches dwell upon Jesus' person and work, as we shall find, with a didactic directness, philosophical terminology and denunciatory exclusiveness unmatched in the Synoptist sayings. "This is eternal life, that they may know Thee the only true God and Jesus Christ whom Thou hast sent" (xvii. 3), is part of the high-priestly prayer; yet Père Calmes, with the papal censor's approbation, says, "It seems to us impossible not to admit that we have here dogmatic developments explicable rather by the evangelist's habits of mind than by the actual words of Jesus." "I have told you of earthly things and you believe not; how shall ye believe if I tell you of heavenly things?" (iii. 12), and "Ye are from beneath, I am from above" (viii. 23), give us a Plato- (Philo-) like upper, "true" world, and a lower, delusive world. "Ye shall die in your sins" (viii 21); "ye are from your father the devil" (viii. 44); "I am the door of the sheep, all they that came before Me are thieves and robbers," (x. 7, 8); "they have no excuse for their sin" (xv 22)—contrast strongly with the yearning over Jerusalem: "The blood of Abel the just" and "the blood of Zacharias son of Barachias" (Matt. xxiii. 35–37); and "Father, forgive them; for they know not what they do" (Luke xxiii. 34). And whilst the Synoptist speeches and actions stand in loose and natural relation to each other, the Johannine deeds so closely illustrate the sayings that each set everywhere supplements the other: the history itself here tends to become one long allegory. So with the woman at the well and "the living water"; the multiplication of the loaves and "the living Bread"; "I am the Light of the world" and the blind man's cure; "I am the Resurrection and the Life" and the raising of Lazarus; indeed even with the Temple-cleansing and the prophecy as to His resurrection; Nicodemus's night visit and "men loved the darkness rather than the light"; the cure of the inoperative paralytic and "My Father and I work hitherto"; the walking, phantom-like, upon the waters (John vi. 15–21; Mark vi. 49); and the declaration concerning the eucharist, "the spirit it is that quickeneth" (John vi. 63). Only some sixteen Synoptic sayings reappear here; but we are given some great new sayings full of the Synoptic spirit.

Characteristics and Object.—The book's character results from the continuous operation of four great tendencies. There is everywhere a readiness to handle traditional, largely historical, materials with a sovereign freedom, controlled and limited by doctrinal convictions and devotional experiences alone. There is everywhere the mystic's deep love for double, even treble meanings: *e.g.*, the "again" in iii. 2, means, literally, "from the beginning," to be physically born again; morally, to become as a little child; mystically, "from heaven, God," to be spiritually renewed. "Judgment" (κρίσις) in the popular sense, condemnation, a future act; in the mystical sense, discrimination, a present fact. There is everywhere the influence of certain central ideas, partly identical with, but largely developments of, those less reflectively operative in the Synoptists. Thus six great terms are characteristic of, or even special to, this Gospel. "The Only-Begotten" is most nearly reached by St. Paul's term "His own Son." The "Word," or "Logos," is a term derived from Heracleitus of Ephesus and the Stoics, through the Alexandrian Jew Philo, but conceived here throughout as definitely personal. "The Light of the World" the Jesus-Logos here proclaims Himself to be; in the Synoptists He only declares His disciples to be such. "The Paraclete," as in Philo, is a "helper," "intercessor"; but in Philo he is the intelligible universe, whilst here He is a self-conscious Spirit. "Truth," "the truth," "to know," have here a prominence and significance far beyond their Synoptic or even their Pauline use And above all stand the uses of "Life," "Eternal Life."

The living ever-working Father (vi. 57; v. 17) has a Logos in whom is Life (i. 4), an ever-working Son (v. 17), who declares Himself "the living Bread," " the Resurrection and the Life," "the Way, the Truth and the Life" (vi. 51; xi. 25; xiv. 16): so that Father and Son quicken whom they will (v. 21); the Father's commandment is life everlasting, and Jesus' words are spirit and life (xii. 50; vi. 63, 68). The term, already Synoptic, takes over here most of the connotations of the "Kingdom of God," the standing Synoptic expression, which appears here only in iii. 3–5; xviii. 36. Note that the term "the Logos" is peculiar to the Apocalypse (xix. 13), and the prologue here, but that, as Light and Life, the Logos-conception is present throughout the book. And thus there is everywhere a striving to contemplate history *sub specie aeternitatis* and to englobe the successiveness of man in the simultaneity of God.

Narratives Peculiar to John.—Of his seven great symbolical, doctrinally interpreted "signs," John shares three, the cure of the ruler's son, the multiplication of the loaves, the walking on the waters, with the Synoptists: yet here the first is transformed almost beyond recognition; and the two others only typify and prepare the eucharistic discourse. Of the four purely Johannine signs, two—the cures of the paralytic (v. 1–16), and of the man born blind (ix. 1–34)—are, admittedly, profoundly symbolical. In the first case, the man's physical and spiritual lethargy are closely interconnected and strongly contrasted with the ever-active God and His Logos. In the second case there is also the closest parallel between physical blindness cured, and spiritual darkness dispelled, by the Logos-Light as described in the accompanying discourse. Both narratives are doubtless based upon actual occurrences—the cures narrated in Mark ii., iii., viii , x., and scenes witnessed by the writer in later times—yet here they do but picture our Lord's spiritual work in the human soul achieved throughout Christian history. We cannot well claim more than these three kinds of reality for the first and the last signs, the miracle at Cana and the resurrection of Lazarus.

For the marriage-feast sign yields throughout an allegorical meaning. Water stands in this Gospel for what is still but symbol; thus the water-pots serve here the external Jewish ablutions—old bottles which the "new wine" of the Gospel is to burst (Mark ii. 22). Wine is the blood of the new covenant, and He will drink the fruit of the vine new in the Kingdom of God (Mark xiv. 23–25); the vineyard where He Himself is the true Vine (Mark xii. 1; John xv. 1). And "the kingdom of heaven is like to a marriage-feast" (Matt. xxii. 2); Jesus is the Bridegroom (Mark ii. 19); "the marriage of the Lamb has come" (Rev. xix. 7). "They have no wine": the hopelessness of the old conditions is announced here by the true Israel, the Messiah's spiritual mother, the same "woman" who in Rev. xii. 2, 5 "brought forth a man-child who was to rule all nations " Cardinal Newman admitted that the latter woman "represents the church, this is the real or direct sense"; yet as her man-child is certainly the Messiah, this church must be the faithful Jewish church. Thus also the "woman" at the wedding and beneath the cross stands primarily for the faithful Old Testament community, corresponding to the beloved disciple, the typical New Testament follower of her Son, the Messiah: in each case the devotional accommodation to His earthly mother is equally ancient and legitimate. He answers her "My hour is not yet come," *i.e.*, in the symbolic story, the moment for working the miracle; in the symbolized reality, the hour of His death, condition for the spirit's advent; and "what is there between Me and thee?" *i.e.*, "My motives spring no more from the old religion," words devoid of difficulty, if spoken thus by the Eternal Logos to the passing Jewish church. The transformation is soon afterwards accomplished, but in symbol only; the "hour" of the full sense is still over three years off. Already Philo says "the Logos is the master of the spiritual drinking-feast," and "let Melchisedeck"—the Logos—"in lieu of water offer wine to souls and inebriate them" (*De somn.* ii. 37; *Legg. all.* iii. 26). But in John this symbolism figures a great historic fact, the joyous freshness of Jesus' ministerial beginnings, as indicated in the sayings of the Bridegroom and of the new wine, a freshness typical of Jesus' ceaseless renovation of souls.

The raising of Lazarus, in appearance a massive, definitely localized historical fact, requires a similar interpretation, unless we would, in favour of the direct historicity of a story peculiar to a profoundly allegorical treatise, ruin the historical trustworthiness of the largely historical Synoptists in precisely their most complete and verisimilar part. For especially in Mark, the passing through Jericho, the entry into Jerusalem, the Temple-cleansing and its immediate effect upon the hierarchs, their next day's interrogatory, "By what authority doest thou these things?" *i.e.*, the cleansing (x. 46–xi. 33), are all closely interdependent and lead at once to His discussions with His Jerusalem opponents (xii., xiii.), and to the anointing, last supper, and passion (xiv., xv.). John's last and greatest symbolic sign replaces those historic motives, since here it is the raising of Lazarus which determines the hierarchs to kill Jesus (xi. 46–52), and occasions the crowds which accompany and meet him on His entry (xii. 9–19). The intrinsic improbabilities of the narrative, if taken as direct history are also great: Jesus' deliberate delay of two days to secure His friend's dying, and His rejoicing at the death, since thus He can revivify His friend and bring His disciples to believe in Himself as the Life; His deliberate weeping over the death which He has thus let happen, yet His anger at the similar tears of Lazarus's other friends; and His praying, as He tells the Father in the prayer itself, simply to edify the bystanders: all point to a doctrinal allegory. Indeed the climax of the whole account is already reached in Jesus' great saying: "I am the Resurrection and the Life; he that believeth in Me . . . shall not die for ever," and in Martha's answer: "I believe that Thou art the Christ, the Son of God, who hast come into the world" (xi. 26, 27); the sign which follows is but the pictorial representation of this abiding truth. The materials for the allegory will have been certain Old Testament narratives, but especially the Synoptic accounts of Jesus' raisings of Jairus's daughter and of the widow's son (Mark v ; Luke vii.). Mary and Martha are admittedly identical with the sisters in Luke x. 38–42; and already some Greek fathers connect the Lazarus of this allegory with the Lazarus of the parable (Luke xvi. 19–31). In the parable Lazarus returns not to earth, since Abraham foresees that the rich man's brethren would disbelieve even if one rose from the dead; in the corresponding allegory, Lazarus does actually return to life, and the Jews believe so little as to determine upon killing the very Life Himself.

Special Difficulties and Greatness.—The difficulties, limitations and temporary means special to the book are closely connected with its ready appeal and abiding power; let us take both sets of things together, in three couples of inter-related price and gift

The book's method and form are pervadingly allegorical; its instinct and aim are profoundly mystical. Now from Philo to Origen we have a long Hellenistic, Jewish and Christian application of that all-embracing allegorism, where one thing stands for another and where no factual details resist resolution into a symbol of religious ideas and forces. Thus Philo had, in his life of Moses, allegorized the Pentateuchal narratives so as to represent him as mediator, saviour, intercessor of his people, the one great organ of revelation, and the soul's guide from the false lower world into the upper true one. The Fourth Gospel is the noblest instance of this kind of literature, of which the truth depends not on the factual accuracy of the symbolizing appearances but on the truth of the ideas and experiences thus symbolized. And Origen is still full of spontaneous sympathy with its pervading allegorism. But this method has lost its attraction; the Synoptists, with their rarer and slighter pragmatic rearrangements and their greater closeness to our Lord's actual words, deeds, experiences, environment, now come home to us as indefinitely richer in content and stimulative appeal. Yet mysticism persists, as the intuitive and emotional apprehension of the most specifically religious of all truths, viz., the already full, operative existence of eternal beauty, truth and goodness, of infinite Personality and Spirit independently of our action, and not, as in ethics, the simple possibility and obligation for ourselves to produce such-like things. And of this elemental mode of apprehension

and root-truth, the Johannine Gospel is the greatest literary document and incentive extant: its ultimate aim and deepest content retain all their potency.

The book contains an intellectualist, static, determinist, abstractive trend. In Luke x. 25–28, eternal life depends upon loving God and man; here it consists in knowing the one true God and Christ whom He has sent. In the Synoptists, Jesus grows in favour with God and man, passes through true human experiences and trials, prays alone on the mountain-side, and dies with a cry of desolation; here the Logos' watchword is "I am," He has deliberately to stir up emotion in Himself, never prays for Himself, and in the garden and on the cross shows but power and self-possession. Here we find "ye cannot hear, cannot believe, because ye are not from God, not of My sheep" (viii. 47, x. 26); "the world cannot receive the spirit of truth" (xiv. 17). Yet the ethical current appears here also strongly: "he who doeth the truth, cometh to the light" (iii. 21), "if you love Me, keep My commandments" (xiv. 15). Libertarianism is here: "the light came, but men loved the darkness better than the light," "ye will not come to Me" (iii. 19, v. 40); hence the appeal "abide in Me"—the branch can cease to be in Him the Vine (xv. 4, 2). Indeed even those first currents stand here for the deepest religious truths, the prevenience of God and man's affinity to Him. "Not we loved God (first), but He (first) loved us"; "let us love Him, because He first loved us" (1 John iv. 10, 19): "no man can come to Me, unless the Father draw him" (vi. 44), a drawing which effects a hunger and thirst for Christ and God (iv. 14, vi. 35). Thus man's spirit can respond actively to the historic Jesus, because already touched and made hungry by the all-actual Spirit-God who made that soul akin unto Himself.

The book has an outer protective shell of acutely polemical and exclusive moods and insistences, whilst certain splendid Synoptic breadths and reconciliations are nowhere reached; but this is primarily because it is fighting, more consciously than they, for that inalienable ideal of all deepest religion, unity, even external and corporate, amongst all believers. The "Pneumatic" Gospel comes thus specially to emphasize certain central historical facts; and, the most explicitly institutional and sacramental of the four, to proclaim the most universalistic and developmental of all Biblical sayings. Here indeed Jesus will not pray for the world (xvii. 9): "ye shall die in your sins," He insists to His opponents (viii. 44, 24); it is the Jews generally who appear throughout as such; nowhere is there a word as to forgiving our enemies; and the commandment of love is designated by Jesus as His, as new, and as binding the disciples to "love one another" within the community to which He gives His "example" (xv. 12. xiii. 34, 15). In the Synoptists, the disciples' intolerance is rebuked (Mark ix. 38–41); Jesus' opposition is everywhere restricted to the Pharisees and the worldly Sadducees; He ever longs for the conversion of Jerusalem; the great double commandment of love is proclaimed as already formulated in the Mosaic law (Mark xii. 28–34); the neighbour to be thus loved and served is simply any and every suffering fellow-man; and the pattern for such perfect love is found in a schismatical Samaritan (Luke x. 25–37). Yet the deepest strain here is more serenely universalist even than St. Paul, for here Jesus says. "God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should . . . have everlasting life" (iii. 16). True, the great prologue passage (i. 9) probably reads "He was the true Light coming into the world, that enlighteneth every man," so that the writer would everywhere concentrate his mind upon the grace attendant upon explicit knowledge of the incarnate, historic Christ. Yet Christian orthodoxy, which itself has, all but uniformly, understood this passage of the spiritual radiation throughout the world of the Word before His incarnation, has been aided towards such breadth as to the past by the Johannine outlook into the future. For, in contrast to the earliest Synoptic tradition, where the full Christian truth and its first form remain undistinguished, and where its earthly future appears restricted to that generation, in John the Eternal Life conception largely absorbs the attention away from all successiveness; Jesus' earthly life does not limit the religion's assimilation of further truth and experience: "I have many things to tell you, but you cannot bear them now," "the Father will give you another Helper, the spirit of truth, who will abide with you for ever" (xvi. 12, xiv. 15). This universalism is not simply spiritual; the external element, presupposed in the Synoptists as that of the Jewish church within which Jesus' earthly life was spent, is here that of the now separate Christian community: He has other sheep not of this fold—them also He must bring, there will be one fold, one shepherd; and His seamless tunic, and Peter's net which, holding every kind of fish, is not rent, are symbols of this visible unity. Ministerial gradations exist in this church; Jesus begins the feet-washing with Peter, who alone speaks and is spoken to; the beloved disciple outruns Peter to Jesus' monument, yet waits to go in till Peter has done so first; and in the appendix the treble pastoral commission is to Peter alone: a Petrine pre-eminence which but echoes the Synoptists. And sacramentalism informs the great discourses concerning rebirth by water and the spirit, and feeding on the Living Bread, Jesus' flesh and blood, and the narrative of the issue of blood and water from the dead Jesus' side. Indeed so severe a stress is laid upon the explicitly Christian life and its specific means, that orthodoxy itself interprets the rebirth by water and spirit, and the eating the flesh and drinking the blood to which entrance into the Kingdom and possession of interior life are here exclusively attached, as often represented by a simple sincere desire and will for spiritual purification and a keen hunger and thirst for God's aid, together with such cultural acts as such souls can know or find, even without any knowledge of the Christian rites. Thus there is many "a pedagogue to Christ," and the Christian visible means and expressions are the culmination and measure of what, in various degrees and forms, accompanies every sincerely striving soul throughout all human history.

Origin and Authorship.—The question as to the book's origin has lost its poignancy through the ever-increasing recognition of its intrinsic character. Thus the defenders of the apostolic authorship, the Unitarian James Drummond (1903), the Anglican William Sanday (1905), the Roman Catholic Theodore Calmes (1904), can tell us: the first, that "the evangelist did not aim at an illustrative picture of what was most characteristic of Jesus"; the second, that "the author sank into his own consciousness and at last brought to light what he found there"; the third, that "the Gospel contains an entire theological system," "history is seen through the intervening dogmatic development," "the Samaritan woman is . . . a personification," "the behaviour of the Greeks is entirely natural in such a book." We thus get at cross-purposes with this powerful, profound work: only some such position as Abbé Loisy's critical summing up (1903) brings out its specific greatness. "What the author was, his book, in spite of himself, tells us to some extent: a Christian of Judeo-Alexandrine formation; a believer without, apparently, any personal reminiscence of what had actually been the life, preaching and death of Jesus; a theologian far removed from every historical preoccupation, though he retains certain principal facts of tradition without which Christianity would evaporate into pure ideas; and a seer who has lived the Gospel which he propounds." "To find his book beautiful and true, we need but take it as it is and understand it." "The church, which has never discussed the literary problem of this Gospel, in nowise erred as to its worth."

Several traditional positions have indeed been approximately maintained or reconquered against the critics. As to the Gospel's date, critics have returned from 160–170 (Baur), 150 (Zeller), 130 (Keim), to 110–115 (Renan) and 80–110 (Harnack): since Irenaeus says its author lived into the times of Trajan (90–117), a date somewhere about 105 would satisfy tradition. As to the place, the critics accept proconsular Asia with practical unanimity, thus endorsing Irenaeus's declaration that the Gospel was published in Ephesus. As to the author's antecedents, critics have ceased to hold that he could not have been a Jew-Christian, and admit that he must have been by birth a Jew of the Dispersion or the son of Christian parents who had been such Jews. And as to the vivid accuracy of many of his topographical and social details, the predominant critical verdict now is that he betrays

an eye-witness's knowledge of the country between Sichem and Jordan and as to Jerusalem; he will have visited these places, say in 90, or may have lived in Jerusalem shortly before its fall. But the reasons against the author being John the Zebedean or any other eyewitness of Jesus' earthly life have accumulated to a practical demonstration.

As to the external evidence for the book's early date, we must remember that the Epistle to the Hebrews and the Book of Revelation, though admittedly earlier, are of the same school, and, with the great Pauline Epistles, show many preformations of Johannine phrases and ideas. Other slighter prolusions will have circulated in that Philonian centre Ephesus, before the great Gospel englobed and superseded them. Hence the precariousness of the proofs derived from more or less close parallels to Johannine passages in the apostolic fathers. Justin Martyr (163–167) certainly uses the Gospel; but his conception of Jesus' life is so strictly Synoptic that he can hardly have accepted it as from an apostolic eyewitness. Papias of Hierapolis, in his *Exposition of the Lord's Sayings* (145–160), appears nowhere to have mentioned it, and clearly distinguishes between "what Andrew, Peter, . . . John or Matthew or any other of the Lord's disciples spoke," and "what Aristion and the presbyter John, the Lord's disciples, say." Thus Papias, as Eusebius, about 314, insists, knew two Johns, and the apostle was to him a far-away figure; indeed early mediaeval chroniclers recount that Papias "in the second book of the Lord's sayings" asserted that both the sons of Zebedee were "slain by Jews," so that the apostle John would have died before 70 Irenaeus's testimony is the earliest and admittedly the strongest we possess for the Zebedean authorship; yet, as Calmes admits, "it cannot be considered decisive." In his work against the Heresies and in his letter to Florinus, about 185–191, he tells how he had himself known Bishop Polycarp of Smyrna, and how Polycarp "used to recount his familiar intercourse with John and the others who had seen the Lord"; and explicitly identifies this John with the Zebedean and the evangelist. But Irenaeus was at most 15 when thus frequenting Polycarp; writes 35 to 50 years later in Lyons, admitting that he noted down nothing at the time; and, since his mistaken description of Papias as "a hearer of John" the Zebedean was certainly reached by mistaking the presbyter for the apostle, his additional words "and a companion of Polycarp" point to this same mistaken identification having also operated in his mind with regard to Polycarp. In any case, the very real and important presbyter is completely unknown to Irenaeus, and his conclusion as to the book's authorship resulted apparently from a comparison of its contents with Polycarp's teaching. If the presbyter wrote Revelation and was Polycarp's master, such a mistake could easily arise. Certainly Polycrates, bishop of Ephesus, made a precisely similar mistake when about 190 he described the Philip "who rests in Hierapolis" as "one of the twelve apostles," since Eusebius rightly identifies this Philip with the deacon of Acts xxi. A positive testimony for the critical conclusion is derived from the existence of a group of Asia Minor Christians who about 165 rejected the Gospel as not by John but by Cerinthus. The attribution is doubtless mistaken; but could Christians who were sufficiently numerous to deserve a long discussion by St. Epiphanius in 374–377, and who upheld the Synoptists, stoutly opposed the Gnostics and Montanists, and had escaped every special designation till the bishop nicknamed them the "Alogoi" (irrational rejectors of the Logos-Gospel), dare, in such a time and country, to hold such views, had the apostolic origin been incontestable? Surely not. The Alexandrian Clement, Tertullian, Origen, Eusebius, Jerome and Augustine only tell of the Zebedean what is traceable to stories told by Papias of others, to passages of Revelation and the Gospel, or to the assured fact of the long-lived Asian presbyter.

As to the internal evidence, if the Gospel typifies various imperfect or sinful attitudes in Nicodemus, the Samaritan woman and Thomas; if even the mother appears to symbolize faithful Israel: then, profoundly spiritual and forward-looking as it is, a type of the perfect disciple, not all unlike Clement's perfect "Gnostic," could hardly be omitted by it; and the precise details of this figure may well be only ideally, mystically true. The original work nowhere identifies this disciple with any particular historic figure. "He who saw" the lance-thrust "hath borne witness, and his witness is true," is asserted (xix. 35) of the disciple. Yet "to see" is said also of intuitive faith, "whoso hath seen Me, hath seen the Father" (xiv. 9); and "true" appears also in "the true Light," "the true Bread from heaven," as characterizing the realities of the upper, alone fully true world, and equals "heavenly" (iii. 12); thus a "true witness" testifies to some heavenly reality, and appeals to the reader's "pneumatic," *i.e.*, allegorical, understanding.

Only in the appendix do we find any deliberate identification with a particular historic person: "this is the disciple who witnessed to and who wrote these things" (xxi. 24) refers doubtless to the whole previous work and to "the disciple whom Jesus loved," identified here with an unnamed historic personage whose recent death had created a shock, evidently because he was the last of that apostolic generation which had so keenly expected the second coming (18–23). This man was so great that the writer strives to win his authority for this Gospel; and yet this man was not John the Zebedean, else why, now he is dead and gone, not proclaim the fact? If the dead man was John the presbyter—if this John had in youth just seen Jesus and the Zebedean, and in extreme old age had still seen and approved the Gospel—to attribute this Gospel to him, as is done here, would not violate the literary ethics of those times. Thus the heathen philosopher Iamblichus (d. *c.* 330) declares: "this was admirable" amongst the Neo-Pythagoreans "that they ascribed everything to Pythagoras; but few of them acknowledge their own works as their own" (*de Pythag. vita,* 198). And as to Christians, Tertullian about 210 tells how the presbyter who, in proconsular Asia, had "composed the *Acts of Paul and Thecla*" was convicted and deposed, for how could it be credible that Paul should confer upon women the power to "teach and baptize" as these *Acts* averred? The attribution as such, then, was not condemned.

The facts of the problem would all appear covered by the hypothesis that John the presbyter, the eleven being all dead, wrote the book of Revelation (its more ancient Christian portions) say in 69, and died at Ephesus say in 100; that the author of the Gospel wrote the first draft, here, say in 97; that this book, expanded by him, first circulated within a select Ephesian Christian circle; and that the Ephesian church officials added to it the appendix and published it in 110–120. But however different or more complicated may have been the actual origins, three points remain certain. The real situation that confronts us is not an unbroken tradition of apostolic eye-witnesses, incapable of re-statement with any hope of ecclesiastical acceptance, except by another apostolic eye-witness On one side indeed there was the record, underlying the Synoptists, of at least two eye-witnesses, and the necessity of its preservation and transmission; but on the other side a profound double change had come over the Christian outlook and requirements. St. Paul's heroic labours (30–64) had gradually gained full recognition and separate organization for the universalist strain in our Lord's teaching; and he who had never seen the earthly Jesus, but only the heavenly Christ, could even declare that Christ "though from the Jewish fathers according to the flesh" had died, "so that henceforth, even if we have known Christ according to the flesh, now we no further know Him thus," "the Lord is the Spirit," and "where the Spirit of the Lord is, there is liberty." And the Jewish church, within which Christianity had first lived and moved, ceased to have a visible centre. Thus a super-spatial and super-temporal interpretation of that first markedly Jewish setting and apprehension of the Christian truth became as necessary as the attachment to the original contingencies. The Fourth Gospel, inexplicable without St. Paul and the fall of Jerusalem, is fully understandable with them. The attribution of the book to an eye-witness nowhere resolves, it everywhere increases, the real difficulties; and by insisting upon having history in the same degree and way in John as in the Synoptists, we cease to get it sufficiently anywhere at all. And the Fourth Gospel's true greatness lies well within

the range of this its special character. In character it is profoundly "pneumatic"; Paul's super-earthly Spirit-Christ here breathes and speaks, and invites a corresponding spiritual comprehension. And its greatness appears in its inexhaustibly deep teachings concerning Christ's sheep and fold; the Father's drawing of souls to Christ; the dependence of knowledge as to Christ's doctrine upon the doing of God's will; the fulfilling of the commandment of love, as the test of true discipleship; eternal life, begun even here and now; and God a Spirit, to be served in spirit and in truth.

BIBLIOGRAPHY.—*See* JOHN THE APOSTLE; APOCALYPSE. Among the immense literature of the subject, the following books will be found especially instructive by the classically trained reader: Origen's commentary, *c.* 235–237 (ed. by Brooke, 1896; Preuschen 1903); St. Augustine's *Tractatus in Joannis Ev. et Ep., c.* 416. The Spanish Jesuit Juan Maldonatus' Latin commentary, pubd. 1596 (critical reprint, ed. by Raich, 1874), a pathfinder on many obscure points, is still a model for tenacious penetration of Johannine ideas. Bretschneider's short *Probabilia de Evangelii . . . Joannis Apostoli indole et origine* (1820), the first systematic assault on the traditional attribution, remains unrefuted in its main contention. The best summing up and ripest fruit of the critical labour since then are Professor H. J. Holtzmann's *Handkommentar* (2nd ed., 1893) and the respective sections in his *Einleitung in d. N. T.* (3rd ed., 1892) and his *Lehrbuch der N. T. Theologie* (1897), vol. ii. Among the few critically satisfactory French books, Abbé Loisy's *Le Quatrième évangile* (1903, 2nd ed. 1921) stands pre-eminent for delicate psychological analysis and continuous sense of the book's closely knit unity; whilst Père Th. Calmes' *Évangile selon S. Jean* (1904) indicates how numerous are the admissions as to the book's character and the evidences for its authorship, made by intelligent Roman Catholic apologists with Rome's explicit approbation. Bp. Lightfoot's *Essays on . . . Supernatural Religion* (1874–77; collected 1889) are often masterly conservative interpretations of the external evidence; but they leave this evidence still inconclusive, and the formidable contrary internal evidence remains practically untouched. Much the same applies to Bp. Westcott's *Gospel according to St. John* (1882), devotionally so attractive, and in textual criticism excellent. V. H. Stanton's *Gospels as Historical Documents*, Pt. iii. (1920), shows how far conservative scholarship has moved since Westcott's time. Prof. F. C. Burkitt's *The Gospel History* (1906) vigorously sketches the book's dominant characteristics and true function. E. F. Scott's *The Fourth Gospel* (1906, 2nd ed. 1909) gives a lucid, critical and religiously tempered account of the Gospels ideas, aims, affinities, difficulties and abiding significance. Wellhausen, *Das Evang. Johannis* (1908). C. F. Burney, *The Aramaic Origin of the Fourth Gospel* (1922), attempts to prove that the Gospel is based on an Aramaic original; but the thesis has not met with wide acceptance. The origin, authorship and character of the Gospel are considered in B. H. Streeter, *The Four Gospels* (1924). D. W. Bauer, *Das Johannesevangelium* in the Handbuch z. N T. (2nd ed. 1925) contains elaborate references, giving prominence to the suggested parallels in the Mandaean literature (*see* MANDAEANS). (F. v. H)

JOHN, THE EPISTLES OF. Three writings appear as such in the New Testament, but none answers exactly to the description, for the so-called "First Epistle" is an address or pastoral letter in epistolary form, in reality a homily, whilst the two smaller "epistles" are brief notes or letters. The first consists of a series of meditations upon some central themes of the faith, which the writer felt to be endangered; it is not so marked a "letter" as, *e.g.*, the addresses to the seven churches in Rev. ii–iii. The second "epistle" is indeed addressed to some Christian community, but it is so brief that it may almost be termed a letter. As for the third, it is a private letter in the strict sense of the term, even more private than Philemon (*q.v.*).

1. The homily or manifesto which is called "The First Epistle of John" did not arise from any special occasion. The author felt impelled to counteract (i. 4) a tendency in the Church which threatened, in his view, both theology and ethics, but there are no indications of where or how the movement worked No name is mentioned, and there is no indication or watermark of date. All we overhear are some catchwords of the people who were responsible for the movement in question. They claimed to have fellowship with God (i. 6f), for example, and at the same time to be free from sin; "We are not guilty," "We have not sinned." They claimed to "know God" (ii. 4f) and to "abide in God," but this claim was accompanied by uncharitable feelings towards other Christians. Apparently they distinguished between the historical Jesus and the Christ (ii. 22f), depreciating the incarnation (iv. 2f) in the interests of a mystical illumination or a spiritual religion. Against such teachers the writer protests that the real fellowship with God involves a nexus with the historical revelation in Jesus (i. 1f), and that, although the errorists had apparently withdrawn from the Church (ii. 19), the evil they had done required to be resisted, *i.e.*, the false, fascinating, "knowledge," which in speculative guise undermined the historical basis of the gospel. "Fellowship with God," implying fellowship with Christians, is the keynote of the homily, and the writer plays on various melodies suggested by the keynote. After describing the fellowship as his subject (i. 1f) he proceeds to mention its tests and conditions, primarily the sense of sin (i. 5f), involving a sense of the need of forgiveness through Jesus Christ, and also obedience to the supreme law of brotherly love, which is called the true light of life. Then the dangers of this fellowship are taken up (ii. 18f) under the category of truth and falsehood, belief in the incarnate Christ being the test of Christian truth. The characteristics of the fellowship are once more discussed (iii. 1f), as sinlessness, due to regeneration, and brotherly love, the latter bulking so largely in the writer's mind that he goes into three of its features, confidence towards God (iii. 13f), moral discernment (iv. 1f), and assurance of union with the God of love (iv. 7f), all these being bound up with belief in Jesus as the Christ (v. 1f). A brief epilogue (v. 13–21) sums up the certainties of the Christian knowledge on which any fellowship rests.

It is needless to attempt to identify the tendency attacked in the epistle with any one form of contemporary thought, such as Cerinthianism. The writer seeks to put his readers on their guard against a spirit of the age which assumed a variety of forms but which fundamentally was characterized by an ultra-spiritualism. In the background we can detect the gnostic or semi-docetic view that the divine power or Christ did not really identify itself with the human Jesus, as though the spiritual God was too fine to come into contact with the flesh or matter; if this divine aeon or Christ withdrew from Jesus before the passion and death, as Cerinthus seems to have taught, entering Jesus only at baptism and leaving Him before the Cross, the point of iv. 2f and v 5f becomes clearer. Again, the claims of the illuminati involved a superior knowledge of God, which led to a disparagement of ordinary Christians; perhaps too the overstrained spiritualism led to an antinomianism, by its indifference to sins of the flesh. At any rate it is plain that the errorists failed to recognise that brotherly love was the cardinal law of God for human fellowship, either because they adhered to the Old Testament law or because they denied the redeeming love of God in the Cross, from which, the writer contends, true Christian love flowed. But the teaching of the manifesto is positive. The writer is seeking to recall his hearers to the original faith of the gospel, to belief and love, it is not an exposure of error which he offers so much as an exposition of the Christian standing.

2. The so-called "Second Epistle" is addressed by the author, who calls himself "The Elder, or Presbyter," to an unknown community described as "The Elect Lady and Her Children." It is a warning against indiscriminate hospitality towards wandering teachers who were evidently promulgating heretical views of a docetic character about the person of Christ. It is thought by some that the lady is an individual, but the allusions to the family are much better understood if the family is conceived as a small church, some of whose members (ver. 4) had commended themselves to the writer

The note was familiar to Irenaeus, but tradition has not preserved any information as to the church addressed or the authorship of the note. It is only guess-work to fix on Antioch or Rome; if the Presbyter be identified with the author of the Fourth Gospel or of the Apocalypse, some Asiatic church is more likely, but we are in the dark on this matter.

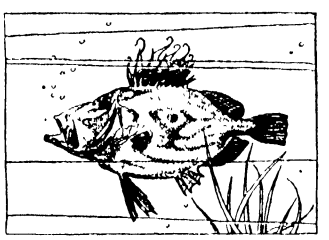
3. The third letter is by the same author as the second, and addressed to an individual. It is one of the letters of commendation, like Rom xvi. 1f, witnessing to the high character of a certain Demetrius, and promising to deal sharply with a local official called Diotrephes, who repudiated the writer and his adherents. It is likely that the allusion in ver. 9 ("I wrote to the church") is to the second epistle. Otherwise, we are ignorant of the reasons

which led Diotrephes to challenge the Presbyter. But it is plain that the Presbyter had some authority, whether or not he was a representative of the primitive apostolic band, whose sway over the churches was being resisted by Diotrephes as a monarchical bishop (Harnack). The various theories which attempt to throw light upon the letter by identifying Gaius and Demetrius with the Gaius of Rom. xvi. 23 and the Demas of 2 Tim iv. 10 or the Demetrius of Acts xix. 24, are fanciful rather than helpful to the serious criticism of the letter.

It is obvious to most critics that the Second and Third "Epistles" came from the same hand. But who the author was, depends on the conclusions reached by a study of the Johannine tradition, in connection with the Fourth Gospel and the Apocalypse. Those who believe that the apostle John wrote the Gospel are able to go further and add to his credit the three epistles. But if the witness of Papias be true, there were two Johns in Asia Minor, or at least in the early church, one of them John the Presbyter. It is a fair hypothesis that this Presbyter wrote the Apocalypse and also the Second and Third Epistles, whilst the Fourth Gospel and the First Epistle may have come from another author. There is a certain similarity of language, indeed, between the three epistles, which at first sight is striking. But this may be accounted for by their origin in a common circle. And on the other hand, there are differences between the First Epistle and the Fourth Gospel, which are not inconsiderable (*see* the present writer's *Introduction to the Literature of the NT*, pp. 589f). The Epistle may have been intended as a tract to supplement the Gospel, or it may be an independent treatise; but identity of authorship is another question. There are scholars still who are prepared to hold that the Fourth Gospel and the Apocalypse were composed by the same writer. If so, there is less difficulty in assuming that he could have written the other two "Johannine" epistles, whoever he may have been. On the other hand, when the Fourth Gospel and the Apocalypse are assigned to different writers, and when the latter in particular is attributed to John the Presbyter, the two smaller epistles not unnaturally follow in its wake, whereas the First Epistle may be left alongside of the Fourth Gospel, either as a product of the same pen or as a kindred document from the same sphere of Christian thought. To sum up—there is sufficient tradition to warrant us in believing that in Asia Minor about the end of the first century a distinguished Presbyter lived who was called John. "Harnack's conjecture, based upon the most natural interpretation of the fragment of Papias' preface which Eusebius has preserved, that he was a pupil of John the Apostle, and in some sense a disciple of the Lord, is perhaps the hypothesis which leaves fewest difficulties unsolved. That he is the author of the two smaller Epistles is the view which seems to be best supported by external tradition and by internal probability" (Brooke, p. lxxvii). That he also wrote the First Epistle is less likely, since that homily is closely linked to the Fourth Gospel; unless we suppose that the same Presbyter wrote both Gospel and Apocalypse, or edited the former; the alternative whereas the Fourth Gospel belongs to the same soil as that on which the First Epistle shot up.

BIBLIOGRAPHY.—The best of the older editions of all three epistles are by Ewald (*Die Johan. Briefe ubersetzt und erklärt*, Göttingen, 1862), Alexander (*Speaker's Commentary*, 1881), and Bernhard Weiss (Meyer's *Commentar*, 1900). Later editions of special value are by Westcott (third edition, 1892), Holtzmann-Bauer (*Handcommentar*, 1908), Windisch (in Lietzmann's *Handbuch*, 1911), and A. E. Brooke (*International Critical Commentary*, 1912), to which may be added Pummer's edition in the *Cambridge Greek Testament*, and Dr. Gore's English notes in *The Epistles of St. John* (1920). General studies of the three are offered in Schmiedel's critical article (*Encyclopaedia Biblica*, 2556f), in A. V. Green's *Ephesian Canonical Writings* (1910, pp. 128f), and in H. H. Wendt's *Die Johannische Briefe und das Joh. Christenthum* (Halle, 1925), as well as incidentally in any critical study of the Johannine writings and tradition.

The religious ideas and historical environment of the first epistle are discussed in Wurm's *Die Irrlehrer im ersten Johannisbrief* (1904), in G. G. Findlay's *Fellowship in the Life Eternal* (1909), and in R. Law's *Tests of Life* (second edition, 1909). For the two smaller, consult especially Poggel's monograph, *Der 2 und 3 Briefe des Apostel Johannes* (1896), J. Chapman's study in *The Journal of Theological Studies* (1904, pp. 357f, 517f), Vernon Bartlet (*ibid.* 1905, 204f), Harnack (*Texte und Untersuchungen*, xv. 3), E. C. Selwyn's *The Christian Prophets and the Prophetic Apocalypse* (1900, pp. 1331), and Jean Reville (*Le quatrième Evangile*, pp. 49f). (J. MOF.)



JOHN ALBERT (1459–1501), king of Poland, third son of Casimir IV., king of Poland, and Elizabeth of Austria. As crown prince he distinguished himself by his brilliant victory over the Tatars at Kopersztyn in 1487. He succeeded his father in 1492. Primarily a warrior and adventurer, John Albert desired to pose as the champion of Christendom against the Turks, and in 1494 (Conference of Leutschau) arranged a combined campaign with his brother Wladislaus, king of Hungary and Bohemia, the elector Frederick of Brandenburg and John Albert's vassal Stephen, hospodar of Moldavia. In 1496 John Albert collected 80,000 men in Poland, but the hospodar, apparently suspecting his designs, invaded Galicia. The war became one between Poland and Moldavia, in which John Albert, weakened by the insubordination of the *szlachta*, had the worst of matters. He was more successful in the north, compelling the recalcitrant grand master of the Teutonic Order, Frederick of Saxony, to do homage, but a further campaign was frustrated by his sudden death in 1501.

See V. Czerny, *The Reigns of John Albert and Alexander Jagiello* (Pol.) (Cracow, 1882).

JOHN ANGELUS (d. 1244), emperor of Thessalonica. In 1240 he received the throne from his father, Theodore, who, after a period of exile, had re-established his authority, but owing to his loss of eyesight resolved to make John the nominal sovereign. His reign is chiefly marked by the aggressions of the rival emperor of Nicaea, John Vatatzes, who laid siege to Thessalonica in 1242 and only withdrew upon John Angelus consenting to exchange the title "emperor" for the subordinate one of "despot."

See G. Finlay, *History of Greece*, vol. iii. (1877).

JOHN DORY or **DORY** (*Zeus faber*), an Acanthopterygian fish, the type of the family *Zeidae*. Its English name is probably a corruption of the French *jaune dorée*, in reference to the golden-yellow colour of the living fish. The body is much compressed and nearly oval, while the mouth is large and capable of extensive protrusion. It possesses two dorsal fins, of which the anterior is armed with long spines, and the connecting membrane is produced into tendril-like filaments. The side is marked with a prominent dark spot, on account of which the dory divides with the haddock the reputation of being the fish from which Peter took tribute money. It inhabits the Atlantic coasts of Europe, the Mediterranean and the Australian seas. It is exceedingly voracious, feeding on molluscs, shrimps and the young of other fish. It is often taken in nets off the Cornwall and Devon coast, having entered these in pursuit of pilchards. It prefers sandy bays, among the weeds growing on the bottom of which it lies in wait for its prey. The dory may attain a weight of 12lb. It is highly valued as an article of food. (*See* FISH.)

JOHN DORY (ZEUS FABER), A FISH IN GREAT ESTEEM IN EUROPE AS FOOD

JOHN FREDERICK I. (1503–1554), called the Magnanimous, elector of Saxony, was the elder son of the elector, John the Steadfast, and belonged to the Ernestine branch of the Wettin family. Born at Torgau on June 30, 1503, and educated as a Lutheran, he succeeded his father in August 1532. His lands comprised the western part of Saxony, and included Thuringia, but in 1542 Coburg was surrendered to form an appanage for his brother, John Ernest (d. 1553). John Frederick continued the religious policy of his father. His general attitude was one of vacillation between the emperor and his own impetuous colleague in the league of Schmalkalden, Philip, landgrave of Hesse. He was often at variance with Philip, whose bigamy he disliked, and his belief in the pacific intentions of Charles V. and his loyalty to the empire prevented him from strong measures for the defence of Protestantism. In 1541 his kinsman Maurice became duke of Saxony, and cast covetous eyes upon the electoral dignity. In 1541 John

Frederick forced Nicholas Amsdorf into the see of Naumburg in spite of the chapter, who had elected a Roman Catholic, Julius von Pflug; and about the same time he seized Wurzen, the property of the bishop of Meissen, whose see was under the joint protection of electoral and ducal Saxony. Maurice took up arms, and war was only averted by the efforts of Philip of Hesse and Luther. In 1542 the elector helped to drive Henry, duke of Brunswick-Wolfenbüttel, from his duchy, but his relations with Charles V. at the diet of Spires in 1544 were amicable. But the emperor made preparations for attacking the league of Schmalkalden, and especially John Frederick and Philip of Hesse. The neutrality of Maurice was won by the hope of the electoral dignity, and in July 1546 war broke out between Charles and the league. In September John Frederick was placed under the imperial ban, and in November Maurice invaded the electorate. Hastening from southern Germany the elector drove Maurice from the land, took his ally, Albert Alcibiades, prince of Bayreuth, prisoner at Rochlitz, and overran ducal Saxony. His progress, however, was checked by the advance of Charles V. He was wounded and taken prisoner at Mühlberg (April 24, 1547), and was condemned to death in order to induce Wittenberg to surrender. The sentence was not carried out, but by the capitulation of Wittenberg (May 1547) he renounced the electoral dignity and a part of his lands in favour of Maurice, steadfastly refusing, however, concessions on religious matters, and remained in captivity until May 1552, when he returned to the Thuringian lands which his sons had been allowed to retain, his return being hailed with wild enthusiasm. During his imprisonment he had refused to accept the Augsburg interim, and had urged his sons to make no peace with Maurice. After his release the emperor had restored his dignities, and his assumption of the electoral arms and title prevented any arrangement with Maurice. After the death of Maurice in July 1553, a treaty was made at Naumburg in Feb. 1554 with his successor Augustus. John Frederick consented to the transfer of the electoral dignity, and was thus the last Ernestine elector of Saxony. He died at Weimar on March 3, 1554, and was succeeded by his eldest son, John Frederick. The elector was a great hunter and a hard drinker, whose dignified bearing in misfortune won for him his surname of Magnanimous, and drew eulogies from Roger Ascham and Melanchthon. He founded the university of Jena and was a benefactor to that of Leipzig.

See Mentz, *Johann Friedrich der Grossmütige* (Jena, 1903); Rogge, *Johann Friedrich der Grossmutige* (Halle, 1902) and L. von Ranke, *Deutsche Geschichte im Zeitalter der Reformation* (Leipzig, 1882).

JOHN FREDERICK (1529–1595), called *der Mittlere*, duke of Saxony, was the eldest son of John Frederick, who had been deprived of the Saxon electorate by the emperor Charles V. in 1547. Born at Torgau on Jan. 8, 1529, he received a good education, and when his father was imprisoned in 1547 undertook the government of the remnant of electoral Saxony left to the Ernestine branch of the Wettin family. After the death of John Frederick the elder in 1554 his three sons ruled Ernestine Saxony together until 1557, when John Frederick was made sole ruler. This arrangement lasted until 1565, when John Frederick shared his lands with his surviving brother, John William (1530–1573), retaining for himself Gotha and Weimar. The duke was a strong, even a fanatical, Lutheran, but his religious views were gradually subordinated to the one idea of regaining the electoral dignity then held by Augustus I. He lent a willing ear to the schemes of Wilhelm von Grumbach (*q.v.*), who offered to regain the electoral dignity and even to acquire the empire for his patron. In 1566 his obstinacy caused John Frederick to be placed under the imperial ban. The execution of the imperial sentence was entrusted to Augustus, who, aided by the duke's brother, John William, marched against Gotha with a strong force. The town surrendered in April 1567, and John Frederick was imprisoned in Vienna, his lands were given to his brother, and he remained in captivity until his death at Steyer on May 6, 1595. His wife Elizabeth, daughter of the elector palatine, Frederick III, shared her husband's imprisonment for 22 years.

See A. Beck, *Johann Friedrich der Mittlere, Herzog zu Sachsen* (Vienna, 1858); and F. Ortloff, *Geschichte der Grumbachischen Händel* (Jena, 1868–70).

JOHN GEORGE I. (1585–1656), elector of Saxony, second son of the elector Christian I., was born on March 5, 1585, succeeding his elder brother, Christian II, in 1611. Though a Lutheran, he voted for the election of Ferdinand, archduke of Styria, as emperor in Aug. 1619, an action which nullified the anticipated opposition of the Protestant electors. The new emperor secured the help of John George for the impending campaign in Bohemia by promising that he should be undisturbed in his possession of certain ecclesiastical lands. John George occupied Silesia and Lusatia, and had thus some part in driving Frederick V., elector palatine of the Rhine, from Bohemia and in crushing Protestantism in that country, the crown of which he had previously refused. Gradually his policy veered towards the Protestant side, and when the imperial troops under Tilly began to ravage Saxony, he concluded an alliance with Gustavus Adolphus in 1631. The Saxon troops were present at the battle of Breitenfeld, but were routed by the imperialists. Marching into Bohemia the Saxons occupied Prague, but John George soon began to negotiate for peace, and consequently his soldiers offered little resistance to Wallenstein, who drove them back into Saxony. After the death of the Swedish king at Lützen in 1632, John George again negotiated for peace, and in May 1635 he concluded the treaty of Prague with Ferdinand II. His reward was Lusatia and other additions of territory; the retention by his son Augustus of the archbishopric of Magdeburg; and some concessions with regard to the edict (1629) of restitution of ecclesiastical lands. Almost at once he declared war upon the Swedes, but in Oct. 1636 he was beaten at Wittstock; and Saxony was ravaged impartially by both sides. In Sept. 1645 the elector agreed to a truce with the Swedes, who, however, retained Leipzig; and as far as Saxony was concerned this ended the Thirty Years' War. John George died on Oct. 8, 1656. He was twice married, and in addition to his successor John George II. he left three sons, Augustus (1614–1680), Christian (d. 1691) and Maurice (d. 1681) who founded cadet branches of the Saxon house.

JOHN GEORGE II. (1613–1680), elector of Saxony, was born on May 31, 1613. In 1657, just after his accession, he made an arrangement with his three brothers with the object of preventing disputes over their separate territories, and in 1664 he entered into friendly relations with Louis XIV. The existence of a strong anti-French party in Saxony, however, prevented open hostility to the emperor Leopold I. The elector's primary interests were not in politics, but in music and art. He adorned Dresden, which under him became the musical centre of Germany; welcoming foreign musicians and others he gathered around him a large and splendid court, and his capital was the constant scene of musical and other festivals. His enormous expenditure compelled him in 1661 to grant greater control over monetary matters to the Estates, a step which laid the foundation of the later system of finance in Saxony. John George died at Freiberg on Aug. 22, 1680.

JOHN GEORGE III. (1647–1691), elector of Saxony, the only son of John George II., was born on June 20, 1647. In June 1683 he joined an alliance against France. Having raised the first standing army in the electorate he helped to drive the Turks from Vienna in September 1680; but disagreed with Leopold I., and returned at once to Saxony. However, he sent aid to the emperor in 1685. When Louis XIV.'s armies invaded Germany in September 1688 John George took up arms against the French, and after sharing in the capture of Mainz he was appointed commander-in-chief of the imperial forces. He died at Tubingen on Sept. 12, 1691.

JOHN GEORGE IV. (1668–1694), elector of Saxony, was born on Oct. 18, 1668. This elector, who only reigned for 2½ years, is chiefly celebrated for his passion for Magdalene Sibylle von Neidschütz (d. 1694), created in 1693 countess of Rochlitz, whom on his accession he publicly established as his mistress. John George left no legitimate issue when he died on April 27, 1694.

JOHN MAURICE OF NASSAU (1604–1679), surnamed the Brazilian, was the son of John the Younger, count of Nassau-

Siegen-Dillenburg, and the grandson of John, the elder brother of William the Silent and the chief author of the Union of Utrecht. He fought in the campaigns of his cousin, the stadtholder Frederick Henry of Orange, and was by him recommended to the directors of the Dutch West India company in 1636 to be governor-general of the new dominion in Brazil recently conquered by the company. He landed at the Recife, the port of Pernambuco, and the chief stronghold of the Dutch, in January 1637. By successful expeditions he extended the Dutch possessions from Sergipe on the south to S Luis de Maranham in the north. He likewise conquered the Portuguese possessions of St. George del Mina and St. Thomas on the west coast of Africa. With the assistance of the famous architect, Pieter Post of Haarlem, he transformed the Recife by building a new town called after his name Mauritstad. He brought the colony into a flourishing condition, and reconciled the Portuguese settlers to submit to Dutch rule. His large schemes and lavish expenditure, however, alarmed the directors of the West India company, and John Maurice returned to Europe in July 1644. He was appointed by Frederick Henry to the command of the cavalry in the States army, and he took part in the campaigns of 1645 and 1646.

After the peace of Münster (1648), John Maurice accepted from the elector of Brandenburg the post of governor of Cleves, Mark and Ravensberg, and later also of Minden At the end of 1652 he was appointed head of the order of St. John and made a prince of the Empire In 1664 he came back to Holland; when the war broke out with England he was appointed commander-in-chief of the Dutch forces on land In 1673 he was appointed by the stadtholder William III. to command the forces in Friesland and Groningen, and to defend the eastern frontier of the Provinces. In 1675 he retired. He died at Cleves on Dec. 20, 1679. The house which he built at The Hague, named after him the Maurits-huis, now contains the collections of pictures so well known to all admirers of Dutch art.

Bibliography.—Caspar Barlaeus, *Rerum per octennium in Brasilia et alibi nuper gestarum historia, sub praefectura illustrissimi comitis J. Mauritii Nassoviae* (Amsterdam, 1647); L. Driessen, *Leben des Fursten Johann Moritz von Nassau* (Berlin, 1849); D. Veegens, *Leven van Jaan Maurits, Graaf van Nassau-Siegen* (Haarlem, 1840).

JOHN OF ASIA (or of Ephesus) (b *c* 505), a leader of the Monophysite Syriac-speaking Church in the 6th century, and one of the earliest and most important of Syriac historians Born at Āmid (Diarbekr) about 505, he was there ordained as a deacon in 529; but in 534 we find him in Palestine, and in 535 he passed to Constantinople, on account of pestilence or persecution In Constantinople he seems to have early won the notice of Justinian, who desired the consolidation of Eastern Christianity as a bulwark against the heathen power of Persia. He was entrusted with the administration of the entire revenues of the Monophysite Church He was also sent, with the rank of bishop, on a mission in Asia Minor, and informs us that the number of those whom he baptized amounted to 70,000. He built a large monastery at Tralles on the hills skirting the valley of the Meander, and more than 90 other monasteries. He promoted a mission to the Nubians. In 546 the emperor entrusted him with the task of rooting out the secret practice of idolatry in Constantinople and its neighbourhood. But his fortunes changed soon after the accession of Justin II. About 571 Paul of Asia began (with the sanction of the emperor) a rigorous persecution of the Monophysite Church leaders, and John was among the sufferers. He died probably soon after 585.

John's main work was his *Ecclesiastical History*, in three parts, which covered more than six centuries, from the time of Julius Caesar to 585. The first part seems to have wholly perished. The second, which extended from Theodosius II. to the 6th or 7th year of Justin II., was (as F. Nau has proved) reproduced in the third part of the *Chronicle* once attributed to the patriarch Dionysius Telmaharensis. The third part of John's history, covering the years 571–585, survives in a fairly complete state in Add. 14640, a British Museum ms. of the 7th century. This third part was edited by Cureton (Oxford, 1853), and was translated into English by R. Payne-Smith (Oxford, 1860) and into German by J. M. Schönfelder (Munich, 1862).

John's other known work was a series of *Biographies of Eastern Saints*, compiled about 569. These have been edited by Land in *Anecdota Syriaca*, ii. 1–288, and translated into Latin by Douwen and Land (Amsterdam, 1889). *See* a memoir read before the five French Academies (Oct. 25, 1892) by the abbé Duchesne.

JOHN OF BEVERLEY, ST. (d. 721), English bishop, was educated at Canterbury under Archbishop Theodore. He was for a time a member of the Whitby community, under St. Hilda, and in 687 he was consecrated bishop of Hexham and in 705 was promoted to the bishopric of York He resigned the latter see in 718, and retired to a monastery which he had founded at Beverley, where he died on May 7, 721. He was canonized in 1037, and his feast is celebrated on May 7.

The following works are ascribed to John by J. Bale: *Pro Luca exponendo* (an exposition of Luke); *Homiliae in Evangelia; Epistolae ad Herebaldum, Audenam, et Bertinum;* and *Epistolae ad Hyldam abbatissam. See* life by Folcard, based on Bede, in *Acta SS. Bolland;* and J. Raine's *Fasti eboracenses* (1863).

JOHN OF BRIENNE (*c.* 1148–1237), king of Jerusalem and Latin emperor of Constantinople, was a man sixty years of age before he began to play any considerable part in history. In forty years of tournaments and fights he had won some fame, when in 1208 envoys came from the Holy Land to ask Philip Augustus, king of France, to select a husband for the heiress of the kingdom of Jerusalem, Mary (daughter of Isabella and Conrad of Montferrat). Philip selected John, who assumed the title of king after his marriage. In 1211, after some desultory operations, he concluded a six years' truce with Malik-el-Adil; in 1212 he lost his wife, who left him a daughter, Isabella; soon afterwards he married an Armenian princess. In the fifth crusade (1218–1221) he was a prominent figure. The legate Pelagius, however, claimed the command; and insisting on the advance from Damietta, in spite of John's warnings, he refused to accept the favourable terms of the sultan, as the king advised, until it was too late. After the failure of the crusade, King John came to the West to obtain help for his kingdom. In 1223 he met Honorius III and the emperor Frederick II. at Ferentino, where, in order that he might be connected more closely with the Holy Land, Frederick was betrothed to John's daughter Isabella, now heiress of the kingdom. John then travelled to France, England and Compostella, where he married a new wife, Berengaria of Castile. After a visit to Germany he returned to Rome (1225)

Frederick II. (who had now married Isabella), now demanded that he should abandon his title and dignity of king, which—so Frederick claimed—had passed to himself along with the heiress of the kingdom. John was now a septuagenarian "king in exile," but he was still vigorous enough to revenge himself on Frederick, by commanding the papal troops which attacked southern Italy during the emperor's absence on the sixth crusade (1228–1229). In 1229 John, now eighty years of age, was invited by the barons of the Latin empire of Constantinople to become emperor, on condition that Baldwin of Courtenay should marry his second daughter and succeed him. For nine years he ruled in Constantinople, and in 1235, with a few troops, he repelled a great siege of the city by Vataces of Nicaea and Azen of Bulgaria. After this last feat of arms, which has perhaps been exaggerated by the Latin chroniclers, who compare him to Hector and the Maccabees, John died in the habit of a Franciscan friar.

The story of John's career must be sought partly in histories of the kingdom of Jerusalem and of the Latin Empire of the East, partly in monographs. Among these, of which R. Rohricht gives a list (*Geschichte des Konigreichs Jerusalem*, p. 699, n. 3), *see* especially that of E. de Montcarmet, *Un chevalier du temps passé* (Limoges, 1876 and 1881).

JOHN OF DAMASCUS (Johannes Damascenus) (d. before 754), an eminent theologian of the Eastern Church, derives his surname from Damascus, where he was born about the close of the 7th century. His Arabic name was Mansur (the victor), and he received the epithet Chrysorrhoas (gold-pouring) on account of his eloquence. His father Sergius, a Christian, held high office under the Saracen caliph, in which he was succeeded by his son. John wrote (*c.* 730) several treatises in defence of image-worship, which the emperor, Leo the Isaurian, was making strenuous efforts to suppress. He then surrendered his worldly goods, and betook himself to the monastery of St. Sabas, near Jerusalem, where he spent the rest of his life. He was ordained priest by the patriarch of Jerusalem. In his last years he travelled

through Syria contending against the iconoclasts, and visited Constantinople at the imminent risk of his life during the reign of Constantine Copronymus. With him the "mysteries," the entire ritual, are an integral part of the Orthodox system, and all dogma culminates in image-worship. He died probably about 752. John Damascenus is a saint both in the Greek and in the Latin Churches, his festival being on Dec. 4, and May 6, respectively.

The most important of the treatises of Damascenus contains three parts under the general title Πηγὴ γνώσεως ("The Fountain of Knowledge"). The first part, entitled Κεφάλαια φιλοσοφικά, is an exposition and application of theology of Aristotle's *Dialectic.* The second, entitled Περὶ αἱρέσεων ("Of Heresies"), is a reproduction of the earlier work of Epiphanius, with a continuation giving an account of the heresies that arose after the time of that writer. The third part, entitled Ἔκδοσις ἀκριβὴς τῆς ὀρθοδόξου πίστεως ("An Accurate Exposition of the Orthodox Faith"), is much the most important, containing as it does a complete system of theology founded on the teaching of the fathers and church councils, from the 4th to the 7th century. It thus embodies the finished result of the theological thought of the early Greek Church. Through a Latin translation made by Burgundio of Pisa in the 12th century, it was well known to Peter Lombard and Aquinas, and in this way it influenced the scholastic theology of the West. Another well-known work is the *Sacra parallela,* a collection of biblical passages followed by illustrations drawn from other scriptural sources and from the fathers.

Bibliography.—The *Life* of John of Damascus was written by John, patriarch of Jerusalem in the 10th century (Migne, *Patrol. Graec.,* xciv. 429–489). The works were edited by Le Quien (2 vols., fol., Paris, 1712) and form vols. 94 to 96 in Migne's Greek series A monograph by J. Langen was published in 1879. A. Harnack's *History of Dogma* is very full (*see* especially vols. iii. and iv.; on the image-worship controversy, iv. 322 *seq.*), and so are the similar works of F. Loofs-Seeberg and A. Dorner. *See* also O Bardenhewer's *Patrologie,* and other literature cited in F. Kattenbusch's excellent article in Herzog-Hauck, *Realencyklopadie,* vol ix.

JOHN OF GAUNT, duke of Lancaster; *see* Lancaster, John of Gaunt, duke of.

JOHN OF GOD, ST. (Juan Ciudad) (1495–1550), founder of the Brothers of Charity, was born at Montemor, Novo, Portugal. From the life of a shepherd he turned to that of soldiering in the Austrian army, then in active conflict with the Turks. On returning to Granada, he was so deeply impressed by the sermons of Blessed John of Avila that he determined to devote his life to the care of the poor and the sick, and rented a house for that purpose. When he died, 10 years later, his companion, Antonio Martino, succeeded him as head of the institution Other houses, including the large hospital at Madrid, richly endowed by Philip II., were soon opened, and in 1572 Pius V. raised the lay society to an order with the Augustinian rule Its founder was canonized in 1690.

See C. Wilmet, *Lebensbeschreibung des . . . Johannes von Gott* (Regensburg, 1860); L. Saglier, *Vie de S. Jean de Dieu* (1877).

JOHN OF HEXHAM (*fl.* 1160–1209), English chronicler, is known to us merely as the author of a work called the *Historia XXV. annorum,* which continues the *Historia regum* of Simeon of Durham and contains an account of English events 1130–53. He was prior of Hexham between 1160 and 1209 Up to the year 1139 he follows closely the history written by his predecessor, Prior Richard; thenceforward he is an independent though not a very valuable authority.

The one manuscript of John's chronicle is a 13th century copy; ms. C. C. C. Cambridge, cxxxix. 8. The best edition is that of T. Arnold in *Symeonis monachi opera,* vol. ii. (Rolls Series, 1885). There is an English translation in J. Stevenson's *Church Historians of England,* vol. iv. (1856).

JOHN OF IRELAND (Johannis de Irlandia) (*fl.* 1480), Scottish writer, perhaps of Lowland origin, was resident for 30 years in Paris and later a professor of theology. He was confessor to James IV. and also to Louis XI. of France, and was rector of Yarrow (de Foresta) when he completed, at Edinburgh, the work on which rests his sole claim as a vernacular writer. This book, preserved in ms. in the Advocates' library, Edinburgh (ms. 18, 2, 8), and labelled "Johannis de Irlandia opera theologica," is a treatise in Scots on the wisdom and discipline necessary to a prince, especially intended for the use of the young James IV. The book is the earliest extant example of original Scots prose.

See the notices in John Lyden's Introduction to his edition of the *Complaynt of Scotlande* (1801); *The Scottish Antiquary,* xiii. and xv. Annotated extracts are given in Gregory Smith's *Specimens of Middle Scots* (1902).

JOHN OF LEIDEN: *see* Buckholdt, Johann.

JOHN OF RAVENNA. Two distinct persons of this name, formerly confused and identified with a third (anonymous) Ravennese in Petrarch's letters, lived at the end of the 14th and the beginning of the 15th century.

1. A young Ravennese born about 1347, who in 1364 went to live with Petrarch as secretary. In 1367 he set out to see the world and make a name for himself, returned in a state of destitution, but, growing restless again, left his employer for good in 1368.

2. Son of Conversanus (Conversinus, Convertinus). He is first heard of (Nov. 17, 1368) as appointed to the professorship of rhetoric at Florence, where he had for some time held the post of notary at the courts of justice. This differentiates him from (1). He entered (*c.* 1370) the service of the ducal house of Padua, the Carraras, in which he continued at least until 1404, during part of which time he was professor of rhetoric at Padua In 1406 he is last heard of living at Venice. His history of the Carraras, a tasteless production in barbarous Latin, says little for his literary capacity; but as a teacher he enjoyed a great reputation, amongst his pupils being Vittorino da Feltre and Guarino of Verona.

3. Malpaghini (De Malpaghinis), the most important. Born about 1356, he was a pupil of Petrarch from a very early age to 1374. On Sept. 19, 1397, he was appointed professor of rhetoric and eloquence at Florence, and he died in May 1417. Although Malpaghini left nothing behind him, he did much to encourage the study of Latin; among his pupils was Poggio Bracciolini

The local documents and other authorities on the subject will be found in E. T. Klette, *Beitrage zur Geschichte und Litteratur der italienischen Gelehrtenrenaissance,* vol. i. (1888); *see* also G. Voigt, *Die Wiederbelebung des klassischen Altertums* (3rd ed. 1893), who, however, identifies (1) and (2).

JOHN OF SALISBURY (*c.* 1115–1180), English author, diplomatist and bishop of Chartres, was born at Salisbury. From his own accounts, he seems to have crossed to France in 1136 and to have studied for the next ten years under Abelard, Alberich of Reims, Robert of Melun, Gilbert de la Porrée, Robert Pullus, Simon of Poissy, William of Conches, and Richard l'Evêque. From the last two, who were disciples of Bernard of Chartres, he imbibed his Platonic leanings and especially his love of the Latin classics. The purity of his own style, which was evidently moulded on that of Cicero, was unsurpassed in the middle ages. On the completion of his studies, John stayed for a time with his friend Peter, the Cistercian abbot of Moustier la Celle, near Troyes. In 1148 he was present at the council of Reims, in which St. Bernard opposed Gilbert de la Porrée, and was probably presented to Bernard by Theobald, archbishop of Canterbury, who made him his secretary in 1150. He was frequently sent on missions to the pope, to whose household he seems to have been attached from 1148 onwards. After the death of Theobald in 1161, John continued as secretary to Thomas Becket, whom he supported in his long disputes with Henry II. His letters throw light on the constitutional struggle then agitating the English world In 1163–64 he withdrew with Becket to France during the king's displeasure; he returned with him in 1170, and was present at his assassination In 1176 he was made bishop of Chartres, where he passed the remainder of his life, taking an active part in the council of the Lateran in 1179. He died at or near Chartres on Oct. 25, 1180.

John's writings, the chief of which are the *Policraticus* and the *Metalogicus,* both completed in 1159, exhibit a highly cultivated intelligence well versed in practical affairs The former sketches an ideal state not unlike that of Plato: the soul is the clergy, the head is the prince, who is the servant of the clergy, the heart is

the senate, the eyes, ears and tongue are the governors of the provinces, the hands are the armed and the administrative classes, and the feet are the husbandmen. The prince receives the material sword from the church, but only when he disobeys the law or ceases to rule the people by it, can he be deposed. In the *Metalogicus* we find a fusion of Augustinian and Aristotelian philosophy. Thus the doctrine of the necessity of the *rationes aeternae* as the foundation of certitude is combined with a moderate realism. There is also a noteworthy appreciation of the difficulties of such problems as that of substance, the movement of bodies, tides and other natural phenomena, time and space, the nature of the soul, the limits of knowledge, and Providence. In addition to these two works, John wrote a *Historia Pontificalis*, a philosophical poem, *Eutheticus de Dogmate Philosophorum*, two lives of St. Anselm, and a life of St. Thomas of Canterbury.

His collected works were edited by J. A. Giles (5 vols. 1848) and reprinted in Migne's *Patrol. Lat.*, vol. 199. The *Polycraticus* has been edited by C. C. J. Webb (2 vols, 1909) and the *Historia Pontificalis* by R. L. Poole (1927); and also in the *Mon. Germ. Hist.* (1868, 2nd ed. 1885). *See* C. Shaarschmidt, *Johannes Sarisberiensis* (1862); R. L. Poole, *Illustrations of the Hist. of Mediaeval Thought* (1884, 2nd ed. 1920); "Early Correspondence of John of Salisbury," in *Proc. of Brit. Acad.* (vol. xi. 1924), articles in the *Eng. Hist. Review* for 1920 and 1923, and in the *Dict. Nat. Biog.*; and E. F. Jacob's article in *Social and Political Ideas of Some Great Mediaeval Thinkers* (edit. Hearnshaw, 1923).

JOHN OF THE CROSS, ST. (1542–1591), Spanish mystic, was born at Ontiveros (Old Castile) on June 24, 1542. He became a professed Carmelite in 1564, and was ordained priest at Salamanca in 1567 He met with much opposition in his efforts to introduce the reforms proposed by St. Theresa, and was more than once imprisoned. His real name was Juan de Yepez y Álvarez; in religion he was known as Juan de San Matías till 1568, when he adopted the name of Juan de la Cruz. Broken by persecution, he was sent to the monastery of Ubeda, where he died in 1591; his *Obras espirituales* were published posthumously in 1618. He was beatified in 1674 and canonized on Dec. 27, 1726. The lofty symbolism of his prose is frequently obscure, but his lyrical verses are distinguished for their rapturous ecstasy and beauty of expression.

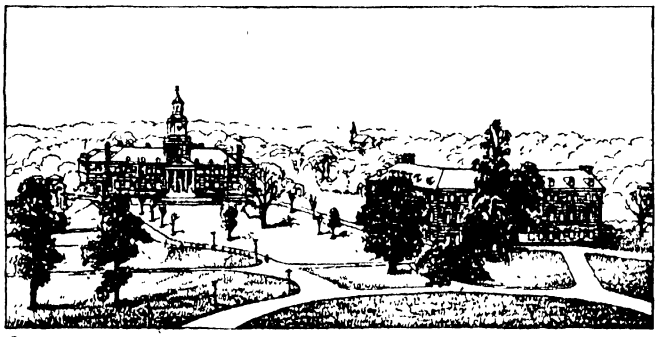
Some of his poems have been translated with great success by Arthur Symons in *Images of Good and Evil*; the most convenient edition of his works, which have been frequently reprinted, is that contained in vol. xvi. of the *Biblioteca de autores españoles*. *See* also J. D. Berrueta, *Sta. Teresa de Jesús y S. Jean de la Croix* (1915).

JOHN O' GROAT'S HOUSE, a spot on the north coast of Caithness, Scotland, 14 m N. of Wick and 1¾ m. W. of Duncansby Head It is the mythical site of an octagonal house said to have been erected early in the 16th century by one John Groot, a Dutchman who had migrated to the north of Scotland by permission of James IV. According to the legend, other members of the Groot family followed John, and acquired lands around Duncansby. When there were eight Groot families, disputes began to arise as to precedence at annual feasts. These quarrels John Groot is said to have settled by building an octagonal house which had eight entrances and eight tables, so that the head of each family could enter by his own door and sit at the head of his own table. Being but a few miles south of Dunnet Head, John o' Groat's is a colloquial term for the most northerly point of Great Britain. The site of the traditional building is marked by a mound and flagstaff.

JOHN THE BAPTIST, the "forerunner" of Jesus in the Gospel story. His preaching made a great impression upon his contemporaries (*cf.* Josephus *Ant.* xviii., 5). According to the birth-narrative in Luke i. and ii., he was born in "a city of Judah" (read, "the Province of Judah"), in "the hill country" (possibly Hebron). In this narrative his father, Zacharias, is represented as a priest "of the course of Abijah," and his mother Elizabeth (also of priestly descent) as related to Mary, the mother of Jesus. This narrative, which embodies some very primitive features Palestinian in character (it probably depends upon a Hebrew original, and reflects the point of view of the early Palestinian Christian Church), manifests a strong tendency to bring the Baptist into close connection with Jesus.

In the 15th year of the emperor Tiberius (?A.D. 28–29) John began his public life in the "wilderness of Judea," the wild district between the Kedron and the Dead sea, especially near the Jordan. According to the Synoptics his preaching was essentially eschatological in character, being concerned with the nearness of the Messianic kingdom and the consequent urgency for preparation by repentance.

Possibly as Streeter (*J.Th.S.* July 1913) suggests John's baptism was eschatological. "It was regarded as a 'sealing' or symbolical act entitling to admission to the coming kingdom. . . . The essential meaning of the rite would be rather aspiration for the future than regret for the past." Josephus, as cited, seems to suggest that John's baptism must be regarded as a bodily purification corresponding to an inward change, not as a means of remitting sins; in fact Josephus does not agree with the Synoptic accounts in this respect. Jewish scholars (*e.g.*, Kohler and I. Abrahams) insist on the Essene affinities of John, though John was less rigid. The fourth Gospel preserves a trustworthy tradition in locating one place of John's baptism at "Aenon near to Sâlim" (John iii. 23.) This must be the modern 'Ainûn, nearly eight miles north-east of Sâlim (a town east of Nablus). This fact confirms the view that John preached to the Samaritans, and the persistent tradition that he was buried at Sebaste in Samaria. *See* W. F. Albright, *Harvard Th. Rev.*, xvii. p. 193 f.



If, as has been suggested, John's preaching was first of all directed to those who practised an ascetic mode of life, there must have followed a later period when the scope of his mission was widened and he delivered his message to the masses of the people, "the people of the land." He had disciples who fasted (Mark ii. 18, etc.), who visited him regularly in prison (Matt. xi. 2, xiv. 12), and to whom he taught special forms of prayer (Luke v. 33, xi. 1). Some of these afterwards became followers of Christ (John i. 37). John's activity indeed had far-reaching effects. It profoundly influenced the Messianic movement depicted in the Gospels. The preaching of Jesus shows traces of this, and the Fourth Gospel (as well as the Synoptics) displays a marked interest in connecting the Johannine movement with the beginnings of Christianity, though in fact the original connection may have been exaggerated. The existence of disciples of John at Ephesus after the lapse of 25 years is significant (Acts xviii. 25, xix. 3). It is curious that the Mandaeans or Sabians (from Saba—"Baptise"), called also "Christians according to John," have preserved some confused traditions about the Baptist. For Christ's estimate of John, *cf.* Matt. xi. 7 f. John's ministry terminated in his imprisonment in the fortress of Machaerus, where he was executed by order of Herod Antipas.

MANDAEANS in *E.R.E.* and in this *Encyc.*; Box, *St. Matt.* (Century Bible), pp. 236 ff. for chronology. (G. H. B.)

JOHNS HOPKINS UNIVERSITY, an American educational institution at Baltimore (Md.). Its trustees, chosen by Johns Hopkins (1794–1873), a successful Baltimore merchant, were incorporated Aug. 24, 1867, under a general act "for the promotion of education in the State of Maryland." But nothing was actually done until after the death of Johns Hopkins (Dec. 24, 1873), when his fortune of $7,000,000 was equally divided between the projected university and a hospital, also to bear his name, and intended to be an auxiliary to the medical school of the university. The trustees of the university consulted men prominent in higher education, notably Charles W. Eliot of Harvard, Andrew D. White of Cornell, and James B. Angell of the university of Michigan; on Dec. 30, 1874, they elected Daniel Coit Gilman (*q.v.*) president. The university was formally opened Oct. 3, 1876, when an address was delivered by T. H. Huxley.

The first year was largely given up to consultation among the newly chosen professors, among whom were: in Greek, B. L. Gildersleeve (1831–1924); in mathematics, J. J. Sylvester (1814–97); in chemistry, Ira Remsen (1846–1927); in biology, Henry Newell Martin (1848–96); in zoology, William Keith Brooks (1848–1908); and in physics, Henry Augustus Rowland (1848–1901). Prominent among later teachers were Arthur Cayley, in

mathematics; the Semitic scholar, Paul Haupt (1858–1926); Granville Stanley Hall (1846–1924), in psychology; Maurice Bloomfield (1848–), in Sanskrit and comparative philosophy; James Rendel Harris in Biblical philology; James Wilson Bright (1852–1926) in English philology; Herbert B. Adams (1855–1901), in history; and Richard T. Ely (1854–), in economics. The university at once became a pioneer in the United States in

GILMAN HALL AND THE CHEMISTRY LABORATORY AT JOHNS HOPKINS UNIVERSITY

teaching by means of seminary courses and laboratories, and was eminently successful in encouraging research, in scholarly publications, and in the preparation of its students to become instructors in other colleges and universities. It includes graduate departments under the faculty of philosophy and the medical faculty, a school of hygiene and public health, a college of arts and sciences, a school of engineering, a school of business economics, and a college for teachers. From its foundation the university had novel features and a liberal administration. Twenty annual fellowships of $500 each were opened to the graduates of any college. Petrography and laboratory psychology were among the new sciences fostered by the new university. Such eminent outsiders were secured for brief residence and lecture courses as J. R. Lowell, F. J. Child, Simon Newcomb, H. E. von Holst, F. A. Walker, William James, James Bryce, E. A. Freeman, W. W. Goodwin, and Alfred Russel Wallace. The poet, Sidney Lanier, held an appointment as lecturer in English literature from 1879 until his death in 1881.

The medical department, inaugurated in 1893, is closely affiliated with the excellently equipped Johns Hopkins hospital (opened in 1889), and is actually a graduate school, as it admits only students holding the bachelor's degree or its equivalent. The degree of doctor of medicine is conferred after four years of successful study, and advanced courses are offered. Among the department's greatest teachers have been William Osler (1849–1919) and William Henry Welch (1850–). President Gilman gave up his presidential duties in Sept. 1901, and was succeeded in office by Ira Remsen, a member of the original faculty. In Oct. 1914 he was succeeded by Frank Johnson Goodnow of Columbia university, who had been constitutional adviser to the republic of China.

In 1909 the university, in co-operation with Goucher college (now the college for teachers), initiated college courses for teachers; in 1911, summer courses; in 1916, evening courses, in business economics, without degrees, for technical workers. Extension to other State centres was authorized in 1917. A school of business economics, providing academic training for business careers, and conferring the degree of bachelor of science in economics, was opened in 1922.

Upon an initial State appropriation of $600,000, continued by annual grants of $50,000, a school of engineering was opened in 1913, with instruction in civil, electrical, and mechanical branches. This school's courses were extended in 1924 to include, for five years, gas engineering, through gifts of the Southern Gas Association. For these schools two laboratories and a power-house have been erected.

Teaching in Medicine.—The university received from 1913 to 1927, gifts and grants to about $20,000,000. The clinical departments of medicine, surgery, pediatrics, obstetrics, psychiatry, and ophthalmology were placed on a full-time basis. The General Education Board led with several large grants in all these cases, besides giving two laboratories—the new Hunterian (1915) and the pathological (1923)—and $3,000,000 for expansion now in process, including a central heating plant (1925). Capt. Joseph R. DeLamar, who died in 1918, left bequests amounting to more than $5,000,000 in 1927. In 1923, $2,000,000 was voted by the Carnegie Corporation for a new university dept. of psychiatry and the Phipps psychiatric clinic at the Johns Hopkins hospital, one-half coming from the founders, Mr. and Mrs. Henry Phipps. In 1925, the Wilmer ophthalmological institute, named after the first director, Dr. William Holland Wilmer, with endowment of the university dept. of ophthalmology, was established at the hospital on a fund of $3,000,000 raised in recognition of the half-century commemoration. Advanced ophthalmological training in America was thus made possible. The university has also profited from the establishment of the three other clinical institutes at the hospital, Harriet Lane home for pediatrics (1912), Brady urological institute (1914), and the women's clinic for obstetrics (1923), all teaching hospitals staffed from the school.

In 1918, under the direction of Dr. William H. Welch, assisted by Dr. William H. Howell, former dean of the school of medicine, a school of hygiene and public health was opened, with an annual grant from the Rockefeller Foundation, which in 1922 became an endowment of $5,000,000, with another $1,000,000 for a building, completed and occupied in 1925. This school, together with the hospital and the school of medicine, is a unit in one of the strongest medical centres in America. The main objects of this school are to train for public health work, promote investigation, and disseminate sound hygienic knowledge. The degrees granted are doctor of public health, doctor of science in hygiene, and certificate in public health. Of the 150 students enrolled in 1924–25, 42 came from foreign countries In 1925 the Institute of Biological Research was established on a five years' grant from the Rockefeller Foundation.

The government of the university is entrusted to a board of 16 trustees, of which the president is a member ex-officio, while the direction of affairs of a strictly academic nature is delegated to an academic council and to department boards. In 1907–8 the regular faculty numbered 175. In 1925 it numbered 394, with 67 additional instructors in the afternoon, evening, and summer courses. In 1907–8 there were 683 students, of whom 518 were in post-graduate courses, in 1925, 4,260 (2,601 not being candidates for degrees).

The library had in 1927 about 300,000 bound volumes and as many more pamphlets; and during 1927 plans were completed for the creation of a central medical library, the William H. Welch memorial library, to serve both the hospital and the departments of the university devoted to various branches of medical science. The project was made possible by a generous gift from the General Education Board and other friends of the university, where Dr. Welch, professor of the history of medicine, was given the charge of promoting collection of distinguished works in that field.

The buildings of the university in 1901 were crowded unpretentiously near the business centre of the city. In 1902 a gift of about 125ac. in the northern suburbs, made by a group of Baltimore citizens, brought about plans for removal. In 1916 the removal from the old site to Homewood was completed with the exception of the department of chemistry, which occupied its new laboratory in 1924. The tract is expertly developed. The new university buildings were fashioned in Georgian colonial architectural style to conform to the Homewood mansion, erected on the site early in the 19th century.

A dormitory, designated as a war memorial, was opened in 1923 in the name of the alumni. An ingeniously equipped laboratory in plant physiology, botanical garden and arboretum, athletic fields, and concrete grand-stand completed the development of 1925.

In 1927 the university's endowment amounted to more than $24,000,000 and the value of its physical equipment was not less than $8,200,000.

Scientific Expeditions.—The university has despatched four scientific expeditions abroad, two botanical to Jamaica in 1910

and 1919, and two geological to South America for the first detail cross-section of the Andes in 1919 and 1924. A fifth expedition —this one to the Near East for archaeological exploration and excavation (1924)—was conducted by a faculty member. Active in publication, the university was reported in 1927 to be recording about 600 printed contributions a year.

JOHNSON, ANDREW (1808–1875), seventeenth president of the United States, was born at Raleigh, N.C., on Dec. 29, 1808. His parents did not belong to the slave-owning class and Andrew continued poor long enough to develop a feeling of hostility toward the dominant element in southern society. Of formal schooling he had none. At the age of ten the boy was apprenticed to a tailor and although his hours were long, he managed to learn to read and write. In 1826 he removed to Greenville in eastern Tennessee, where he married Eliza McCordle (1810–76), who possessed a fair education and was of considerable assistance to her husband in his pursuit of further learning. During the early Tennessee years Johnson earned his living by the practice of his trade, but before he was 21 he entered local politics, was elected an alderman, and in 1830 became mayor of Greenville. From 1834 to 1843 he participated in State politics, serving as a Democrat in the State constitutional convention (1834), in the House of Representatives (1835–37; 1839–41) and in the Senate (1841–43). These years marked Johnson's political apprenticeship. His powers were now mature and he was ready to assume the position of champion of his section which was composed in the main of small farmers, suspicious and jealous of the slave-holding plantation owners who dominated the social and political life of middle and western Tennessee.

Generally speaking, during the formative years of Johnson's political career and down to the middle of the 1850's, the Whig Party was the political agent of the plantation interests in Tennessee while the Democratic Party, true to its Jacksonian origin, continued as the exponent of the small farmer-labourer interests. As the years passed and the drift of events tended to force slave-owners everywhere to unite in one party, and that party by the force of circumstances became the Democratic, Johnson sometimes found himself in uncongenial company. Nevertheless he preferred the Democratic to the newly-formed Republican Party. As a Democrat he had served as a member of the Federal House of Representatives from 1843 to 1853; from 1853 to 1857 he was governor of Tennessee and from 1857 to 1862 he was a member of the United States senate. In Congress he was in harmony with the pro-slavery element of his party so far as low tariff, territorial expansion, slavery extension and opposition to abolitionist agitation were concerned. He opposed them when they attempted to obstruct the movement for free western land for actual settlers, and as governor of Tennessee when he espoused the cause of popular education at State expense. In 1860 he supported Breckenridge whom he regarded as the true Democratic standard-bearer. However, he did not consider the election of Lincoln a sufficient reason for the Southern States to secede. Accordingly when Tennessee passed an ordinance of secession in June, 1861, he refused to leave his seat in the United States Senate and join the newly organized Confederacy. In March, 1862, President Lincoln appointed him military governor of Tennessee and during the two years he held this position he rendered valuable service to the Union cause, and just before he left the office he succeeded in creating and putting into operation machinery for the restoration of a loyal civil government in the State. During these Civil War years Johnson never ceased to class himself as a Democrat, and when in 1864 he was nominated for vice president on the ticket with Lincoln, it was by a convention that called itself "Union," not "Republican." This distinction is important for it exculpates Johnson from the charge subsequently made that he was an apostate from the Republican Party.

When Lincoln was assassinated in April, 1865, Johnson succeeded to the Presidency. Although he had frequently expressed himself to the effect that secession was treason and that the leaders of the secession movement should be punished as traitors, he did not hold that the late Confederate States were conquered territories to be dealt with in such manner as Congress might see fit. In this his opinions were in harmony with those of Lincoln, who had acted on the theory that the States had never been out of the Union. As commander-in-chief of the army the President had full power to name the conditions upon which military rule might be withdrawn and civil rule substituted. Accordingly, on May 29, 1865, he issued a general amnesty proclamation, granting full pardon to all ex-Confederates (except certain leaders) who would take an unqualified oath of allegiance to the United States. He next appointed provisional governors for the seven rebel States which had not already begun the process of restoration under the direction of Lincoln. To these governors he issued instructions that they provide for State conventions to be elected by such persons as had taken the oath of allegiance and were otherwise qualified to vote under the laws of the respective States. To the conventions he suggested (one might almost say, ordered) that they embody in the State Constitutions a provision for the abolition of slavery, ratify the 13th amendment to the Federal Constitution, nullify the ordinances of secession and repudiate such parts of the State debts as had been contracted in support of the secession movement. These were essentially the same demands that Lincoln had made on the conventions in the States where he had erected loyal civil governments. All this took place during the summer and autumn of 1865 previous to the assembling of Congress on Dec. 4.

That body was overwhelmingly Republican in complexion and most of the Republicans were inclined to take a radical view of the southern situation. It refused admission to the senators and representatives from the rebel States and provided for the creation of a joint committee on reconstruction. The exigencies of politics and the status of the freedmen were the crucial points in the situation. The radicals demanded that the late slaves be granted the right to vote forthwith and that a sufficient number of ex-Confederates be disfranchised to assure Republican majorities in most of the Southern States, assuming, of course, that the negroes would vote Republican out of gratitude to the party which had effected their freedom. To none of these demands would the President yield and in the course of three or four months the breach between him and the Republican Congress was wide open. Meanwhile the Southern States remained unrepresented in Congress while the reconstruction committee conducted investigations into southern conditions to ascertain whether any of them were sufficiently loyal to warrant their being represented. In June, 1866, the committee reported that the rebel States were unfit for representation, but presumably would become fit should they ratify the 14th amendment which was reported at the same time. This amendment was defeated in all the late Confederate States except Tennessee. The representatives and senators from this State were forthwith admitted. Soon afterward Congress adjourned and the whole question of reconstruction was submitted to the electorate.

During the course of his contest with the radical Republicans Johnson had gradually drawn the Democrats to his side and hoped to secure the support of enough moderate Republicans to control the next Congress. To this end he took an active part in the campaign but it is a question whether his speeches, some of which were certainly undignified and in bad taste, did more harm than good to his cause. At any rate his hopes were dashed as the new Congress contained an even larger majority of radical Republicans than the old. Accordingly, in 1867 Congress threw aside his work of restoration and proceeded with a plan of its own, the main features of which were the restoration of military control, the enfranchisement of negroes and the disfranchisement of considerable numbers of ex-Confederates. Johnson opposed this plan with all the power he possessed, regarding it as dangerous to the Federal system of government. His opposition was vain but troublesome to the leaders of the radical movement. They therefore determined to deprive the President of practically all power. To this end Congress passed on March 2, 1867, over the President's veto, the Tenure of Office act, prohibiting the President from dismissing from office, unless the Senate should agree, any officer appointed by and with the consent of that body. For a long time Edwin M. Stanton, the secretary of war, had been dis-

loyal to his chief and in league with his enemies. To rid himself of his obnoxious war minister and at the same time test before the Supreme Court the constitutionality of the Tenure of Office act, Johnson removed Stanton without obtaining the consent of the Senate. His plan for bringing the case before the Supreme Court, however, miscarried. Whereupon the House of Representatives brought articles of impeachment against the President, the only important charge being his violation of the Tenure of Office act. The evidence was entirely inadequate for convicting him on the graver charge before any fair-minded and impartial tribunal. The Senate at that time, however, was extremely partisan, and Johnson escaped conviction by only one vote (35 to 19; a two-thirds majority was necessary for conviction), on May 16, 1868. The remainder of Johnson's term as President was comparatively quiet and uneventful. On March 4, 1869, he left the Presidency a beaten and embittered man, but something of his old fighting spirit remained. After a number of unsuccessful efforts, in 1875 his Tennessee constituents returned him to his old place in the Senate. But his triumph was not for long. He made one brilliant speech in the Senate, where many of the men who had voted to convict him of high crimes and misdemeanors were still sitting, in apology for his own reconstruction policy and in denunciation of that of his opponents. But it was his last. Shortly afterward, on July 31, 1875, he died.

Faults of personality were Andrew Johnson's great handicap. He lacked the finish of systematic education. He was frequently tactless and at times even undignified. Though possessing fundamentally a kind and sympathetic disposition, his natural shyness caused him to appear to all except his closest intimates, hard and inflexible. His career as president was of the essence of tragedy. Of unlimited faith in the people, his reconstruction policies were overwhelmingly rejected by them. Of unswerving devotion to the letter and spirit of the Constitution he was impeached for its violation.

BIBLIOGRAPHY.—The most satisfactory biography is Robert W. Winston, *Andrew Johnson, Plebeian and Patriot* (1928). *See* also: L. Foster, *The Life and Speeches of Andrew Johnson* (1866); D. M. DeWitt, *The Impeachment and Trial of Andrew Johnson* (1903); C. E. Chadsey, *The Struggle between President Johnson and Congress over Reconstruction* (1896); W. A. B. K.)

JOHNSON, EASTMAN (1824–1906), American artist, was born at Lovell (Me.), on July 29, 1824. He studied at Düsseldorf, Paris, Rome, and The Hague, the last city being his home for four years. In 1860 he was elected to the National Academy of Design, New York. A distinguished portrait and genre painter, he made distinctively American themes his own, depicting the negro, fisherfolk and farm life with unusual interest. Such pictures as "Old Kentucky Home" (1867), "Husking Bee" (1876), "Cranberry Harvest, Nantucket" (1880), and his portrait group "The Funding Bill" (1881), achieved a national reputation. Among his sitters were many prominent men, including Daniel Webster; Presidents Hayes, Arthur, Cleveland and Harrison; William M. Evarts, Charles J. Folger; Emerson, Longfellow, Hawthorne, James McCosh, Noah Porter and Sir Edward Archbald. He died in New York city on April 5, 1906.

JOHNSON, EDWARD, tenor, was born at Guelph, Ont. He was educated at the University of Toronto and went to New York as a church soloist in 1907. Turning soon to light opera, he rapidly became a public favourite. After further vocal study in Italy, he made his operatic début at Padua, in *Andrea Chenier* in 1911; and subsequently sang in Rome, Bologna and at La Scala, Milan, for five seasons. In 1916 he was invited to the Teatro Colon, Buenos Aires. His first operatic appearance in the United States was with the Chicago Opera Company, Nov. 30, 1919. He joined the Metropolitan Opera Company, New York, in 1922, in which year he became an American citizen.

JOHNSON, EMORY RICHARD (1864–), American economist, was born at Waupun, Wis., March 22, 1864, and educated at the University of Wisconsin (B.L., 1888; M.L., 1891) and the University of Pennsylvania (Ph.D., 1893). He was instructor in economics at Haverford college, 1893–96, and after 1896 professor of transportation and commerce at the University of Pennsylvania. In 1919 he became dean of the Wharton school of finance and commerce at that university. Very early he gained a reputation as an expert in transportation and his specialized knowledge has often been called into Government service. He was a member of the U.S. Industrial Commission, 1899; a member of the U.S. Isthmian Canal Commission, 1899–1904; an expert on the valuation of railway property for the U.S. Census Bureau, 1904–05; expert on traffic for the National Waterways Commission, 1909; appointed by President Taft to report on Panama Canal traffic and tolls and the measurement of vessels, 1911; member of the Public Service Commission, 1913–15; assistant director of the Bureau of Transportation, War Trade Board, 1917; rate expert, U.S. Shipping Board, 1918–19.

Besides reports to commissions and many articles in economic journals he is the author of *Inland Waterways* (1893); *American Railway Transportation* (1903); *Ocean and Inland Water Transportation* (1906); *Railroad Traffic and Rates* (1911); *Panama Canal Traffic and Tolls* (1912); *The Panama Canal and Commerce* (1916); *Principles of Ocean Transportation* (1917); *Interpretative Essays on China and England* (1927).

JOHNSON, HIRAM WARREN (1866–), American politician, was born at Sacramento, Calif., on Sept. 2, 1866. He entered the University of California, but did not finish his course. He became a reporter, at the same time studying law in his father's office; was admitted to the bar 1888, and practised with his father and his brother in Sacramento. In 1902 he opened an office in San Francisco, where he became widely known in 1906–07 for the vigour and success with which, as prosecuting attorney, he proceeded against dishonest public officials and corporations. He was elected governor of California for the term 1911–15; and in 1912 was an unsuccessful candidate for vice president (on the ticket with Theodore Roosevelt), as nominee of the National Progressive Party, which he had helped to organise. As governor he signed in 1913 the Webb Anti-alien bill, designed to prohibit the ownership of land in California by Japanese, although the President had asked for delay. He was re-elected governor 1915–19, but resigned in 1917, having been elected a U.S. senator. He opposed many of the policies of President Wilson's administration and declared that a league of nations would involve the United States in European wars. At the Republican National convention in 1920 he had considerable support as presidential candidate, especially from those opposed to the League of Nations and the Treaty of Peace as submitted to the Senate. He was re-elected U.S. senator for the term 1923–29.

JOHNSON, LIONEL PIGOT (1867–1902), English critic and poet, was born at Broadstairs on March 15, 1867, and educated at Winchester, and at New College, Oxford. He began writing verse while still at school, and his essay on "The Fools of Shakespeare" was published in 1887, in *Noctes Shakesperianae*. In 1890, on leaving Oxford, he settled in London, where he undertook reviewing for the *Academy*, *Pall Mall Gazette* and other journals. In June 1891, he was received into the Church of Rome, and the influence of his conversion is seen in his poetry after that date. In 1895 the first collected edition of his poems appeared. His second volume *Ireland and other Poems* (1897), reflects his growing interest in Ireland, which he visited in Sept. 1893, and on several later occasions. He died on Oct. 4, 1902, as the result of a fall in Fleet street, following on a long period of ill-health.

A collected edition of his poems was published in 1915.

JOHNSON, REVERDY (1796–1876), American political leader and jurist, was born at Annapolis, Md., on May 21, 1796. His father, John Johnson (1770–1824), was a distinguished lawyer, who served in both legislative houses of Maryland, as attorney general of the State (1806–11), as a judge (1811–21), and as a chancellor of his State (1821–24). Reverdy graduated from St. John's college in 1812. He then studied law in his father's office, was admitted to the bar in 1815 and began to practise in Upper Marlborough. In 1817 he removed to Baltimore, where he became the professional associate of Luther Martin, William Pinkney and

Roger B. Taney; with Thomas Harris he reported the decisions of the court of appeals in *Harris and Johnson's Reports* (1820–27). From 1845 to 1849, as a Whig, he was a member of the United States Senate; and in 1849–50 he was attorney general of the United States. In 1856 he became identified with the conservative wing of the Democratic Party, and four years later supported Stephen A. Douglas for the presidency.

After the capture of New Orleans he was commissioned by Lincoln to revise the decisions of the military commandant, General B. F. Butler, in regard to foreign governments, and reversed all those decisions to the entire satisfaction of the administration. In 1863 he again took his seat in the United States Senate. In 1868 he was appointed minister to Great Britain, returning on the accession of Grant to the presidency. Again resuming his practice he was engaged by the government in the prosecution of Ku-Klux cases. He repudiated the doctrine of secession, and pleaded for compromise and conciliation. Opposed to the Reconstruction measures, he voted for them on the ground that it was better to accept than reject them, since they were probably the best that could be obtained. As a lawyer he was engaged during his later years in most of the especially important cases in the Supreme Court of the United States. He died at Annapolis on Feb. 10, 1876.

JOHNSON, RICHARD (1573–1659?), English romance writer, was baptized in London on May 24, 1573. His most famous romance is *The Famous Historie of the Seaven Champions of Christendom* (1596?). The success of this book was so great that the author added a second and a third part in 1608 and 1616.

His other stories include: *The Nine Worthies of London* (1592); *The Pleasant Walks of Moorefields* (1607); *The Pleasant Conceites of Old Hobson* (1607), the hero being a well-known haberdasher in the Poultry; *The Most Pleasant History of Tom a Lincolne* (1607); *A Remembrance of . . . Robert Earle of Salisbury* (1612); *Looke on Me, London* (1613); *The History of Tom Thumbe* (1621). *The Crown Garland of Golden Roses . . . set forth in Many Pleasant new Songs and Sonnets* (1612) was reprinted for the Percy Society (1842 and 1845).

JOHNSON, RICHARD MENTOR (1781–1850), ninth vice-president of the United States, was born at Bryant's Station (Ky.) on Oct. 17, 1781. He was admitted to the bar in 1800, and became prominent as a lawyer and Democratic politician serving in the Federal House of Representatives and in the Senate for many years. From 1837 to 1841 he was vice-president of the United States, to which position he was elected over Francis Granger, by the Senate, none of the four candidates for the vice-presidency having received a majority of the electoral votes. The opposition to Johnson within the party greatly increased during his term, and the Democratic national convention of 1840 adopted the unprecedented course of refusing to nominate anyone for the vice-presidency. In the ensuing election Johnson received most of the Democratic electoral votes, but was defeated by the Whig candidate, John Tyler. He died in Frankfort (Ky.) on Nov. 19, 1850.

JOHNSON, SAMUEL (1709–1784), English writer and lexicographer, was the son of Michael Johnson (1656–1731), bookseller and magistrate of Lichfield, who married in 1706 Sarah Ford (1669–1759). Michael's abilities and attainments seem to have been considerable. He was so well acquainted with the contents of the volumes which he exposed for sale that the country rectors of Staffordshire and Worcestershire thought him an oracle on points of learning. Between him and the clergy, indeed, there was a strong religious and political sympathy. He was a zealous churchman, and, though he had qualified himself for municipal office by taking the oaths to the sovereigns in possession, was to the last a Jacobite in heart. The social position of Samuel's paternal grandfather, William Johnson, remains obscure; his mother was the daughter of Cornelius Ford, "a little Warwickshire Gent."

At a house (now the Johnson museum) in the Market Square, Lichfield, Samuel Johnson was born on Sept. 18, 1709 and baptized on the same day at St. Mary's, Lichfield. In the child the physical, intellectual and moral peculiarities which afterwards distinguished the man were plainly discernible: great muscular strength accompanied by much awkwardness and many infirmities; great quickness of parts, with a morbid propensity to sloth and procrastination; a kind and generous heart, with a gloomy and irritable temper. He had inherited from his ancestors a scrofulous taint, and his parents were weak enough to believe that the royal touch would cure him. In his third year he was taken up to London, inspected by the court surgeon, prayed over by the court chaplains and stroked and presented with a piece of gold by Queen Anne. Her hand was applied in vain. The boy's features, which were originally noble and not irregular, were distorted by his malady. His cheeks were deeply scarred. He lost for a time the sight of one eye; and he saw but very imperfectly with the other. But the force of his mind overcame every impediment. Indolent as he was, he acquired knowledge with such ease and rapidity that at every school (such as those at Lichfield and Stourbridge) to which he was sent he was soon the best scholar. From 16 to 18 he resided at home, and was left to his own devices. He learned much at this time, though his studies were without guidance and without plan. He ransacked his father's shelves, dipped into a multitude of books, read what was interesting and passed over what was dull. An ordinary lad would have acquired little or no useful knowledge in such a way; but much that was dull to ordinary lads was interesting to Samuel. He read little Greek; for his proficiency in that language was not such that he could take much pleasure in the masters of Attic poetry and eloquence. But he had left school a good Latinist, and he soon acquired an extensive knowledge of Latin literature. He was peculiarly attracted by the works of the great restorers of learning. Once, while searching for some apples, he found a huge folio volume of Petrarch's works. The name excited his curiosity, and he eagerly devoured hundreds of pages. Indeed, the diction and versification of his own Latin compositions show that he had paid at least as much attention to modern copies from the antique as to the original models.

While he was thus irregularly educating himself, his family was sinking into hopeless poverty. Old Michael Johnson was much better qualified to pore over books, and to talk about them, than to trade in them. His business declined; his debts increased; it was with difficulty that the daily expenses of his household were defrayed. It was out of his power to support his son at either university, but a wealthy neighbour offered assistance; and, in reliance on promises which proved to be of very little value, Samuel was entered at Pembroke College, Oxford. When the young scholar presented himself to the rulers of that society, they were amazed not more by his ungainly figure and eccentric manners than by the quantity of extensive and curious information which he had picked up during many months of desultory but not unprofitable study. On the first day of his residence he surprised his teachers by quoting Macrobius; and one of the most learned among them declared that he had never known a freshman of equal attainments.

At Oxford Johnson resided barely over two years, possibly less. He was poor, even to raggedness; and his appearance excited a mirth and a pity which were equally intolerable to his haughty spirit. He was driven from the quadrangle of Christ Church by the sneering looks which the members of that aristocratical society cast at the holes in his shoes. Some charitable person placed a new pair at his door; but he spurned them away in a fury. Distress made him, not servile, but reckless and ungovernable. No opulent gentleman commoner, panting for one-and-twenty, could have treated the academical authorities with more gross disrespect. The needy scholar was generally to be seen under the gate of Pembroke, a gate now adorned with his effigy, haranguing a circle of lads, over whom, in spite of his tattered gown and dirty linen, his wit and audacity gave him an undisputed ascendancy. In every mutiny against the discipline of the college he was the ringleader. Much was pardoned, however, to a youth so highly distinguished by abilities and acquirements. He had early made himself known by turning Pope's "Messiah" into Latin verse. The style and rhythm, indeed, were not exactly Virgilian; but the translation found many admirers, and was read with pleasure by Pope himself.

The time drew near at which Johnson would, in the ordinary course of things, have become a Bachelor of Arts; but he was at the end of his resources. Those promises of support on which he had relied had not been kept. His family could do nothing for him. His debts to Oxford tradesmen were small indeed, yet larger than

he could pay. In the autumn of 1731 he was under the necessity of quitting the university without a degree. In the following winter his father died. The old man left but a pittance; and of that pittance almost the whole was appropriated to the support of his widow. The property to which Samuel succeeded amounted to no more than twenty pounds.

His life, during the thirty years which followed, was one hard struggle with poverty. The misery of that struggle needed no aggravation, but was aggravated by the sufferings of an unsound body and an unsound mind. Before the young man left the university, his hereditary malady had broken forth in a singularly cruel form. He had become an incurable hypochondriac. He said long after that he had been mad all his life, or at least not perfectly sane; and, in truth, eccentricities less strange than his have often been thought ground sufficient for absolving felons and for setting aside wills. His grimaces, his gestures, his mutterings, sometimes diverted and sometimes terrified people who did not know him. At a dinner table he would absent-mindedly stoop down and twitch off a lady's shoe. He would amaze a drawing-room by suddenly ejaculating a clause of the Lord's Prayer. He would conceive an unintelligible aversion to a particular alley, and perform a great circuit rather than see the hateful place. He would set his heart on touching every post in the streets through which he walked. If by any chance he missed a post, he would go back a hundred yards and repair the omission. Under the influence of his disease, his senses became morbidly torpid, and his imagination morbidly active. At one time he would stand poring on the town clock without being able to tell the hour. At another he would distinctly hear his mother, who was many miles off, calling him by his name. But this was not the worst. A deep melancholy took possession of him, and gave a dark tinge to all his views of human nature and of human destiny. Such wretchedness as he endured has driven many men to shoot themselves or drown themselves. But he was under no temptation to commit suicide. He was sick of life; but he was afraid of death; and he shuddered at every sight or sound which reminded him of the inevitable hour. In religion he found but little comfort during his long and frequent fits of dejection; for his religion partook of his own character. The light from heaven shone on him indeed, but not in a direct line, or with its own pure splendour. The rays had to struggle through a disturbing medium; they reached him refracted, dulled and discoloured by the thick gloom which had settled on his soul, and, though they might be sufficiently clear to guide him, were too dim to cheer him.

With such infirmities of body and of mind, he was left, at two-and-twenty, to fight his way through the world. He remained during about five years in the midland counties. At Lichfield, his birthplace and his early home, he had inherited some friends and acquired others. He was kindly noticed by Henry Hervey, a gay officer of noble family, who happened to be quartered there. Gilbert Walmesley, registrar of the ecclesiastical court of the diocese, a man of distinguished parts, learning and knowledge of the world, did himself honour by patronizing the young adventurer, whose repulsive person, unpolished manners and squalid garb moved many of the petty aristocracy of the neighbourhood to laughter or disgust. At Lichfield, however, Johnson could find no way of earning a livelihood. He became usher of a grammar school in Leicestershire; he resided as a humble companion in the house of a country gentleman; but a life of dependence was insupportable to his haughty spirit. He repaired to Birmingham, and there earned a few guineas by literary drudgery. In that town he printed a translation, little noticed at that time, and long forgotten, of a Latin book about Abyssinia. He then put forth proposals for publishing by subscription the poems of Politian, with notes containing a history of modern Latin verse; but subscriptions did not come in, and the volume never appeared.

While leading this vagrant and miserable life, Johnson fell in love. The object of his passion was Mrs. Elizabeth Porter (1688–1752), widow of Harry Porter (d. 1734), whose daughter Lucy was born only six years after Johnson himself. To ordinary spectators the lady appeared to be a short, fat, coarse woman, painted half an inch thick, dressed in gaudy colours, and fond of exhibiting provincial airs and graces which were not exactly those of the Queensberrys and Lepels. To Johnson, however, whose passions were strong, and whose eyesight was too weak to distinguish rouge from natural bloom, and who had seldom or never been in the same room with a woman of real fashion, his Tetty, as he called her, was the most beautiful, graceful and accomplished of her sex. That his admiration was unfeigned cannot be doubted; she had, however, a jointure of £600 and perhaps a little more; she came of a good family, and her son Jervis (d. 1763) commanded H.M.S. "Hercules." The marriage, in spite of occasional wranglings, proved happier than might have been expected. The lover continued to be under the illusions of the wedding-day (July 9, 1735) till the lady died in her sixty-fourth year. On her monument at Bromley he placed an inscription extolling the charms of her person and of her manners; and when, long after her decease, he had occasion to mention her, he exclaimed with a tenderness half ludicrous, half pathetic, "Pretty creature!"

His marriage made it necessary for him to exert himself more strenuously than he had hitherto done. He took a house at Edial near Lichfield and advertised for pupils. But 18 months passed away, and only three pupils came to his academy. The "faces" that Johnson habitually made (probably nervous contortions due to his disorder) may well have alarmed parents. Good scholar though he was, these twitchings had lost him usherships in 1735 and 1736. David Garrick, who was one of the pupils, used, many years later, to throw the best company of London into convulsions of laughter by mimicking the master and his lady.

At length Johnson, in the twenty-eighth year of his age, determined to seek his fortune in London as a literary adventurer. He set out with a few guineas, three acts of his tragedy of *Irene* in manuscript and two or three letters of introduction from his friend Walmesley. Never since literature became a calling in England had it been a less gainful calling than at the time when Johnson took up his residence in London. In the preceding generation a writer of eminent merit was sure to be munificently rewarded by the Government. The least that he could expect was a pension or a sinecure place; and, if he showed any aptitude for politics, he might hope to be a member of parliament, a lord of the treasury, an ambassador, a secretary of state. But literature had ceased to flourish under the patronage of the great, and had not yet begun to flourish under the patronage of the public. One man of letters, indeed, Pope, had acquired by his pen what was then considered as a handsome fortune, and lived on a footing of equality with nobles and ministers of state. But this was a solitary exception. Even an author whose reputation was established, and whose works were popular—such an author as Thomson, whose *Seasons* was in every library, such an author as Fielding, whose *Pasquin* had had a greater run than any drama since *The Beggar's Opera*—was sometimes glad to obtain, by pawning his best coat, the means of dining on tripe at a cookshop underground, where he could wipe his hands, after his greasy meal, on the back of a Newfoundland dog. It is easy, therefore, to imagine what humiliations and privations must have awaited the novice who had still to earn a name. One of the publishers to whom Johnson applied for employment measured with a scornful eye that athletic though uncouth frame, and exclaimed, "You had better get a porter's knot and carry trunks." Nor was the advice bad, for a porter was likely to be as plentifully fed, and as comfortably lodged, as a poet.

Some time appears to have elapsed before Johnson was able to form any literary connection from which he could expect more than bread for the day which was passing over him. He never forgot the generosity with which Hervey, who was now residing in London, relieved his wants during this time of trial. "Harry Hervey," said Johnson many years later, "was a vicious man; but he was very kind to me. If you call a dog Hervey, I shall love him." At Hervey's table Johnson sometimes enjoyed feasts which were made more agreeable by contrast. But in general he dined, and thought that he dined well, on sixpennyworth of meat and a pennyworth of bread at an alehouse near Drury Lane.

The effect of the privations and sufferings which he endured at this time was discernible to the last in his temper and his deportment. His manners had never been courtly. They now became

almost savage. Being frequently under the necessity of wearing shabby coats and dirty shirts, he became a confirmed sloven. Being often very hungry when he sat down to his meals, he contracted a habit of eating with ravenous greediness. Even to the end of his life, and even at the tables of the great, the sight of food affected him as it affects wild beasts and birds of prey. His taste in cookery, formed in subterranean ordinaries and *à la mode* beef shops, was far from delicate. Whenever he was so fortunate as to have near him a hare that had been kept too long, or a meat pie made with rancid butter, he gorged himself with such violence that his veins swelled and the moisture broke out on his forehead. The affronts which his poverty emboldened stupid and low-minded men to offer him would have broken a mean spirit into sycophancy, but made him rude even to ferocity. Unhappily the insolence which, while it was defensive, was pardonable, and in some sense respectable, accompanied him into societies where he was treated with courtesy and kindness. He was repeatedly provoked into striking those who had taken liberties with him. All the sufferers, however, were wise enough to abstain from talking about their beatings, except Osborne, the most rapacious and brutal of booksellers, who proclaimed everywhere that he had been knocked down by the huge fellow whom he had hired to puff the Harleian Library.

About a year after Johnson had begun to reside in London he was fortunate enough to obtain regular employment from Edward Cave (*q.v.*) on the *Gentleman's Magazine*. That periodical, just entering on the ninth year of its long existence, was the only one in the kingdom which then had what would now be called a large circulation. Johnson was engaged to write the speeches in the "Reports of the Debates of the Senate of Lilliput" (*see* REPORTING), under which thin disguise the proceedings of parliament were published. He was generally furnished with notes, meagre indeed and inaccurate, of what had been said; but sometimes he had to find arguments and eloquence both for the ministry and for the opposition. He was himself a Tory, not from rational conviction—for his serious opinion was that one form of government was just as good or as bad as another—but from mere passion, such as inflamed the Capulets against the Montagues, or the Blues of the Roman circus against the Greens. In his infancy he had heard so much talk about the villainies of the Whigs, and the dangers of the Church, that he had become a furious partisan when he could scarcely speak. Before he was three he had insisted on being taken to hear Sacheverell preach at Lichfield Cathedral, and had listened to the sermon with as much respect and probably with as much intelligence, as any Staffordshire squire in the congregation. The work which had been begun in the nursery had been completed by the university. Oxford, when Johnson resided there, was the most Jacobitical place in England; and Pembroke was one of the most Jacobitical colleges in Oxford. The prejudices which he brought up to London were scarcely less absurd than those of his own Tom Tempest. Charles II. and James II. were two of the best kings that ever reigned. Laud was a prodigy of parts and learning over whose tomb Art and Genius still continued to weep. Hampden deserved no more honourable name than that of the "zealot of rebellion." Even the ship-money Johnson would not pronounce to have been an unconstitutional impost. Under a government which allowed to the people an unprecedented liberty of speech and action, he fancied that he was a slave. He hated Dissenters and stockjobbers, the excise and the army, septennial parliaments, and Continental connections. He long had an aversion to the Scots, an aversion of which he could not remember the commencement, but which, he owned, had probably originated in his abhorrence of the conduct of the nation during the Great Rebellion. It is easy to guess in what manner debates on great party questions were likely to be reported by a man whose judgment was so much distorted by party spirit. A show of fairness was indeed necessary to the prosperity of the *Magazine*. But Johnson long afterwards owned that, though he had saved appearances, he had taken care that the Whig dogs should not have the best of it; and, in fact, every passage which has lived, every passage which bears the marks of his higher faculties, is put into the mouth of some member of the opposition.

A few weeks after Johnson had entered on these obscure labours, he published a work which at once placed him high among the writers of his age. It is probable that what he had suffered during his first year in London had often reminded him of some parts of the satire in which Juvenal had described the misery and degradation of a needy man of letters, lodged among the pigeons' nests in the tottering garrets which overhung the streets of Rome. Pope's admirable imitations of Horace's *Satires* and *Epistles* had recently appeared, were in every hand, and were by many readers thought superior to the originals. What Pope had done for Horace, Johnson aspired to do for Juvenal.

Johnson's *London* appeared without his name in May 1738. He received only ten guineas for this stately and vigorous poem; but the sale was rapid and the success complete. A second edition was required within a week. Those small critics who are always desirous to lower established reputations ran about proclaiming that the anonymous satirist was superior to Pope in Pope's own peculiar department of literature. It ought to be remembered, to the honour of Pope, that he joined heartily in the applause with which the appearance of a rival genius was welcomed. He made inquiries about the author of *London*. Such a man, he said, could not long be concealed. The name was soon discovered; and Pope, with great kindness, exerted himself to obtain an academical degree and the mastership of a grammar school for the poor young poet. The attempt failed, and Johnson remained a bookseller's hack.

It does not appear that these two men, the most eminent writer of the generation which was going out, and the most eminent writer of the generation which was coming in, ever saw each other. They lived in very different circles, one surrounded by dukes and earls, the other by starving pamphleteers and index-makers. Among Johnson's associates at this time may be mentioned Boyse, who, when his shirts were pledged, scrawled Latin verses sitting up in bed with his arms through two holes in his blanket, who composed very respectable sacred poetry when he was sober, and who was at last run over by a hackney coach when he was drunk; Hoole, surnamed the metaphysical tailor, who, instead of attending to his measures, used to trace geometrical diagrams on the board where he sat cross-legged; and the penitent impostor, George Psalmanazar, who, after poring all day, in a humble lodging, on the folios of Jewish rabbis and Christian fathers, indulged himself at night with literary and theological conversation at an alehouse in the City. But the most remarkable of the persons with whom at this time Johnson consorted was Richard Savage, an earl's son, a shoemaker's apprentice, who had seen life in all its forms, who had feasted among blue ribands in St. James's Square, and had lain with fifty pounds weight of irons on his legs in the condemned ward of Newgate. This man had, after many vicissitudes of fortune, sunk at last into abject and hopeless poverty. His pen had failed him. His patrons had been taken away by death, or estranged by the riotous profusion with which he squandered their bounty, and the ungrateful insolence with which he rejected their advice. He now lived by begging. He dined on venison and champagne whenever he had been so fortunate as to borrow a guinea. If his questing had been unsuccessful, he appeased the rage of hunger with some scraps of broken meat, and lay down to rest under the piazza of Covent Garden in warm weather, and, in cold weather, as near as he could get to the furnace of a glass house. Yet in his misery he was still an agreeable companion. He had an inexhaustible store of anecdotes about that gay and brilliant world from which he was now an outcast. He had observed the great men of both parties in hours of careless relaxation, had seen the leaders of opposition without the mask of patriotism, and had heard the prime minister roar with laughter and tell stories not over-decent. During some months Savage lived in the closest familiarity with Johnson; and then the friends parted, not without tears. Johnson remained in London to drudge for Cave. Savage went to the west of England, lived there as he had lived everywhere, and in 1743 died, penniless and heartbroken, in Bristol Gaol.

Soon after his death, while the public curiosity was strongly excited about his extraordinary character and his not less extraordinary adventures, a life of him appeared widely different from the catchpenny lives of eminent men which were then a staple article of manufacture in Grub Street. The style was indeed deficient in

ease and variety; and the writer was evidently too partial to the Latin element of our language. But the little work, with all its faults, was a masterpiece. No finer specimen of literary biography existed in any language, living or dead; and a discerning critic might have confidently predicted that the author was destined to be the founder of a new school of English eloquence.

The *Life of Savage* was anonymous; but it was well known in literary circles that Johnson was the writer. During the three years which followed, he produced no important work; but he was not, and indeed could not be, idle. The fame of his abilities and learning continued to grow. Warburton pronounced him a man of parts and genius; and the praise of Warburton was then no light thing. Such was Johnson's reputation that, in 1747, several eminent booksellers combined to employ him in the arduous work of preparing a *Dictionary of the English Language,* in two folio volumes. The sum which they agreed to pay him was only fifteen hundred guineas; and out of this sum he had to pay several poor men of letters who assisted him in the humbler parts of his task.

The prospectus of the *Dictionary* he addressed to the earl of Chesterfield. Chesterfield had long been celebrated for the politeness of his manners, the brilliancy of his wit and the delicacy of his taste. He was acknowledged to be the finest speaker in the House of Lords. He had recently governed Ireland, at a momentous conjuncture, with eminent firmness, wisdom and humanity; and he had since become secretary of state. He received Johnson's homage with the most winning affability, and requited it with a few guineas, bestowed doubtless in a very graceful manner, but was by no means desirous to see all his carpets blackened with the London mud, and his soups and wines thrown to right and left over the gowns of fine ladies and the waistcoats of fine gentlemen, by an absent-minded scholar, who gave strange starts and uttered strange growls, who dressed like a scarecrow and ate like a cormorant. During some time Johnson continued to call on his patron, but, after being repeatedly told by the porter that his lordship was not at home, took the hint and ceased to present himself at the inhospitable door.

Johnson had flattered himself that he should have completed his *Dictionary* by the end of 1750; but it was not till 1755 that he at length gave his huge volumes to the world. During the seven years which he passed in the drudgery of penning definitions and marking quotations for transcription, he sought for relaxation in literary labour of a more agreeable kind. In January 1749 he published *The Vanity of Human Wishes,* an excellent imitation of the tenth satire of Juvenal, for which he received fifteen guineas.

A few days after the publication of this poem, his tragedy of *Irene,* begun many years before, was brought on the stage by his old pupil, David Garrick, now manager of Drury Lane Theatre. The relation between him and his old preceptor was of a very singular kind. They repelled each other strongly, and yet attracted each other strongly. Nature had made them of very different clay; and circumstances had fully brought out the natural peculiarities of both. Sudden prosperity had turned Garrick's head. Continued adversity had soured Johnson's temper. Johnson saw with more envy than became so great a man the villa, the plate, the china, the Brussels carpet, which the little mimic had got by repeating, with grimaces and gesticulations, what wiser men had written; and the exquisitely sensitive vanity of Garrick was galled by the thought that, while all the rest of the world was applauding him, he could obtain from one morose cynic, whose opinion it was impossible to despise, scarcely any compliment not acidulated with scorn. Yet the two Lichfield men had so many early recollections in common, and sympathized with each other on so many points on which they sympathized with nobody else in the vast population of the capital, that, though the master was often provoked by the monkey-like impertinence of the pupil, and the pupil by the bearish rudeness of the master, they remained friends till they were parted by death. Garrick now brought *Irene* out, with alterations sufficient to displease the author, yet not sufficient to make the piece pleasing to the audience. After nine representations the play was withdrawn. The poet however cleared by his benefit nights, and by the sale of the copyright of his tragedy, about three hundred pounds, then a great sum in his estimation.

About a year after the representation of *Irene,* he began to publish a series of short essays on morals, manners and literature. This species of composition had been brought into fashion by the success of the *Tatler,* and by the still more brilliant success of the *Spectator.* A crowd of small writers had vainly attempted to rival Addison. The *Lay Monastery,* the *Censor,* the *Freethinker,* the *Plain Dealer,* the *Champion,* and other works of the same kind had had their short day. At length Johnson undertook the adventure in which so many aspirants had failed. In the 36th year after the appearance of the last number of the *Spectator* appeared the first number of the *Rambler.* From March 1750 to March 1752 this paper continued to come out every Tuesday and Saturday.

From the first the *Rambler* was enthusiastically admired by a few eminent men. Richardson, when only five numbers had appeared, pronounced it equal if not superior to the *Spectator.* Young and Hartley expressed their approbation not less warmly. In consequence probably of the good offices of Bubb Dodington, who was then the confidential adviser of Prince Frederick, two of his royal highness's gentlemen carried a gracious message to the printing office, and ordered seven copies for Leicester House. But Johnson had had enough of the patronage of the great to last him all his life, and was not disposed to haunt any other door as he had haunted the door of Chesterfield.

By the public the *Rambler* was at first very coldly received. Though the price of a number was only twopence, the sale did not amount to five hundred. The profits were therefore very small. But as soon as the flying leaves were collected and reprinted they became popular. The author lived to see thirteen thousand copies spread over England alone. Separate editions were published for the Scotch and Irish markets. A large party pronounced the style perfect, so absolutely perfect that in some essays it would be impossible for the writer himself to alter a single word for the better. Another party, not less numerous, vehemently accused him of having corrupted the purity of the English tongue. The best critics admitted that his diction was too monotonous, too obviously artificial, and now and then turgid even to absurdity. But they did justice to the acuteness of his observations on morals and manners, to the constant precision and frequent brilliancy of his language, to the weighty and magnificent eloquence of many serious passages, and to the solemn yet pleasing humour of some of the lighter papers

The last *Rambler* was written in a sad and gloomy hour. Mrs. Johnson had been given over by the physicians. Three days later she died. She left her husband almost broken-hearted. Many people had been surprised to see a man of his genius and learning stooping to every drudgery, and denying himself almost every comfort, for the purpose of supplying a silly, affected old woman with superfluities, which she accepted with but little gratitude. But all his affection had been concentrated on her. He had neither brother nor sister, neither son nor daughter. Her opinion of his writings was more important to him than the voice of the pit of Drury Lane Theatre, or the judgment of the *Monthly Review.* The chief support which had sustained him through the most arduous labour of his life was the hope that she would enjoy the fame and the profit which he anticipated from his *Dictionary.* She was gone; and in that vast labyrinth of streets, peopled by eight hundred thousand human beings, he was alone. Yet it was necessary for him to set himself, as he expressed it, doggedly to work. After three more laborious years, the *Dictionary* was at length complete.

It had been generally supposed that this great work would be dedicated to the eloquent and accomplished nobleman to whom the prospectus had been addressed. Lord Chesterfield well knew the value of such a compliment; and therefore, when the day of publication drew near, he exerted himself to soothe, by a show of zealous and at the same time of delicate and judicious kindness, the pride which he had so cruelly wounded. Since the *Rambler* had ceased to appear, the town had been entertained by a journal called the *World,* to which many men of high rank and fashion contributed. In two successive numbers of the *World,* the *Dictionary* was, to use the modern phrase, puffed with wonderful skill. The writings of Johnson were warmly praised. It was proposed that he should be invested with the authority of a dictator, nay, of a pope,

over our language, and that his decisions about the meaning and the spelling of words should be received as final. His two folios, it was said, would of course be bought by everybody who could afford to buy them. It was soon known that these papers were written by Chesterfield. But the just resentment of Johnson was not to be so appeased. In a letter written with singular energy and dignity of thought and language, he repelled the tardy advances of his patron. The *Dictionary* came forth without a dedication. In the Preface the author truly declared that he owed nothing to the great, and described the difficulties with which he had been left to struggle so forcibly and pathetically that the ablest and most malevolent of all the enemies of his fame, Horne Tooke, never could read that passage without tears.

Johnson's *Dictionary* was hailed with an enthusiasm such as no similar work has ever excited. It was indeed the first dictionary which could be read with pleasure. The definitions show so much acuteness of thought and command of language, and the passages quoted from poets, divines and philosophers are so skilfully selected, that a leisure hour may always be very agreeably spent in turning over the pages. The faults of the book resolve themselves, for the most part, into one great fault. Johnson was a wretched etymologist. He knew little or nothing of any Teutonic language except English, which indeed, as he wrote it, was scarcely a Teutonic language; and thus he was absolutely at the mercy of Junius and Skinner.

The *Dictionary*, though it raised Johnson's fame, added nothing to his pecuniary means. The fifteen hundred guineas which the booksellers had agreed to pay him had been advanced and spent before the last sheets issued from the press. It is painful to relate that twice in the course of the year which followed the publication of this great work he was arrested and carried to sponging-houses, and that he was twice indebted for his liberty to his excellent friend Richardson. It was still necessary for the man who had been formerly saluted by the highest authority as dictator of the English language to supply his wants by constant toil. He abridged his *Dictionary*. He proposed to bring out an edition of Shakespeare by subscription, and many subscribers sent in their names and laid down their money; but he soon found the task so little to his taste that he turned to more attractive employments. He contributed many papers to a new monthly journal, which was called the *Literary Magazine*. Few of these papers have much interest; but among them was one of the best things that he ever wrote, a masterpiece both of reasoning and of satirical pleasantry, the review of Jenyns' *Inquiry into the Nature and Origin of Evil*.

In the spring of 1758 Johnson put forth the first of a series of essays, entitled the *Idler*. During two years these essays continued to appear weekly. They were eagerly read, widely circulated, and indeed impudently pirated, while they were still in the original form, and had a large sale when collected into volumes. The *Idler* may be described as a second part of the *Rambler*, somewhat livelier and somewhat weaker than the first part.

While Johnson was busied with his *Idlers*, his mother, who had accomplished her ninetieth year, died at Lichfield. It was long since he had seen her, but he had not failed to contribute largely out of his small means to her comfort. In order to defray the charges of her funeral, and to pay some debts which she had left, he wrote a little book in a single week, and sent off the sheets to the press without reading them over. A hundred pounds were paid him for the copyright, and the purchasers had great cause to be pleased with their bargain, for the book was *Rasselas*, and it had a great success.

The plan of *Rasselas* might, however, have seemed to invite severe criticism. Johnson has frequently blamed Shakespeare for neglecting the proprieties of time and place, and for ascribing to one age or nation the manners and opinions of another. Yet Shakespeare has not sinned in this way more grievously than Johnson. Rasselas and Imlac, Nekayah and Pekuah, are evidently meant to be Abyssinians of the 18th century; for the Europe which Imlac describes is the Europe of the 18th century, and the inmates of the Happy Valley talk familiarly of that law of gravitation which Newton discovered and which was not fully received even at Cambridge till the 18th century. Johnson, not content with turning filthy savages, ignorant of their letters, and gorged with raw steaks cut from living cows, into philosophers as eloquent and enlightened as himself or his friend Burke, and into ladies as highly accomplished as Mrs. Lennox or Mrs. Sheridan, transferred the whole domestic system of England to Egypt. Into a land of harems, a land of polygamy, a land where women are married without ever being seen, he introduced the flirtations and jealousies of our ball-rooms. In a land where there is boundless liberty of divorce, wedlock is described as the indissoluble compact. "A youth and maiden meeting by chance, or brought together by artifice, exchange glances, reciprocate civilities, go home, and dream of each other. Such," says Rasselas, "is the common process of marriage." A writer who was guilty of such improprieties had little right to blame the poet who made Hector quote Aristotle, and represented Julio Romano as flourishing in the days of the Oracle of Delphi.

By such exertions as have been described Johnson supported himself till the year 1762. In that year a great change in his circumstances took place. He had from a child been an enemy of the reigning dynasty. His Jacobite prejudices had been exhibited with little disguise both in his works and in his conversation. Even in his massy and elaborate *Dictionary* he had, with a strange want of taste and judgment, inserted bitter and contumelious reflections on the Whig party. The excise, which was a favourite resource of Whig financiers, he had designated as a hateful tax. He had railed against the commissioners of excise in language so coarse that they had seriously thought of prosecuting him. He had with difficulty been prevented from holding up the lord privy seal by name as an example of the meaning of the word "renegade." A pension he had defined as pay given to a state hireling to betray his country; a pensioner as a slave of state hired by a stipend to obey a master. It seemed unlikely that the author of these definitions would himself be pensioned. But that was a time of wonders. George III. had ascended the throne, and had, in the course of a few months, disgusted many of the old friends, and conciliated many of the old enemies of his house. The city was becoming mutinous; Oxford was becoming loyal. Cavendishes and Bentincks were murmuring; Somersets and Wyndhams were hastening to kiss hands. The head of the Treasury was now Lord Bute, who was a Tory, and could have no objection to Johnson's Toryism. Bute wished to be thought a patron of men of letters; and Johnson was one of the most eminent and one of the most needy men of letters in Europe. A pension of three hundred a year was graciously offered, and with very little hesitation accepted.

This event produced a change in Johnson's whole way of life. For the first time since his boyhood he no longer felt the daily goad urging him to the daily toil. He was at liberty, after 30 years of anxiety and drudgery, to indulge his constitutional indolence, to lie in bed till two in the afternoon, and to sit up talking till four in the morning, without fearing either the printer's devil or the sheriff's officer

One laborious task indeed he had bound himself to perform. He had received large subscriptions for his promised edition of Shakespeare; he had lived on those subscriptions during some years; and he could not without disgrace omit to perform his part of the contract. His friends repeatedly exhorted him to make an effort, and he repeatedly resolved to do so. But, notwithstanding their exhortations and his resolutions, month followed month, year followed year, and nothing was done. He prayed fervently against his idleness; he determined, as often as he received the sacrament, that he would no longer doze away and trifle away his time; but the spell under which he lay resisted prayer and sacrament. Happily for his honour, the charm which held him captive was at length broken by no gentle or friendly hand. He had been weak enough to pay serious attention to a story about a ghost which haunted a house in Cock Lane, and had actually gone himself, with some of his friends, at one in the morning, to St. John's Church, Clerkenwell, in the hope of receiving a communication from the perturbed spirit. But the spirit, though adjured with all solemnity, remained obstinately silent; and it soon appeared that a naughty girl of eleven had been amus-

ing herself by making fools of so many philosophers. Churchill, who, confident in his powers, drunk with popularity, and burning with party spirit, was looking for some man of established fame and Tory politics to insult, celebrated the Cock Lane ghost in three cantos, nicknamed Johnson Pomposo, asked where the book was which had been so long promised and so liberally paid for, and directly accused the great moralist of cheating. This terrible word proved effectual, and in October 1765 appeared, after a delay of nine years, the new edition of Shakespeare.

This publication saved Johnson's character for honesty, but added nothing to the fame of his abilities and learning. The Preface, though it contains some good passages, is not in his best manner. The most valuable notes are those in which he had an opportunity of showing how attentively he had during many years observed human life and human nature. The best specimen is the note on the character of Polonius. Nothing so good is to be found even in Wilhelm Meister's admirable examination of *Hamlet*. But here praise must end. It would be difficult to name a more slovenly, a more worthless edition of any great classic.[1] Johnson had, in his prospectus, told the world that he was peculiarly fitted for the task which he had undertaken, because he had, as a lexicographer, been under the necessity of taking a wider view of the English language than any of his predecessors. But, unfortunately, he had altogether neglected that very part of our literature with which it is especially desirable that an editor of Shakespeare should be conversant In the two folio volumes of the *English Dictionary* there is not a single passage quoted from any dramatist of the Elizabethan age except Shakespeare and Ben Jonson. Even from Ben the quotations are few. Johnson might easily in a few months have made himself well acquainted with every old play that was extant. But it never seems to have occurred to him that this was a necessary preparation for the work which he had undertaken. He would doubtless have admitted that it would be the height of absurdity in a man who was not familiar with the works of Aeschylus and Euripides to publish an edition of Sophocles. Yet he ventured to publish an edition of Shakespeare, without having ever in his life, as far as can be discovered, read a single scene of Massinger, Ford, Dekker, Webster, Marlow, Beaumont or Fletcher. His detractors were noisy and scurrilous. He had, however, acquitted himself of a debt which had long lain heavy on his conscience and he sank back into the repose from which the sting of satire had roused him. He long continued to live upon the fame which he had already won. He was honoured by the university of Oxford with a doctor's degree, by the Royal Academy with a professorship, and by the king with an interview, in which his majesty most graciously expressed a hope that so excellent a writer would not cease to write. In the interval between 1765 and 1775 Johnson published only two or three political tracts.

But, though his pen was now idle, his tongue was active. The influence exercised by his conversation, directly upon those with whom he lived, and indirectly on the whole literary world, was altogether without a parallel. His colloquial talents were indeed of the highest order. He had strong sense, quick discernment, wit, humour, immense knowledge of literature and of life, and an infinite store of curious anecdotes. As respected style, he spoke far better than he wrote. Every sentence which dropped from his lips was as correct in structure as the most nicely balanced period of the *Rambler*. But in his talk there were no pompous triads, and little more than a fair proportion of words in *-osity* and *-ation*. All was simplicity, ease and vigour. He uttered his short, weighty, and pointed sentences with a power of voice, and a justness and energy of emphasis, of which the effect was rather increased than diminished by the rollings of his huge form, and by the asthmatic gaspings and puffings in which the peals of his eloquence generally ended. Nor did the laziness which made him unwilling to sit down to his desk prevent him from giving instruction or entertainment orally. To discuss questions of taste, of learning, of casuistry, in language so exact and so forcible that it might have been printed without the alteration of a word, was to him no exertion, but a pleasure. He loved, as he said, to fold his legs and have his talk out. He was ready to bestow the overflowings of his full mind on anybody who would start a subject: on a fellow-passenger in a stage coach, or on the person who sat at the same table with him in an eating-house. But his conversation was nowhere so brilliant and striking as when he was surrounded by a few friends, whose abilities and knowledge enabled them, as he once expressed it, to send him back every ball that he threw. Some of these, in 1764, formed themselves into a club, which gradually became a formidable power in the commonwealth of letters. The verdicts pronounced by this conclave on new books were speedily known over all London, and were sufficient to sell off a whole edition in a day, or to condemn the sheets to the service of the trunkmaker and the pastrycook. Goldsmith was the representative of poetry and light literature, Reynolds of the arts, Burke of political eloquence and political philosophy. There, too, were Gibbon the greatest historian and Sir William Jones the greatest linguist of the age. Garrick brought to the meetings his inexhaustible pleasantry, his incomparable mimicry, and his consummate knowledge of stage effect. Among the most constant attendants were two high-born and high-bred gentlemen, closely bound together by friendship, but of widely different characters and habits—Bennet Langton, distinguished by his skill in Greek literature, by the orthodoxy of his opinions, and by the sanctity of his life, and Topham Beauclerk, renowned for his amours, his knowledge of the gay world, his fastidious taste and his sarcastic wit.

Among the members of this celebrated body was one to whom it has owed the greater part of its celebrity, yet who was regarded with little respect by his brethren, and had not without difficulty obtained a seat among them. This was James Boswell (*q.v.*), a young Scots lawyer, heir to an honourable name and a fair estate. That he was a coxcomb and a bore, weak, vain, pushing, curious, garrulous, was obvious to all who were acquainted with him.

To a man of Johnson's strong understanding and irritable temper, the silly egotism and adulation of Boswell must have been as teasing as the constant buzz of a fly. Johnson hated to be questioned; and Boswell was eternally catechizing him on all kinds of subjects, and sometimes propounded such questions as, "What would you do, sir, if you were locked up in a tower with a baby?" Johnson was a water-drinker and Boswell was a wine-bibber, and indeed little better than an habitual sot. It was impossible that there should be perfect harmony between two such companions. Indeed, the great man was sometimes provoked into fits of passion, in which he said things which the small man, during a few hours, seriously resented. Every quarrel, however, was soon made up. During 20 years the disciple continued to worship the master; the master continued to scold the disciple, to sneer at him, and to love him. The two friends ordinarily resided at a great distance from each other. Boswell practised in the Parliament House of Edinburgh, and could pay only occasional visits to London. During those visits his chief business was to watch Johnson, to discover all Johnson's habits, to turn the conversation to subjects about which Johnson was likely to say something remarkable, and to fill quarto notebooks with minutes of what Johnson had said. In this way were gathered the materials out of which was afterwards constructed the most interesting biographical work in the world.

Soon after the club began to exist, Johnson formed a connection less important indeed to his fame, but much more important to his happiness, than his connection with Boswell Henry Thrale, one of the most opulent brewers in the kingdom, a man of sound and cultivated understanding, rigid principles, and liberal spirit, was married to one of those clever, kind-hearted, engaging, vain, pert young women who are perpetually doing or saying what is not exactly right, but who, do or say what they may, are always agreeable. In 1765 the Thrales became acquainted with Johnson, and the acquaintance ripened fast into friendship. They were

[1] This famous dictum of Macaulay, though endorsed by Lord Rosebery, has been energetically rebutted by Professor W. Raleigh and others, who recognize both sagacity and scholarship in Johnson's Preface and Notes. Johnson's wide grasp of the discourse and knowledge of human nature enable him in a hundred entangled passages to go straight to the dramatist's meaning. (T. S.)

astonished and delighted by the brilliancy of his conversation. They were flattered by finding that a man so widely celebrated preferred their house to any other in London. Johnson soon had an apartment at the brewery in Southwark, and a still more pleasant apartment at the villa of his friends on Streatham Common. A large part of every year he passed in those abodes, which must have seemed magnificent and luxurious indeed, when compared with the dens in which he had generally been lodged. But his chief pleasures were derived from what the astronomer of his Abyssinian tale called "the endearing elegance of female friendship." Mrs. Thrale rallied him, soothed him, coaxed him, and if she sometimes provoked him by her flippancy, made ample amends by listening to his reproofs with angelic sweetness of temper. When he was diseased in body and in mind, she was the most tender of nurses. No comfort that wealth could purchase, no contrivance that womanly ingenuity, set to work by womanly compassion, could devise, was wanting to his sick room. It would seem that a full half of Johnson's life during about 16 years was passed under the roof of the Thrales. He accompanied the family sometimes to Bath, and sometimes to Brighton, once to Wales and once to Paris. But he had at the same time a house in one of the narrow and gloomy courts on the north of Fleet Street. In the garret was his library, a large and miscellaneous collection of books, falling to pieces and begrimed with dust. On a lower floor he sometimes, but very rarely, regaled a friend with a plain dinner —a veal pie, or a leg of lamb and spinach, and a rice pudding. Nor was the dwelling uninhabited during his long absences. It was the home of the most extraordinary assemblage of inmates that ever was brought together. At the head of the establishment Johnson had placed an old lady named Williams, whose chief recommendations were her blindness and her poverty. But, in spite of her murmurs and reproaches, he gave an asylum to another lady who was as poor as herself, Mrs. Desmoulins, whose family he had known many years before in Staffordshire. Room was found for the daughter of Mrs. Desmoulins, and for another destitute damsel, who was generally addressed as Miss Carmichael, but whom her generous host called Polly. An old quack doctor named Levett, who had a wide practice, but among the very poorest class, poured out Johnson's tea in the morning and completed this strange menagerie. All these poor creatures were at constant war with each other, and with Johnson's negro servant Frank. Sometimes, indeed, they transferred their hostilities from the servant to the master, complained that a better table was not kept for them, and railed or maundered till their benefactor was glad to make his escape to Streatham or to the Mitre Tavern. And yet he, who was generally the haughtiest and most irritable of mankind, who was but too prompt to resent anything which looked like a slight on the part of a purse-proud bookseller, or of a noble and powerful patron, bore patiently from mendicants, who, but for his bounty, must have gone to the workhouse, insults more provoking than those for which he had knocked down Osborne and bidden defiance to Chesterfield. Year after year Mrs. Williams and Mrs. Desmoulins, Polly and Levett, continued to torment him and to live upon him.

The course of life which has been described was interrupted in Johnson's sixty-fourth year by an important event. He had early read an account of the Hebrides, and had been much interested by learning that there was so near to him a land peopled by a race which was still as rude and simple as in the Middle Ages. A wish to become intimately acquainted with a state of society so utterly unlike all that he had ever seen frequently crossed his mind. But it is not probable that his curiosity would have overcome his habitual sluggishness, and his love of the smoke, the mud, and the cries of London, had not Boswell importuned him to attempt the adventure, and offered to be his squire. At length, in August 1773, Johnson crossed the Highland line, and plunged courageously into what was then considered, by most Englishmen, as a dreary and perilous wilderness. After wandering about two months through the Celtic region, sometimes in rude boats which did not protect him from the rain, and sometimes on small shaggy ponies which could hardly bear his weight, he returned to his old haunts with a mind full of new images and new theories. During the following year he employed himself in recording his adventures. About the beginning of 1775 his *Journey to the Hebrides* was published, and was, during some weeks, the chief subject of conversation in all circles in which any attention was paid to literature. His prejudice against the Scots had at length become little more than matter of jest; and whatever remained of the old feeling had been effectually removed by the kind and respectful hospitality with which he had been received in every part of Scotland. It was, of course, not to be expected that an Oxonian Tory should praise the Presbyterian polity and ritual, or that an eye accustomed to the hedgerows and parks of England should not be struck by the bareness of Berwickshire and East Lothian. But even in censure Johnson's tone is not unfriendly. The most enlightened Scotsmen, with Lord Mansfield at their head, were well pleased. But some foolish and ignorant Scotsmen were moved to anger by a little unpalatable truth which was mingled with much eulogy, and assailed him whom they chose to consider as the enemy of their country with libels much more dishonourable to their country than anything that he had ever said or written. They published paragraphs in the newspapers, articles in the magazines, sixpenny pamphlets, five-shilling books. One scribbler abused Johnson for being blear-eyed, another for being a pensioner; a third informed the world that one of the doctor's uncles had been convicted of felony in Scotland, and had found that there was in that country one tree capable of supporting the weight of an Englishman. Macpherson, whose *Fingal* had been treated in the *Journey* as an impudent forgery, threatened to take vengeance with a cane. The only effect of this threat was that Johnson reiterated the charge of forgery in the most contemptuous terms, and walked about, during some time, with a cudgel.

Of other assailants Johnson took no notice whatever. He had early resolved never to be drawn into controversy; and he adhered to his resolution with a steadfastness which is the more extraordinary because he was, both intellectually and morally, of the stuff of which controversialists are made. In conversation he was a singularly eager, acute and pertinacious disputant. When at a loss for good reasons, he had recourse to sophistry; and when heated by altercation, he made unsparing use of sarcasm and invective. But when he took his pen in his hand, his whole character seemed to be changed. A hundred bad writers misrepresented him and reviled him; but not one of the hundred could boast of having been thought by him worthy of a refutation, or even of a retort. One Scotsman, bent on vindicating the fame of Scots learning, defied him to the combat in a detestable Latin hexameter:—

Maxime, si tu vis, cupio contendere tecum.

But Johnson took no notice of the challenge. He always maintained that fame was a shuttlecock which could be kept up only by being beaten back as well as beaten forward, and which would soon fall if there were only one battledore. No saying was oftener in his mouth than that fine old apophthegm of Bentley, that no man was ever written down but by himself.

Unhappily, a few months after the appearance of the *Journey to the Hebrides*, Johnson did what none of his envious assailants could have done, and to a certain extent succeeded in writing himself down. The disputes between England and her American colonies had reached a point at which no amicable adjustment was possible. War was evidently impending; and the ministers seem to have thought that the eloquence of Johnson might with advantage be employed to inflame the nation against the opposition at home, and against the rebels beyond the Atlantic. He had already written two or three tracts in defence of the foreign and domestic policy of the government; and those tracts, though hardly worthy of him, were much superior to the crowd of pamphlets which lay on the counters of Almon and Stockdale. But his *Taxation no Tyranny* was a pitiable failure. Even Boswell was forced to own that in this unfortunate piece he could detect no trace of his master's powers. The general opinion was that the strong faculties which had produced the *Dictionary* and the *Rambler* were beginning to feel the effect of time and of disease, and that the old man would best consult his credit by writing no more. But this was a great mistake. Johnson had failed, not because his mind was less

vigorous than when he wrote *Rasselas* in the evenings of a week, but because he had foolishly chosen, or suffered others to choose for him, a subject such as he would at no time have been competent to treat. He was in no sense a statesman. He never willingly read or thought or talked about affairs of state. He loved biography, literary history, the history of manners; but political history was positively distasteful to him. The question at issue between the colonies and the mother country was a question about which he had really nothing to say. Happily, Johnson soon had an opportunity of proving most signally that his failure was not to be ascribed to intellectual decay.

On Easter Eve 1777 some persons, deputed by a meeting which consisted of 40 of the first booksellers in London, called upon him. Though he had some scruples about doing business at that season, he received his visitors with much civility. They came to inform him that a new edition of the English poets, from Cowley downwards, was in contemplation, and to ask him to furnish short biographical prefaces. He readily undertook the task for which he was pre-eminently qualified. His knowledge of the literary history of England since the Restoration was unrivalled. That knowledge he had derived partly from books, and partly from sources which had long been closed: from old Grub Street traditions; from the talk of forgotten poetasters and pamphleteers, who had long been lying in parish vaults; from the recollections of such men as Gilbert Walmesley, who had conversed with the wits of Button, Cibber, who had mutilated the plays of two generations of dramatists, Orrery, who had been admitted to the society of Swift and Savage, who had rendered services of no very honorable kind to Pope. The biographer therefore sat down to his task with a mind full of matter. He had at first intended to give only a paragraph to every minor poet, and only four or five pages to the greatest name. But the flood of anecdote and criticism overflowed the narrow channel. The work, which was originally meant to consist only of a few sheets, swelled into ten volumes—small volumes, it is true, and not closely printed. The first four appeared in 1779, the remaining six in 1781.

The *Lives of the Poets* is, on the whole, the best of Johnson's works. The narratives are as entertaining as any novel. The remarks on life and on human nature are eminently shrewd and profound. The criticisms are often excellent, and, even when grossly and provokingly unjust, well deserve to be studied. *Savage's Life* Johnson reprinted nearly as it had appeared in 1744. Whoever, after reading that life, will turn to the other lives will be struck by the difference of style. Since Johnson had been at ease in his circumstances he had written little and had talked much. When therefore he, after the lapse of years, resumed his pen, the mannerism which he had contracted while he was in the constant habit of elaborate composition was less perceptible than formerly, and his diction frequently had a colloquial ease which it had formerly wanted. The improvement may be discerned by a skilful critic in the *Journey to the Hebrides*, and in the *Lives of the Poets* is so obvious that it cannot escape the notice of the most careless reader. Among the *Lives* the best are perhaps those of Cowley, Dryden and Pope. The very worst is, beyond all doubt, that of Gray; the most controverted that of Milton.

This great work at once became popular. There was, indeed, much just and much unjust censure; but even those who were loudest in blame were attracted by the book in spite of themselves. Malone computed the gains of the publishers at five or six thousand pounds. But the writer was very poorly remunerated. Intending at first to write very short prefaces, he had stipulated for only two hundred guineas. The booksellers, when they saw how far his performance had surpassed his promise, added only another hundred. Indeed Johnson, though he did not despise or affect to despise money, and though his strong sense and long experience ought to have qualified him to protect his own interests, seems to have been singularly unskilful and unlucky in his literary bargains. He was generally reputed the first English writer of his time. Yet several writers of his time sold their copyrights for sums such as he never ventured to ask. To give a single instance, Robertson received £4,500 for the *History of Charles V*

Johnson was now in his seventy-second year. The infirmities of age were coming fast upon him. That inevitable event of which he never thought without horror was brought near to him; and his whole life was darkened by the shadow of death. The strange dependants to whom he had given shelter, and to whom, in spite of their faults, he was strongly attached by habit, dropped off one by one; and, in the silence of his home, he regretted even the noise of their scolding matches. The kind and generous Thrale was no more; and it was soon plain that the old Streatham intimacy could not be maintained upon the same footing. Mrs. Thrale herself confessed that without her husband's assistance she did not feel able to entertain Johnson as a constant inmate of her house. Free from the yoke of the brewer, she fell in love with a music master, high in his profession, from Brescia, named Gabriel Piozzi, in whom nobody but herself could discover anything to admire. The secret of this attachment was soon discovered by Fanny Burney, but Johnson at most only suspected it.

In September 1782 the place at Streatham was from motives of economy let to Lord Shelburne, and Mrs. Thrale took a house at Brighton, whither Johnson accompanied her; they remained for six weeks on the old familiar footing. In March 1783 Boswell was glad to discover Johnson well looked after and staying with Mrs. Thrale in Argyll Street, but in a bad state of health. Impatience of Johnson's criticisms and infirmities had been steadily growing with Mrs. Thrale since 1774. She now went to Bath with her daughters, partly to escape his supervision. Johnson was very ill in his lodgings during the summer, but he still corresponded affectionately with his "mistress" and received many favours from her. He retained the full use of his senses during the paralytic attack, and in July he was sufficiently recovered to renew his old club life and to meditate further journeys. In June 1784 he went with Boswell to Oxford for the last time. In September he was in Lichfield. On his return his health was rather worse; but he would submit to no dietary régime. His asthma tormented him day and night, and dropsical symptoms made their appearance His wrath was excited in no measured terms against the remarriage of his old friend Mrs. Thrale, the news of which he heard this summer. The whole dispute seems, to-day, entirely uncalled-for, but the marriage aroused some of Johnson's strongest prejudices. He wrote inconsiderately on the subject, but we must remember that he was at the time afflicted in body and mentally haunted by dread of impending change. Throughout all his troubles he had clung vehemently to life. The feeling described in that fine but gloomy paper which closes the series of his *Idlers* seemed to grow stronger in him as his last hour drew near. He fancied that he should be able to draw his breath more easily in a southern climate, and would probably have set out for Rome and Naples but for his fear of the expense of the journey. That expense, indeed, he had the means of defraying; for he had laid up about two thousand pounds, the fruit of labours which had made the fortune of several publishers. But he was unwilling to break in upon this hoard, and he seems to have wished even to keep its existence a secret. Some of his friends hoped that the Government might be induced to increase his pension to six hundred pounds a year, but this hope was disappointed, and he resolved to stand one English winter more.

That winter was his last. His legs grew weaker; his breath grew shorter; the fatal water gathered fast in spite of incisions which he, courageous against pain but timid against death, urged his surgeons to make deeper and deeper. Though the tender care which had mitigated his sufferings during months of sickness at Streatham was withdrawn, and though Boswell was absent, he was not left desolate. The ablest physicians and surgeons attended him, and refused to accept fees from him. Burke parted from him with deep emotion. Windham sat much in the sick-room. Frances Burney, whom the old man had cherished with fatherly kindness, stood weeping at the door; while Langton, whose piety eminently qualified him to be an adviser and comforter at such a time, received the last pressure of his friend's hand within. When at length the moment, dreaded through so many years, came close, the dark cloud passed away from Johnson's mind. Windham's servant, who sat up with him during his last night, declared that "no man could appear more collected, more devout or less terrified at the thoughts

of the approaching minute." At hour intervals, often of much pain, he was moved in bed and addressed himself vehemently to prayer. In the morning he was still able to give his blessing, but in the afternoon he became drowsy, and at a quarter past seven in the evening on the 13th of December 1784, in his seventy-sixth year, he passed away. He was laid, a week later, in Westminster Abbey, among the eminent men of whom he had been the historian —Cowley and Denham, Dryden and Congreve, Gay, Prior and Addison. (M)

Note.—The following comment on Macaulay, written by Thomas Seccombe for the 11th edition of the *Encyclopædia Britannica* may well be reprinted here: "The splendid example of his style which Macaulay contributed in the article on Johnson to the 8th edition of this encyclopædia has become classic, and has therefore been retained above with a few trifling modifications in those places in which his invincible love of the picturesque has drawn him demonstrably aside from the dull line of veracity. Macaulay, it must be noted, exaggerated persistently the poverty of Johnson's pedigree, the squalor of his early married life, the grotesqueness of his entourage in Fleet Street, the decline and fall from complete virtue of Mrs. Thrale, the novelty and success of the *Dictionary*, the complete failure of the Shakespeare and the political tracts. Yet this contribution is far more mellow than the article contributed on Johnson twenty-five years before to the *Edinburgh Review* in correction of Croker. Matthew Arnold, who edited six selected *Lives* of the poets, regarded it as one of Macaulay's happiest and ripest efforts. It was written out of friendship for Adam Black, and 'payment was not so much as mentioned.' The big reviews, especially the quarterlies, have always been the natural home of Johnsonian study. Sir Walter Scott, Croker, Hayward, Macaulay, Thomas Carlyle (whose famous Fraser article was reprinted in 1853) and Whitwell Elwin have done as much as anybody perhaps to sustain the zest for Johnsonian studies. Macaulay's prediction that the interest in the man would supersede that in his 'works' seemed and seems likely enough to justify itself; but his theory that the man alone mattered and that a portrait painted by the hand of an inspired idiot was a true measure of the man has not worn better than the common run of literary propositions. Johnson's prose is not extensively read. But the same is true of nearly all the great prose masters of the 18th century As in the case of all great men, Johnson has suffered a good deal at the hands of his imitators and admirers. His prose, though not nearly so uniformly monotonous or polysyllabic as the parodists would have us believe, was at one time greatly overpraised. From the 'Life of Savage' to the 'Life of Pope' it developed a great deal, and in the main improved. To the last he sacrificed expression rather too much to style, and he was perhaps over-conscious of the balanced epithet. But he contributed both dignity and dialectical force to the prose movement of his period." (T. S)

BIBLIOGRAPHY.—Since Seccombe's comment was written there has been a steady output of Johnsonian literature. In the first place, Courtney and Nichol Smith's *Bibliography of Johnson* (1915) provides a sound basis for the study of the text of the whole of Johnson's works; an index of Johnson's literary criticism is contained in J. E. Brown's *Critical Opinions of Dr. Johnson* (1926) and P. H. Houston's *Doctor Johnson, A Study in XVIII. Century Humanism* (1923) discusses Johnson from the scholastic point of view. Such works are evidence of the greater attention now being paid to Johnson's own writings. Of the *Collected Works* it is still true to say that the best edition is the Oxford edition of 1825 in 9 volumes, with two supplementary volumes containing the *Debates*. Similarly the Birkbeck Hill editions of the *Lives of the Poets* (1905) and of the *Letters* (1892) remain the standard editions, though *Proposals* for a definitive edition of the *Letters* have been published by R. W. Chapman (Essays and Studies, Eng. Assoc. xii.). The latter editor has also produced editions of the *Journey to the Western Islands* (1924) and of *Rasselas* (1927); in both books the text is edited with scrupulous care. Though *Rasselas* was in Johnson's own day by far the most popular of his prose writings, later generations have preferred the *Lives of the Poets*, and it is significant that this work is now available in the World's Classics (ed. A. Waugh, 1906) and in Everyman's Library (ed. L. Archer-Hind, 1925). Enthusiasts for Johnson's prose have also endeavoured to popularize it by books of selections; *e.g.*, *Selections from The Rambler* (ed. W. Hale White, 1907), *Selections from The Idler* (ed. S. C. Roberts, 1921), *Johnson on Shakespeare* (ed. W. Raleigh, 1908), *Selected Letters* (ed. R. W. Chapman, 1925), *Samuel Johnson: Writer* (ed. S. C. Roberts, 1927). A handy reprint of Johnson's *Poems* is contained in *The Poems of Johnson, Goldsmith, Gray and Collins* (ed. T. Methuen Ward, 1905) and D. Nichol Smith's edition of the *Poems* is in preparation.

Recent editions of and selections from Boswell's *Life* are noted under BOSWELL (*q.v.*), but Sir Leslie Stephen's *Samuel Johnson* (1878) remains the best short biography; Col. F. Grant's *Life and Writings of Samuel Johnson,* planned on a similar scale, contains a useful bibliography; T. Seccombe's *The Age of Johnson* (1899) gives a concise account of the period, and S. C. Roberts' *Story of Dr. Johnson* (1919) provides an introduction for the beginner in Johnsoniana; the most intensive study of the byways of Johnson's career is that undertaken by Aleyn Lyell Reade, of whose *Johnsonian Gleanings* four parts have been published. A. M. Broadley's *Dr. Johnson and Mrs. Thrale* (1909), with an essay by T. Seccombe, contained much new material, and Mrs. Piozzi's *Anecdotes* have been freshly edited by S. C. Roberts (1925). The revival of general interest in Johnsoniana may perhaps be dated from the publication of Sir Walter Raleigh's *Six Essays on Johnson* (1910), a model of sane appreciation, and such small books as John Bailey's *Dr. Johnson and his Circle* (1913) and Robert Lynd's *Dr. Johnson and Company* (1927) are significant of the really popular interest in the subject. Many of the lesser lives, or parts of them, by Hawkins, Murphy, Tyers and others are included in the two volumes of Birkbeck Hill's *Johnsonian Miscellanies* (1897); in *Dr. Johnson and Fanny Burney* (1912) C. B. Tinker collects the passages from the diary and letters of Madame D'Arblay which relate to Johnson. Collectors (notably R. B Adam and A. Edward Newton) have facilitated research and editing; in particular, the former's *Catalogue,* containing many facsimiles of letters and mss., is of great value. Johnson's "Club" has continued till the present day and its members are for the most part eminent in literature or politics or both. The Johnson Club, founded in 1884, meets in the Johnson House in Gough Square, London, happily rescued from ruin by Mr. Cecil Harmsworth. Two volumes of *Johnson Club Papers* have been published. A Johnson Society has also been founded at Lichfield where the anniversary of Johnson's birth is regularly celebrated. (S. C. R.)

JOHNSON, SIR THOMAS (1664–1729), English merchant, was born in Liverpool in Nov. 1664. He succeeded his father in 1689 as bailiff and in 1695 as mayor. From 1701 to 1723 he represented Liverpool in parliament, and he was knighted by Queen Anne in 1708. He effected the separation of Liverpool from the parish of Walton-on-the-Hill; from the Crown he obtained the grant to the corporation of the site of the old castle where he planned the town market; while the construction of the first floating dock (1708) and the building of St. Peter's and St. George's churches were due in great measure to his efforts. He was interested in the tobacco trade; in 1715 he conveyed 130 Jacobite prisoners to the American plantations. In 1723, having lost his fortune, he went himself to Virginia as a collector of customs. He died in Jamaica in 1729. A street in Liverpool is named Sir Thomas Buildings after him.

JOHNSON, THOMAS, English 18th century wood-carver and furniture designer. Of excellent repute as a craftsman, his original conceptions and his adaptations were remarkable for their rococo absurdities and thin and meretricious ornament. On the other hand, he occasionally produced a mirror frame or a mantelpiece which was simple and dignified. The three leading "motives" of the time—Chinese, Gothic and Louis Quatorze—were mixed up in his work in the most amazing manner; and he introduced human figures, animals, birds and fishes in highly incongruous places. Johnson, who was in business at the "Golden Boy" in Grafton street, Westminster, published a folio volume of *Designs for Picture Frames, Candelabra, Ceilings, etc.* (1758); and *One Hundred and Fifty New Designs* (1761).

JOHNSON, SIR WILLIAM (1715–1774), British soldier and American pioneer, was born in Smithtown, Co. Meath, Ireland, the son of a country gentleman, Christopher Johnson. In 1737 he removed to America for the purpose of managing a tract of land in the Mohawk valley, N.Y., belonging to his uncle, Admiral Sir Peter Warren. He established himself on the south bank of the Mohawk, about 25m. W. of Schenectady, but before 1743 removed to the north bank where he had purchased a large tract of his own. His settlement prospered and a valuable trade was built up with the Indians. Fort Johnson with a store and mill was erected. His situation, together with his character, soon won for Johnson an immense influence over the Indians. He was adopted by the Mohawks and learned their language. In 1744

Governor George Clinton of New York appointed him superintendent of the affairs of the Six Nations (Iroquois). In 1746 he was made commissary of the province for Indian affairs and was influential in enlisting and equipping the Six Nations for participation in the conflict with French Canada. Two years later he was placed in command of a line of outposts on the New York frontier, but the peace of Aix-la-Chapelle interrupted the offensive operations he had planned. In May 1750, by royal appointment, he became a member for life of the governor's council. In 1754 he was one of the New York delegates to the Albany intercolonial Congress, where plans of union were discussed and a council held with the Indians In 1755 he was commissioned a major-general, in which capacity he directed the expedition against Crown Point, and in September defeated the Indians and French at the battle of Lake George. For this success he received the thanks of parliament and was created a baronet. Also in 1756 he was appointed sole agent and superintendent of the Six Nations and all other Indians inhabiting British territory north of the Carolinas and the Ohio river, a position which he held until his death. Johnson took part in Abercrombie's disastrous campaign against Ticonderoga (1758), and in 1759 was second-in-command in Gen. Prideaux's expedition against Ft. Niagara, succeeding to the chief command on that officer's death and capturing the fort. In 1760 he was with Gen Amherst at the capture of Montreal. As a reward for his services the king granted him 100,000ac. of land north of the Mohawk river, on which he built Johnson Hall (on the site of the present Johnstown) and lived in baronial style after the war. It was Johnson's influence that kept the Iroquois loyal and made them effective in the French and Indian War. It was his influence which kept them from joining Pontiac in his conspiracy in 1763. Again, Johnson was instrumental in arranging the treaty of Stanwix in 1768. His services for a period of 30 years, through successive crises, as the outstanding Indian diplomat of the colonies, can hardly be over-estimated.

His son, SIR JOHN JOHNSON, who also served through the French and Indian War, succeeded to the baronetcy upon his father's death; but during the Revolution he chose to remain on the British side and organized a loyalist regiment, whereupon the estates in the Mohawk valley were confiscated

BIBLIOGRAPHY.—Five volumes of *The Papers of Sir William Johnson* were published at Albany (1921–27); others are to follow. *See* also the collection in *Documentary History of the State of New York*, vol. ii., pp. 543–1009 (Albany, 1849), W. L. Stone, *Life of Sir William Johnson* (1865); W. E. Griffis, *Sir William Johnson and the Six Nations* (1891); A. C. Buell, *Sir William Johnson* (1903); and *Proceedings of the New York State Historical Association*, vols. i., iv., xi., xiii., xix.

JOHNSONBURG, a borough of Elk county, Pa., U.S.A., on the Clarion river, 105m. N.E. of Pittsburgh. It is on Federal highway 219, and is served by the Buffalo, Rochester and Pittsburgh, the Erie and the Pennsylvania railroads. The population was 5,400 in 1920. It is in a farming and lumbering region. The dominant manufacturing industry of the borough is the making of newsprint paper. Johnsonburg was founded about 1875 and was named after the first settler, Thomas Johnson, a hunter.

JOHNSON CITY, a city of Washington county, Tennessee, U.S.A., in the mountainous eastern part of the State, at an altitude of 1,700ft. It is served by the Clinchfield, the East Tennessee and Western North Carolina, and the Southern railways. The population was 12,442 in 1920 (87% native white) and was estimated locally at over 26,000 in 1928. It is surrounded by very beautiful scenery, and is developing as a touring centre. Behind the town rise the heights of Buffalo and Cherokee; within a few miles is the Unaka national forest; Roan mountain (6,000ft.) and the peaks of Holston are in the landscape. The town has various manufacturing industries, with an output in 1925 valued at $8,712,699. It is the seat of a branch of the National Home for Disabled Volunteer Soldiers, and of the East Tennessee State Teachers college (established 1909). Johnson City was settled about 1787, incorporated as a town in 1879, and as a city in 1887. The region has many associations with Daniel Boone, Andrew Jackson, Andrew Johnson and early events in the history of Tennessee.

JOHNSTON, ALBERT SIDNEY (1803–1862), American Confederate general in the Civil War, was born at Washington, Ky., on Feb. 3, 1803. He graduated at West Point in 1826, and served for eight years in the U.S. infantry as a company officer, adjutant and staff officer. In 1834 he resigned his commission, emigrated in 1836 to Texas, then a republic, and joined its army as a private. His rise was very rapid, and before long he was serving as commander-in-chief in preference to Gen. Felix Huston, with whom he fought a duel. From 1838 to 1840 he was Texan secretary for war, and in 1839 he led a successful expedition against the Cherokee Indians. From 1840 to the outbreak of the Mexican War he lived in retirement on his farm, but in 1846 he led a regiment of Texan volunteers in the field, and at Monterey, as a staff officer, he had three horses shot under him. In 1849 he returned to the U.S. army as major, and in 1855 became colonel of the 2nd U.S. Cavalry (afterwards 5th), in which his lieut.-colonel was Robert E. Lee, and his majors were Hardee and Thomas. In 1857 he commanded the expedition sent against the Mormons, and performed his difficult and dangerous mission so successfully that the objects of the expedition were attained without bloodshed. He was rewarded with the brevet of brigadier-general. At the outbreak of the Civil War in 1861 Johnston, then in command of the Pacific department, resigned his commission and made his way to Richmond, where President Jefferson Davis, whom he had known at West Point, at once made him a full general in the Confederate army and assigned him to command the department of Kentucky. Here he had to guard a long and weak line from the Mississippi to the Alleghany mountains, which was dangerously advanced on account of the political necessity of covering friendly country. The first serious advance of the Federals forced him back at once, and he was freely criticized and denounced for what, in ignorance of the facts, the Southern press and people regarded as a weak and irresolute defence. Johnston himself, who had entered upon the Civil War with the reputation of being the foremost soldier on either side, bore with fortitude the reproaches of his countrymen, and Davis loyally supported his old friend. Johnston then marched to join Beauregard at Corinth, Miss., and with the united forces took the offensive against Grant's army at Pittsburg Landing. The battle of Shiloh (*q.v.*) took place on April 6 and 7, 1862. The Federals were completely surprised, and Johnston was in the full tide of success when he fell mortally wounded, dying a few minutes afterwards. President Davis said, in his message to the Confederate Congress, "Without doing injustice to the living, it may safely be said that our loss is irreparable," and the subsequent history of the war in the west went far to prove the truth of his eulogy.

His son, WILLIAM PRESTON JOHNSTON (1831–99), who served on the staff of Gen. Johnston and subsequently on that of President Davis, was a distinguished professor and president of Tulane university His chief work is the *Life of General Albert Sidney Johnston* (1878), a most valuable and exhaustive biography.

See "The Death of General Albert Sidney Johnston on the Battlefield of Shiloh," in *Iowa Journal of History and Politics*, vol. xvi. p. 275–281 (1918); *see* also Amory Dwight Mayo, *William Preston Johnston's Work for a New South*, U.S. Educ. Bur. (1900).

JOHNSTON, ALEXANDER KEITH (1804–71), Scottish geographer, was born at Kirkhill, near Edinburgh, on Dec. 28, 1804. He was educated at Edinburgh high school and university, and was apprenticed to an engraver. In 1826 he joined his brother in the cartographical firm of W. and A. K. Johnston. His first important work was the *National Atlas* of general geography, which gained for him (1843) the appointment of Geographer-royal for Scotland Johnston published his magnificent *Physical Atlas* in 1848 (2nd ed. enlarged, 1856). This illustrates the geology, hydrography, meteorology, botany, zoology and ethnology of the globe. He died at Ben Rhydding, Yorkshire, on July 9, 1871. His son of the same name (1844–79) also wrote geographical works and papers; in 1873–75 he was geographer to a commission for the survey of Paraguay; and he died in Africa while leading the Royal Geographical society's expedition to Lake Nyasa. The elder Johnston published a *Dictionary of Geography* (1850 and many later editions); *The Royal Atlas of Modern*

Geography (begun in 1855); and many other atlases and maps for scientific or educational purposes.

JOHNSTON, ARTHUR (1587–1641), Scottish physician and writer of Latin verse, was the son of an Aberdeenshire laird Johnston of Johnston and Caskieben, and on his mother's side a grandson of the seventh Lord Forbes. It is probable that he began his university studies at one, or both, of the colleges at Aberdeen, but in 1608 he proceeded to Italy and graduated M.D. at Padua in 1610. Thereafter he resided at Sedan, in the company of the exiled Andrew Melville (*q.v.*), and in 1619 was in practice in Paris. He appears to have returned to England about the time of James I.'s death and to have been in Aberdeen about 1628. He met Laud in Edinburgh at the time of Charles I.'s Scottish coronation (1633) and was encouraged by him in his literary efforts, partly, it is said, for the undoing of Buchanan's reputation as a Latin poet. He was appointed rector of King's College, Aberdeen, in June 1637. Four years later he died at Oxford, on his way to London, whither Laud had invited him.

Johnston left more than ten works, all in Latin. On two of these, published in the same year, his reputation entirely rests: (*a*) his version of the Psalms (*Psalmorum Davidis paraphrasis poetica et canticorum evangelicorum, Aberdeen,* 1637), and (*b*) his anthology of contemporary Latin verse by Scottish poets (*Deliciae poetarum scotorum huius aevi illustrium,* Amsterdam, 1637). His sacred poems, which had appeared in the *Opera* (1642), were reprinted by Lauder in his *Poetarum Scotorum musae sacrae* (1739). The earliest lives are by Lauder (*op. cit.*) and Benson (in *Psalmi Davidici,* 1741). Ruddiman's *Vindication of Mr. George Buchanan's Paraphrase* (1745) began a pamphlet controversy regarding the merits of the rival poets.

JOHNSTON, SIR HARRY HAMILTON (1858–1927), British administrator and explorer, was born on June 12, 1858, at Kennington, London, and educated at Stockwell grammar school and King's college, London. He was a student for four years in the painting schools of the Royal Academy. At the age of eighteen he began a series of travels in Europe and North Africa, chiefly as a student of painting, architecture and languages. In 1879–1880 he visited the then little known interior of Tunisia. In 1882 he joined the earl of Mayo in an expedition to the southern part of Angola, a district then much traversed by Transvaal Boers. In 1883 Johnston visited H. M. Stanley on the Congo, and explored the river above Stanley Pool at a time when it was scarcely known to other Europeans than Stanley and De Brazza. The British Association, and the Royal Society conferred on Johnston the leadership of the scientific expedition to Mount Kilimanjaro which started from Zanzibar in April 1884.

While in the Kilimanjaro district Johnston concluded treaties with the chiefs of Moshi and Taveta (Taveita). These treaties or concessions were transferred to the merchants who founded the British East Africa Company, and in the final agreement with Germany Taveta fell to Great Britain. In October 1885 Johnston was appointed British vice-consul in Cameroon and in the Niger delta, and he became in 1887 acting consul for that region. A British protectorate over the Niger delta had been notified in June 1885, and between the date of his appointment and 1888, together with the consul E. H. Hewett, Johnston laid the foundations of the British administration in that part of the delta not reserved for the Royal Niger Company. His action in removing the turbulent chief Ja-ja led to the complete pacification of a region long disturbed by trade disputes. During these three years of residence in the Gulf of Guinea Johnston ascended the Cameroon Mountain, and made large collections of the flora and fauna of Cameroon for the British Museum.

In the spring of 1889 he was sent to Lisbon to negotiate the delimitation of the British and Portuguese spheres of influence in South-East Africa, but the scheme drawn up was not given effect to at the time. On his return from Lisbon he was despatched to Mozambique as consul for Portuguese East Africa, and was charged with a mission to Lake Nyasa to pacify that region, then in a disturbed state owing to the attacks of slave-trading Arabs on the stations of the African Lakes Trading Company—an unofficial war. Owing to the unexpected arrival on the scene of Major Serpa Pinto, Johnston was compelled to declare a British protectorate over the Nyasa region. A truce was arranged with the Arabs on Lake Nyasa, and within twelve months the British flag, by agreement with the natives, had been hoisted over a very large region which extended north of Lake Tanganyika to the vicinity of Uganda, to Katanga in the Congo Free State, the Shiré Highlands and the central Zambezi. Johnston's scheme, in fact, was that known as the "Cape-to-Cairo," a phrase which he had brought into use in an article in *The Times* in August 1888. According to his arrangement there would have been an all-British route from Alexandria to Cape Town. But by the Anglo-German agreement of July 1, 1890, the British sphere north of Tanganyika was abandoned to Germany, and the Cape-to-Cairo route broken by a wedge of German territory.

Johnston returned to British Central Africa as commissioner and consul-general in 1891, and retained that post till 1896, in which year he was made a K.C.B. He was transferred to Tunis as consul-general in 1897 on account of his health. In the autumn of 1899 Sir Harry Johnston was despatched to Uganda as special commissioner to reorganize the administration of that protectorate after the suppression of the mutiny of the Sudanese soldiers and the long war with Unyoro. His two years' work in Uganda and a portion of what is now British East Africa were rewarded at the close of 1901 by a G.C.M.G. In the spring of the following year he retired from the consular service. After 1904 he interested himself greatly in the affairs of the Liberian republic, and negotiated various arrangements with that negro state by which order was brought into its finances, the frontier with French territory was delimited, and the development of the interior by roads was commenced. In 1903 he was defeated as Liberal candidate for parliament at a by-election at Rochester. He met with no better success at West Marylebone at the general election of 1906.

For his services to zoology he was awarded the gold medal of the Zoological Society in 1902, and in the same year was made an honorary doctor of science at Cambridge. He received the gold medal of the Royal Geographical and the Royal Scottish Geographical societies, and other medals for his artistic work from South Kensington and the Society of Arts. His pictures, chiefly dealing with African subjects, were frequently exhibited at the Royal Academy. He was the author of numerous books on Africa, including *British Central Africa* (1897); *The Colonization of Africa* (1899); *The Uganda Protectorate* (1902); *Liberia* (1906); *George Grenfell and the Congo* (1908). During his travels in the north-eastern part of the Congo Free State in 1900 he was instrumental in discovering and naming the okapi, a mammal nearly allied to the giraffe. His name has been connected with many other discoveries in the African fauna and flora.

In 1919 he wrote an amusing novel, *The Gay Dombeys,* the personages in which are descended from the Dickens' Dombeys. He died on July 31, 1927.

His later works include —*The Opening up of Africa* (1911); *Pioneers in West Africa, etc.* (6 vols. 1911–13); *The Story of My Life* (1923).

JOHNSTON, JOSEPH EGGLESTON (1807–1891), American Confederate general in the Civil War, was born near Farmville, Va., on Feb. 3, 1807. His father, Peter Johnston (1763–1841), a Virginian of Scottish descent, served in the Revolutionary War, and afterwards became a distinguished jurist; his mother was a niece of Patrick Henry. He graduated at West Point, in the same class with Robert E. Lee. He served in the Black Hawk and Seminole wars, and left the army in 1837 to become a civil engineer, but a year afterwards he was reappointed to the army as first lieutenant, Topographical Engineers. During the Mexican war he was twice severely wounded, was engaged in the siege of Vera Cruz, the battles of Contreras, Churubusco, and Molino del Rey, the storming of Chapultepec, and the assault on the city of Mexico, and received three brevets for gallant and meritorious service. In April 1861 he resigned from the U.S. army and entered the Confederate service. He was commissioned major-general of volunteers in the army of Virginia, and assisted in organizing the volunteers. He was later appointed a general officer of the Confederacy and assigned to the command of the army of the Shenandoah. When McDowell advanced upon the Confederate forces under Beauregard at Manassas, Johnston moved from the Shenandoah valley with great rapidity to Beauregard's assistance. As

senior officer he took command on the field, and at Bull Run (Manassas) (*q.v.*) won the first important Confederate victory. In Aug. 1861 he was made one of the five full generals of the Confederacy, remaining in command of the main army in Virginia. He commanded in the battle of Fair Oaks (May 31, 1862), and was severely wounded. In March 1863, still troubled by his wound, he was assigned to the command of the south-west, and in May was ordered to take immediate command of all the Confederate forces in Mississippi, then threatened by Grant's movement on Vicksburg. When Pemberton's army was besieged in Vicksburg by Grant, Johnston made every effort to relieve it, but his force was inadequate. Later in 1863 he commanded the army of Tennessee at Dalton, and in the early days of May 1864 the combined armies of the North under Sherman advanced against his lines. For the main outlines of the famous campaign between Sherman and Johnston *see* AMERICAN CIVIL WAR. When Johnston had been driven back to Atlanta he was superseded by Hood with orders to fight a battle. The wisdom of Johnston's course was soon abundantly clear, and the Confederate cause was already lost when Lee reinstated him on Feb. 23, 1865. He opposed Sherman's march through the Carolinas, and at Bentonville, N C , fought a most gallant and skilful battle against heavy odds. But the Union troops steadily advanced, and a few days after Lee's surrender Johnston advised President Davis that it was in his opinion useless to continue the conflict, and he was authorized to make terms with Sherman. After the close of the war Johnston engaged in civil pursuits. In 1874 he published a *Narrative of Military Operations during the Civil War*; in 1877 he was elected to represent the Richmond district of Virginia in Congress; and in 1887 he was appointed by President Cleveland U S. commissioner of railroads. He died at Washington, D.C., on March 21, 1891.

It was not the good fortune of Johnston to acquire the prestige which so much assisted Lee and Jackson, nor indeed did he possess the power of enforcing his will on others in the same degree; but his methods were exact, his strategy calm and balanced, and, if he showed himself less daring than his comrades, he was unsurpassed in steadiness.

See Hughes, *General Johnston,* in "Great Commanders Series" (1893); Gamaliel Bradford, *Confederate Portraits* (1914); Sir Frederick Barton Maurice, *Statesmen and Soldiers of the Civil War* (1926).

JOHNSTON CITY, a coal-mining city of Williamson county, Illinois, U.S A., 90m. S.E. of Saint Louis. It is served by the Chicago and Eastern Illinois, the Illinois Central and the Missouri Pacific railways. The population was 787 in 1900; 7,137 in 1920. The city was incorporated in 1896.

JOHNSTONE, police burgh, Renfrewshire, Scotland, on the Black Cart, 11 m. W. of Glasgow by the L M S. railway Pop. (1921) 12,473. The leading industries include flax-spinning, cotton and thread manufactures, paper-making, iron foundries, machine manufacture and engineering works. There are also iron and coal mines and oil works. Elderslie, one m. E , where cotton-spinning and carpet-making are carried on, is the reputed birthplace of Sir William Wallace, but it is doubtful if "Wallace's Yew," though of great age, and the small castellated building (traditionally his house) which preceded the present mansion in the west end of the village, existed in his day.

JOHNSTOWN, city, New York, U S A., 48m. N.W. of Albany, on Cayadutta creek, 4m. N. of the Mohawk river; the county seat of Fulton county. It is served by the Fonda, Johnstown and Gloversville railroad, connecting at Fonda, 4m. S., with the New York Central. The population in 1925 was 10,712. Like the adjacent city of Gloversville (*q.v.*) it is an important glove-manufacturing centre. The output of all its factories in 1925 was valued at $12,882,100. The site of Johnstown was in the extensive grant of Sir William Johnson, and the city was founded by a colony of Scots he brought to America about 1760, and was named for him in 1771. His fine mansion, built in 1762, is maintained as a museum by the historical society. Originally it was flanked by two stone forts, and one of them still stands. The county courthouse, built by Sir William in 1772, is said to be the oldest in the United States. The gaol (1772) was first used for all New York west of Schenectady county, and was a military prison during the Revolution. Three miles south of the city is Butler house, built in 1742 by Col. John Butler, a prominent Tory leader during the Revolutionary War. Johnstown was the scene of important conferences with the Iroquois Indians in colonial days, and a minor engagement of the Revolution took place here on Oct. 28, 1781. The village was incorporated in 1808 and became a city in 1895.

JOHNSTOWN, a city of Cambria county, Pa., U.S A , 75m. E by S. of Pittsburgh, on the Conemaugh river at the mouth of Stony creek. It is on Federal highway 219, and is served by the Baltimore and Ohio and the Pennsylvania railways. The population was 67,327 in 1920, of whom 12,142 were foreign-born white (largely from southern and eastern Europe), and was estimated by the census bureau at 73,700 in 1928. Including the contiguous boroughs, the population of the metropolitan area in 1928 was estimated locally at over 105,000. The city lies 1,149ft. above the sea, on level ground along the river, nearly enclosed by high, precipitous hills which afford many charming vistas, and is surrounded by some of the most picturesque scenery of the Alleghenies. It is the metropolis of the Conemaugh valley, and one of the chief coal-mining and steel-producing centres of the State, with over 18,000 men employed in these two industries. The coal mined in Cambria county in 1926 amounted to 18,860,645 tons. Iron, fire clay, limestone and timber also abound in the vicinity. Within the city are some 140 industrial establishments (including the Cambria works of the Bethlehem Steel company, employing 14,500 men in mills and mines), with an aggregate output in 1925 valued at $107,186,236. Among the numerous manufactures besides steel are silk, radiators, stoves, radios, paints, brick, concrete block, cigars, tires, playing cards, mattresses, motor trucks, mine cars, electrical equipment and hoists for mines and electrical conduit. The assessed valuation of property was $78,237,200 in 1925. Bank clearings in 1926 were $315,200,000. There are 230ac. in the public parks, and in 1926 a municipal stadium seating 17,000 was completed. A new sewer system was under construction (1928) at a cost of over $5,000,000. The city has a commission form of government. Joseph Jahns, a Swiss pioneer, settled here in 1791, and a little later a town was laid out and named after him. It was an important port of call on the Pennsylvania canal, before the Pennsylvania railroad was built, but grew slowly until 1880, when the population was 8,380. With the development of the iron and steel industry in the following decade, the population increased almost threefold. The city was incorporated in 1889 On May 31, 1889, after unprecedented rains, a dam across the South Fork, 12m. above the city (built in 1852 to provide a storage reservoir for the Pennsylvania canal) gave way, releasing a body of water 60–70ft. deep and 700ac. in area. The flood swept down the valley in a mass 20ft. or more in height at its head, at a speed of 20m an hour, and within an hour almost completely destroyed Johnstown and wiped out entirely seven other towns in the valley. The Pennsylvania railroad bridge withstood the strain, and against it the water piled up a mass of wreckage on which many persons were saved from drowning, only to be burned when it caught fire Between 2,000 and 3,000 lives were lost, out of a population of 30,000, and the loss of property was estimated at $12,000,000 In Grandview cemetery, overlooking the city, where most of the victims were buried, is a large plot containing the graves of 779 who were not identified. A relief fund of over $4,000,000 was raised by a nation-wide subscription and disbursed through a State commission. The city was quickly rebuilt and made a rapid recovery from the disaster.

JOHOR (Johore), an independent Malayan state at the southern end of the peninsula, stretching from 2° 40′ S. to Cape Romania (Ramūnya), the most southerly point on the mainland of Asia, and including all the small islands adjacent to the coast which lie to the south of parallel 2° 40′ S It is bounded north by the state of Pahang, north-west by the Negri Sembilan and the territory of Malacca, south by the strait which divides Singapore island from the mainland, east by the China Sea, and west by the Straits of Malacca. The greatest length from north-west to south-east is 165 m , the greatest breadth from east to

west 100 m. Area of Johor, 7,678 sq.m. The state forms a region of comparative lowland; the highest point is Mt. Ophir (Gūnong Lēdang), about 4,000 ft. The Mūar is the most important waterway, while in the valley of the Johor the old capital of the state was situated. The Endau marks the boundary with Pahang.

Like the rest of the peninsula, Johor is covered with forest, broken here and there by clearings and settlements. The capital is Johor Bharu (pop about 20,000), situated at the nearest point on the mainland to the island of Singapore. The palace built by the sultan Abubakar is the principal feature of the town. The capital of the province of Mūar (placed under the administration of Johor by the British Government in 1877), is Bandar Maharani. The climate is equable for a region situated so near to the equator; it is cooler than that of Singapore. The temperature varies from 98·5° to 68·2° The rainfall averages 97·28 in. per annum. The population in 1921 was 282,234, of which 157,852 were Malays, 97,253 Chinese and 24,180 Indians.

It is claimed that the Mohammedan empire of Johor was founded by the sultan of Malacca after his expulsion from his kingdom by the Portuguese in 1511. It is certain that Johor took an active part, together with Achin, in the war between the Portuguese and the Dutch for the possession of Malacca. Later we find Johor ruled by an officer of the sultan of Riouw (Rīau), bearing the title of Tumĕnggong, and owing feudal allegiance to his master in common with the Bĕndahāra of Pahang. In 1812, however, this officer seems to have thrown off the control of Riouw, and to have assumed the title of sultan, for one of his descendants, Sultan Husain, ceded the island of Singapore to the East India Company in 1819. In 1855 the then sultan, Ali, was deposed, and his principal chief, the Tumĕnggong, was given the supreme rule by the British. His son Tumĕnggong Abubakar was made a maharaja in 1879. In 1885 he entered into a new agreement with the British government, and assumed the title of sultan of Johor. This agreement was amended in 1914; the sultan to act on the advice of a British adviser. The sultan is assisted in his government by an Executive Council and by a Legislative Council.

Johor imports food and drink, tobacco and raw materials. The amount of rubber exported in 1926 amounted to 60,169 tons. There are 627 miles of good roads (1926) and the railway from Penang to Singapore crosses Johor for 120 miles. The Johor portion is leased to the government of the Federated Malay States for some years. A causeway taking the railway line and road joins the island of Singapore with the mainland across the Johor straits. The railway was opened in 1923 and the road in 1924. The riverways are also important for the rubber traffic. (H. CL.; X)

JOIGNY, a town of central France in the department of Yonne, 18 m. N.N.W. of Auxerre by the P.L.M. railway. Pop. (1926) 5,191. Joigny (*Jovîniacum*) was probably of Roman origin. In the 10th century it became the seat of a countship dependent on that of Champagne. A fragment of a ladder in the church of St. André commemorates the successful resistance offered by the town to the English in 1429. Joigny is situated on the flank of Côte St. Jacques on the bank of the Yonne. Its streets are steep and narrow, and old houses with carved wooden façades are numerous. The church of St Jean (16th century), which once stood within the *enceinte* of the old castle, contains a representation (15th century) of the Holy Sepulchre in white marble. Other interesting buildings are the church of St. André (12th, 16th and 17th centuries) with its Renaissance portal and its fine bas-reliefs; and the church of St. Thibault (16th century). The Porte du Bois, a gateway with two massive flanking towers, is a relic of the 10th century castle; there is also a castle of the 16th and 17th centuries, partly demolished. The hôtel de ville (18th century) shelters the library; the law-court contains the sepulchral chapel of the Ferrands (16th century) Joigny has trade in wines, coal, wood, wooden shoes and hosiery.

JOINDER: *see* PRACTICE AND PROCEDURE.

JOINERY, one of the useful constructive arts which contribute to the comfort and convenience of man. As the arts of joinery and carpentry are often followed by the same individual, it may appear that the same principles are common to both, but a close examination leads to a different conclusion. The art of carpentry is directed almost wholly to the support of load and its principles must be sought in the mechanical sciences. In a building it includes all the timber work necessary for support, division or connection, and its object is to give firmness and stability to the structure. The art of joinery has for its object the addition in a building of all the fixed woodwork necessary for comfort, convenience or ornament. The work of the joiner is in many cases of a complicated nature, and often requires to be executed in an expensive material, therefore joinery requires much skill in that part of geometrical science which treats of the projection and relation of lines, surfaces and solids, as well as an intimate knowledge of the structure and nature of wood. A good carpenter may not be a joiner, but a good joiner is competent, at least, to supervise all the operations required in carpentry. The heavy labour of the carpenter does not fit him to produce that accurate workmanship expected from a joiner. In carpentry, strength is mainly due to the form and position of its parts; in joinery, strength depends to a larger extent upon the rigidity of the joints. It is important that a joiner's work shall be constructed of sound and dry materials, and on such principles as to allow of movement due to changes of temperature and humidity.

In early times, woodwork was crude, and jointing was difficult and roughly done. The first dawnings of the art of modern joinery appear in the thrones, stalls, pulpits and screens of early Gothic cathedrals and churches, but even in these the art is indebted to the carver for everything that is worthy of regard. With the revival of classic art, however, great changes took place in every kind of construction. Forms were introduced in architecture which demanded new principles for their satisfactory execution, and these principles were discovered and published by craftsmen. These men had scanty geometrical knowledge and confused notions and definitions of principles and their descriptions were often obscure and sometimes erroneous. During this period the framed wainscot of small panels gave way to the large bolection moulded panelling; doors which were formerly heavily framed and hung on massive posts or in jambs of cut stone were now framed in light panels and hung in moulded dressings of wood. Oak timber was generally used but the scarcity of oak and the expense of working it subsequently led to the importation of fir timber from northern Europe, and this gradually superseded all other material save for special work. In recent years, owing to the development of more ample, quicker and less costly means of transport, a great variety of hardwoods and softwoods have been imported and are now extensively used in all types of building.

MODERN TECHNIQUE

The Joiner's Tools.—The joiner operates with a large variety of tools, the names and uses of the principal ones being.

Saws: the hand saw for cutting large material across the grain; the rip saw for cutting large material with the grain; the tenon saw for smaller material and more accurate cutting than either of the foregoing; the dove-tail saw for still finer cutting; the bow-saw, the key-hole saw, the pad-saw and the table-saw, for cutting along curves and for pierced work.

Planes: the jack plane for removing rough surfaces and reducing material to size; the trying plane for forming straight and true surfaces; the smoothing plane for finishing surfaces; the rebate plane for working internal angles; the shoulder plane for truing up hardwood shoulders and similar work; the bullnose plane for working close up to stops and for similar uses; the plough for grooving with the grain; the side fillister and sash fillister for forming rebates; the grooving plane for grooving across the grain; the compass plane for curved surfaces; the side rebate plane for planing the sides of grooves; the chamfer plane; various moulding planes

Chisels: the firmer chisel for removing waste; the paring chisel for finishing surfaces that are inaccessible or unsuited to the plane; the mortise chisel for large mortises; the sash chisel for small mortises.

Gouges: the firmer gouge for heavy circular cutting; the paring

gouge for finishing concave curved surfaces; the scribing gouge for scribing mouldings.

Boring bits: the twist or augur bit; the centre bit; the centerless bit; the expanding bit; the shell bit; the nose bit; the gimlet bit; twist drills; countersinks for wood and metal.

Brace or stock: for holding every form of boring bit.

Try squares: for testing the right angle between adjacent surfaces and for squaring lines across material.

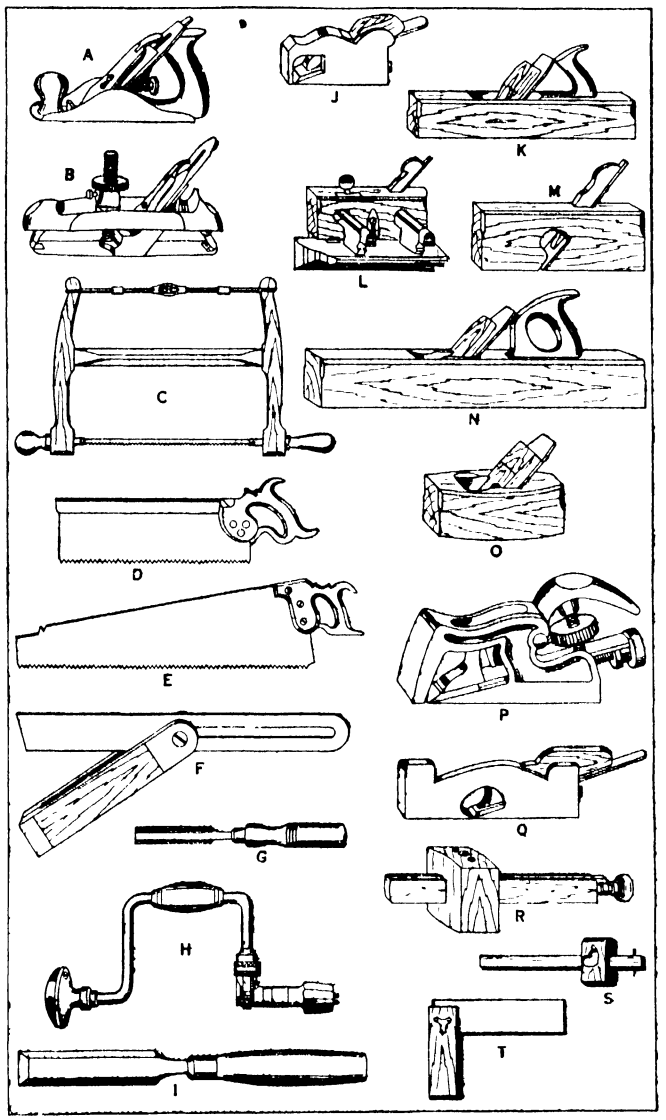


FIG. 1.—IMPLEMENTS USED IN VARIOUS PROCESSES OF JOINERY

Bevel: for testing angles other than right angles and for marking lines inclined to the surfaces of the material.

Gauges: the marking gauge for marking lines parallel to the surfaces of the material; the mortise gauge for marking mortise lines on the material; the spider gauge for marking and testing curved and twisted material.

Spokeshaves: for cleaning up and shaping curved surfaces.

Mitre block and mitre box: used in sawing mitred intersections.

Mitre shoot: used in planing mitred surfaces.

Cramp: for forcing and holding surfaces into close contact.

Hand screw: a form of wooden cramp.

Routers: for forming grooves in curved and twisted material and for finishing sunk surfaces

Hammer, Mallet, Screwdriver, Bradawl, Gimlet, Pincers, Sharpening stone and Slips: and a variety of minor tools. (*See* fig. 1.)

In making a typical example of joinery, such as a panelled door and door linings, and assuming the whole of the work to be done by hand, the chief operations and their order of procedure would be as follows:—the measurements are taken from the architect's scale and detail drawings and full size sections and special details are set out on a thin board called a setting out rod, or on paper. A quantity sheet, containing the sawn and finished sizes and the names of the various members, together with a list of the ironmongery required, is prepared. The material is then cut and planed to the required sizes, skill and great care being exercised to produce true surfaces and the required angles between the surfaces. If the width of the panels necessitates glue jointing this operation is performed at this stage to give time for the glue to harden before the panel is required for fitting.

The shoulder mortise and other cutting lines are then transferred from the rod to the material; the important lines being marked with a scribing knife or gauge

The mortising is then done and the tenons that are parallel to the grain (fibres) are cut by the saw

The rebating, grooving and moulding are the next operations, after which the cheeks of the tenons are cut, the tenons haunched and the stuck mouldings (if any) scribed or mitred. The panels are then fitted and cleaned up, and all the surfaces of the framing that will be inaccessible when the work is put together are lightly planed and glass-papered. The work is next assembled and lightly cramped up for inspection If everything is found to be satisfactory the work is partially knocked apart, the glue or other adhesive is applied and the final cramping and wedging up is completed Finally, the surfaces are finished with the plane and in the case of hardwoods, the scraper and glass-paper

The preparation of joinery entirely by hand is now the exception—a fact due to the ever-increasing use of machines, which have remarkably shortened the time required to execute ordinary operations. Various machines rapidly and perfectly execute planing and surfacing, mortising and moulding, leaving the craftsman merely to assemble, glue and wedge Large quantities of machine-made flooring, window-frames and doors are now imported into England from abroad

Joinery Woods.—The structure and properties of wood should be thoroughly understood by every joiner. Timber shrinks considerably in the width, but not appreciably in the length; its size and sectional shape alters with changes of temperature and humidity. Owing to these changes certain joints and details, hereinafter described and illustrated, are in common use for the purpose of counteracting the bad effect of movements which would otherwise injure the joinery work.

The kinds of wood commonly employed in joinery are the different species of North European and North American pine, oak, teak and mahogany (*see* TIMBER). The greater part of English joiners' work is executed in the northern pine exported from the Baltic countries Hence the joiner obtains the planks, deals, battens and strips from which he shapes his work. The timber reaches the workman from the sawmills in a size convenient for the use he intends, considerable time and labour being saved in this way

A log of timber sawn to a square section is termed a *balk*. In section it may range from 1 to 1½ ft. square *Planks* are formed by sawing the balk into sections from 11 to 18 in wide and 3 to 6 in. thick, and the term *deal* is applied to sawn stuff 9 in. wide and 2 to 4½ in. thick. *Battens* are boards running not more than 3 in. thick and 4 to 7 in wide. A *strip* is not thicker than 1½ in , the width being about 4 in.

Joints.—(*See* figs 2, 3 and 4.) The simplest type of joint used to obtain an increased width of material is the square or smooth joint, in which the edges of the boards to be jointed are planed straight and square to the faces, after which the edges are glued and rubbed into close contact; to hold the edges together until the glue is hard, iron dogs are driven lightly into the ends of the boards across the joint.

A joint in general use for joining up boards for fascias, panels, linings, window-boards, and other work of a like nature is formed in a similar manner to the above, but with a cross-grained tongue inserted, thereby greatly strengthening the work at an otherwise naturally weak point. This is termed a *cross-tongued and glued* joint. The *dowelled* joint is a square glued joint strengthened with hard wood or iron dowels inserted in the edge of each board to a

depth of about ¼ in. and placed about 18 in. apart. The *matched* joint is shown in two forms, beaded and V jointed. Matched boarding is frequently used as a less expensive substitute for panelled framing. Although of course in appearance it cannot compare with the latter, it has a somewhat ornamental appearance, and the moulded joints allow shrinkage to take place without detriment to the appearance of the work The *rebated* joint is used in the meeting styles of casements and folding doors, and it is useful in excluding draughts and preventing observation through the joint.

Angle Joints.—For joining the edges of boards and framing together so as to form an angle between the faces of the material the following are the principal joints used: the plain mitre joint, the tongued mitre joint, the rebated and mitred joint, the tongued grooved and moulded joint, and the rebated grooved and moulded joint. Their chief uses are at the external angles between dado and other vertical framing, and at the angles between beam and pipe casings.

The *dovetail* is a most important joint; its most usual forms are illustrated in fig. 3. The *mitre dovetail* is used only in the best

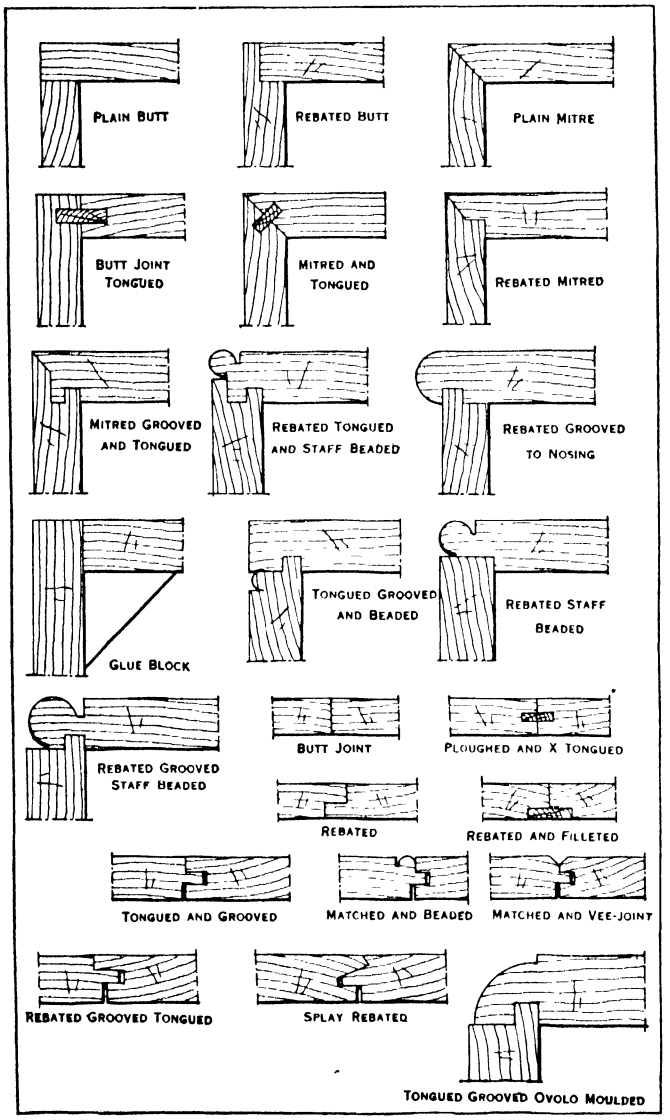

FIG. 2.—JOINERY JOINTS

work. It will be seen that the dovetail is a tenon, shaped as a wedge, and it is this distinguishing feature which, if closely fitted, gives it great strength irrespective of glue or screws. It is invaluable in framing together joiners' fittings; its use in drawers especially provides a good example of its purpose and structure.

Housed Joints.—This term is applied when the face of a board is grooved or trenched to receive the end of a second board; when the sides of the groove are square it is a plain housing, when the sides are bevelled it is a dovetailed housing. When the groove is stopped a short distance from the edge of the material it is called a stopped housing. The housed joint is used in fixing shelves, at the head and sill of a cased window frame, between the steps and strings of stairs, and for many other similar purposes.

Mortise and Tenon Joints.—When the end of a wooden member is cut to fit into a rectangular hole in a second member, the joint

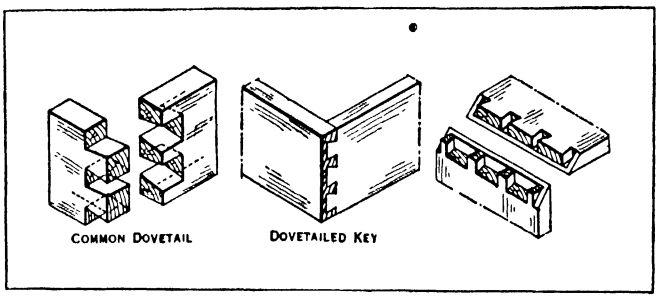

FIG. 3.—JOINERY JOINTS—DOVETAILS. (A) COMMON DOVETAIL. (B) LAPPED DOVETAIL. (C) MITRE OR SECRET DOVETAIL

is called a mortise and tenon joint; the hole being the mortise and the fitted end, the tenon.

This is probably the most generally used of all joinery joints since practically all framing is held together by this method.

The rules relating to this joint are.—(i.) the thickness of the tenon should be about one-third of the thickness of the material to be jointed; (ii.) the width of the tenon should not exceed five times its thickness. When the width of a tenon is cut away to make it accord with "rule ii." it is called a haunched tenon; the position from which the part of the tenon has been removed is called the haunch. A third rule is:—the sum of the widths of the haunches should not exceed the sum of the widths of the tenons.

The second and third rules are of importance only when the tenon is fixed by wedges; when the tenon is pinned its width is not so important since undue shrinkage would not affect the pin whereas it would tend to loosen the wedges.

The number and positions of tenons on the same end of one piece of material are referred to as follows:—one tenon is a single tenon; two tenons in the same plane are called "a pair of single tenons"; two tenons side by side are called a "double tenon"; four tenons, two in each of two planes are called a "pair of double tenons."

When a tenon passes only partially through the material it is called a "stub tenon." Other forms of tenon are called "fox wedged," "tusk," and "dovetailed and keyed tenon."

Warping in Wide Boards.—The tendency to warp, twist and split, which boards of great width, or several boards glued together edge to edge, naturally possess, must be provided against in the construction. On the other hand, swelling and shrinking due to changes in the humidity of the atmosphere must *not* be checked, or the result will be disastrous. To effect this end various simple devices are available. The direction of the annular rings in alternate boards may be reversed, and when the boards have been carefully jointed with tongues or dowels and glued up, a hard-wood tapering key, dovetail in section, may be sunk into a wide dovetail at the back (fig. 4). It must be accurately fitted and driven tightly home, but not glued. Battens of hard wood may be used for the same purpose, fixed either with hard wood buttons or by means of brass slots and screws, the slots allowing for any slight movement that may take place. With boards of a substantial thickness light iron rods may be used, holes being bored through the boards edgewise, the edges glued up and the rods passed through. This method is very effective and neat in appearance, and is specially suitable when a smooth surface is desired on both sides of the work.

MOULDINGS, SKIRTINGS AND DADOS

Mouldings.—These are used in joinery to relieve plain surfaces by the contrasts of light and shade formed by their members, and to ornament or accentuate those particular portions which the designer may wish to bring into prominence. Skill and discrimination are required in designing and applying mouldings, but the crafts-

man must be able to appreciate the beauty and refinement of a moulding in order to interpret the ideas of the designer and draftsman. The character of a moulding is greatly affected by the nature and appearance of the wood in which it is worked. A section suitable for a hard regularly grained wood, such as mahogany, would probably look insignificant if worked in a softer wood with pronounced markings. Mouldings worked on woods of the former type may consist of small and delicate members; woods of the latter class require bold treatment.

The mouldings of joinery, as well as of all other moulded work used in connection with a building, are usually worked in accordance with full-sized detail drawings prepared by the architect, and are designed by him to conform with the style and class of building. There are, however, a number of moulded forms in common use which have particular names; sections are shown of many of these in fig. 5. Most of them occur in the classic architecture of both Greeks and Romans. A striking distinction, however, existed

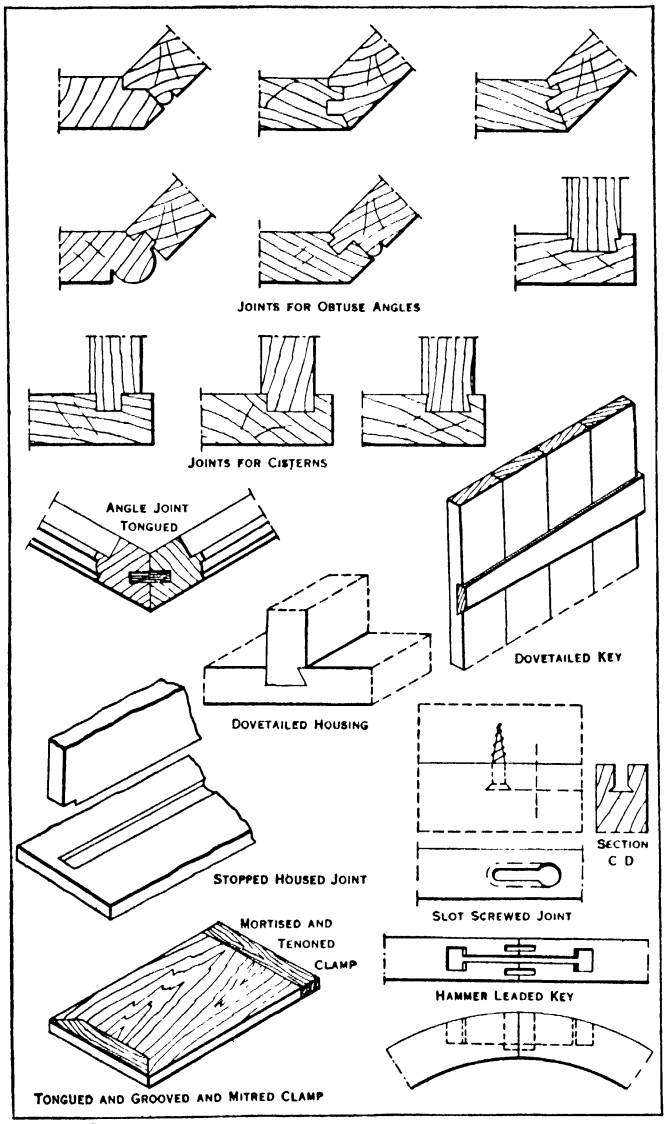

FIG. 4.—JOINERY JOINTS USED FOR SPECIAL PURPOSES

in the mouldings of these two peoples; the curves of the Greek mouldings were either derived from conic sections or drawn in freehand, while in typical Roman work the curved components were segments of a circle. Numerous examples of the use of these forms occur in ordinary joinery work, and may be recognized on reference to the illustrations.

Mouldings may be either stuck or planted on. A *stuck* moulding is worked directly on the solid framing; a *planted* moulding is separately worked and fixed in position with nails or screws. Beads and other small mouldings should always be stuck; larger ones are usually planted on. In the case of mouldings planted on panelled work, the nails should be driven through the moulding into the style or rail of the framing, and not into the panel. By adopting the former method the panel is free to expand and contract without altering the good appearance of the work, but if the moulding be fixed to the panel it will, when the latter shrinks, be pulled out of place, leaving an unsightly gap between the moulding and the

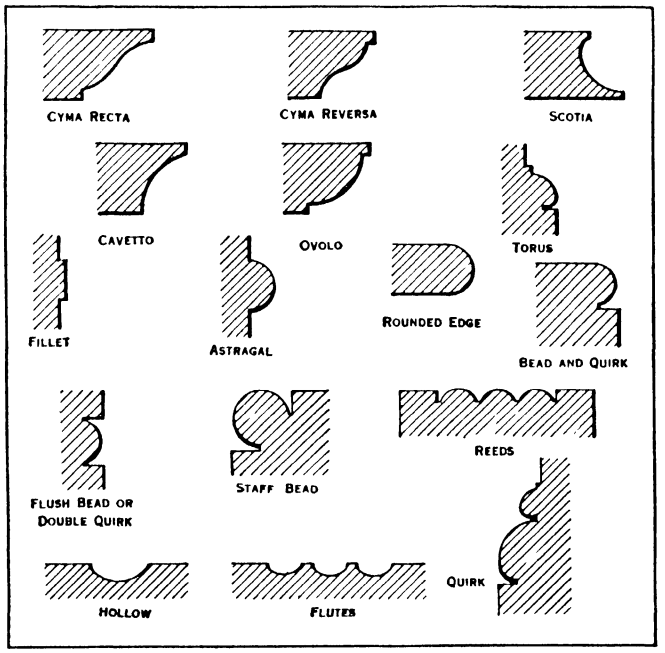

FIG. 5.—MOULDINGS

framing; or if sturdy mouldings be used, the panel may split under the strain.

Planted mouldings are cut to intersect on plain mitres, but mouldings stuck on the solid are scribed whenever the section of the moulding will permit. Scribing consists of cutting away the end of one moulding to form an exact reverse of the moulding profile so as to allow the cut surfaces to fit closely down on to the adjacent moulding The advantage of scribing is that the appearance of the joint is less affected by shrinkage. In machine made joinery the scribing and tenoning are effected in one operation by the tenoning machine, while mitreing is done by hand.

Skirtings.—In joinery, a skirting is a board fixed around the base of an internal wall to form an ornamental base for the wall (*see* fig 7) It also covers the joint between the flooring and the wall, and protects the base of the wall from injury. Skirtings may be placed in two classes—those formed from a plain board with its upper edge either left square or moulded, and those formed of two or more separate members and termed a *built-up* skirting (fig 6). Small angle fillets or mouldings are often used as skirtings The skirting should be worked so as to allow it to be fixed with the heart side of the wood outwards; any tendency to warp will then only serve to press the top edge more closely to the wall. In good work a groove should be formed in the floor and the skirting tongued into it so that an open joint is avoided should shrinkage occur The skirting should be nailed only near the top to wood grounds secured to breeze fixing blocks in the brickwork. These grounds are about $\frac{3}{4}$ to 1 in. thick, *i.e.*, the same thickness as the plaster, and are generally splayed or grooved on the edge to form a key for the plaster. A rough coat of plaster should always be laid on the wall behind the skirting to keep out vermin.

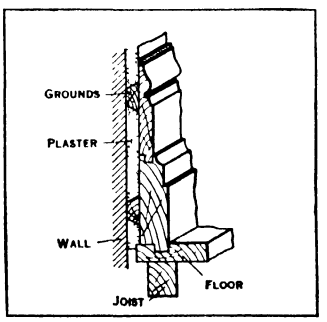

FIG 6.—BUILT-UP SKIRTING TONGUED TO FLOOR

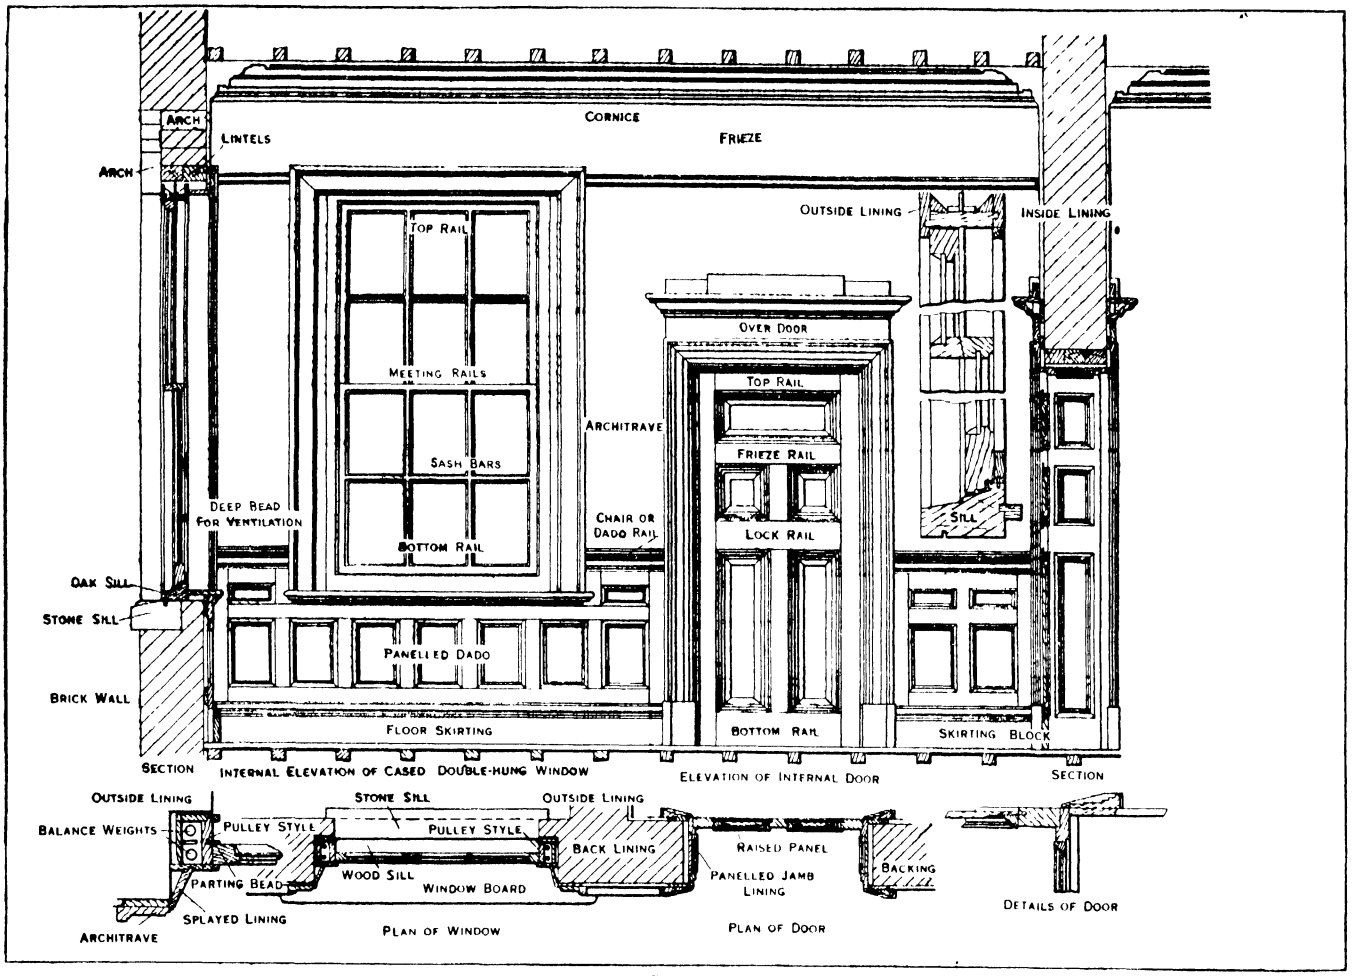

FIG 7

Dados.—A dado, like a skirting, is useful both in a decorative and a protective sense It is filled in to ornament and protect that portion of the wall between the *chair* or *dado rail* and the skirting. It may be of horizontal boards battened at the back and with cross tongued and glued joints, presenting a perfectly smooth surface, or of matched boarding fixed vertically, or of panelled framing. The last method is of course the most ornate and admits of great variety of design. The work is fixed to rough framed wood grounds which are nailed to fixing blocks built into the brickwork. Fig. 7 shows an example of a panelled dado with capping moulding and skirting. A *picture rail* also is shown; it is a small moulding with the top edge grooved to take the metal hooks from which pictures are hung.

WINDOWS AND DOORS

Windows.—The parts of a window sash are distinguished by the same terms as are applied to similar portions of ordinary framing, and are formed of rails and styles, with sash bars rebated for glazing. The upright sides are *styles;* the horizontal ones, which are tenoned into the styles, are *rails* (fig. 7).

Sashes hung by one of their vertical edges are called *casements.* They are really a kind of glazed door and sometimes indeed are used as such, as for example *French casements* (fig. 8). They may be made to open either outwards or inwards It is very difficult with the latter to form perfectly water-tight joints; with those opening outwards the trouble does not exist to so great an extent. *Yorkshire sliding sashes* move in a horizontal direction upon grooved runners with the meeting styles vertical. They are little used, and are apt to admit draughts and wet unless efficient checks are worked upon the sashes and frames.

Lights in a position difficult of access are often hung on *centre pivots;* metal pivots are fixed to the frame and the sockets in which these pivots work are screwed to the sash. Movement is effected by means of a cord fixed so that a slight pull opens or closes the window to the desired extent, and the cord is then held by being tied to, or twisted round, a small metal button or clip, or a geared fanlight opener may be used For the side sashes of lantern lights and for stables and factories this form of window is in general use.

In the British Isles and in America a common form of window is the *cased frame with double hung sliding sashes.* This style has many advantages. It is efficient in excluding wet and draughts, ventilation may be easily regulated and the sashes can be lowered and raised with ease without interference with any blinds, curtains or other fittings, that may be applied to the windows. In the ordinary window of this style, however, difficulty is experienced in cleaning the external glass without assuming a dangerous position on the sill, but there are many excellent inventions now on the market which obviate this difficulty by allowing—usually on the removal of a small thumb-screw—the reversal of the sash on a pivot or hinge. For a small extra cost these arrangements may be provided; they will be greatly appreciated by those who clean the windows. The cased frames are in the form of boxes to enclose the iron or lead weights which balance the sashes (fig. 7), and consist of a pulley style—which takes the wear of the sashes and is often of hard wood on this account—an inside lining, and an outside lining; these three members are continued to form the head of the frame. The sashes are connected with the weights by flax lines or chains of special make working over metal pulleys fixed in the pulley styles. Access to the weights for the purpose of fitting new cords is obtained by removing the pocket piece. A thin back lining is provided to the sides only and is not required in the head. The sill is of oak weathered to throw off the water. A parting bead separates the sashes, and the inside bead keeps them in position. A parting slip hung from the head inside the cased frame separates the balancing weights and ensures their smooth working.

The inside lining is usually grooved to take the elbow and soffit linings, and the window board is fitted into a groove formed in the sill. The example shown in fig. 7 has an extra deep bottom rail and bead; this enables the lower sash to be raised so as to permit of ventilation between the meeting rails without causing a draught at the bottom of the sash. This is a considerable improvement upon the ordinary form, and the cost of constructing the sashes in this manner is scarcely greater.

Bay windows with cased frames and double hung sashes often require the exercise of considerable ingenuity in their construction

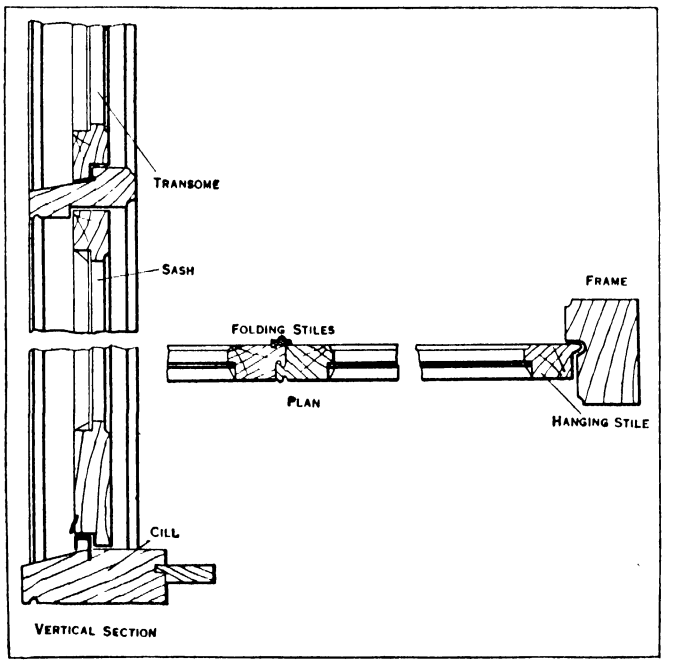

FIG. 8.—FRENCH CASEMENTS, TO OPEN INWARD

in order that the mullions shall be so small as not to intercept more light than necessary; at the same time the sashes must work easily and the whole framing be stable and strong. The sills should be mitred and tongued at the angles and secured by a hand-rail bolt. Frequently it is not desired to hang all the sashes of a bay window, the side lights being fixed. To enable smaller angle mullions to be obtained, the cords of the front windows may be taken by means of pulleys over the heads of the side lights and attached to counter-balance weights working in casings at the junction of the window with the wall. This enables solid angle mullions to be employed. If all the lights are required to be hung the difficulty may be surmounted by hanging two sashes to one weight. Lead weights take up less space than iron, and are used for heavy sashes.

In framing and fixing *skylights* and *lantern lights* also great care is necessary to ensure the result being capable of resisting rough weather and standing firm in high winds. Glue should not be used in any of the joints, as it would attract moisture from the atmosphere and set up decay. Provision must be made for the escape of the water which condenses on and runs down the inner side of the glass, by means of a lead-lined channelled moulding, provided with zinc or copper pipe outlets. The skylight stands on a curb raised at least 6 in. to allow of the exclusion of rain by proper flashing. The sashes of the lantern usually take the form of fixed or hung casements fitted to solid mullions and angle posts which are framed into and support a solid head. The glazed framing of the roof is made up of moulded sash bars framed to hips and ridges of stronger section; these rest on the head, projecting well beyond it in order to throw off the water.

Shutters for domestic windows have largely fallen into disuse, but a reference to the different forms they may take is perhaps necessary. They may be divided into two classes—those fixed to the outside of the window and those fixed inside. They may be battened, panelled or formed with louvres, the latter form admitting air and a little light. *External* shutters are generally hung by means of hinges to the frame of the window: when the window is set in a reveal these hinges are necessarily of special shape, being of large projection to enable the shutters to fold back against the face of the wall. *Internal* shutters may be hinged or may slide either vertically or horizontally. Hinged folding boxed shutters may be fitted into square or splayed recesses on the inside of a sliding sash or casement window, a number of panelled units being hinged together in order to fold neatly within the recess; they are usually held in position by means of a hinged iron bar secured with a special catch. Lifting shutters are usually fitted in a casing formed in the window back, and the window board is hinged to lift up, to allow the shutters to be raised by means of rings fixed in their upper edges. The shutters are balanced by weights enclosed with casings in the manner described for double hung sashes. The panels are of course filled in with wood and not glazed. The shutters are fixed by means of a thumb-screw through the meeting rails, the lower sash being supported on the window board which is closed down when the sashes have been lifted out. Shutters sliding horizontally are also used, but they are not so convenient as the forms described above

Doors.—External doors are usually hung to solid frames placed in the reveals of the brick or stone wall. The frames are rebated for the door and ornamented by mouldings either stuck or planted on. The *jambs* or *posts* are tenoned, wedged and glued to the head, and the feet secured to the sill by stub tenons or dowels of iron. Solid window frames are of similar construction and are used chiefly for casements and sashes hung on centres as already described. Internal doors are hung to jamb linings (fig. 7). They are usually about 1½ in. thick and rebated for the door. When the width of jamb allows it, panelling may be introduced as in the example shown. The linings are nailed or screwed to rough framed grounds 1 in. in thickness plugged or nailed to the wall or partition. *Architraves* are the borders or finishing mouldings fixed around a window or door opening, and screwed or nailed to wood grounds (fig 7). Polished hard wood architraves may be secretly fixed, *i.e.*, without the heads of nails or screws showing on the face, by putting screws into the grounds with their heads slightly projecting, and hanging the moulding on them by means of keyhole slots formed in the back.

Doors may be made in a variety of ways. The simplest form, the *common ledged* door, consists of vertical boards with plain or matched joints nailed to horizontal battens which correspond to the rails in framed doors. For openings over 2 ft. 3 in. wide, the doors should be furnished with braces. *Ledged and braced* doors are similar, but have, in addition to the ledges at the back, oblique braces which prevent any tendency of the door to drop. The upper end of the brace is birdsmouthed into the under side of the rail near the lock edge of the door and crosses the door in an oblique direction to be birdsmouthed into the upper edge of the rail below, near the hanging edge of the door. This is done between each pair of rails.

Framed ledged and braced doors are a further development of this form of door. The framing consists of lock and hanging styles, top, middle and bottom rails, with oblique braces between the rails. These members are tenoned together and the door sheathed with boarding. The top rail and styles are the full thickness of the door, the braces and middle and bottom rails being less by the thickness of the sheathing boards, which are tongued into the top rail and styles and carried down over the other members to the bottom of the door. The three forms of door described above are used mainly for temporary purposes, and stables, farm buildings and outhouses of all descriptions.

The doors in dwelling-houses and other buildings of a like character are commonly *framed and panelled* in one of the many ways possible. The framing consists of styles, rails and muntins or mountings, and these members are grooved to receive and hold the panels, which are inserted previously to the door being glued and wedged up. The common forms are doors in four or six rectangular panels, and although they may be made with any form and number of panels, the principles of construction remain the same. The example shown in fig. 7 is of a five-panel door, with bolection moulded raised panels on one side, and moulded and flat

panels on the other (fig. 9).

A clear idea of the method of jointing the various members may be obtained from fig. 10. The tongues of raised panels should be of parallel thickness, the bevels being stopped at the moulding. The projecting ends or *horns* of the styles are kept on until commencement of the process of hanging, as they prevent the ends of the styles being damaged.

Where there is a great deal of traffic in both directions *swing doors,* either single or double, are used. To open them it is necessary simply to push, the inconvenience of turning a handle and shutting the door after passing through being avoided, as a spring causes the door to return to its original position without noise. They are usually glazed and should be of substantial construction. The door is hinged at the top on a steel pivot; the bottom part fits into a metal shoe connected with the spring, which is placed in a box fixed below the floor.

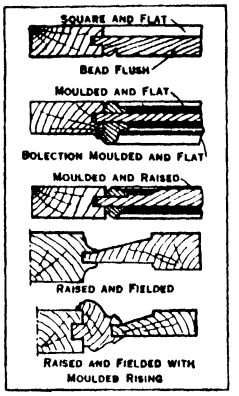

FIG. 9.—FORMS OF PANELLING

For large entrances, notably for hotels and banks, a form of door working on the *turnstile* principle is frequently adopted. It is formed of four leaves fixed in the shape of a cross and working on top and bottom central ball-bearing steel pivots, in a circular framing which forms a kind of vestibule. The leaves of the door are sometimes fitted with slips of india-rubber at their edges which, fitting close to the circular framing, prevent draughts.

When an elegant appearance is desired, and it is at the same time necessary to keep the cost of production as low as possible, doors of pine or other soft wood are sometimes covered with a *veneer* or thin layer of hard wood, such as oak, mahogany or teak, giving the appearance of a solid door of the better material. Made in the ordinary way, however, the shrinkage or warping of the soft wood is very liable to cause the veneer to buckle and peel off. Veneered doors made on an improved method obviating this difficulty have been placed on the market by a Canadian company. The core is made up of strips of pine with the grain reversed, dried at a temperature of 200° F, and glued up under pressure. Both the core and the hard wood veneer are grooved over their surfaces, and a special damp-resisting glue is applied; the two portions are then forced together under hydraulic pressure. By reason of their construction these doors possess the advantages of freedom from shrinking, warping and splitting, defects which are all too common in the ordinary veneered.

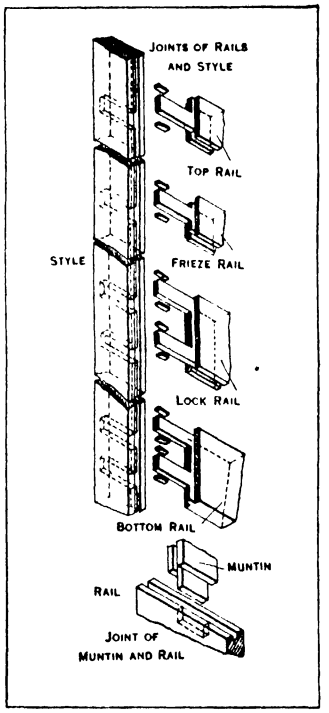

FIG. 10.—JOINTS IN DOOR FRAMING

Ordinary animal glue should not be used in work exposed to the weather as it absorbs damp and thus hastens decay; in its place a compound termed *beaumontique,* made of white lead, linseed oil and litharge, should be used.

SPECIAL WORK

Church Joinery.—Joinery work in connection with the fitting up of church interiors must be regarded as a separate branch of the art. Pitchpine is often used, but the best work is executed in English oak; and when the screens, stalls and seating are well designed and made in this material, a distinction and dignity of effect are added to the interior of the church which cannot be obtained in any other medium. The work is often of the richest character, and frequently enriched with elaborate carving. Many beautiful specimens of early work are to be seen in the English Gothic cathedrals and churches; good work of a later date will be found in many churches and public buildings erected in more recent years. Fine examples of Old English joinery exist at Hampton Court Palace, the Temple Church in London, the Chapel of Henry VII. in Westminster Abbey and Haddon Hall. Specimens of modern work are to be seen in Beverley Minster in Yorkshire, the Church of St. Etheldreda in Ely Place, London, and the Wycliffe Hall Chapel at Oxford. Other examples both ancient and modern abound in the country.

Machine-made Joinery.—The development and general adoption of wood-working machinery has for many years been tending towards the elimination of the highly skilled joiner, but the tendency is counteracted and skilled training assured by the increase in the number and efficiency of day and evening trade training schools. The number of voluntary students, comprising apprentices, improvers and journeymen, attending evening classes for joiners in one institute alone in the London area during the evening school session 1927–28 was in the neighbourhood of 200.

The joiner's hand operations necessary in producing common types of machine-made joinery are of a semi-skilled nature, involving little more than the cramping and wedging up of framing; even the final process of glass papering is frequently performed by machinery. Where there is a well equipped machine-shop highly skilled hand work is only required in the production of high class hard-wood joinery, and in connection with work of double curvature, such as geometrical stairs and handrails, door and window frames that are curved in both plan and elevation, and in examples of joinery involving complex moulding intersections such as may occur in a moulded lantern light or an open roof. To set out and work these and other examples of geometrical wood-work, the joiner must have a sound knowledge of three dimensional geometry in addition to a high standard of manual dexterity.

The skill and adaptability of the joiner was of great service during the World War, for he proved to be capable of performing all the wood-work operations necessary in the production of aircraft, including propeller shaping, without any preliminary period of special training.

Ironmongery.—In regard to the finishing of a building, no detail calls for greater consideration than the selection and accurate fixing of suitable ironmongery, which includes the hinges, bolts, locks, door and window fittings, and the many varieties of metal finishings required for the completion of a building. The task of the selection belongs to the employer or the architect; the fixing is performed by the joiner.

Of *hinges,* the variety termed *butts* are in general use for hanging doors, and are so called from being fitted to the butt edge of the door. They should be of wrought metal, cast-iron butts being liable to snap should they sustain a shock. *Lifting butts* are made with a removable pin to enable the door to be removed and replaced without unscrewing. *Rising butts* have oblique joints which cause the door to rise and clear a thick carpet and yet make a close joint with the floor when shut. Hinges of brass or gun-metal are used in special circumstances. Common forms of hinges used on ledged doors are the *cross garnet* and the *strap.* There are many varieties of *spring hinges* designed to bring the door automatically to a desired position.

Among *locks and fastenings* the ordinary *barrel* or *tower* bolt needs no description. The *flush barrel* is a bolt let in flush with the face of a door. The *espagnolette* is a development of the tower bolt and extends the whole height of the door; a handle at a convenient height, when turned, shoots the bolts at the top and bottom simultaneously. Their chief use is for French casements. The *padlock* is used to secure doors by means of a staple and eye. The *stock* lock is a large rim lock with hard wood casing and is used for stables, church doors, etc.; it is in the form of a dead lock opened only by a key, and is often used in conjunction with a Norfolk latch. The *metal cased* rim lock is a cheap form for domestic and general use. The use of a rim lock obviates the necessity of forming a mortise in the thickness of the door which is required

when a mortise lock is used. The Yale lock is now generally used for every ordinary type of door. *Finger plates* add greatly to the good appearance of a door, and protect the painted work. *Sash fasteners* are fixed at the meeting rails of double hung sashes to prevent the window being opened from the outside and serve also to clip the two sashes tightly together. They should be of a pattern to resist the attack of a knife inserted between the rails. *Sash lifts* and *pulls* of brass or bronze are fitted to large sashes. Ornamental *casement stays* and fasteners in many different metals are made in numerous designs and styles. *Fanlight openers* for single lights, or geared for a number of sashes, may be designed to suit positions difficult of access.

JOINT: *see* PRACTICE AND PROCEDURE.

JOINT ACCOUNT, a financial and business term having three applications: (1) A temporary business association of two or more persons acting as partners, often known as a "joint venture" or "joint adventure." The legal rights and responsibilities of such partners are similar to those of members of a general partnership although there are several points of difference established by law. (2) A bank account in which two or more persons have joint interests or rights, often known as a joint deposit. The account is made and carried under the names of the several owners, connected by the word "and." It is the joint property of all of them, and is generally subject to withdrawals by cheque, although the method of signature is a matter of agreement between the joint depositors and the bank. This form of deposit is used very commonly by husband and wife as a matter of convenience. In case of the death of one of the joint depositors the account becomes the property of the survivor without administratorship. (3) Several banking or security houses associated as a syndicate in the marketing of a large block of securities to the public.

(J. H. B.)

JOINT-FIRS (*Ephedra*), a genus of peculiar shrubs of the family Gnetaceae, comprising 25 species native to warm temperate regions. Six species, commonly known as Mexican tea or joint-pine, occur in the western United States, widely distributed in arid districts from Wyoming to California and southward to western Texas and Mexico. (*See* EPHEDRA; EPHEDRIN; GYMNOSPERMS.)

JOINTS, in engineering, may be classed either (*a*) according to their material, as in stone or brick, wood or metal; or (*b*) according to their object, to prevent leakage of air, steam or water, or to transmit force, which may be thrust, pull or shear; or (*c*) according as they are stationary or moving ("working" in technical language). Many joints, like those of ship-plates and boiler-plates, have simultaneously to fulfil both objects mentioned under (*b*).

All stone joints of any consequence are stationary. It being uneconomical to dress the surface of the stones so as to be flat accurately, a layer of mortar or other cementing material is laid between them. If the ingredients of the mortar are chosen so that when hard it has about the same coefficient of compressibility as the stone or brick, the pressure will be nearly uniformly distributed. The cement also adheres to the stone or brick, and allows a certain amount of tension to be borne by the joint. It likewise acts to prevent the stones from slipping one on the other. The joints are made partially impervious to air or water by "pointing" their outer edges with a superior quality of cement.

Wood joints are also nearly all stationary. They are made partially fluid-tight by "grooving" and tenoning," and by "caulking" with oakum or similar material. The wood swells when it is saturated with water, the edges of the joints press closer together, and the joints become tighter. Relatively to its strength, wood is a better material than iron for transmitting a thrust past a joint, for when a heavy pressure comes on the joint all the small irregularities of the surfaces in contact are crushed out and there results an approximately uniform distribution of the pressure over the whole area (*i.e.,* if there be no bending forces). To attain this result the abutting surfaces should be well fitted together, and the bolts binding the pieces together should be arranged so that they will not interfere with the timber surfaces coming into this close contact. Owing to its weak shearing strength parallel to the fibre, timber is peculiarly unfitted for tension joints. If the pieces exerting the pull are simply bolted together with wooden or iron bolts, the stresses become intensely localized in the immediate neighbourhood of the bolts. A tolerably strong timber tension joint can, however, be made by means of iron plates covering the joint and bolted together through the wood. These plates should have their surfaces which lie against the wood ribbed in a direction transverse to the pull. The bolts should fit their holes slackly, and should be well tightened up to make the ribs sink into the surface of the timber. There will then be very little localized shearing stress brought upon the interior portions of the wood.

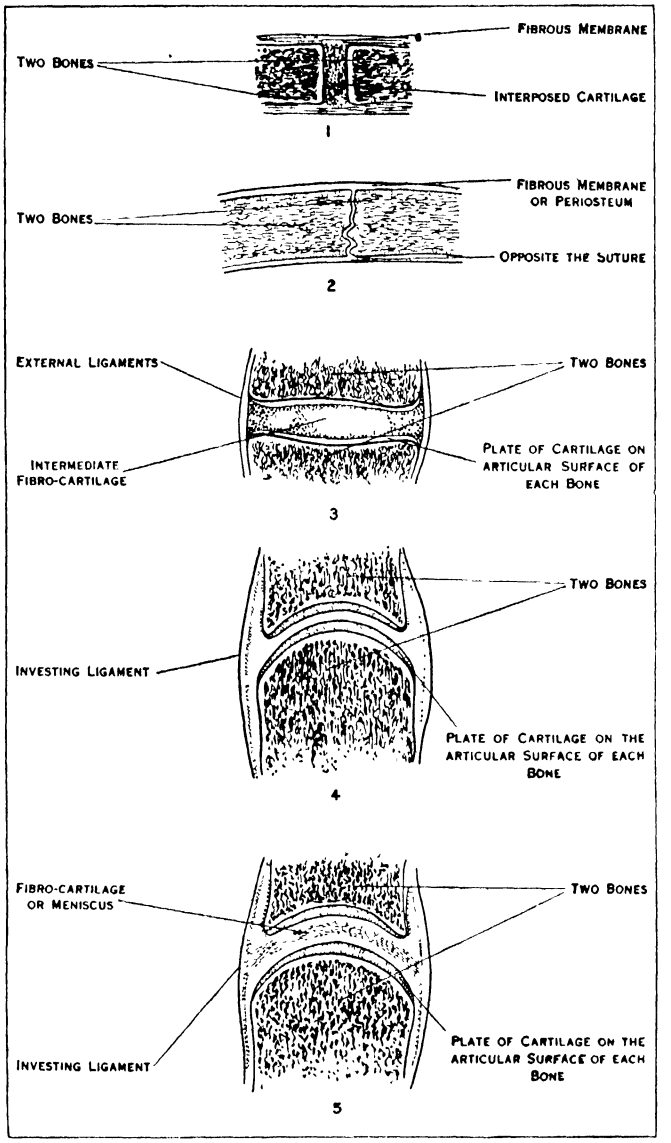
Iron and the other commonly used metals possess in variously high degrees the qualities desirable in substances out of which joints are to be made. The joint ends of metal pieces can be fashioned to any desired form and size. Metallic surfaces can be cut smoothly and evenly to ensure the closest contact over their whole areas of contact. This is of the highest importance, especially in joints designed to transmit a force or an electric current. Wrought-iron and mild steel are especially suitable for joints where there is not continuous rapid motion. Where such motion occurs, a "bush" or layer of brass is inserted. The joint then possesses the good frictional qualities of brass. Leakage past moving metal joints can be prevented by cutting the surfaces very accurately to fit each other. Steam-engine slide valves and their seats, and piston "packing-rings" and the cylinders they work to and fro in, may be cited as examples. A subsidiary compressible "packing" is sometimes employed in the "stuffing boxes" which prevent the escape of steam from cylinders through the piston-rod hole of steam engines. Fixed metal joints are made fluid tight—(*a*) by caulking a riveted joint, *i.e.,* by hammering in the edge of the metal with a square-edged chisel; (*b*) by the insertion between the surfaces of a layer of various cements; (*c*) by the insertion of a layer of soft solid substance called "packing" or "insertion."

Apart from cemented and glued joints, most joints are formed by cutting one or more holes in the ends of the pieces to be joined, and inserting pins in these holes. The word "pin" is technically restricted to mean a cylindrical pin in a movable joint. The word "bolt" is used when the cylindrical pin is screwed up tight with a nut so as to be immovable. When the pin is not screwed, but is fastened by being beaten down on either end, it is called a "rivet." The pin is sometimes rectangular in section, and tapered or parallel lengthwise. "Gibs" and "cottars" are examples of the latter. Fixed joints are seldom subject to simple compression in the direction of their length, though they are frequently subject to simple tension in that direction. A good example is the joint between a steam cylinder and its cover, where the bolts have to resist the whole thrust of the steam and at the same time to keep the joint steam-tight.

JOINTS, in geology, are the dividing planes by which nearly all rocks are traversed more or less completely and which extend in various directions and at various inclinations, generally at a high angle, to the horizontal. Unlike faults, joints are fissures where little or no movement between the blocks has taken place, though the presence of slickensides—striae on the smooth faces—show that in some cases there has been some rubbing movement. Jointing cannot extend to a very great depth: for towards the base of the "zone of fracture," estimated by Van Hise at about 12 km. in rigid rocks, joints and faults cannot form since the rocks tend to flow in relief of strain.

In unweathered rocks, joints, though present, are inconspicuous, but on weathering become marked, especially in a soluble rock such as limestone. Sedimentary rocks usually show two sets of joints perpendicular to the bedding and to one another, one set in the direction of dip, the other of strike. The more prominent set, if well developed and running for long distances, forms a set of

master joints. Individual fissures cannot be traced very far, since joints run into one another, though their approximate general parallelism is evident. The distance between joints varies from an inch or so to several yards: in alternating strata the degree of jointing may vary from bed to bed. In igneous rocks jointing is generally quite irregular, but in granite two vertical sets at right angles to one another, with another set of cross joints approximately horizontal, are frequently found. These cross joints are of a different origin: they are the effect of weathering since they conform to the surface of the ground and die out with depth. Intrusive sills and dikes in many places show a columnar structure perpendicular to the cooling surfaces, where jointing has been so symmetrical that the sheets weather out into polygonal prismatic columns: in the well known Giant's Causeway the columns are hexagonal implying three equally developed sets of joints.



Near the surface joints are more or less open, especially in limestones. Solution by percolating water controlled by joints has led to the formation of large caves and underground rivers several miles in length. Highly jointed rocks are objectionable as a source of potable water; since such water is likely to be contaminated by surface impurities. Quarrying operations are much helped by the presence of a well developed joint system combined with the bedding planes of weakness. Large monoliths are obtainable from granite where the vertical jointing, widely spaced, is not interrupted by cross jointing.

Origin of Joints.—The principal cause of jointing in both stratified and igneous rocks is crustal movement. Certainly stratified rocks subjected to compression, tension and torsion must crack and fissure in the upper parts of the earth's crust. Thus strike and dip joints would originate along the axes of folds. The passage of earthquake waves would account for jointing in undisturbed horizontal strata, which is otherwise hardly explicable if folding is absent. Contraction on drying or crystallization also contributes to minor irregular jointing, as do also expansion and contraction due to epigene agents or the intrusion of heated igneous rocks The columnar structure of basalt is due to the cooling effect of the walls between which it has been intruded and to which the structure is always at right angles. (C. B. B.)

JOINTS AND LIGAMENTS. Anatomically a joint is any connection between two or more adjacent parts of the skeleton, whether they be bone or cartilage. Joints may be immovable, like those of the skull, or movable, like the knee.

Immovable joints (*synarthroses*) are adaptations to growth and are always between bones. When growth ceases the bones often unite (*synostosis*). Immovable joints never have a cavity between the two bones; there is simply an unaltered layer of the substance in which the bone has been laid down. If the bone is being deposited in cartilage, a layer of cartilage intervenes, and the joint is called *synchonarosis* (fig. 1), but if in membrane, a thin layer of fibrous tissue persists, and the joint is then known as a *suture* (fig. 2). Good examples of synchondroses are the epiphysial lines separating the epiphyses from the shafts of developing long bones, or the occipito-sphenoid synchondrosis in the base of the skull. Examples of sutures are plentiful in the vault of the skull. There are two kinds of fibrous synarthroses, which differ from sutures in that they do not synostose. One of these is a *schindylesis*, in which a thin plate of one bone is received into a slot in another, as in the joint between the sphenoid and vomer. The other is a peg and socket joint, or *gomphosis*, found where the fangs of the teeth fit into the alveoli or tooth sockets in the jaws.

Movable joints (*diarthroses*) are divided into those in which there is much and little movement. When there is little movement the term half-joint or *amphiarthrosis* is used. The simplest kind of amphiarthrosis is that in which two bones are connected by bundles of fibrous tissue which pass at right angles from the one to the other; such a joint differs from a suture by the facts that the intervening fibrous tissue is organized into bundles (*interosseous ligaments*), and that it does not synostose when growth stops. A joint of this kind (*syndesmosis*) depends upon the amount of movement which is brought about by the muscles on the two bones. As an instance of this the inferior tibiofibular joint of mammals may be cited. In man this is a syndesmosis, and there is only a slight play between the two bones. In the mouse there is no movement, and the two bones form a synchondrosis between them which speedily becomes a synostosis, while in many Marsupials there is free mobility between the tibia and fibula, and a definite synovial cavity is established The other variety of amphiarthrosis or half-joint is the *symphysis*,

FIGS. 1–5.—JOINTS

Vertical sections through (1) Synchondrosis, (2) Cranial Suture, (3) Amphiarthrodial joint, (4) Diarthrodial joint, (5) Diarthrodial joint with interposed fibro-cartilage, or meniscus

which differs from the syndesmosis in having both bony surfaces lined with cartilage and between the two cartilages a layer of fibro-cartilage, the centre of which often softens and forms a small synovial cavity. Examples of this are the symphysis pubis, the mesosternal joint, and the joints between the bodies of the vertebrae (fig. 3).

The *true diarthroses* are joints in which there is free movement. The opposing surfaces of the bones are lined with the unossified remnant of the cartilaginous model in which they are formed (fig. 4). Between the two cartilages is the *joint cavity*, while surrounding the joint is the *capsule* (fig. 4), which is formed chiefly by the superficial layers of the original periosteum or perichondrium, perhaps strengthened externally by tendinous insertions of muscles. The greater the intermittent strain on any part of the capsule the thicker it is. Lining the interior of the capsule, and all other parts of the joint cavity except where the

articular cartilage is present, is the *synovial membrane* (fig. 4, dotted line); this is a layer of endothelial cells which secrete the synovial fluid to lubricate the interior of the joint.

A *compound diarthrodial joint* is one in which the joint cavity is divided partly or wholly into two by a *meniscus* or *inter-articular fibro-cartilage* (fig. 5).

The shape of the joint cavity varies greatly, and the different divisions of movable joints depend upon it. It is often assumed that the structure of a joint determines its movement, but the converse view has much in its favour. Thus, the mobility of the metacarpo-phalangeal joint of the thumb in many working men is less than it is in many women who use needles and thread, or in many medical students who use pens and scalpels, and the slightly movable thumb has quite a differently shaped articular surface from the freely movable one (see *J. Anat. and Phys.*, xxix., 446).

The freely movable joints (true diarthrosis) are classified as follows:—

(1) *Gliding joints* (*Arthrodia*), in which the articular surfaces are flat, as in the carpal and tarsal bones.

(2) *Hinge joints* (*Ginglymus*), such as the elbow and interphalangeal joints.

(3) *Condyloid joints* (*Condylarthrosis*), allowing flexion and extension as well as lateral movement, but no rotation. The metacarpo-phalangeal and wrist joints are examples of this.

(4) *Saddle-shaped joints* (*Articulus sellaris*), allowing the same movements as the last with greater strength. The carpo-metacarpal joint of the thumb is an example.

(5) *Ball and socket joints* (*Enarthrosis*), allowing free movement in any direction, as in the shoulder and hip.

(6) *Pivot-joint* (*Trochoides*), allowing only rotation round a longitudinal axis, as in the radio-ulnar joints.

Embryology.—Joints are developed in the mesenchyme, or that part of the mesoderm which is not concerned in the formation of the serous cavities. The synarthroses may be looked upon merely as a delay in development. The diarthroses represent an arrest of development at an earlier stage, for a part of the original embryonic tissue remains as a plate of round cells, while the neighbouring two rods chondrify and ossify. This plate may become converted into fibro-cartilage, in which case an amphiarthrodial joint results, or may become absorbed in the centre to form a joint cavity, or, if this absorption occurs in two places, two joint cavities with an intervening meniscus may result. Although, ontogenetically, there is little doubt that menisci arise in the way just mentioned, the teaching of comparative anatomy suggests that, phylogenetically, they originate as an ingrowth from the capsule pushing the synovial membrane in front of them. In the human foetus the joint cavities are all formed by the tenth week of intra-uterine life

ANATOMY

Joints of the Axial Skeleton.—The bodies of the vertebrae except those of the sacrum and coccyx are separated, and yet connected, by the *intervertebral disks*. These are formed of alternating concentric rings of fibrous tissue and fibro-cartilage, with an elastic mass in the centre. The bodies are also bound together by *anterior* and *posterior common ligaments* The odontoid process of the axis fits into a pivot joint formed by the anterior arch of the atlas in front and the *transverse ligament* behind; it is attached to the basioccipital bone by two strong *lateral check ligaments*, and, in the mid line, by a feebler *middle check ligament* which is regarded morphologically as containing the remains of the notochord. This *atlanto-axial joint* is the one which allows the head to be shaken from side to side. Nodding the head occurs at the *occipito-atlantal joint*, which consists of the two occipital condyles received into the cup-shaped articular facets on the atlas and surrounded by capsular ligaments. The neural arches of the vertebrae articulate one with another by the *articular facets*, each of which has a capsular ligament. In addition to these the laminae are connected by the very elastic *ligamenta subflava*. The spinous processes are joined by *interspinous ligaments*, and their tips by a *supraspinous ligament*, which in the neck is continued from the spine of the seventh cervical vertebrae to the external occipital crest and protuberance as the *ligamentum nuchae*, a thin, fibrous, median septum between the muscles of the back of the neck.

The combined effect of all these joints and ligaments is to allow the spinal column to be bent in any direction or to be rotated, though only a small amount of movement occurs between any two vertebrae.

The heads of the ribs articulate with the bodies of two contiguous thoracic vertebrae and the disk between, and ligaments strengthen each articulation. At the junction of the ribs with their cartilages the periosteum simply becomes perichondrium and binds the two structures together. Where the cartilages, however, join the sternum, or where they join one another, diarthrodial joints with synovial cavities are established. In the case of the second rib this is double, and in that of the first usually wanting.

Comparative Anatomy. For the convexity or concavity of the vertebral centra in different classes of vertebrates, *see* SKELETON: *Axial.* The intervertebral disks first appear in the Crocodilia, the highest existing order of reptilia. The *ligamentum nuchae* is a strong elastic band in the Ungulata which supports the weight of the head. In the Carnivora it only reaches as far forward as the spine of the axis.

Jaw Joint.—This occurs between the sigmoid cavity of the temporal bone and the condyle of the jaw. Between the two there is an interarticular fibro-cartilage or meniscus, and the joint is surrounded by a capsule of which the outer part is the thickest. On first opening the mouth, the joint acts as a hinge, but very soon the condyle begins to glide forward on to the eminentia articularis (*see* SKULL) and takes the meniscus with it. This gliding movement between the meniscus and temporal bone may be separately brought about by protruding the lower teeth in front of the upper, or, on one side only, by moving the jaw across to the opposite side.

Comparative Anatomy. The joint between the temporal and mandibular bones is only found in Mammals; in the lower vertebrates the jaw opens between the quadrate and articular bones. In the Carnivora it is a perfect hinge; in many Rodents only the antero-posterior gliding movement is present; while in the Ruminants the lateralizing movement is the chief one. Sometimes, as in the Ornithorhynchus, the meniscus is absent

Joints of the Upper Extremity.—The *sterno-clavicular articulation* is a gliding joint with an intervening meniscus, and allows slight upward and downward and forward and backward movements. There is a well-marked capsule, of which the anterior part is strongest. The two clavicles are joined across the top of the presternum by an *interclavicular ligament.*

The *acromio-clavicular articulation* is also a gliding joint, but allows a swinging or pendulum movement of the scapula on the clavicle. The upper part of the capsule is strongest, and from it hangs down a partial meniscus into the cavity.

Comparative Anatomy. Bland Sutton regards the inter-clavicular ligament as a vestige of the interclavicle of Reptiles and Monotremes. The menisci are only found in the Primates, but it must be borne in mind that many Mammals have no clavicle, or a very rudimentary one.

Shoulder Joint.—This is a good example of the ball and socket variety. Its most striking characteristic is mobility at the expense of strength. The small size of the glenoid cavity in comparison with the head of the humerus, and the great laxity of the capsule, favour this, although the glenoid cavity is slightly deepened by a fibrous lip, round its margin The coracoid and acromial processes of the scapula, with the *coraco-acromial ligament* between them, serve as an overhanging protection to the joint, while the biceps tendon runs over the head of the humerus, inside the capsule, though surrounded by a sheath of synovial membrane. Were it not for these two extra safeguards the shoulder would be even more liable to dislocation than it is. Inside the front of the capsule are three folds of synovial membrane, called *gleno-humeral folds.*

Comparative Anatomy. In the lower Vertebrates the shoulder

is adapted to support rather than prehension and is not so freely movable as in the Primates. The tendon of the biceps has evidently sunk through the capsule into the joint, and even when it is intra-capsular there is usually a double fold connecting its sheath of synovial membrane with that lining the capsule. In Man this has been broken through, but remains of it persist in the *superior gleno-humeral fold.* The *middle gleno-humeral fold* is the vestige of a strong ligament, which steadies and limits the range of movement of the joint in many lower Mammals.

Elbow Joint.—This is a hinge, though its transverse axis of movement is not quite at right angles to the central axis of the limb, but is lower internally than externally. This tends to bring the forearm towards the body when the elbow is bent. The elbow is a great contrast to the shoulder, as the trochlea and capitellum of the humerus are closely adapted to the sigmoid cavity of the ulna and head of the radius (*see* SKELETON: *Appendicular*); consequently movement in one plane only is allowed, and the joint is a strong one. The capsule is really continuous. The joint cavity communicates freely with that of the superior radio-ulnar articulation.

The *radio-ulnar joints* are three: the upper one is an example of a pivot joint, and in it the disk-shaped head of the radius rotates in a circle formed by the lesser sigmoid cavity of the ulna internally and the *orbicular ligament* in the other three quarters.

The *middle radio-ulnar articulation* is simply an interosseous membrane, the fibres of which run downward and inward from the radius to the ulna.

The *inferior radio-ulnar joint* is formed by the disc-shaped lower end of the ulna fitting into the slightly concave sigmoid cavity of the radius. Below, the cavity of this joint is shut off from that of the wrist by a *triangular fibro-cartilage.* The movements allowed at these three articulations are called pronation and supination of the radius. The head of that bone twists, in the orbicular ligament, round its central vertical axis for about half a circle. Below, however, the whole lower end of the radius circles round the lower end of the ulna, the centre of rotation being close to the styloid process of the ulna. The radius, therefore, in its pronation, describes half a cone, the base of which is below, and the hand follows the radius.

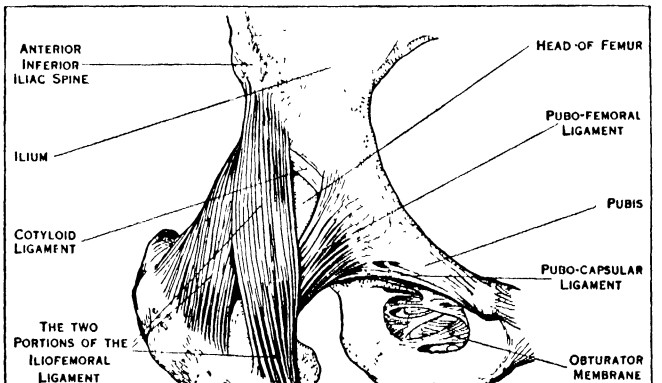
Comparative Anatomy. In pronograde Mammals the forearm is usually permanently pronated, and the head of the radius, instead of being circular and at the side of the upper end of the ulna, is transversely oval and in front of that bone, occupying the same place as the coronoid process of the ulna in Man This type of elbow, which is adapted simply to support and progression, is best seen in the Ungulata; in them both lateral ligaments are attached to the head of the radius, and there is no orbicular ligament, since the shape of the head of the radius does not allow of any supination. The olecranon process of the ulna forms merely a posterior guide or guard to the joint, but transmits no weight No better example of the maximum changes which the uses of support and prehension bring about can be found than in contrasting the elbow of the Sheep or other Ungulate with that of Man. Towards one or other of these types the elbows of all Mammals tend. It may be roughly stated that, when pronation and supination to the extent of a quarter of a circle are possible, an orbicular ligament appears

Wrist Joint.—This lies between the radius and triangular fibro-cartilage above, and the scaphoid, semilunar and cuneiform bones below. It is a condyloid joint allowing flexion and extension round one axis, and slight lateral movement (abduction and adduction) round the other. There is a well-marked capsule. The joint cavity is shut off from the inferior radio-ulnar joint above, and the intercarpal joints below.

The *intercarpal joints* are gliding articulations, the various bones being connected by palmar, dorsal, and a few interosseous ligaments, but only those connecting the first row of bones are complete, and so isolate one joint cavity from another. That part of the intercarpal joints which lies between the first and second rows of carpal bones is called the *transverse carpal joint,* and at this a good deal of the movement which seems to take place at the wrist really occurs.

The *carpo-metacarpal articulations* are, with the exception of that of the thumb, gliding joints, and continuous with the great intercarpal joint cavity. The carpo-metacarpal joint of the thumb is the best example of a saddle-shaped joint in Man. It allows forward and backward and lateral movement, and is very strong.

The *metacarpo-phalangeal joints* are condyloid joints like the wrist, and are remarkable for the great thickness of the palmar ligaments of their capsules. In the four inner fingers these are joined together by the *transverse metacarpal ligament.*



The *interphalangeal articulations* are simple hinges surrounded by a capsule, of which the dorsal part is very thin

Comparative Anatomy. The wrist joint of the lower Mammals allows less lateral movement than does that of Man, while the lower end of the ulna is better developed and is received into a cup-shaped socket formed by the cuneiform and pisiform bones. Unless there is pretty free pronation and supination, the triangular fibro-cartilage is represented by an interosseous ligament, which may be continuous above with the interosseous membrane between the radius and ulna. In most Mammals the wrist is divided into two lateral parts, as in the human foetus, but free pronation and supination seem to cause the disappearance of the septum.

Joints of the Lower Extremity.—The *sacro-innominate articulation* consists of the *sacro-iliac joint* and the *sacro-sciatic ligaments.* The former is one of the amphiarthroses or half-joints by which the sacrum is bound to the ilium. The mechanism of the human sacrum is that of a suspension bridge slung between the two pillars or ilia by the very strong *posterior sacro-iliac ligaments* which represent the chains. The axis of the joint passes through the second sacral vertebra, but the sacrum is so nearly horizontal that the weight of the body, which is transmitted to the first sacral vertebra, tends to tilt that part down. This tendency is corrected by the *sacro-sciatic ligaments,* which fasten the lower part of the sacrum to the tuberosity and spine of the ischium, so that, although the sacrum is a suspension bridge when looked at from behind, it is a lever of the first kind when seen from the side or in sagittal section.

The *pubic symphysis* is the union between the two pubic bones. It has all the characteristics of a symphysis, already described, and may have a small median cavity.

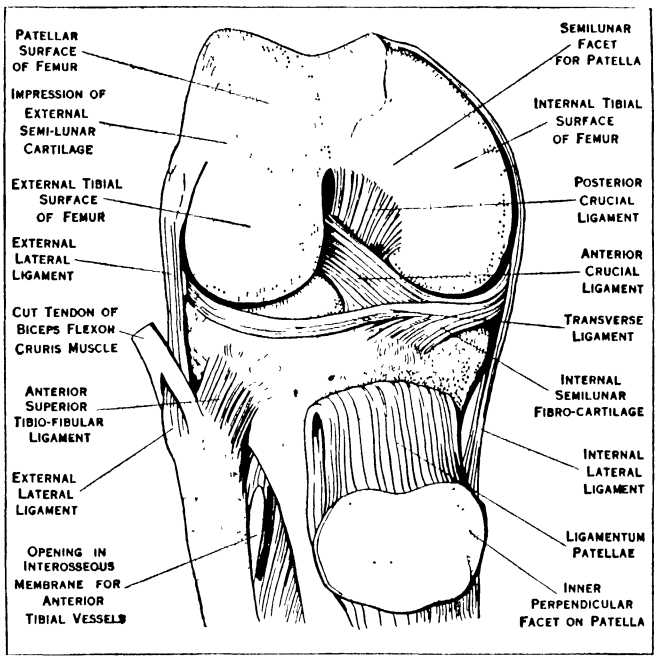
Hip Joint.—This, like the shoulder, is a ball and socket, but does not allow such free movement because the socket or

FROM HEPBURN IN CUNNINGHAM, "TEXT BOOK OF ANATOMY"

FIG. 6.—DISSECTION OF HIP JOINT. ANTERIOR VIEW, SHOWING ATTACHMENT OF LIGAMENTS TO FEMUR, ILIUM, ISCHIUM AND PUBIS

acetabulum is deeper than the glenoid cavity and the capsule is not so lax. At the same time the loss of mobility is made up for by increased strength. The capsule has three thickened bands of which the most important is the *ilio-femoral* or *Y-shaped ligament of Bigelow.* The stalk of the Y is attached to the anterior inferior spine of the ilium, while the two limbs are fastened to the upper and lower parts of the spiral line of the femur. The ligament is so strong that it hardly ever ruptures in a dislocation of the hip. As a plumb-line, dropped from the centre of gravity of

the body, passes behind the centre of the hip joint, this ligament, lying as it does in front of the joint, takes the strain in Man's erect position. The other two thickened parts of the capsule are known as *pubo-femoral* and *ischio-femoral,* from their attachments. Inside the capsule, and deepening the margin of the acetabulum, is a fibrous rim known as the *cotyloid ligament,* which grips the spherical head of the femur and is continued across the cotyloid notch as the *transverse ligament.* The floor of the acetabulum has a horseshoe-shaped surface of articular cartilage, concave downward, and, occupying the "frog" of the horse's hoof, is a mass of fat called the *Haversian pad.* Attached to the inner margin of the horseshoe, and to the transverse ligament where that is deficient, is a reflexion of synovial membrane which forms a covering for the pad and is continued as a tube to the depression on the head of the femur. This reflexion carries blood-vessels and nerves to the femur, and also contains fibrous tissue from outside the joint. It is known as the *ligamentum teres.*



Comparative Anatomy. Bland Sutton regards the *ilio-femoral ligament* as an altered muscle, the scansorius, and the *ligamentum teres* as the divorced tendon of the pectineus muscle. The subject requires much more investigation. In many Mammals, and among them the Orang, there is no ligamentum teres. In others, such as the Armadillo, the structure has not sunk right into the joint, but is connected with the pubo-femoral part of the capsule.

Knee Joint.—This is a hinge formed by the condyles and trochlea of the femur, the patella, and the head of the tibia. The capsule is formed in front by the ligamentum patellae, and on each side special bands form the lateral ligaments. On the outer side there are two of these: the anterior or *long external lateral ligament* is a round cord running from the external condyle to the head of the fibula, while the posterior is slighter and passes from the same place to the styloid process of the fibula. The *internal lateral ligament* is a flat band which runs from the inner condyle of the femur to the internal surface of the tibia some two inches below the level of the knee joint. The posterior part of the capsule is strengthened by an oblique bundle of fibres running upward and outward from the semimembranosus tendon (*posterior ligament of Winslow*).

The intra-articular structures are numerous and interesting Passing from the head of the tibia, in front and behind the spine, are the *anterior* and *posterior crucial ligaments.* These cross like an X. The *semilunar fibro-cartilages*—external and internal—are partial menisci, each of which has an anterior and a posterior cornu by which they are attached to the head of the tibia in front and behind the spine. They are also attached round the margin of the tibial head by a *coronary ligament,* but the external one is more movable than the internal, and this perhaps accounts for its coronary ligament being less often ruptured and the cartilage displaced than the inner one is The external cartilage is broader, and forms more of a circle than the internal. The synovial cavity of the knee runs up, deep to the extensor muscles of the thigh, for about two inches above the top of the patella, forming the *bursa suprapatellaris.* At the lower part of the patella it covers a pad of fat, which lies between the ligamentum patellae and the front of the head of the tibia, and is carried up as a narrow tube to the lower margin of the trochlear surface of the femur. The tendon of the popliteus muscle is an intracapsular structure, and is therefore covered with a synovial sheath. There are a large number of bursae near the knee joint, one of which, common to the inner head of the gastrocnemius and the semimembranosus, often communicates with the joint. The hinge movement of the knee is accompanied by a small amount of external rotation at the end of extension, and a compensatory internal rotation during flexion. This slight twist is enough to tighten up almost all the ligaments so that they may take a share in resisting over-extension, because, in the erect position, a vertical line from the centre of gravity of the body passes in front of the knee.

Comparative Anatomy. In some Mammals, *e.g.,* Bradypus and Ornithorhynchus, the knee is divided into three parts, two condylotibial and one trochleo-patellar, by synovial folds. In a typical Mammal the external *semilunar cartilage* is attached by its posterior horn to the internal condyle of the femur only. In the Monkeys and anthropoid Apes this cartilage is circular. The *semilunar cartilages* first appear in the Amphibia, and, according to B. Sutton, are derived from muscles which are drawn into the joint. When only one kind of movement (hinge) is allowed, as in the fruit bat, the cartilages are not found. In most Mammals the superior tibio-fibular joint communicates with the knee.

The *tibio-fibular articulations* resemble the radio-ulnar in position but are much less movable. The superior in Man is usually

FROM HEPBURN IN CUNNINGHAM, "TEXT BOOK OF ANATOMY"

FIG 7.—DISSECTION OF KNEE-JOINT FROM THE FRONT. THE PATELLA IS SEEN THROWN DOWN TO SHOW THE INTERNAL SEMILUNAR CARTILAGE AND TRANSVERSE LIGAMENT

cut off from the knee and is a gliding joint; the middle is the interosseous membrane, while the lower is of a syndesmosis or fibrous half joint.

Ankle Joint.—This is a hinge, the astragalus being received into a lateral arch formed by the lower ends of the tibia and fibula. Backward dislocation is prevented by the articular surface of the astragalus being broader in front than behind. The anterior and posterior parts of the capsule are feeble, but the lateral ligaments are very strong, the external consisting of three separate fasciculi which bind the fibula to the astragalus and calcaneum. To avoid confusion it is best to speak of the movements of the angle as dorsal and plantar flexion.

The *tarsal joints* resemble the carpal in being gliding articulations. There are two between the astragalus and calcaneum, and at these, inversion and eversion of the foot largely occur. The inner arch of the foot is maintained by a very important ligament called the *calcaneo-navicular* or *spring ligament;* it connects the sustentaculum tali of the calcaneum with the navicular, and upon it the head of the astragalus rests. When it becomes stretched, flat-foot results. The tarsal bones are connected by dorsal, plantar and interosseous ligaments. The *long* and *short calcaneo-cuboid* are plantar ligaments of special importance, and maintain the outer arch of the foot.

The joints of the foot closely resemble those of the hand, except that the tarso-metatarsal joint of the great toe is not saddle-shaped.

Comparative Anatomy. The anterior fasciculus of the external lateral ligament of the ankle is only found in Man, and is probably an adaptation to the erect position. In animals with a long foot, such as the Ungulates and the Kangaroo, the lateral ligaments of the ankle are in the form of an X, to give greater protection against lateral movement. In certain marsupials a fibro-cartilage is developed between the external malleolus and the astragalus, and its origin from the deeper fibres of the external

lateral ligament of the ankle can be traced. These animals have a rotatory movement of the fibula on its long axis, in addition to the hinge movement of the ankle.

DISEASES AND INJURIES

The affection of the joints of the human body by specific diseases is dealt with under various headings (*see* RHEUMATISM, etc.); in the present article the more direct forms of ailment are discussed. In most cases, disease starts either in the synovial lining or in the bone—rarely in the articular cartilage or ligaments. Often the disease begins after an injury. There are three principal types of injury: (1) sprain or strain, in which the ligamentous and tendinous structures are stretched or lacerated; (2) contusion, in which the opposing bones are driven forcibly together; (3) dislocation, in which the articular surfaces are separated from one another.

Sprains and Strains.—A *sprain* or *strain* of a joint means that as the result of violence the ligaments holding the bones together have been suddenly stretched or even torn. Since on the inner aspect the ligaments are lined by a synovial membrane, this is necessarily damaged. Small blood-vessels are also torn, and the joint may become full of blood. If bleeding does not take place the swelling is not immediate, but synovitis having been set up, serous effusion comes on sooner or later. Often local heat and pain accompany synovitis. In a healthy individual the effects of a sprain may quickly pass off, but in a rheumatic or gouty person obstinate chronic synovitis may remain, and in one with a tuberculous history may start serious disease of the joint. A sprain should, therefore, be treated with rest and prolonged supervision. In a person of health and vigour a sprained joint should be at once bandaged. Wide pieces of adhesive strapping, layer on layer, form a useful support and may be the only treatment needed. If the sprain is followed by much synovitis a plaster of paris or leather splint may be applied, complete rest being secured for the limb. Later on, blistering or even "firing" may be found advisable

Synovitis.—When a joint has been injured, slight or severe inflammation occurs in the damaged tissue. As a rule, it is the synovial membrane lining the fibrous capsule of the joint which first and chiefly suffers. Synovitis may, however, be due to causes other than mechanical injury, as when the interior of the joint is attacked by the micro-organisms of pyaemia (blood-poisoning), typhoid fever, pneumonia, rheumatism, gonorrhoea or syphilis. Under judicious treatment the synovitis generally clears up, but it may linger on and cause the formation of adhesions which may temporarily stiffen the joint; or it may, especially in tuberculous, pneumonic, septic or pyaemic infections, involve the cartilages, ligaments and bones in such serious changes as to destroy the joint, and possibly call for amputation.

The symptoms of synovitis include stiffness and tenderness in the joint Movements cause pain. Effusion of fluid takes place, and there is fullness in the neighbourhood. If the inflammation is advancing, and particularly if it is going on to suppuration, the skin over the joint is flushed and hot Especially is this the case if the joint is near the surface, as at the knee, wrist or ankle.

The treatment of an inflamed joint demands rest. This may be conveniently obtained by the use of a light splint, padding and bandages. Slight compression of the joint by a bandage aids absorption of the fluid. If the inflammation is extremely acute a warm fomentation or an ice-bag or an evaporating lotion will often give relief. As the inflammation is passing off, massage of the limb and of the joint will prove useful.

Chronic Disease of a Joint.—This may be the tailing off of an acute affection, and may eventually clear up. But if chronic disease lingers in the joint of a child or young person, the probability of its being tuberculous must be considered. In such a case prolonged and absolute rest with sunlight treatment (*see* HELIOTHERAPY) is necessary. As the disease clears up, the splint, if it has been used, may be gradually left off, but on the slightest indication of return of trouble the former restrictive measures must be again resorted to. Massage and gentle exercises may be given day by day, but there must be, as yet, no thought of "breaking down the stiffness." Many a joint has in such circumstances been wrecked by the manipulations of a "bone-setter."

Permanent Stiffness.—During the treatment of chronic joint disease, the question arises whether the joint will be left permanently stiff. If an inflamed joint is kept long on a splint it may eventually be found permanently stiff; but except from disuse and shortening of muscles, it is not the *rest* of the inflamed joint which causes the stiffness. The matter should be put thus: in tuberculous and other forms of chronic disease stiffness may ensue in spite of long-continued rest. It is the destructive disease, not the enforced rest, which causes it; for inflammation of a joint rest is absolutely necessary.

The causes of permanent stiffness are destructive changes wrought by the inflammation. In one case the synovial membrane is so far destroyed that the joint ever afterwards creaks at its work and easily becomes tired and painful. It is crippled but not destroyed. In another case the ligaments and cartilages are implicated as well as the synovial membrane, and when the disease clears up, only a small range of motion is left, which forcible flexion and other methods of vigorous treatment are unable materially to improve. In yet another case the inflammatory germs quickly destroy the soft tissues of the joint, and then invade the bones, and, the disease having at last come to an end, with or without an intervening period of abscess formation, the softened ends of the bones unite like the broken fragments in simple fracture. For this reason the surgeon places the limb in that position in which it will be most useful if the bony union should occur. Thus, the leg is kept straight and the elbow bent. If a joint is left stiff in an awkward and useless position its excision may be desirable. The cut ends of the bones are then treated as a fracture.

A stiff joint may remain as the result of long continued inflammation; the unused muscles are wasted and the joint in consequence looks large. Careful measurement, however, may show that it is not materially larger than its fellow. No progress being made under massage or gentle exercises, the surgeon may advise that the lingering adhesion be broken down under an anaesthetic, after which the function of the joint may quickly return.

These are the cases over which the "bone-setter" secures his greatest triumphs. A qualified practitioner may have been for months judiciously treating an inflamed joint by rest, and hesitates to flex suddenly the stiffened limb The "bone-setter" does not, and his manipulation here proves successful. But such vigorous treatment in other cases works irreparable damage and it is only instructed knowledge that can determine whether forcible movement of a stiff joint should or should not be undertaken.

Charcot's Disease.—This resembles rheumatoid arthritis (*q.v.*) in that it causes destruction of a joint and greatly deforms it. The deformity, however, comes on rapidly and without pain or tenderness. It is usually associated with the symptoms of locomotor ataxy, and depends upon disease of the nerves which preside over the nutrition of the joints. It is incurable.

Slipping of a Cartilage.—A loose cartilaginous body in the knee joint is apt to become caught in the hinge between the thigh-bone and the leg-bone, and by causing a sudden stretching of the ligaments of the joint to give rise to intense pain. When this happens the individual is liable to be thrown down as he walks, for it comes on with great suddenness. As a rule, the slipping of a cartilage first occurs as the result of a serious fall or of a sudden and violent action—often it happens when the man is "dodging" at football, the foot being firmly fixed on the ground and the body being violently twisted at the knee. After the slipping has occurred many times, the amount of swelling, distress and lameness may diminish with each subsequent slipping, and the individual may become somewhat reconciled to his condition, but the only satisfactory treatment is operation. The origin of these loose bodies is not known with certainty.

Wounds in Joints.—An accidental wound of a joint, as from a bullet or a fragment of shell or the blade of a knife, or a spike, is very serious, because of the risk of septic germs entering the synovial cavity at the time of injury. If the joint becomes thus infected there is great swelling with redness of the skin, and escape of blood-stained or purulent synovia. Absorption takes place of bacterial products and great constitutional disturbance arises. Blood-poisoning may thus threaten life, and in many cases amputation above the joint is the only course possible Owing to the great extent of its synovial membrane and the difficulty of drainage, wounds of the knee joint are particularly dangerous. If the joint be saved probably it will be stiff permanently.

Dislocation.—The ease with which the joint-end of a bone is dislocated varies with its form and structure, and with the position in which it happens to be placed when the violence is applied. The relative frequency of fracture of the bone and dislocation of the joint depends on the strength of the bones above and below the joint relatively to the strength of the joint itself. The strength of the various joints in the body is dependent upon either ligament or muscle, or upon the shape of the bones. In the hip, for instance, all three sources of strength are present; therefore in spite of the great leverage of the long thigh-bone, the hip is rarely dislocated. The shoulder, in order to allow of extensive movement, has no osseous or ligamentous strength; it is, therefore, frequently dislocated. The wrist and ankle are rarely dislocated; as the result of violence at the wrist the radius gives way, at the ankle the fibula, these bones being relatively weaker than the respective joints. The wrist owes its strength to ligaments, the elbow and the ankle to the shape of the bones. The symptoms of a dislocation are distortion and limited movement, with absence of the grating sensation felt in fracture when the broken ends of the bone are rubbed together. The treatment consists in reducing the dislocation, and the sooner this replacement is effected the better—the longer the delay the more difficult it becomes to put things right. After a variable period, depending on the nature of the joint and the age of the person, it may be impossible to replace the bones. The result will be a more or less useless joint. The administration of an anaesthetic, by relaxing the muscles, greatly assists the operation of reduction The length of time that a joint has to be kept quiet after it has been restored to its normal shape depends on its form, but, as a rule, early movement is advisable. But when by the formation of the bones a joint is weak, as at the outer end of the collarbone, and at the elbow-end of the radius, prolonged rest for the joint is necessary or dislocation may recur.

Congenital Dislocation at the Hip.—Possibly as a result of faulty position of the subject during intrauterine life, the head of the thigh-bone leaves, or fails throughout to occupy, its normal situation on the haunch-bone. The defect, which is a very serious one, is probably not discovered until the child begins to walk, when its peculiar rolling gait attracts attention The want of fixation at the joint permits of the surgeon thrusting up the thigh-bone, or drawing it down in a painless, characteristic manner.

The first thing to be done is to find out by means of the X-rays whether a socket exists into which, under an anaesthetic, the surgeon may fortunately be enabled to lodge the end of the thigh-bone. If this offers no prospect of success, there are three courses open: first, to try under an anaesthetic to manipulate the limb until the head of the thigh-bone rests as nearly as possible in its normal position, and then to endeavour to fix it there by splints, weights and bandaging until a new joint is formed; second, to cut down upon the site of the joint, to scoop out a new socket in the haunch-bone, and thrust the end of the thigh-bone into it, keeping it fixed there as just described; and third, to allow the child to run about as it pleases, merely raising the sole of the foot of the short leg by a thick boot, so as to keep the lower part of the trunk fairly level, lest secondary curvature of the spine ensue. The first and second methods demand many months of careful treatment in bed. The ultimate result of the second is so often disappointing that the surgeon now rarely advises its adoption. But if, under an anaesthetic, as the result of skilful manipulation the head of the thigh-bone can be made to enter a more or less rudimentary socket, the case is worth all the time, care and attention bestowed upon it. Sometimes the results of prolonged treatment are so good that the child eventually is able to walk with scarcely a limp. But a vigorous attempt at placing the head of the bone in its proper position should be made in every case.

JOINT TENANCY, the tenancy of an estate by two or more persons wherein those participating are subject to the same conditions of interest and possession and are individually responsible in respect of the tenure and survivorship of the property; such joint tenancy being only dissolved by partition. The purchaser of the share of a joint tenant is not entitled to resell and must accept the terms of the tenancy in common with the surviving partners. A joint tenancy is regarded by law as a single person and those concerned are jointly responsible for any legal proceedings in connection with the estate Moreover, when one of the joint tenants dies, his share, instead of going to his own heirs, lapses to his co-tenant's by survivorship This tenancy is distinguished from *tenancy in common* under which the property of each co-tenant passes to the heirs and not to the surviving tenants. (*See* PARTITION; JOINT.)

In the United States joint tenancies have been looked upon with disfavour. Statutes have reversed the common law rule whereby a grant to two or more was supposed to create a joint tenancy, substituting the presumption that a tenancy in common is created unless a contrary intention appear upon the face of the grant. Some States have abolished the right of survivorship in the case of joint tenants, prescribing that no such right shall exist unless specifically contained in the grant A few States have abolished joint tenancy completely, transforming such estates into tenancies in common.

JOINTURE, in law, a provision for a wife after the death of her husband. As defined by Sir E. Coke, it is "a competent livelihood of freehold for the wife, of lands or tenements, to take effect presently in possession or profit after the death of her husband, for the life of the wife at least, if she herself be not the cause of determination or forfeiture of it." (Co. Litt. 36b) It must have been made before marriage and be expressed to her in lieu of dower (*q.v.*).

JOINTWORM, the name applied in the United States to the larvae of hymenopterous gall-forming insects of the genus *Isosoma*, two of which, *I. triciti* and *I. hordei*, are important parasites of wheat and barley respectively, causing swellings in the stems near or on the joints (whence the name). The adult insects are small flies, about $\frac{1}{8}$ in. long and black in colour. (*See* ENTOMOLOGY, PESTS, HYMENOPTERA)

JOINVILLE, the name of a French noble family of Champagne, which traced its descent from Étienne de Vaux, who lived at the beginning of the 11th century. Geoffroi III (d. 1184), sire de Joinville, who accompanied Henry the Liberal, count of Champagne, to the Holy Land in 1147, received from him the office of seneschal, and this office became hereditary in the house of Joinville. In 1203 Geoffroi V, sire de Joinville, died while on a crusade, leaving no children. He was succeeded by his brother Simon, who married Beatrice of Burgundy, daughter of the count of Auxonne, and had as his son Jean (*q.v.*), the historian and friend of St. Louis. Henri (d. 1374), sire de Joinville, the grandson of Jean, became count of Vaudémont, through his mother, Marguerite de Vaudémont. His daughter, Marguerite de Joinville, married in 1393 Ferry of Lorraine (d 1415), to whom she brought the lands of Joinville. In 1552, Joinville was made into a principality for the house of Lorraine Mlle. de Montpensier, the heiress of Mlle de Guise, bequeathed the principality of Joinville to Philip, duke of Orleans (1693). The castle, which overhung the Marne, was sold in 1791 to be demolished The title of prince de Joinville (*q.v.*) was given later to the third son of King Louis Philippe. Two branches of the house of Joinville have settled in other countries: one in England, descended from

Geoffroi de Joinville, sire de Vaucouleurs, and brother of the historian, who served under Henry III. and Edward I.; the other, descended from Geoffroi de Joinville, sire de Briquenay, and son of Jean, settled in the kingdom of Naples.

See J. Simonnet, *Essai sur l'histoire et la généalogie des seigneurs de Joinville* (1875); H. F. Delaborde, *Jean de Joinville et les seigneurs de Joinville* (1894). (M. P; X.)

JOINVILLE, FRANÇOIS FERDINAND PHILIPPE LOUIS MARIE, PRINCE DE (1818–1900), third son of Louis Philippe, duc d'Orléans, afterwards king of the French, was born at Neuilly on Aug. 14, 1818. He was educated for the navy, and became lieutenant in 1836. In 1840 he was entrusted with the removal of the remains of Napoleon from St. Helena to France. In 1844 he conducted naval operations on the coast of Morocco, bombarding Tangier and occupying Mogador, and was recompensed with the grade of vice-admiral. In the following year he published in the *Revue des deux mondes* an article on the deficiencies of the French navy which attracted attention. By his hostility to the Guizot ministry, by an affectation of ill-will towards Great Britain, he gained considerable popularity. The revolution of 1848 nevertheless swept him away with the other Orleans princes. He hastened to quit Algeria, where he was then serving, and took refuge at Claremont, in Surrey, with the rest of his family. In 1861, upon the breaking out of the American Civil War, he proceeded to Washington, and placed the services of his son and two of his nephews at the disposal of the United States government. Otherwise, he was little heard of until the overthrow of the Empire in 1870, when he re-entered France, only to be promptly expelled by the government of national defence. Returning incognito, he joined the army of General d'Aurelle de Paladines, under the assumed name of Colonel Lutherod, fought bravely before Orleans, and afterwards, divulging his identity, formally sought permission to serve. Gambetta, however, arrested him and sent him back to England. In the National Assembly, elected in February 1871, the prince was returned by two departments and elected to sit for the Haute Marne, but, by an arrangement with Thiers, did not take his seat until the latter had been chosen president of the provincial republic. He resigned his seat in 1876. In 1886 the provisions of the law against pretenders to the throne deprived him of his rank as vice-admiral, but he continued to live in France; he died in Paris on the 16th of June 1900. He had married in 1843 the princess Francisca, sister of Pedro II., emperor of Brazil, and had a son, the duc de Penthièvre, also brought up to the navy, and a daughter Françoise, who married the duc de Chartres.

The prince de Joinville wrote *Essais sur la marine française* (1853); *Études sur la marine* (1859 and 1870); *La Guerre d'Amerique, campagne du Potomac* (1862 and 1872); *Encore un mot sur Sadowa* (Brussels, 1868); and *Vieux souvenirs* (1894).

JOINVILLE, JEAN, SIRE DE (1224–1319), was the second great writer of history in Old French, and occupies the interval between Villehardouin and Froissart. He was the head of a noble family of the province of Champagne (*see* JOINVILLE, p 133). His first appearance at the king's court was in 1241, on the occasion of the knighting of Louis IX.'s younger brother Alphonse. Seven years afterwards he took the cross. The crusade, in which he distinguished himself equally by wisdom and prowess, taught his practical spirit several lessons. He returned with the king in 1254. He was in the intervals of residence on his own fief a constant attendant on the court, but he declined to accompany the king on his last and fatal expedition. In 1282 he was one of the witnesses whose testimony was formally given at St. Denis in the matter of the canonization of Louis, and in 1298 he was present at the exhumation of the saint's body.

It was not till even later that he began his history, the occasion being a request from Jeanne of Navarre, the wife of Philippe le Bel. The great interval between his experiences and the period of the composition of his history is important for the due comprehension of the latter. Some years passed before the task was completed in Oct. 1309. Jeanne was by this time dead, and Joinville presented his book to her son Louis. This original ms. is now lost. Great as was his age, Joinville had not ceased to be actively loyal, and in 1315 he complied with the royal summons to bear arms against the Flemings. He was at Joinville again in 1317, and on July 11, 1319, he died, leaving his possessions and his position as seneschal of Champagne to his second son Anselm. He was buried in the neighbouring church of St. Laurent.

The Writer.—Joinville's *Histoire de Saint Louis* bears the vivid impress of the writer's personality. It does not, like Villehardouin's account, give us a picture of the temper and habits of a whole order or cast of men during an heroic period of human history; it falls far short of Froissart in vivid portrayal of the picturesque and external aspects of social life; but it is a more personal book than either. The writer was a very old man telling of circumstances which occurred in his youth. He evidently thinks that the times have not changed for the better—what with the frequency with which the devil is invoked in modern France, and the sinful expenditure common in the matter of embroidered silk coats. But this laudation of times past concentrates itself almost wholly on the person of the sainted king whom, while with feudal independence he had declined to swear fealty to him, "because I was not his man," he evidently regarded with an unlimited reverence. His age, too, while garrulous to a degree, seems to have been free from the slightest taint of boasting. No one perhaps ever took less trouble to make himself out a hero than Joinville. He is constantly admitting that on such and such an occasion he was terribly afraid; he confesses without the least shame that, when one of his followers suggested defiance of the Saracens and voluntary death, he (Joinville) paid not the least attention to him; nor does he attempt to gloss in any way his refusal to accompany St. Louis on his unlucky second crusade, or his invincible conviction that it was better to be in mortal sin than to have the leprosy, or his decided preference for wine as little watered as might be, or any other weakness. Yet he was a sincerely religious man, as the curious *Credo*, written at Acre and forming a kind of anticipatory appendix to the history, sufficiently shows.

His History.—Joinville's history is divided into three parts, dealing with the character and conduct of the hero, Saint Louis; the second with his acts and deeds in Egypt, Palestine, etc, as Joinville knew them; and his subsequent life and death. Of these the last is very brief, the first not long; the middle constitutes the bulk of the work. The contents of the first part are chiefly stories showing the valour of Louis, his piety, his justice, his personal temperance, and so forth.

The second part enters upon the history of the crusade itself, and tells how Joinville pledged all his land save so much as would bring in a thousand livres a year, and started with a brave retinue of nine knights (two of whom besides himself wore bannerets), and shared a ship with the sire d'Aspremont, leaving Joinville without raising his eyes, "pour ce que le cuer ne me attendroisist du biau chastel que je lessoie et de mes deux enfans"; how they could not get out of sight of a high mountainous island (Lampedusa or Pantellaria) till they had made a procession round the masts in honour of the Virgin; how they reached first Cyprus and then Egypt; how they took Damietta, and then entangled themselves in the Delta. Bad generalship, which is sufficiently obvious, unwholesome food—it was Lent, and they ate the Nile fish which had been feasting on the carcases of the slain—and Greek fire did the rest, and personal valour was of little avail, not merely against superior numbers and better generals, but against dysentery and a certain "mal de l'ost" which attacked the mouth and the legs, a curious human version of a well-known bestial malady. After ransom Acre was the chief scene of Louis's stay in the East, and here Joinville lived in some state, and saw not a few interesting things, hearing besides much gossip as to the affairs of Asia from ambassadors, merchants and others. At last they journeyed back again to France, not without considerable experiences of the perils of the deep, which Joinville tells with a good deal of spirit. The remainder of the book is very brief. Some anecdotes of the king's "justice," his favourite and distinguishing attribute during the 16 years which intervened between the two crusades, are given; then comes the story of Joinville's own refusal to join the second expedition, a refusal which bluntly alleged the harm done by the king's men who

stayed at home to the vassals of those who went abroad as the reason of Joinville's resolution to remain behind. The death of the king at Tunis, his *enseignement* to his son, and the story of his canonization complete the work.

The book in which this interesting story is told has had a literary history. It seems to have undergone very much the same fate as that which befell the originals of the first two volumes of the *Paston Letters* which Sir John Fenn presented to George III. Several royal library catalogues of the 14th century are known, but in none of these does the *Histoire de St. Louis* appear. It does appear in that of Charles V. (1411), but apparently no copy even of this survives. A copy at first or second hand which belonged to the fiddler king René of Provence in the 15th century was used for the first printed edition in 1547. Other editions were printed from other versions, all evidently posterior to the original. But in 1741 the well-known mediaevalist, La Curne de St. Palaye, found at Lucca a manuscript of the 16th century, evidently representing an older text than any yet printed. Three years later a 14th century copy was found at Brussels; this is the standard manuscript authority for the text of Joinville, and appears in the well-known collection of Michaud and Poujoulat as well as in that of Buchon, and in a careful and useful separate edition by Francisque Michel. The modern science of critical editing, however, which applies to mediaeval texts the principles long recognized in editing the classics, has discovered in the 16th century ms. and still more in the original miscellaneous works of Joinville, the letters, deeds, etc., already alluded to, the materials for what we have already called a conjectural restoration, which is not without its interest, though perhaps it is possible for that interest to be exaggerated

For general readers Buchon's or Michaud's editions of Joinville will suffice amply. Both include translations into modern French, which are hardly necessary, for the language is easy. Natalis de Wailly's editions of 1868 and, particularly, 1874 are critical editions, embodying the modern research connected with the text, the value of which is considerable, but contestable. They are accompanied by ample annotations and appendices, with illustrations of great merit and value. Much valuable information appeared for the first time in the edition of F. Michel (1859). To these may be added A. F. Didot's *Études sur Joinville* (1870) and H. F. Delaborde's *Jean de Joinville* (1894). A good sketch of the whole subject will be found in Aubertin's *Histoire de la langue et de la littérature françaises au moyen âge*, ii.; *see* also Gaston Paris, *Litt. française au moyen âge* (1893), and A. Debidour, *Les Chroniqueurs* (1888). There are English translations by T. Johnes (1807), J. Hutton (1868), Ethel Wedgwood (1906), and (more literally) Sir F. T. Marzials ("Everyman's Library," 1908).

JOIST. In building, one of a row or tier of beams set edgewise from one wall or partition to another and carrying the flooring boards on the upper edge and the laths of the ceiling on the lower. In double flooring there are three series of joists, *binding, bridging,* and *ceiling* joists. The binding joists are the real support of the floor, running from wall to wall, and carrying the bridging joists above and the ceiling joists below (*see* CARPENTRY). The Mid. Eng. form of the word was *giste* or *gyste,* and was adapted from O.Fr. *giste,* modern *gîte,* a beam supporting the platform of a gun. By origin the word meant that on which anything lies or rests (*gésir,* to lie; Lat. *jacere*)

The English word "gist," in such phrases as "the gist of the matter," the main or central point in an argument, is a doublet of joist. According to Skeat, the origin of this meaning is an O Fr. proverbial expression, *Je scay bien où gist le lièvre,* I know well where the hare lies; *i.e.,* I know the real point of the matter.

JÓKAI, MAURUS (1825–1904), Hungarian novelist, was born at Rév-Komárom on Feb. 19, 1825. His father, Joseph, was a member of the Asva branch of the ancient Jókay family; his mother was a scion of the noble Pulays. The lad was educated at Pressburg, and then at the Calvinist college at Pápá, where he first met Petöfi, Alexander Kozma, and other brilliant young men who subsequently became famous. Destined by his family to the legal profession, he studied law assiduously, and, as an advocate was successful in winning his first case. But the work was uncongenial to him, and, encouraged by the encomiums pronounced by the Hungarian Academy upon his first play, *Zsidó fiu* ("The Jew Boy"), he went to Pest in 1845 with a ms. romance in his pocket. He was introduced by Petöfi to literary society, and the same year his romance *Hétköznapok* ("Working Days"), appeared, first in the columns of the *Pesti Dievatlap,* and subsequently, in 1846, in book form. *Hétköznapok,* despite its crudities and extravagances, was recognized by the leading critics as a work of genius, and in the following year Jókai was appointed the editor of *Életképek,* the leading Hungarian literary journal. On the outbreak of the revolution of 1848 the young editor enthusiastically adopted the national cause, and served it with both pen and sword.

As a moderate Liberal he set his face steadily against all excesses; but, carried away by the Hungarian triumphs of April and May 1849, he supported Kossuth's deposition of the Hapsburg dynasty, and though, after the war was over, his life was saved by an ingenious stratagem of his wife, the great tragic actress, Roza Benke Laborfalvi, whom he had married on Aug. 29, 1848, he lived for the next fourteen years the life of a political suspect During this period he devoted himself to the rehabilitation of the proscribed and humiliated Magyar language, composing in it no fewer than thirty great romances, besides innumerable volumes of tales, essays, criticisms and facetiae. This was the period of such masterpieces as *Erdély Arany Kord* ("The Golden Age of Transylvania"), with its sequel *Törökvilág Magyarországon* ("The Turks in Hungary"), *Egy Magyar Nábob* ("A Hungarian Nabob"), *Karpáthy Zoltán, Janicsárok végnapjai* ("The Last Days of the Janissaries"), *Szomorú napok* ("Sad Days"). On the re-establishment of the Hungarian constitution by the Composition of 1867, Jókai took an active part in politics. As a supporter of the Tisza administration, both in parliament, where he sat continuously for more than twenty years, and as the editor of the government organ, *Hon,* founded by him in 1863, he became a power in the state, though he never took office. In 1897 the emperor appointed him a member of the upper house, where he distinguished himself in debate.

Yet it was to literature that he devoted most of his time, and his productiveness after 1870 was stupendous, amounting to some hundreds of volumes. None of this work is slipshod, and the best of it deserves to endure. Amongst the finest of his later works may be mentioned the unique and incomparable *Az arany ember* ("A Man of Gold")—translated into English under the title of *Timar's Two Worlds*—and *A tengerzemu hölgy* ("Eyes like the Sea"), the latter of which won the Academy's prize in 1890 He died at Budapest on May 5, 1904; his wife having predeceased him in 1886. Jókai was an arch-romantic, with a perfervid Oriental imagination, and humour of the purest, rarest description

See Névy László, *Jókai Mór;* Hegedúsis Sándor, *Jókai Mórról;* H. W. Temperley, "Maurus Jokai and the Historical Novel," *Contemporary Review* (July 1904); and the biographies by F. Zsigmond (1924), and T. Gál (1925).

JOKJAKARTA or **JOKYAKARTA** (Dutch *Djokjakarta*), a residency in Central Java, Dutch East Indies, area 3,145 sq km., also the name of the capital. It is triangular in form, with a long coast-line, fronting the Indian ocean, and extends inland to the neighbourhood of Gunong Merapi, being bounded on the E. by Surakarta residency and on the W. by Kedu. Jokjakarta is mountainous in the north-west and there are hills (Kidul) along by the coast in the east, but between these regions, in the plains, well watered by the rivers Praga and Upak, are some of the most fertile and well-cultivated lands in Java, famed for their crops of tobacco and sugar-cane, whilst rice flourishes and other food plants do well; there are also small teak forests. Coal has been found in the Kidul hills, but is not worked; manganese is known, also marble, in coloured varieties. The residency is one of the most thickly populated in the country; 1,398,894, including 15,100 Europeans and Eurasians, and only 7,769 foreign Asiatics, the natives being almost entirely Javanese, mostly living in villages, of which Wonosari and Brosot are the largest. Jokjakarta is also a native Principality and has a Javanese ruler, who is known as the Sultan His power is nominal, being subject to that of the Dutch Resident, but he is still the sovereign lord of the land and derives revenue therefrom for himself, his vassals and officials, has some judicial powers, great privileges and a large official salary. He has no rights, however, over the teak forests, the opium trade, the edible birds-nest cliffs or the coinage. Another native prince, Paku Alam, retains certain privileges. Jokjakarta is (with Surakarta) the only portion of Java where any semblance of native rule is maintained and where the interesting manners and customs of the Javanese of former days are still largely preserved From the earliest days of European

settlements in Java, Jokjakarta was a thorn in the side of first the Dutch, then the British under Raffles, and again the Dutch. (*See* JAVA.) The residency is well served with roads in the south-west and centre, but communications are poor in the difficult hilly country in the south-east. The railway from Batavia to Surabaya runs through Jokjakarta, the principal station being the capital (which has a population of 109,932; nearly 7,000 Europeans and Eurasians), and Jokjakarta, the city, is connected by rail with Semarang, via Magelang. Pleasantly situated, about 20 m. from the sea, Jokjakarta is the seat of the Dutch Resident and the Sultan, who has an imposing palace, situated within the *Kraton*, an extensive citadel, a mile square, in the heart of the city, and here a native court is maintained with much ceremonial. The *Kraton* is strictly private and may be visited only by permission, at certain times, on certain days. Prince Paku Alam also has his palace in Jokjakarta. The streets of Jokjakarta are wide, well-kept, and some tree-planted, and apart from the old Dutch town and fort, there are many quite imposing business premises, shops and public buildings in European style, and a river with steep banks, flowing through its midst, lends to it a very picturesque touch. There is an extremely interesting native market-place and bazaar, famed throughout Java; also some ornamental gardens (Taman Sari), an Oriental Trianon, designed by a Portuguese in mid-18th century for Sultan Mangku Bumi, now in a state of ruin. Four miles S.E. of Jokjakarta is Pasar Gedeh, a large village famed for its craftsmen in gold and silver, copper-work and leather carving, and here are graves of some of the Sultans of Jokjakarta, dated 1509–79 and decadent in style; others are to be seen (together with those of the Sultans of Surakarta) at Imogiri, some 6 m. further south. Permission is needed to visit either. Jokjakarta is the best-known centre for visiting Boro Budur and Prambanam, and from it there is easy access to the coast, where, at various points, Nyabi Kidul, Rongkob and Selarong, there are sacred grottoes, and at Parang Tritis, a popular seaside resort.

(E. E. L.)

JOLA, a round-faced, coarse-featured people with low foreheads and filed teeth closely related to the Serer, and living between the Lower Gambia and Lower Kasamansa The principal tribes are Felup and Fogni. The Felup recognize a paramount chief (who must not leave his own territory or look upon the sea), elected by the notables. The Jola practise tillage and cattle-rearing, and irrigate the rice-fields. The dead, after exposure for three days, are buried near the house.

See Dr. Lasnet, *Une mission au Sénégal* (1900).

JOLIET, LOUIS (1645–1700), American explorer, was born at Quebec, Canada, on Sept 21, 1645 He was selected by the French governor, Frontenac, to ascertain the direction and mouth of the Mississippi river, several branches of which French traders had already visited near their headwaters. He embarked with Father Marquette and five other Frenchmen at Green Bay, Wis., in June 1673, ascended the Fox river, portaged to the Wisconsin and descended that river to its meeting with the Mississippi, the upper reaches of which they were the first white men to see. Before turning back they followed the Mississippi southward beyond the mouth of the Arkansas river. The return journey to Lake Michigan was made by the Illinois-Chicago portage route. When near Montreal Joliet's canoe was overturned and his journal and papers lost He wrote a short account from memory which agrees with Father Marquette's longer recital in his *Voyage et découverte de quelques pays et Nations de l'Amérique Septentrionale* (1681 and later reprints). Joliet later travelled to Hudson Bay and to Labrador in the interest of the fur trade and fisheries.

See also L. P. Kellogg, *The French Régime in the Northwest* (1925); F. Parkman, *La Salle or the Discovery of the Great West* (1869); and E. Gagnon, *Louis Joliet, découvreur du Mississippi* (1913).

JOLIET, a city of Illinois, U.S.A., 37m. S.W. of Chicago, on the Des Plaines river and the Illinois and Michigan canal; the county seat of Will county; on the Chicago and Alton, the Rock Island and the Santa Fe railways, and for freight the outer belt line of Chicago. The population was 38,442 in 1920 (22% foreign-born white), and was estimated by the census bureau at 41,900 in 1928. Joliet is on the route of the Great Lakes to Gulf Deep Waterway, now (1928) under construction. Falls in the river supply power for extensive manufacturing industries. The output of the factories within the city in 1925 was estimated at $16,644,767, and there are large plants just outside the city limits. There are gas works supplying 63 towns, railroad shops, coke ovens, steel mills, wall-paper factories, and numerous smaller industries. Coal is mined within 20m., and there are quarries of famous building limestone near by. The assessed valuation of property in 1926 was $47,731,100. The Northern Illinois penitentiary is situated here. The early settlement, dating from 1833, was called Juliet, after the daughter of one of the founders. In 1845 it was renamed after Louis Joliet, the French-Canadian explorer, who had visited the site in 1673. A city charter was secured in 1852.

JOLLY BALANCE is a device for determining the specific gravity (relative density) of solids and liquids. Its operation is based on (*a*) Archimedes's principle; *i.e.*, that a body immersed in a fluid is buoyed up by a force equal to the weight of the fluid displaced, and (*b*), on Hooke's law; *i.e.*, that in elastic bodies and within certain limits the strain is proportional to stress, or that displacement is proportional to displacing force. In its usual form the Jolly balance consists of a long, delicate, helical spring suspended by one end in front of a uniformly graduated scale. To the lower end of the spring is attached a weight pan, and immediately below that a small wire basket. At some convenient point, usually just above the weight pan, an index is provided which can be read with reference to the scale, which is usually graduated on the surface of a mirror to avoid parallax in reading the position of the index. A movable platform for supporting a small vessel of water is provided which can be clamped at any desired height along the vertical scale and immediately below the wire basket attached to the lower end of the spring. The point of suspension of the upper end of the spring is also usually movable vertically, as a means of increasing the range of the balance and as an aid in adjusting the index to a convenient zero setting.

In determining the specific gravity of a solid a zero reading of the position of the index is taken with the wire basket immersed in water up to a definite point on its suspension wire, care being taken to see that the point of suspension of the helical spring is such as to permit the necessary extension of the spring during subsequent steps of the determination. Let this reading be W_1. Next, place in the weight pan the specimen, the specific gravity of which is to be determined, lower the movable platform carrying the vessel of water until the water surface reaches the same point on the suspension wire as before, and again read the index. Let W_2 represent this reading. W_2-W_1, which represents the extension of the spring, may be taken as the weight of the specimen in air. Then place the specimen in the wire basket, immersed in water, and again adjust the height of the movable platform until the water surface is at the original height on the suspension wire above the basket, and again read the position of the index. Let this reading be W_3. W_2-W_3, which represents the difference in the extension of the spring when the specimen is immersed in air and in water, respectively, may be taken as the loss of weight in water. Then specific gravity

$$= \frac{\text{weight in air}}{\text{loss of weight in water}} = \frac{W_2-W_1}{W_2-W_3}$$

The specific gravity so obtained is the apparent specific gravity in air, in terms of water at the temperature of the determination. In order to determine the specific gravity of a liquid, the same procedure is followed except that the "loss of weight in water" and the "loss of weight in the unknown liquid" are determined with any convenient specimen of a solid not affected by either liquid. The specific gravity of the unknown liquid is the ratio of the loss of weight in the unknown liquid to the loss of weight in water. (*See* also BALANCE.) (H. W. BEA.)

JOLO, a municipality (with 14 *barrios* or districts), port of entry, and capital of the Sulu Province (which consists of the islands of the Sulu Archipelago), is on the north-west coast of the island of Jolo, 540 m. from Manila. Pop. (1918) 5,810. Jolo has an active trade with Zamboanga, Borneo and Singapore and the

pearling fleet has its chief centre here. An excellent Government dock has been built here. Carabao, cattle and horses are raised on the island of Jolo and exported through this port. The climate is moist and warm, for Jolo is but slightly more than 6° from the equator. In 1918 there were 13 manufacturing establishments with output valued at 105,400 pesos. There were three schools (all public). Jolo was founded long before the Spaniards reached the Philippines, and was, in fact, a place of considerable importance when Cebu was still an insignificant settlement. Its inhabitants together with those of the entire region, were converted to the Mohammedan religion in the XIV. century, and the town has long been the Mohammedan capital of the region, the spiritual (and formerly the temporal) jurisdiction of the sultan reaching even beyond the confines of the Philippines into Borneo. Hostilities between the Spaniards and the Moros centring at Jolo were almost continuous during most of the Spanish occupation.

JOLY DE LOTBINIÈRE, SIR HENRI GUSTAVE (1829–1908), Canadian politician, was born at Epernay in France on Dec. 5, 1829. Henri Gustave adopted the name of his mother's family, Lotbinière, in 1888, under a statute of the province of Quebec. He was educated in Paris, and called to the bar of lower Canada in 1858. At the general election of 1861 he was elected to the house of assembly of the province of Canada as Liberal member for the county of Lotbinière, which county 1867 to 1874 he represented in the House of Commons, Ottawa, and in the legislative assembly, Quebec. Joly was opposed to confederation. In 1878 he was called by Luc Letellier de St. Just, lieutenant-governor of Quebec, to form an administration, which was defeated in 1879, and until 1883 he was leader of the opposition. During his brief administration he adopted a policy of retrenchment, and endeavoured to abolish the legislative council. In 1885, as a protest against the attitude of his party towards Louis Riel, who was tried and executed for high treason, he retired from public life. But at the general election of 1896 he was returned as member for the county of Portneuf. He had already in 1895 been created K C M G. On the formation of Sir Wilfrid Laurier's administration he accepted the office of controller of inland revenue, and a year later he became a privy councillor, as minister of inland revenue. From 1900 to 1906 he was lieutenant-governor of British Columbia. He died on Nov. 17, 1908.

JOMINI, ANTOINE HENRI, Baron (1779–1869), general, was born on March 6, 1779, at Payerne in the canton of Vaud, Switzerland He wished for a military life; for some time he was a clerk in a Paris banking-house, until the outbreak of the Swiss revolution At the age of nineteen he was appointed to a post on the Swiss headquarters staff, and when twenty-one commanded a battalion At the peace of Lunéville in 1801 he returned to business life in Paris, where he devoted himself to the *Traité des grandes opérations militaires,* which was published in 1804–1805. Introduced to Marshal Ney, he served in the campaign of Austerlitz as a volunteer aide-de-camp on Ney's personal staff. In December 1805 Napoleon made him a colonel in the French service. Ney thereupon made him his principal aide-de-camp. In 1806 Jomini published his views on the impending war with Prussia, and this, along with his knowledge of Frederick the Great's campaigns, led Napoleon to attach him to his own headquarters. He was present with Napoleon at the battle of Jena, and at Eylau won the cross of the Legion of Honour. After the peace of Tilsit he was made chief of the staff to Ney, and created a baron. In the Spanish campaign of 1808 he gave the marshal much good advice, but Jomini quarrelled with his chief, and was left at the mercy of Berthier, the emperor's chief of staff. He had already been invited to enter the Russian service, but Napoleon compelled him to remain in the service as general of brigade. For some years thereafter Jomini held both a French and Russian commission, with the consent of both sovereigns. When war between France and Russia broke out, he escaped from his dilemma by taking a command on the line of communication. He was thus engaged when the seat of war shifted to central Germany. He rejoined Ney, took part in the battle of Lützen and, as chief of the staff of Ney's group of corps, distinguished himself at the battle of Bautzen, and was recommended for the rank of general of division. Berthier, however, had him arrested for failing to supply certain returns that had been called for.

How far Jomini was held responsible for certain misunderstandings which frustrated Ney's hopes (*see* Bautzen) there is no means of knowing. But the pretext for censure was trivial and baseless, and during the armistice Jomini entered the Russian service. This was regarded by Napoleon as going over to the enemy. Jomini had indeed for years held a dormant commission in the Russian army, had declined to take part in the invasion of Russia in 1812, and was a Swiss and not a Frenchman He withdrew from the Allied Army in 1814 when the violation of Swiss neutrality was inevitable. Apart from love of his own country, the desire to study, to teach and to practise the art of war was his ruling motive. At the critical moment of the battle of Eylau he exclaimed, "If I were the Russian commander for two hours!" On joining the allies he became lieutenant-general and aide-de-camp to the tsar, and rendered important assistance during the German campaign. He declined as a Swiss patriot and as a French officer to take part in the passage of the Rhine at Basel and the subsequent invasion of France.

In 1815 he was with the emperor Alexander in Paris, and attempted in vain to save the life of his old commander Ney. This almost cost him his position in the Russian service, but he succeeded in making head against his enemies, and took part in the congress of Vienna. Resuming his post in the Russian army, he was about 1823 made a full general, and until his retirement in 1829 he was principally employed in the military education of the tsarevich Nicholas (afterwards emperor) and in the organization of the Russian staff college, which was opened in 1832 In 1828 he was employed in the field in the Russo-Turkish War, and at the siege of Varna he was given the grand cordon of the Alexander order. This was his last active service. In 1829 he settled at Brussels where he chiefly lived for the next thirty years.

In 1853, after trying without success to bring about a political understanding between France and Russia, Jomini was called to St. Petersburg to act as a military adviser to the tsar during the Crimean War. He returned to Brussels on the conclusion of peace in 1856 and some years afterwards settled at Passy near Paris. He was busily employed up to the end of his life in writing treatises, pamphlets and open letters on subjects of military art and history, and in 1859 he was asked by Napoleon III. to furnish a plan of campaign in the Italian War. One of his last essays dealt with the war of 1866 and the influence of the breech-loading rifle, and he died at Passy on March 24, 1869, only a year before the Franco-German War. Thus one of the earliest of the great military theorists lived to speculate on the tactics of the present day.

Amongst his numerous works the principal, besides the *Traité,* are: *Histoire critique et militaire des campagnes de la Révolution* (1806; new ed. 1819–24); *Vie politique et militaire de Napoléon racontée par lui-même* (1827) and, perhaps the best known of all his publications, the theoretical *Précis de l'art de la guerre* (1836).

See Ferdinand Lecomte, *Le Général Jomini, sa vie et ses écrits* (1861; new ed 1888); C. A. Saint-Beuve, *Le Général Jomini* (1869); A. Pascal, *Observations historiques sur la vie, &c., du général Jomini* (1842).

JOMMELLI, NICCOLO (1714–1774), Italian composer, was born at Aversa near Naples on Sept. 10, 1714. His first opera, *L'Errore amoroso,* was successfully produced at Naples (under a pseudonym) when he was only twenty-three Three years afterwards he went to Rome to bring out two new operas, and thence to Bologna, where he profited by the advice of Padre Martini, one of the greatest contrapuntists of his age. In 1748 he went to Vienna, where one of his finest operas, *Didone,* was produced. Three years later he returned to Italy, and in 1753 he obtained the post of *Kapellmeister* to the duke of Württemberg at Stuttgart. Here he wrote many more operas and adjusted his style so completely to German taste that when, after an absence of fifteen years, he returned to Naples, his countrymen hissed two of his operas off the stage, and he retired in consequence to his native village He died at Naples on Aug 25, 1774, his last composition being the celebrated *Miserere,* a setting for two female voices of Saverio Mattei's Italian paraphrase of Psalm li. Jommelli is one

settlements in Java, Jokjakarta was a thorn in the side of first the Dutch, then the British under Raffles, and again the Dutch. (*See* JAVA.) The residency is well served with roads in the south-west and centre, but communications are poor in the difficult hilly country in the south-east. The railway from Batavia to Surabaya runs through Jokjakarta, the principal station being the capital (which has a population of 109,932; nearly 7,000 Europeans and Eurasians), and Jokjakarta, the city, is connected by rail with Semarang, via Magelang. Pleasantly situated, about 20 m. from the sea, Jokjakarta is the seat of the Dutch Resident and the Sultan, who has an imposing palace, situated within the *Kraton*, an extensive citadel, a mile square, in the heart of the city, and here a native court is maintained with much ceremonial. The *Kraton* is strictly private and may be visited only by permission, at certain times, on certain days. Prince Paku Alam also has his palace in Jokjakarta. The streets of Jokjakarta are wide, well-kept, and some tree-planted, and apart from the old Dutch town and fort, there are many quite imposing business premises, shops and public buildings in European style, and a river with steep banks, flowing through its midst, lends to it a very picturesque touch. There is an extremely interesting native market-place and bazaar, famed throughout Java; also some ornamental gardens (Taman Sari), an Oriental Trianon, designed by a Portuguese in mid-18th century for Sultan Mangku Bumi, now in a state of ruin. Four miles S.E. of Jokjakarta is Pasar Gedeh, a large village famed for its craftsmen in gold and silver, copper-work and leather carving, and here are graves of some of the Sultans of Jokjakarta, dated 1509–79 and decadent in style; others are to be seen (together with those of the Sultans of Surakarta) at Imogiri, some 6 m. further south. Permission is needed to visit either. Jokjakarta is the best-known centre for visiting Boro Budur and Prambanam, and from it there is easy access to the coast, where, at various points, Nyabi Kidul, Rongkob and Selarong, there are sacred grottoes, and at Parang Tritis, a popular seaside resort.

(E. E. L.)

JOLA, a round-faced, coarse-featured people with low foreheads and filed teeth closely related to the Serer, and living between the Lower Gambia and Lower Kasamansa. The principal tribes are Felup and Fogni. The Felup recognize a paramount chief (who must not leave his own territory or look upon the sea), elected by the notables. The Jola practise tillage and cattle-rearing, and irrigate the rice-fields The dead, after exposure for three days, are buried near the house.

See Dr. Lasnet, *Une mission au Sénégal* (1900).

JOLIET, LOUIS (1645–1700), American explorer, was born at Quebec, Canada, on Sept. 21, 1645. He was selected by the French governor, Frontenac, to ascertain the direction and mouth of the Mississippi river, several branches of which French traders had already visited near their headwaters. He embarked with Father Marquette and five other Frenchmen at Green Bay, Wis., in June 1673, ascended the Fox river, portaged to the Wisconsin and descended that river to its meeting with the Mississippi, the upper reaches of which they were the first white men to see. Before turning back they followed the Mississippi southward beyond the mouth of the Arkansas river. The return journey to Lake Michigan was made by the Illinois-Chicago portage route. When near Montreal Joliet's canoe was overturned and his journal and papers lost. He wrote a short account from memory which agrees with Father Marquette's longer recital in his *Voyage et découverte de quelques pays et Nations de l'Amérique Septentrionale* (1681 and later reprints). Joliet later travelled to Hudson Bay and to Labrador in the interest of the fur trade and fisheries.

See also L. P. Kellogg, *The French Régime in the Northwest* (1925); F. Parkman, *La Salle or the Discovery of the Great West* (1869); and E. Gagnon, *Louis Joliet, découvreur du Mississippi* (1913).

JOLIET, a city of Illinois, U.S.A., 37m. S.W. of Chicago, on the Des Plaines river and the Illinois and Michigan canal; the county seat of Will county; on the Chicago and Alton, the Rock Island and the Santa Fe railways, and for freight the outer belt line of Chicago. The population was 38,442 in 1920 (22% foreign-born white), and was estimated by the census bureau at 41,900 in 1928. Joliet is on the route of the Great Lakes to Gulf Deep Waterway, now (1928) under construction. Falls in the river supply power for extensive manufacturing industries. The output of the factories within the city in 1925 was estimated at $16,644,767, and there are large plants just outside the city limits. There are gas works supplying 63 towns, railroad shops, coke ovens, steel mills, wall-paper factories, and numerous smaller industries. Coal is mined within 20m., and there are quarries of famous building limestone near by. The assessed valuation of property in 1926 was $47,731,100. The Northern Illinois penitentiary is situated here. The early settlement, dating from 1833, was called Juliet, after the daughter of one of the founders. In 1845 it was renamed after Louis Joliet, the French-Canadian explorer, who had visited the site in 1673. A city charter was secured in 1852.

JOLLY BALANCE is a device for determining the specific gravity (relative density) of solids and liquids. Its operation is based on (*a*) Archimedes's principle; *i.e.*, that a body immersed in a fluid is buoyed up by a force equal to the weight of the fluid displaced, and (*b*), on Hooke's law; *i.e.*, that in elastic bodies and within certain limits the strain is proportional to stress, or that displacement is proportional to displacing force. In its usual form the Jolly balance consists of a long, delicate, helical spring suspended by one end in front of a uniformly graduated scale. To the lower end of the spring is attached a weight pan, and immediately below that a small wire basket. At some convenient point, usually just above the weight pan, an index is provided which can be read with reference to the scale, which is usually graduated on the surface of a mirror to avoid parallax in reading the position of the index. A movable platform for supporting a small vessel of water is provided which can be clamped at any desired height along the vertical scale and immediately below the wire basket attached to the lower end of the spring. The point of suspension of the upper end of the spring is also usually movable vertically, as a means of increasing the range of the balance and as an aid in adjusting the index to a convenient zero setting.

In determining the specific gravity of a solid a zero reading of the position of the index is taken with the wire basket immersed in water up to a definite point on its suspension wire, care being taken to see that the point of suspension of the helical spring is such as to permit the necessary extension of the spring during subsequent steps of the determination. Let this reading be W_1. Next, place in the weight pan the specimen, the specific gravity of which is to be determined, lower the movable platform carrying the vessel of water until the water surface reaches the same point on the suspension wire as before, and again read the index. Let W_2 represent this reading. W_2-W_1, which represents the extension of the spring, may be taken as the weight of the specimen in air. Then place the specimen in the wire basket, immersed in water, and again adjust the height of the movable platform until the water surface is at the original height on the suspension wire above the basket, and again read the position of the index. Let this reading be W_3. W_2-W_3, which represents the difference in the extension of the spring when the specimen is immersed in air and in water, respectively, may be taken as the loss of weight in water. Then specific gravity

$$= \frac{\text{weight in air}}{\text{loss of weight in water}} = \frac{W_2-W_1}{W_2-W_3}$$

The specific gravity so obtained is the apparent specific gravity in air, in terms of water at the temperature of the determination. In order to determine the specific gravity of a liquid, the same procedure is followed except that the "loss of weight in water" and the "loss of weight in the unknown liquid" are determined with any convenient specimen of a solid not affected by either liquid. The specific gravity of the unknown liquid is the ratio of the loss of weight in the unknown liquid to the loss of weight in water. (*See* also BALANCE.) (H. W. BEA.)

JOLO, a municipality (with 14 *barrios* or districts), port of entry, and capital of the Sulu Province (which consists of the islands of the Sulu Archipelago), is on the north-west coast of the island of Jolo, 540 m. from Manila. Pop. (1918) 5,810. Jolo has an active trade with Zamboanga, Borneo and Singapore and the

pearling fleet has its chief centre here. An excellent Government dock has been built here. Carabao, cattle and horses are raised on the island of Jolo and exported through this port. The climate is moist and warm, for Jolo is but slightly more than 6° from the equator. In 1918 there were 13 manufacturing establishments with output valued at 105,400 pesos. There were three schools (all public). Jolo was founded long before the Spaniards reached the Philippines, and was, in fact, a place of considerable importance when Cebu was still an insignificant settlement. Its inhabitants together with those of the entire region, were converted to the Mohammedan religion in the XIV. century, and the town has long been the Mohammedan capital of the region, the spiritual (and formerly the temporal) jurisdiction of the sultan reaching even beyond the confines of the Philippines into Borneo. Hostilities between the Spaniards and the Moros centring at Jolo were almost continuous during most of the Spanish occupation.

JOLY DE LOTBINIÈRE, SIR HENRI GUSTAVE (1829–1908), Canadian politician, was born at Epernay in France on Dec. 5, 1829. Henri Gustave adopted the name of his mother's family, Lotbinière, in 1888, under a statute of the province of Quebec. He was educated in Paris, and called to the bar of lower Canada in 1858. At the general election of 1861 he was elected to the house of assembly of the province of Canada as Liberal member for the county of Lotbinière, which county 1867 to 1874 he represented in the House of Commons, Ottawa, and in the legislative assembly, Quebec. Joly was opposed to confederation. In 1878 he was called by Luc Letellier de St. Just, lieutenant-governor of Quebec, to form an administration, which was defeated in 1879, and until 1883 he was leader of the opposition. During his brief administration he adopted a policy of retrenchment, and endeavoured to abolish the legislative council. In 1885, as a protest against the attitude of his party towards Louis Riel, who was tried and executed for high treason, he retired from public life. But at the general election of 1896 he was returned as member for the county of Portneuf. He had already in 1895 been created K.C.M.G. On the formation of Sir Wilfrid Laurier's administration he accepted the office of controller of inland revenue, and a year later he became a privy councillor, as minister of inland revenue. From 1900 to 1906 he was lieutenant-governor of British Columbia. He died on Nov. 17, 1908.

JOMINI, ANTOINE HENRI, BARON (1779–1869), general, was born on March 6, 1779, at Payerne in the canton of Vaud, Switzerland. He wished for a military life; for some time he was a clerk in a Paris banking-house, until the outbreak of the Swiss revolution. At the age of nineteen he was appointed to a post on the Swiss headquarters staff, and when twenty-one commanded a battalion. At the peace of Lunéville in 1801 he returned to business life in Paris, where he devoted himself to the *Traité des grandes opérations militaires,* which was published in 1804–1805. Introduced to Marshal Ney, he served in the campaign of Austerlitz as a volunteer aide-de-camp on Ney's personal staff. In December 1805 Napoleon made him a colonel in the French service. Ney thereupon made him his principal aide-de-camp. In 1806 Jomini published his views on the impending war with Prussia, and this, along with his knowledge of Frederick the Great's campaigns, led Napoleon to attach him to his own headquarters. He was present with Napoleon at the battle of Jena, and at Eylau won the cross of the Legion of Honour. After the peace of Tilsit he was made chief of the staff to Ney, and created a baron. In the Spanish campaign of 1808 he gave the marshal much good advice, but Jomini quarrelled with his chief, and was left at the mercy of Berthier, the emperor's chief of staff. He had already been invited to enter the Russian service, but Napoleon compelled him to remain in the service as general of brigade. For some years thereafter Jomini held both a French and Russian commission, with the consent of both sovereigns. When war between France and Russia broke out, he escaped from his dilemma by taking a command on the line of communication. He was thus engaged when the seat of war shifted to central Germany. He rejoined Ney, took part in the battle of Lützen and, as chief of the staff of Ney's group of corps, distinguished himself at the battle of Bautzen, and was recommended for the rank of general of division. Berthier, however, had him arrested for failing to supply certain returns that had been called for.

How far Jomini was held responsible for certain misunderstandings which frustrated Ney's hopes (*see* BAUTZEN) there is no means of knowing. But the pretext for censure was trivial and baseless, and during the armistice Jomini entered the Russian service. This was regarded by Napoleon as going over to the enemy. Jomini had indeed for years held a dormant commission in the Russian army, had declined to take part in the invasion of Russia in 1812, and was a Swiss and not a Frenchman. He withdrew from the Allied Army in 1814 when the violation of Swiss neutrality was inevitable. Apart from love of his own country, the desire to study, to teach and to practise the art of war was his ruling motive. At the critical moment of the battle of Eylau he exclaimed, "If I were the Russian commander for two hours!" On joining the allies he became lieutenant-general and aide-de-camp to the tsar, and rendered important assistance during the German campaign. He declined as a Swiss patriot and as a French officer to take part in the passage of the Rhine at Basel and the subsequent invasion of France.

In 1815 he was with the emperor Alexander in Paris, and attempted in vain to save the life of his old commander Ney. This almost cost him his position in the Russian service, but he succeeded in making head against his enemies, and took part in the congress of Vienna. Resuming his post in the Russian army, he was about 1823 made a full general, and until his retirement in 1829 he was principally employed in the military education of the tsarevich Nicholas (afterwards emperor) and in the organization of the Russian staff college, which was opened in 1832. In 1828 he was employed in the field in the Russo-Turkish War, and at the siege of Varna he was given the grand cordon of the Alexander order. This was his last active service. In 1829 he settled at Brussels where he chiefly lived for the next thirty years.

In 1853, after trying without success to bring about a political understanding between France and Russia, Jomini was called to St. Petersburg to act as a military adviser to the tsar during the Crimean War. He returned to Brussels on the conclusion of peace in 1856 and some years afterwards settled at Passy near Paris. He was busily employed up to the end of his life in writing treatises, pamphlets and open letters on subjects of military art and history, and in 1859 he was asked by Napoleon III to furnish a plan of campaign in the Italian War. One of his last essays dealt with the war of 1866 and the influence of the breech-loading rifle, and he died at Passy on March 24, 1869, only a year before the Franco-German War. Thus one of the earliest of the great military theorists lived to speculate on the tactics of the present day.

Amongst his numerous works the principal, besides the *Traité,* are: *Histoire critique et militaire des campagnes de la Révolution* (1806; new ed. 1819–24); *Vie politique et militaire de Napoléon racontée par lui-même* (1827) and, perhaps the best known of all his publications, the theoretical *Précis de l'art de la guerre* (1836).

See Ferdinand Lecomte, *Le Général Jomini, sa vie et ses écrits* (1861; new ed. 1888); C. A. Saint-Beuve, *Le Général Jomini* (1869); A. Pascal, *Observations historiques sur la vie, &c., du général Jomini* (1842).

JOMMELLI, NICCOLO (1714–1774), Italian composer, was born at Aversa near Naples on Sept. 10, 1714. His first opera, *L'Errore amoroso,* was successfully produced at Naples (under a pseudonym) when he was only twenty-three. Three years afterwards he went to Rome to bring out two new operas, and thence to Bologna, where he profited by the advice of Padre Martini, one of the greatest contrapuntists of his age. In 1748 he went to Vienna, where one of his finest operas, *Didone,* was produced. Three years later he returned to Italy, and in 1753 he obtained the post of *Kapellmeister* to the duke of Württemberg at Stuttgart. Here he wrote many more operas and adjusted his style so completely to German taste that when, after an absence of fifteen years, he returned to Naples, his countrymen hissed two of his operas off the stage, and he retired in consequence to his native village. He died at Naples on Aug. 25, 1774, his last composition being the celebrated *Miserere,* a setting for two female voices of Saverio Mattei's Italian paraphrase of Psalm li. Jommelli is one

of the most representative composers of the generation following Leo and Durante.

See Hermann Abert, *Jommelli als Opernkomponist* (Halle, 1908).

JONAH, in the Bible, a prophet who foretold the deliverance of Israel from the Aramaeans (2 Ki. xiv. 25). He may also be the hero of the much later book of Jonah, but how different a man is he! New problems have arisen out of that book, but here we can only attempt to consider what, in a certain sense, may be called the surface meaning of the text.

The prophet Jonah is summoned to go and prophesy against Nineveh, a great and wicked city (*cf.* 4 Esdras ii. 8, 9). He fears (iv. 2) that the Ninevites may repent, so he proceeds to Joppa, and takes his passage for Tarshish. But soon a storm arises of which he proves to be the cause. He is, at his own request, thrown into the sea, which at once becomes calm. Meantime God has "appointed a great fish" which swallows up Jonah till, at a word from Yahweh, three days later, it vomits him on to the dry ground. Again Jonah receives the divine call. This time he obeys. After delivering his message to Nineveh he waits in vain for the destruction of the city (probably iv. 5 is misplaced and should stand after iii. 4). Thereupon he beseeches Yahweh to take away his worthless life. As an answer Yahweh "appoints" a small quickly-growing tree with large leaves (the castor-oil plant) to shelter the angry prophet from the sun. But the next day the tree perishes by God's "appointment" from a wormbite. Then God "appoints" the east wind whose fierce heat brings Jonah again to desperation. The fine close reminds us of Job. God himself gives short-sighted man a lesson. Jonah has pitied the tree, and should not God have pity on so great a city?

It is generally agreed that the psalm in ch. ii. has been transferred from some other place; it is an anticipatory thanksgiving for the deliverance of Israel, mostly composed of phrases from other psalms. Further, the narrative is an imaginative story, a Midrash (*q.v.*), based upon Biblical data and tending to edification. The narrator considered that Israel had to be a prophet to the "nations" at large, that Israel had, like Jonah, neglected its duty and for its punishment was "swallowed up" in foreign lands. God had watched over His people and prepared its choicer members to fulfil His purpose. This company of faithful but not always sufficiently charitable men represented their people, so that it might be said that Israel itself (the "Servant of Yahweh"; *see* ISAIAH) had taken up its duty, but in an ungenial spirit which grieved the All-merciful One. The book, which is post-exilic, may therefore be grouped with another Midrash, the Book of Ruth, which also appears to represent a current of thought opposed to the exclusive spirit of Jewish legalism.

Besides symbolism there may be myth. The "great fish" has a mythological appearance. The Babylonian dragon myth (*see* COSMOGONY) is often alluded to in the Old Testament; *e.g.*, in Jer. li. 44, which, as Cheyne long since pointed out, may supply the missing link between Jonah i. 17 and the original myth. For the "great fish" is ultimately Tiāmat, the dragon of chaos, represented historically by Nebuchadrezzar, by whom for a time God permitted or "appointed" Israel to be swallowed up.

BIBLIOGRAPHY.—Cheyne, *Ency Bib.*, "Jonah"; and his article "Jonah, a Study in Jewish Folklore and Religion," *Theological Review* (1877), pp. 211–219; König, Hastings' *Dict. Bible*, "Jonah"; C. H. H. Wright, *Biblical Studies* (1886) argues ably for the symbolic theory. Against Cheyne, *see* Marti's *Commentary* (1894); the "great fish" and the "three days and three nights" remain unexplained by this writer.

(T. K. C.)

JONAH, RABBI (ABULWALID MERWAN IBN JANAH, also R. MARINUS) (*c.* 990–*c.* 1050), the greatest Hebrew grammarian and lexicographer of the middle ages. He was born in Cordova, studied in Lucena, and after somewhat protracted wanderings, settled in Saragossa, where he died. Though a physician, Rabbi Jonah devoted himself to the scientific investigation of the Hebrew language and to a rational biblical exegesis based upon sound linguistic knowledge. His first work—composed, like all the rest, in Arabic—bears the title *Almustalḥa*, and forms, as is indicated by the word, a criticism and at the same time a supplement to the two works of Yehuda ʻḤayyuj on the verbs with weak-sounding and double-sounding roots. These two tractates, with which ʻḤayyuj had laid the foundations of scientific Hebrew grammar, were recognized by Abulwalīd as the basis of his own grammatical investigations. Rabbi Jonah's principal work, the *Kitab al Tanḳiḥ* ("Book of Exact Investigation") includes the *Kitab al-Luma* ("Book of Many-coloured Flower-beds") and the *Kitab al-uṣul* ("Book of Roots"). The former (ed. J. Derenbourg, Paris, 1886) contains the grammar, the latter (ed. Ad. Neubauer, Oxford, 1875) the lexicon of the Hebrew language. Both works were published in the Hebrew translation of Yehuda Ibn Tibbon (*Sefer Ha-Riḳmah*, ed. B. Goldberg, Frankfurt-am-Main, 1855; *Sefer Ha-Schoraschim*, ed. W. Bacher, Berlin, 1897). The other writings were edited in Arabic with French translation by Joseph and Hartwig Derenbourg (Paris 1880). A few fragments and numerous quotations in his principal book form our only knowledge of the *Kitab al-Tashwir* ("Book of Refutation") a controversial work in which he successfully answered the opponents of his first treatise. The grammatical work of Rabbi Jonah extended to the domain of rhetoric and biblical hermeneutics, and his lexicon contains many exegetical excursuses. This lexicon is of especial importance by reason of its ample contribution to the comparative philology of the Semitic languages—Hebrew and Arabic, in particular. Abulwalid's works exercised the greatest influence on Jewish exegesis.

See S. Munk, *Notice sur Abou'l Walid* (1851); W. Bacher, *Leben und Werke des Abulwalid* (Leipzig, 1885), *Aus der Schrifterklärung des Abulwalid* (Leipzig, 1889), *Die hebr.-arabische Sprachvergleichung des Abulwalid* (Vienna, 1884). *Die hebräisch-neuhebraische und hebr.-aramaische Sprachvergleichung des Abulwalid* (Vienna, 1885).

JONAS, JUSTUS (1493–1555), a German Protestant reformer, was born at Nordhausen, Thuringia, on June 5, 1493. His real name was Jodokus (Jobst) Koch. He studied law and the humanities at the university of Erfurt and at Wittenberg. His great admiration for Erasmus first led him to Greek and biblical studies, and his election in 1519 as rector of the university of Erfurt was regarded as a triumph for the partisans of the New Learning. After the Leipzig disputation with Eck Luther won his allegiance. He accompanied Luther to Worms in 1521, and was appointed by the elector of Saxony professor of canon law at Wittenberg. During Luther's stay in the Wartburg Jonas was one of the most active of the Wittenberg reformers. He became superintendent of the Halle churches in 1542; in 1546 he was at Luther's deathbed at Eisleben, and preached the funeral sermon; but in the same year was banished from the duchy by Maurice, duke (later elector) of Saxony. He died at Eisfeld on Oct. 9, 1555.

See *Briefwechsel des Justus Jonas*, ed. G. Kawerau (2 vols., Halle, 1884–85).

JONATHAN. Of the many Jewish bearers of this name, three are well known: (1) the grandson of Moses, who was priest at Dan (Judg. xviii. 30). (2) The eldest son of Saul, who, together with his father, freed Israel from the Philistines (1 Sam. xiii. *seq.*). Both are lauded in an elegy quoted from the Book of Jashar (2 Sam. i.) for their warm mutual love, their heroism, and their labours on behalf of the people. Jonathan's name is most familiar for the firm friendship which subsisted between him and David (*see* further DAVID; SAUL). (3) The Maccabee (*see* JEWS; MACCABEES).

JONCIÈRES, VICTORIN (1839–1903), French composer, was born in Paris on April 12, 1839. He entered the Conservatoire, but did not remain there long, because he had espoused too warmly the cause of Wagner against his professor. He composed the following operas: *Sardanapale* (1867), *Le Dernier jour de Pompéi* (1869), *Dimitri* (1876), *La Reine Berthe* (1878), *Le Chevalier Jean* (1885), *Lancelot* (1900), but these had more of Gounod in them than of Wagner. He died on Oct. 26, 1903.

JONES, ALFRED GILPIN (1824–1906), Canadian politician, was born at Weymouth, Nova Scotia, in Sept. 1824. In 1865 he opposed the federation of the British American provinces, and, in his anger at the refusal of the British Government to repeal such portions of the British North America Act as referred to Nova Scotia, made a speech which won for him the name of Haul-down-the-flag Jones. He was for many years a member of

the Federal parliament, and for a few months in 1878 was minister of militia under the Liberal Government. Largely owing to his influence the Liberal party refused in 1878 to abandon its Free Trade policy, an obstinacy which led to its defeat in that year. In 1900 he was appointed lieutenant-governor of his native province, and held this position till his death on March 15, 1906.

JONES, SIR ALFRED LEWIS (1845–1909), British shipowner, was born in Carmarthenshire, in 1845. At the age of 12 he was apprenticed to the managers of the African Steamship company at Liverpool, making several voyages to the west coast of Africa. About 1891 he entered the firm of Messrs. Elder, Dempster & Co., with a share in the undertaking. In 1901 he was knighted. Sir Alfred Jones took a keen interest in imperial affairs, and was one of the founders of the Liverpool School of Tropical Medicine. He acquired considerable territorial interests in west Africa, and financial interests in many of the companies engaged in opening up and developing that part of the world. He opened up a new line of communication with the West Indies, and stimulating the Jamaica fruit trade and tourist traffic. He died on Dec. 13, 1909, leaving large charitable bequests.

JONES, EBENEZER (1820–1860), British poet, was born in Islington, London, on Jan. 20, 1820. His father, who was of Welsh extraction, was a strict Calvinist, and Ebenezer was educated at a dull, middle-class school. The death of his father obliged him to become a clerk in the office of a tea merchant, where he worked for 72 hours a week. Shelley and Carlyle were his spiritual masters, and he spent his meagre spare time in reading and writing. The unkind reception of his *Studies of Sensation and Event* (1843) seemed to be the last drop in his bitter cup of life. Baffled and disheartened, he destroyed his manuscripts. In 1849 he wrote a pamphlet, *The Land Monopoly,* in which he anticipated Henry George in proposing land nationalization. He was rapidly dying of consumption when he wrote his three remarkable poems, "Winter Hymn to the Snow," "When the World is Burning" and "To Death." The fame that these and some of the pieces in the early volume brought to their author came too late. He died at Brentwood on Sept. 14, 1860.

It was not till 1870 that Dante Gabriel Rossetti praised his work in *Notes and Queries.* Rossetti's example was followed by W. B. Scott, Theodore Watts-Dunton, who contributed some papers on the subject to the *Athenaeum* (Sept. and Oct. 1878), and R. H. Sheppard, who edited *Studies of Sensation and Event* in 1879.

JONES, EMILY ELISABETH CONSTANCE (1848–1922), English educator, was born at Langstone Court, Hereford, in 1848. She was educated in Cheltenham, and at Girton college, Cambridge, where she took a first-class in the moral sciences tripos in 1880. In 1884 she was appointed resident lecturer at Girton, vice-mistress in 1896, and mistress in 1903. She retired in 1916. She died on April 18, 1922, at Weston-Super-Mare

Her works include *Elements of Logic as a Science of Propositions* (1890); *Primer of Logic* (1905); and *A New Law of Thought and its Logical Bearings* (1911). She also, with Miss E. Hamilton, translated Lotze's *Mikrokosmus* (1885), and has edited (1902) Henry Sidgwick's *Lectures on T. H. Green, Herbert Spencer and J. Martineau.*

JONES, ERNEST CHARLES (1819–1869), English Chartist, was born in Berlin on Jan. 26, 1819, and educated in Germany. His father, a British army officer, was then equerry to the duke of Cumberland, afterwards king of Hanover. In 1838 Jones came to England and in 1841 published anonymously *The Wood Spirit,* a romantic novel. In 1844 he was called to the bar at the Middle Temple, but from 1845 to 1854 he devoted time and energy to the Chartist movement, quickly becoming a leader much respected for his single-mindedness and steadfastness. In 1847 he wrote for the *Northern Star* and became joint editor with Feargus O'Connor of *The Labourer.* He advocated the formation of national guards, and in 1848, while trying to rally the breaking ranks of the Chartist movement, he was arrested for sedition and sent to prison for two years, where he was treated as a common felon until, after a protest in parliament, he was allowed to purchase exemption from prison tasks. While in prison he wrote *The Revolt of Hindostan,* an epic poem. In 1852 he started the *People's Paper* and later accepted the programme of Karl Marx. When the movement died he joined the advanced Radical party and devoted much time to the writing of novels and political songs, the most famous of which are *The Song of the Lower Classes* and *Songs of Democracy.* He died at Manchester on Jan. 26, 1869.

JONES, HENRY (1831–1899), English author, well known as a writer on whist under his *nom de guerre* "Cavendish," was born in London on Nov. 2, 1831, being the eldest son of Henry D. Jones, a medical practitioner. He adopted his father's profession, established himself in 1852 and continued for 16 years in practice in London. He was a member of several whist clubs, among them the "Cavendish," and in 1862 appeared his *Principles of Whist, stated and explained by "Cavendish,"* which became the leading authority as to the practice of the game. This work was followed by treatises on the laws of piquet and écarté. "Cavendish" also wrote on billiards, lawn tennis and croquet, and contributed articles on whist and other games to the ninth edition of the *Encyclopædia Britannica.* "'Cavendish' was not a law-maker, but he codified and commented upon the laws which had been made during many generations of card-playing." He died on Feb. 10, 1899.

JONES, HENRY ARTHUR (1851–1929), English dramatist, was born at Grandborough, Buckinghamshire, on Sept. 28, 1851 the son of Silvanus Jones, a farmer. His first piece, *Only Round the Corner,* was produced at the Exeter theatre, and within four years of his début as a dramatist he scored a great success by *The Silver King* (November 1882), written with Henry Herman, a melodrama produced by Wilson Barrett at the Princess's theatre. Its financial success enabled the author to write a play "to please himself." *Saints and Sinners* (1884), which ran for 200 nights, placed on the stage a picture of middle-class life and religion in a country town. His next serious piece was *The Middleman* (1889), followed by *Judah* (1890), both powerful plays, which established his reputation. Among his later plays were *The Dancing Girl* (1891), *The Crusaders* (1891), *The Bauble Shop* (1893), *The Tempter* (1893), *The Masqueraders* (1894), *The Case of Rebellious Susan* (1894), *The Liars* (1897), *Carnac Sahib* (1899), *The Manoeuvres of Jane* (1899), *Mrs. Dane's Defence* (1900), *The Princess's Nose* (1902), *Chance the Idol* (1902), *Whitewashing Julia* (1903), *Joseph Entangled* (1904), *The Chevalier* (1904), *Mary Goes First* (1913), *The Lie* (1914), *Cock o' the Walk* (1915). A uniform edition of his plays began to be issued in 1891. His own views of dramatic art have been expressed from time to time in *The Renascence of the English Drama* (1895), *Foundations of a National Drama* (1913), *Theatre of Ideas* (1915), and other works. He died at Hampstead, on Jan. 7, 1929.

JONES, INIGO (1573–1651), English architect, sometimes called the "English Palladio," the son of a cloth-worker, was born in London on July 15, 1573. It is stated that he was apprenticed to a joiner, but at any rate his talent for drawing attracted the attention of Thomas Howard, earl of Arundel (some say William, 3rd earl of Pembroke), through whose help he went to study landscape-painting in Italy. His preference soon transferred itself to architecture, and, following chiefly the style of Palladio, he acquired at Venice such a reputation that in 1604 he was invited by Christian IV. to Denmark, where he is said to have designed the two great royal palaces of Rosenborg and Frederiksborg. In the following year he accompanied Anne of Denmark to the court of James I. of England, where, besides being appointed architect to the queen and Prince Henry, he was employed in supplying the designs and decorations of the court masques. After a second visit to Italy in 1612, Jones was appointed surveyor-general of royal buildings by James I., and was engaged to prepare designs for a new palace at Whitehall. In 1620 he was employed by the king to investigate the origin of Stonehenge, when he came to the absurd conclusion that it had been a Roman temple. Shortly afterwards he was appointed one of the commissioners for the repair of St Paul's, but the work was not begun till 1633. Under Charles I. he enjoyed the same offices as under his predecessor, and in the capacity of designer of the masques he came into collision with Ben Jonson, who frequently made him the butt of his satire. After the Civil War Jones was forced to pay heavy fines as a courtier and malignant. He died

in poverty on July 5, 1651.

A list of the principal buildings designed by Jones is given in Dallaway's edition of Walpole's *Anecdotes of Painting*, and for an estimate of him as an architect *see* Fergusson's *History of Modern Architecture*. *The Architecture of Palladio*, in 4 books, by Inigo Jones, appeared in 1715; *The Most Notable Antiquity of Great Britain, called Stonehenge, restored by Inigo Jones*, in 1655 (ed. with memoir, 1725); the *Designs of Inigo Jones*, by W. Kent, in 1727; and *The Designs of Inigo Jones*, by J. Ware, in 1757. *See* also G. H. Birch, *London Churches of the XVIIth and XVIIIth Centuries* (1896); W. J. Loftie, *Inigo Jones and Wren, or the Rise and Decline of Modern Architecture in England* (1893).

JONES, JOHN (*c.* 1800–1882), English art collector, was born about 1800 in or near London and died in London on Jan. 7, 1882. He was apprenticed to a tailor and about 1825 opened a shop at 6 Waterloo Place, London. In 1850 he retired with a large fortune. When quite a young man he had begun to collect articles of *vertu*. The rooms over his own shop were soon crowded and even the bedrooms of his new house, 95 Piccadilly, were filled with art treasures. His collection of French furniture, pictures and objects of art comprised the choicest specimens of the finest periods and was valued at approximately £250,000 when he left it to the Victoria and Albert museum in 1882

A *Catalogue of the Jones Bequest* was published by the Victoria and Albert museum (1882). *See* also a *Handbook* with memoir and portrait (1883); a *Brief Guide* (1922); and a *Catalogue in Three Parts* (1922–24).

JONES, JOHN PAUL (1747–1792), American naval officer, was born in the parish of Kirkbean, stewartry of Kirkcudbright, Scotland, on the estate of Arbigland, belonging to Robert Craik, a member of parliament. His father, John Paul, was a landscape gardener in Craik's employ; his mother, Jean Macduff, was the daughter of a highlander. When but 12 years of age the son was apprenticed to a ship-master and taken aboard a ship which carried him to Virginia. Other voyages followed, gaining for the lad much sea experience. When his master failed, young John Paul obtained an acting midshipman's berth for a brief period in the royal navy. Then he engaged as third mate on a slave ship which carried him on two voyages between Jamaica and the Guinea coast. Next, he transferred to another slaver, this time as first mate, though but 19 years of age. After two years he became disgusted with the slave trade, gave up his position, and took passage on board the ship "John" for England. On the way the captain and first mate both died of fever and John Paul took command and brought the vessel safely to port. Forthwith the owners made him master and supercargo of the ship. After he had made two voyages to Tobago for them, his employers dissolved partnership. Paul, himself, purchased the "Betsey" and again sailed for Tobago. Investing all his money in a cargo there, the youthful owner intended to delay payment of his crew until his cargo had been sold, but the crew mutinied. After a struggle Paul killed the ringleader and left the ship. No admiralty court then sat in Tobago and, rather than suffer imprisonment while awaiting his trial, he fled from the island.

There follows a period of obscurity. There are legends that to escape he was forced to board a pirate's ship on which he served for a time. In 1775, at any rate, he appeared in Philadelphia, calling himself John Paul Jones, and in possession of a commission from the Continental Congress as a senior lieutenant in the new Continental navy. Indications are that he had spent much of his exile in Virginia, and through his friends there met Joseph Hewes, a member of the marine committee of Congress, who procured for him his commission. In his new employment his first task was to arm and man the ship "Alfred," which he commanded in the expedition under Commander Hopkins against New Providence, in the Bahama Islands. Jones's familiarity with the island proved a large factor in the success of the attack. In May 1776 Jones received command of the "Providence," and for a time did convoy duty for ships bringing supplies for the defence of New York. In August he received his captain's commission, which was followed by orders to undertake a free-lance cruise for "six weeks or two or three months." Such orders were most to the young captain's liking. In the seven weeks in which the "Providence" cruised between Bermuda and Nova Scotia, six brigantines, one ship and one sloop were taken, and six schooners, one ship and one brigantine destroyed. In November, Jones again sailed for Newfoundland in the "Alfred," but fog and ice greatly interfered with this cruise. Captain Hacker, in the "Providence," who was to go with him, gave up and returned soon after the start. Jones was blocked by the ice in his attempt to release the imprisoned Americans on the Isle Royale. Fish warehouses along the Arcadian coast were burned and four transports taken; on the way home a 16 gun privateer from Liverpool was captured, and a large armed transport carrying clothing and supplies for Burgoyne's army run down. When nearing the Boston harbour, Jones accidentally met the armed British frigate "Milford," but in the dark lured her away from his prizes and then cleverly outsailed her. He paid off the crews of the "Alfred" and "Providence" from his own pocket, receiving no reimbursement from Congress until after the war. Jones returned to find himself placed as low as 18 on a new list of navy commanders drawn up in Congress, a hard blow to his pride. The list had been a pathetic attempt to satisfy all colonies, each of which wanted representation. There followed a year of maladministration, petty bickering and abortive schemes, while Jones chafed under the delay. Finally, he was given command of the "Ranger," which he altered into a fast ship, and on Nov. 1, 1777, sailed for France with despatches for the American commissioners announcing the surrender of Burgoyne. He crowded on the canvas, pausing only to take two prizes on the way.

It had been intended that Jones should take command of a splendid new frigate building at New Amsterdam for the Continental Government. But the British Government discovered her ownership and threatened to seize her, whereupon the Netherlands hastily transferred her to France. France, not yet ready to break with Britain, would not let Jones have her, so upon the suggestion of Franklin, the disappointed commander again re-embarked in the "Ranger," this time with a free hand for proceeding as he judged best "for distressing the enemies of the United States." A few days later he surprised the two forts commanding the harbour of Whitehaven, spiked the guns, and made an unsuccessful attempt to fire the shipping Four days thereafter he encountered the British sloop-of-war "Drake," a vessel slightly superior to his own in fighting capacity, near Belfast, and, after an hour's engagement, forced her to strike her colours and accompany him to France as a prize. The deed made him a hero in the eyes of the French. Several months of inactivity followed, during which Jones was forced to support both himself and his men. Finally, Franklin obtained an old French ship which Jones altered and renamed the "Bon Homme Richard," in compliment to the author of *Poor Richard's Almanac*. Alterations were not completed until June 1779, and in the meantime a new frigate named the "Alliance" arrived from America to be added to the squadron. Three small French ships and several privateers completed the fleet, which disentangled itself of shore politics and set sail in August. The privateers and two of the French ships soon deserted. Captain Landais, of the "Alliance," proved insubordinate. An attempt to attack the port of Leith failed because of contrary winds. Nevertheless, a number of prizes were taken. On the way back to France a large fleet of merchantmen were encountered, convoyed by the heavily armed "Serapis" and the armed sloop "Countess of Scarborough" The "Alliance" deserted, leaving the unwieldy "Bon Homme Richard" to engage the vastly superior "Serapis." The desperate battle, one of the famous sea engagements in history, took place by moonlight and lasted three and a half hours. In the end, the English commander asked for quarter. The "Bon Homme Richard" was so badly shattered that she sank the next day. But Jones's men brought the "Serapis" back to France.

During the following year Jones spent much of his time in Paris, hoping always to refit the "Serapis" and set out again, but delays and intrigues prevented. Louis XVI. gave him a gold-hilted sword and made him a chevalier of France. Congress offered him the command of the "America," then building, but the vessel was shortly after transferred to France. He was to see no more fighting during the war. In Nov. 1783, he was sent to Paris as agent for the prizes captured in European waters under his own command. In 1787 he returned to America and received a gold medal from Congress

in recognition of his services.

In 1781 Catherine the Great of Russia, badly in need of someone to instil new life and modern ideas into the Russian navy, invited Jones to her service, and, upon Jefferson's advice, Jones accepted. He went via Sweden and crossed the Baltic sea, in spite of floating ice, in a 30ft. boat that he might lose no time. He was made an admiral, promised complete command, and sent to take part in the naval campaign in the Black sea against the Turks. But he was not made the superior commander. Credit for his victories was taken by his subordinates, who sent in false reports. Jealous officers finally intrigued to have him recalled to St. Petersburg for the pretended purpose of transferring him to a command in the Baltic. In St. Petersburg he was kept idle while rivals maliciously assailed his private character. Catherine lost faith in him and finally sent him from Russia on an ostensible leave of absence. He returned to Paris a bitterly disappointed man and lived in retirement.

Undue exposure and exertion had wasted his strength. He had returned from Russia in ill-health and gradually grew weaker until he died in 1792, at 45 years of age. He was buried in the St. Louis cemetery for foreign Protestants in Paris, but in the exciting years that followed, the grave and even the cemetery were forgotten. Ambassador Porter in 1905 instituted a systematic search for the body, and, after it had been found and identified beyond doubt, a fleet of warships carried it home. In 1913 it was placed in a crypt of the beautiful naval chapel at Annapolis in belated recognition of Jones's services to his adopted land.

BIBLIOGRAPHY.—The literature concerning John Paul Jones is extensive. The most complete bibliography of this is in Don Seitz's *Paul Jones, His Exploits in English Seas* (1917). The best biographies are A. C. Buell, *Paul Jones, Founder of the American Navy* (1900); Mrs. R. De Koven, *The Life and Letters of John Paul Jones* (1913); M. M. Crawford, *The Sailor Whom England Feared* (1913); P. Russell, *John Paul Jones: Man of Action* (1927). Consult also F. A. Golder, *John Paul Jones in Russia* (1927). Fictional treatment of his life or of episodes in his life is offered in A. Dumas, *Le Capitaine Paul;* J. Fenimore Cooper, *The Pilot;* Herman Melville, *Israel Potter;* and Winston Churchill, *Richard Carvel.*

JONES, OWEN (1741–1814), Welsh antiquary, was born on Sept. 3, 1741, at Llanvihangel Glyn y Myvyr in Denbighshire. In 1760 he entered the furrier's trade at which he worked all his life, but he continued to devote his leisure to Welsh literature. Assisted by Edward William of Glamorgan (Iolo Morganwg) and Dr. Owen Pughe, he published *Myvyrian Archaiology of Wales* (1801–07), a collection of pieces dating from the 6th to the 14th century. The mss. which he had brought together are deposited in the British Museum. Jones founded the Gwyneddigion Society (1772) in London for the encouragement of Welsh studies and literature; and he began in 1805 a miscellany—the *Greal*—of which only one volume appeared. An edition of the poems of *Davydd ab Gwilym* was also issued at his expense. He died on Dec. 26, 1814, in Upper Thames street, London.

JONES, OWEN (1809–1874), British architect and art decorator, son of Owen Jones, a Welsh antiquary, was born in London. His forte was interior decoration, for which his formula was: "Form without colour is like a body without a soul." He was one of the superintendents of works for the Exhibition of 1851 and was responsible for the general decoration of the Crystal Palace at Sydenham. He died in London on April 19, 1874.

His works include *Plans, Elevations and Details of the Alhambra* (1835–45), in which he was assisted by MM. Goury and Gayangos; *Handbook to the Alhambra Court* (1854); *Grammar of Ornament* (1856), a very important work; *One Thousand and One Initial Letters* (1864); *Seven Hundred and Two Monograms* (1864); and *Examples of Chinese Ornament* (1867).

JONES, RICHARD (1790–1855), English economist, was born at Tunbridge Wells. On completing his studies at Caius college, Cambridge, he took orders, and for several years held curacies in Sussex and Kent. He was professor of political economy at King's college, London, from 1833 to 1835, when he succeeded T. R. Malthus in the chair of political economy and history in the East India college, Haileybury. He took an active part in the commutation of tithes, and as tithe commissioner showed great ability. Shortly after resigning his professorship he died, on Jan. 26, 1855.

In his *Essay on the Distribution of Wealth and on the Sources of Taxation*, Jones ably criticized the Ricardian system

A collected edition of Jones's works, with a preface by W. Whewell, was published in 1859.

JONES, ROBERT EDMOND (1887–), American theatrical designer, was born at Milton (N.H.), Dec. 12, 1887. He graduated from Harvard university in 1910 and began designing scenery for the theatre in New York city the following year. He attracted attention by the boldness and originality of his conceptions and exerted a marked influence in American theatrical art.

Among the plays for which he designed the stage settings were *The Man Who Married a Dumb Wife*, for Granville Barker (1915); *The Jest* (1919), *Richard III.* (1920), and *Macbeth* (1921), for Arthur Hopkins; *The Birthday of the Infanta*, for the Chicago Opera Association (1920); *Beyond* and *Desire Under the Elms* for the Provincetown Playhouse (1924); *Redemption; Hamlet;* and *The House of Women* (1927). He published, with K. MacGowan, *Continental Stagecraft* (1922) and *Drawings for the Theatre* (1925).

JONES, THOMAS RUPERT (1819–1911), English geologist and palaeontologist, was born in London on Oct. 1, 1819. While at school at Ilminster, his attention was attracted to geology by the fossils in the Lias quarries. He was apprenticed to a surgeon, first at Taunton, and then at Newbury, and practised in London until in 1849 he was appointed assistant secretary to the Geological society of London. In 1862 he was made professor of geology at the Royal Military college, Sandhurst. He devoted his attention to fossil microzoa, and became an authority on the Foraminifera and Entomostraca. He was specially interested in the geology of South Africa.

His publications include *A Monograph of the Entomostraca of the Cretaceous Formation of England* (Palaeontograph. Soc., 1849); *A Monograph of the Tertiary Entomostraca of England* (*ibid.*, 1857); *A Monograph of the Fossil Estheriae* (*ibid.*, 1862); *A Monograph of the Foraminifera of the Crag* (*ibid.*, 1866, etc., with H. B. Brady); and numerous articles in the *Ann. and Mag. of Nat. Hist.*, the *Geolog. Mag.*, the *Proc. of the Geolog. Assoc.* and other journals.

JONES, SIR WILLIAM (1746–1794), British orientalist and jurist, was born in London on Sept. 28, 1746. He distinguished himself at Harrow, and for three years there studied oriental languages, teaching himself the rudiments of Arabic, and reading Hebrew. In 1764 Jones entered University college, Oxford, where he studied oriental literature; he also studied Persian, Arabic, Hebrew, Chinese and various European languages. In 1766 he obtained a fellowship. When Christian VII of Denmark visited England in 1768, bringing with him a life of Nadir Shah in Persian, Jones was requested to translate the ms. into French. The translation appeared in 1770. In 1771 he published a *Dissertation sur la littérature orientale*, defending Oxford scholars against the criticisms made by Anquetil Du Perron in the introduction to his translation of the *Zend-Avesta*. In 1774 a treatise entitled *Poeseos Asiaticae commentatorium libri sex* definitely confirmed his authority as an oriental scholar. For financial reasons Jones began to study law, and was called to the bar in 1774. In 1776 he was appointed a commissioner in bankruptcy Besides writing an *Essay on the Law of Bailments*, which enjoyed a high reputation both in England and America, Jones translated, in 1778, the speeches of Isaeus on the Athenian right of inheritance In 1783 he was appointed judge of the supreme court of judicature at Calcutta, then "Fort William," and was knighted He founded, in Jan 1784, the Bengal Asiatic Society, of which he remained president till his death. Convinced of the importance of consulting the Hindu legal authorities in the original, he began the study of Sanskrit. He planned (1788) a digest of Hindu and Mohammedan law, but did not live to complete it. Before his death he had published *Institutes of Hindu Law, or the Ordinances of Manu* (1794); his *Mohammedan Law of Succession to Property of Intestates;* and his *Mohammedan Law of Inheritance* (1792). His other publications include, *Traité sur la poésie orientale* (1770); a French metrical translation of the odes of Hafiz; *Grammar of the Persian Language* (1771); *Poems, Chiefly Translations from Asiatic Languages, etc.* (1772); a translation of the seven ancient Arabic poems called *Moallakât* (1783); a translation of Kālidāsa's famous drama, *Sakuntalā* (1789). He also translated the collec-

tion of fables entitled the *Hitopadesa*, the *Gītagovinda*, and considerable portions of the Vedas, besides editing the text of Kālidāsa's poem *Ritusamhara*. He died at Calcutta on April 27, 1794. As a pioneer in Sanskrit learning and as founder of the Asiatic Society he rendered the language and literature of the ancient Hindus accessible to European scholars, and thus became the indirect cause of later achievements in the field of Sanskrit and comparative philology.

See the *Memoir* (1804) by Lord Teignmouth, published in the collected edition of Sir W. Jones's works.

JONESBORO, a city of north-eastern Arkansas, U.S.A., 67m. N.N.W. of Memphis; one of the county seats of Craighead county. It is on Federal highway 63, and is served by the Frisco and the St. Louis Southwestern railways. The population was 9,384 in 1920 (15% negro) and was estimated locally at 17,500 in 1928. It is the centre of a lumbering and agricultural region, and has cotton gins and compresses, cottonseed-oil mills, and various wood-working industries. The city was founded in 1859 and incorporated in 1883.

JONESCU, TAKE (1858–1922), Rumanian statesman, was born at Ploesci on Oct. 26, 1858, and after studying law in Paris was in 1884 elected a deputy. He was minister of public instruction and finance in various Conservative cabinets until 1908 when he founded the Conservative-Democratic party. In 1912 his group formed a Coalition cabinet under Maiorescu, in which Jonescu was minister of the interior. He represented Rumania at the Peace Conference of Bucharest in 1913, and in 1914 he negotiated at Athens the peace between Greece and Turkey. When the World War broke out, Jonescu was, from the first, in favour of intervention on the side of the Allies. In 1918 he went to Paris, and as head of the Rumanian national committee he contributed greatly to the re-integration of Rumania in her rights as an ally when Germany was finally defeated. Jonescu was appointed foreign minister in April 1920, in the Averescu Government. His own original plan for solving the problems created by the Peace Settlement was that of an economic Danube Federation; but finding Czechoslovakia and Yugoslavia hostile to such an idea, he collaborated with their foreign ministers to create the Little Entente (*q.v.*). He died in Rome on June 21, 1922.

JONGKIND, JOHANN BARTHOLD (1819–1891), Dutch painter and engraver, was born at Lattrop, near Rotterdam, on June 3, 1819. He studied at The Hague in the studio of Steffens, and at the Academy under the landscape painter, A. Schelfhout. In 1846 he moved to Paris, and worked under Isabey and Picot. He exhibited at the Salon in 1848, and again in 1852, when he received a medal and worked much at Le Havre. After a stay in Holland (1855–60) he returned to Paris. His works were exhibited with those of Corot, Daubigny and Troyon at an exhibition arranged by Count Armand Doria, and by his style he belonged to the Fontainebleau group. He chose his subjects on the banks of the Seine, and in other picturesque old quarters of Paris on the sea coast of Normandy and on the Dutch canals. Refused at the Salon of 1863, he joined in the Salon des Refusés, and made the acquaintance of C. Monet. His rendering of atmosphere and his study of fleeting effects of light and of reflections make him a pioneer of impressionism—though his oil pictures were not painted direct from nature, and are carefully arranged compositions. His drawings and water colours on the other hand were done out of doors. In 1878 he settled at Côte-Saint-André (Isère) where he painted the simple landscape motives for which his art is famous. He died at Côte-Saint-André on Feb. 9, 1891.

See E. Moreau-Nelaton, *Jongkind, raconté par lui-même* (1918); Delteil, *Peintre-Graveur* (1906).

JÖNKÖPING, a town of Sweden, capital of the district (*län*) of Jönköping, 230 m. S.W. of Stockholm by rail. Pop. (1928) 29,926. Jönköping received the earliest extant Swedish charter in 1284 from Magnus I., and was the scene of parliaments in 1357, 1439 and 1599; of the meeting of the Danish and Swedish plenipotentiaries in 1448; and of the death of Sten Sture, the elder, in 1503. In 1612 Gustavus Adolphus caused the inhabitants to destroy their town lest it should fall into the hands of the Danes; but it was rebuilt soon after, and in 1620 received special privileges from the king. At this period a textile industry was started here, the first of any importance in Sweden, and it was from the Dutch and German workmen, introduced at this time, that the quarter Tyska Mad received its name. It stands at the southern end of Lake Vetter. Two quarters of the town, Svenska Mad and Tyska Mad, recall the time when the site was a marsh (*mad*), and buildings were constructed on piles. The church of St. Kristine (*c.* 1650), the court-houses, town-hall and Government buildings are noteworthy. The town is one of the leading industrial centres in Sweden. The match manufacture, for which it is principally famous, was founded in 1844. There are also textile manufactures, paper-factories and mechanical works.

JONQUIL, the name applied to several species of *Narcissus* (*q.v.*), especially the yellow flowered *N. jonquilla* of southern Europe, common in cultivation, and *N. odorus* of the same region.

JONSON, BEN (1573–1637), English dramatist, was born, probably in Westminster, in the beginning of the year 1573 (or possibly, if he reckoned by the unadopted modern calendar, 1572). By the poet's account his grandfather had been a gentleman who "came from" Carlisle, and originally, the grandson thought, from Annandale. His arms, "three spindles of rhombi," are the family device of the Johnstones of Annandale. Ben Jonson said that he was born a month after the death of his father, who, after suffering in estate and person under Queen Mary, had in the end "turned minister." Two years after the birth of her son the widow married again; her second husband was a master bricklayer, living in Hartshorn lane, near Charing Cross, who sent his stepson to a private school in St. Martin's lane Jonson was then sent to Westminster school at the expense, it is said, of William Camden. His gratitude for an education to which in truth he owed an almost inestimable debt concentrated itself upon the "most reverend head" of his benefactor, then second and afterwards head master of the famous school, and the firm friend of his pupil in later life. He was put to his stepfather's trade immediately on leaving school, and the most learned of Elizabethan dramatists appears to have missed the university Both Aubrey and Fuller, however, say that he went to Cambridge, but there is no record of his presence in the registers. He soon had enough of bricklaying. Either before or after his marriage—more probably before, as Sir Francis Vere's three English regiments were not removed from the Low Countries till 1592—he spent some time in that country soldiering.

Ben Jonson married not later than 1592. The registers of St. Martin's church state that his eldest daughter Maria died in Nov. 1593 when she was, Jonson tells us (epigram 22), only six months old. His eldest son Benjamin died of the plague ten years later (epigram 45). (A younger Benjamin died in 1635.) His wife Jonson characterized to Drummond as "a shrew, but honest"; and for a period (undated) of five years he preferred to live without her, enjoying the hospitality of Lord Albany (afterwards duke of Lennox). Long burnings of oil among his books, and long spells of recreation at the tavern, such as Jonson loved, are not the most favoured accompaniments of family life. But Jonson was no stranger to the tenderest of affections; two at least of the several children whom his wife bore to him he commemorated in touching little tributes of verse; nor in speaking of his lost eldest daughter did he forget "her mother's tears."

On July 28, 1597, there is an entry in Philip Henslowe's diary of a loan of £4 to "Bengemen Johnson player" and another of 3s. 6d "received of Bengemenes Johnsones share." Henslowe advanced 20s. on Dec. 3, 1597, for a play to be completed before Christmas. This was the day on which the theatres were suppressed on account of the performance of the *Isle of Dogs*. A privy council minute of Oct. 8, 1597, records the "warrant for the releasing of Benjamin Johnson" on Oct. 3. Jonson therefore appears to have suffered for his part in this play the "bondage" for his "first error" of which he speaks in a letter to Salisbury in 1605. He is recorded to have borrowed 5s. from Henslowe on Jan. 5, 1598. His relation with Henslowe and the lord admiral's company was intermittent, and was, as we shall see, broken by a serious quarrel.

Early Comedies.—According to Aubrey, whose statement must be taken for what it is worth, "Jonson was never a good

actor, but an excellent instructor." His physique was certainly not well adapted to the histrionic conditions of his—perhaps of any—day; but, in any case, it was not long before he found his place in the organism of his company. In 1598 Jonson was mentioned by Meres in his *Palladis Tamia* as one of "the best for tragedy," without any reference to a connection on his part with the other branch of the drama. Whether this was a criticism based on material evidence or an unconscious slip, Ben Jonson in the same year 1598 (at some date before Sept. 20) produced one of the most famous of English comedies, *Every Man in his Humour*, which was first acted—probably in the earlier part of September—by the lord chamberlain's company at the Curtain. Shakespeare was one of the actors in this first production of Jonson's comedy, and it is in the character of Old Knowell in this very play that, according to a bold but ingenious guess, he is represented in the half-length portrait of him in the folio of 1623, beneath which were printed Jonson's lines concerning the picture. *Every Man in his Humour* was published in 1601; the critical prologue first appears in the folio of 1616, and there are other divergences. After the Restoration the play was revived in 1751 by Garrick (who acted Kitely) with alterations, and long continued to be known on the stage. *The Cast is Altered*, acted by the children of the Blackfriars, which contains a satirical attack upon the pageant poet, Anthony Munday, has been generally assigned to the end of 1598, but E. K. Chambers gives reasons (*Elizabethan Stage*, iii. 357) suggesting the date as 1597. This comedy, which was not included in the folio editions, is one of intrigue rather than of character; it contains obvious reminiscences of Shylock and his daughter.

Before the year 1598 was out, however, Jonson found himself in prison and in danger of the gallows. In a duel, fought on Sept. 22, in Hogsden Fields, he had killed an actor of Henslowe's company named Gabriel Spenser. It seems clear that he acted in self-defence, and the attack may have had something to do with Jonson's work for a rival company. In prison Jonson was visited by a Roman Catholic priest, and the result (certainly strange, if Jonson's parentage is considered) was his conversion to the Church of Rome, to which he adhered for 12 years. He pleaded guilty to the charge of manslaughter brought against him, as the rolls of Middlesex sessions show; but, after a short imprisonment, he was released by benefit of clergy, forfeiting his "goods and chattels," and being branded on his left thumb.

The affair did not affect his reputation; in 1599, Henslowe, who had commercial sense, had made up the quarrel, and Jonson received (Sept. 27), together with Dekker, Chettle and "another gentleman," earnest-money for a tragedy (undiscovered) called *Robert II., King of Scots*. He had a share in other ephemeral pieces of the period. In 1599 he brought out through the lord chamberlain's company at the Globe the elaborate comedy of *Every Man out of his Humour* (quarto 1600; fol. 1616)—a play subsequently presented before Queen Elizabeth. In this play he opened battle, though not yet overtly, on contemporary writers. *Cynthia's Revels*, performed by the chapel children in 1600 and printed with the first title of *The Fountain of Self-Love* in 1601, though it was no doubt primarily designed as a compliment to the queen, contained attacks on his old friends and associates Dekker and Marston. According to Jonson, his quarrel with Marston had begun by the latter attacking his morals, and in the course of it they came to blows, and might have come to worse. In *Cynthia's Revels*, Dekker is generally held to be satirized as Hedon, and Marston as Anaides (Fleay, however, thinks Anaides is Dekker, and Hedon Daniel), while the character of Crites was assumed, perhaps unjustly, by Dekker to refer to Jonson himself. Learning the intention of the two writers whom he had satirized, or at all events of Dekker, to wreak literary vengeance upon him, he anticipated them in *The Poetaster* (1601), again played by the children of the queen's chapel at the Blackfriars and printed in 1602; Marston and Dekker are here ridiculed respectively as the aristocratic Crispinus and the vulgar Democritus. The play was completed 15 weeks after its plot was first conceived. Fleay's supposition that the "purge," said in the *Returne from Parnassus* (Pt. II. act iv. sc. iii.) to have been administered by Shakespeare to Jonson in return for Horace's "pill to the poets" in this piece, consisted of *Troilus and Cressida* is supremely ingenious, but cannot be examined here. Dekker retaliated on *The Poetaster* by the *Satiromastix, or The Untrussing of the Humorous Poet* (1602). Some more last words were indeed attempted on Jonson's part, but in the *Apologetic Dialogue* added to *The Poetaster* in the edition of 1616, though excluded from that of 1602, he says he intends to turn his attention to tragedy.

Tragedies and Masques.—This intention he apparently carried out at once, for in 1602 he received £10 from Henslowe for a play, entitled *Richard Crookbacke*, now lost—unfortunately so, for purposes of comparison in particular, even if it was only, as Fleay conjectures, "an alteration of Marlowe's play." According to a statement by Overbury, early in 1603, "Ben Jonson, the poet, now lives upon one Townesend," supposed to have been the poet and masque-writer Aurelian Townshend, at one time steward to the 1st earl of Salisbury, "and scornes the world." To his other early patron, Lord Albany, Jonson dedicated the first of his two extant tragedies, *Sejanus*, produced by the king's servants at the Globe late in 1603, Shakespeare once more taking a part in the performance. Either on its performance or on its appearing in print in 1605, Jonson was called before the privy council by the Earl of Northampton. But it is open to question whether this was the occasion on which, according to Jonson's statement to Drummond, Northampton "accused him both of popery and treason."

When the reign of James I. opened in England, Jonson's genius, which, far from being "ponderous" in its operations, was singularly swift and flexible in adapting itself to the demands made upon it, met the new taste for masques and entertainments—new of course in degree rather than in kind—introduced with the new reign and fostered by both the king and his consort. The pageant which on May 7, 1603, bade the king welcome to London was partly of Jonson's, partly of Dekker's, devising, and he was able to deepen and diversify the impression by the composition of masques presented to James I. when entertained at houses of the nobility. *The Satyr* (June 25, 1603) was produced on one of these occasions, Queen Anne's sojourn at Althorpe, the seat of Sir Robert Spencer, afterwards Lord Althorpe, who seems to have previously bestowed some patronage upon him. *The Penates* followed on May-day 1604 at the house of Sir William Cornwallis at Highgate. The queen herself with her ladies danced in Jonson's *Masque of Blackness* at Whitehall on Jan. 6, 1605. He was soon occasionally employed by the court itself—already in 1606 in conjunction with Inigo Jones, as responsible for the "painting and carpentry"—and thus speedily showed himself master in a species of composition for which, more than any other English poet before Milton, he secured an enduring place in the national poetic literature. Incidentally, joint employment in *The King's Entertainment* (1604) had reconciled him with Dekker; and with Marston also, who in 1604 dedicated to him his *Malcontent*, he was again on pleasant terms. When, therefore, in 1604–05 Marston and Chapman (who, Jonson told Drummond, was loved of him), produced the excellent comedy of *Eastward Ho*, it contained some contributions by Jonson. At all events, when the authors were arrested on account of passages deemed insulting to the Scots, he "voluntarily imprisoned himself" with them. They were soon released, and a banquet at his expense, attended by Camden and Selden, terminated the incident.

If Jonson is to be believed, the prisoners had been threatened with mutilation of their ears and noses, and, "at the midst of the feast his old mother drank to him, and showed him a paper which she had intended (if the sentence had taken execution) to have mixed in the prison among his drink, which was full of lusty strong poison; and that she was no churl, she told him, she minded first to have drunk of it herself." This incident can hardly be the imprisonment during which Jonson sought the good offices of the earl of Salisbury in a letter endorsed 1605, in which he explains that since his "first error" he has so "attempered" his style as to have "given no cause to any good man of grief." Some authorities have surmised that there were two imprisonments, and that the play which occasioned the trouble, in which both Chapman and

Jonson took part, was *Sir Gyles Goosecappe*, and that the last imprisonment of the two poets was shortly after the discovery of the Gunpowder Plot. In the mysterious history of the Gunpowder Plot Jonson certainly had some obscure part. On Nov. 7, very soon after the discovery of the conspiracy, the council appears to have sent for him and to have asked him, as a loyal Roman Catholic, to use his good offices in inducing the priests to do something required by the council. Jonson tried, and failed; he declares, in a letter to Lord Salisbury, that "they (the priests) are all so enweaved in it that it will make 500 gentlemen less of the religion within this week, if they carry their understanding about them." Jonson did not himself return to the Church of England until five years later, however much it might have been to his advantage to do so.

The Works of His Prime.—His powers as a dramatist were at their height during the earlier half of the reign of James I.; and by the year 1616 he had produced nearly all the plays which are worthy of his genius. They include the tragedy of *Catiline* (acted and printed 1611), which achieved only a doubtful success, and the comedies of *Volpone, or the Fox* (acted 1605 or 1606, and printed in 1607 with a dedication "from my house in the Blackfriars"), *Epicoene, or the Silent Woman* (1609; entered in the Stationers' Register 1610), the *Alchemist* (1610; printed in 1610), *Bartholomew Fair* and *The Devil is an Ass* (acted respectively in 1614 and 1616). During the same period he produced several masques, usually in connection with Inigo Jones, with whom, however, he seems to have quarrelled already, though it is very doubtful whether the architect is really intended to be ridiculed in *Bartholomew Fair* under the character of Lanthorn Leatherhead. Littlewit, according to Fleay, is Daniel. The masques of this period are: the *Masque of Blackness* (1605) already mentioned; *Hymenaei* (1606), written for the wedding of Robert, earl of Essex; the *Masque of Beauty* (1608); *The Hue and Cry after Cupid* (1608), written for Lord Haddington's wedding; the *Masque of Queens* (1609), described by Swinburne as "the most splendid of all masques" and as "one of the typically splendid monuments or trophies of English literature"; *Oberm, the Faery Prince* (1611), a "masque of Prince Henries"; and five other court masques: *Love freed from Ignorance and Folly* (1611), *Love Restored* (1612), *The Irish Masque* (1613), *Mercury vindicated from the Alchemists* (1615), and *The Golden Age Restored* (1616). In 1616 a modest pension of 100 marks a year was conferred upon him, and Jonson published the first volume of the folio collected edition of his works.

He had other patrons more bountiful than the Crown, and (in 1613) had travelled to France as governor to the eldest son of Sir Walter Raleigh, then a State prisoner in the Tower, for whose society Jonson probably gained a liking at the Mermaid Tavern in Brest street, Cheapside. After 1616 Jonson continued to produce masques and entertainments when called upon; but he was attracted by many other literary pursuits. He was already entitled to lord it at the Mermaid, where his quick antagonist in earlier wit-combats (if Fuller's famous description be authentic) no longer apeared even on a visit from his comfortable retreat at Stratford. That on the other hand Ben carried his wicked town habits into Warwickshire, and there, together with Drayton, made Shakespeare drink so hard with them as to bring upon himself the fatal fever which ended his days, is a scandal with which we may fairly refuse to load Jonson's memory. That he had a share in the preparing for the press of the first folio of Shakespeare, or in the composition of its preface, is of course a mere conjecture.

In the year 1618, like Samuel Johnson a century and a half afterwards, Ben resolved to have a real holiday for once, and about midsummer started for his ancestral country, Scotland. He had determined to make the journey on foot; and he was followed by John Taylor, the water-poet, who proposed to accomplish his pilgrimage without a penny in his pocket. Jonson, who put money in his good friend's purse when he came up with him at Leith, spent more than a year and a half in Scotland, being elected a burgess in Edinburgh. The best-remembered hospitality which he enjoyed was that of the learned Scottish poet, William Drummond of Hawthornden, to which we owe the so-called *Conversations*. In these famous jottings, the work of no extenuating hand, Jonson lives for us to this day, delivering his censures, terse as they are, in an expansive mood whether of praise or of blame; he is ungenerously described in the postscript added by his fatigued and at times irritated host as "a great lover and praiser of himself, a contemner and scorner of others." A poetical account of his journey, "with all the adventures," which Jonson had intended to entitle *The Discoverie*, was burnt with Jonson's library, a calamity which befell him probably in 1623–24.

After his return to London early in May 1619, Jonson visited Oxford to receive the degree of M.A. Among his noble patrons and patronesses were the countess of Rutland (Sidney's daughter) and her cousin Lady Wroth. The extremely spirited *Gipsies Metamorphosed* (1621) was thrice presented before the king, who granted the poet the reversion of the office of master of the revels, besides proposing to confer upon him the honour of knighthood. This honour Jonson (hardly in deference to the memory of Sir Petronel Flash) declined; but there was no reason why he should not gratefully accept the increase of his pension in the same year (1621) to £200—a temporary increase only, inasmuch as it still stood at 100 marks when afterwards augmented by Charles I.

Last Plays.—The close of King James I.'s reign found the foremost of its poets in anything but a prosperous condition. Disease had weakened Jonson's strength, and the burning of his library and of his own mss., as his *Execration upon Vulcan* sufficiently shows, must have been no mere transitory trouble to a poor poet and scholar. Moreover, from the time of the accession of Charles I. early in 1625 onwards, royal patronage would no longer be due in part to intellectual sympathy. Jonson therefore returned to writing for the stage, and in 1625 produced, with no faint heart, but with a very clear anticipation of the comments which would be made upon the reappearance of the "huge, overgrown play-maker," *The Staple of News* (pr. 1631), a comedy excellent in some respects, but little calculated to become popular. Jonson, whose habit of body was not more conducive than were his ways of life to a healthy old age, had a paralytic stroke in 1626, and a second in 1628. In the latter year, on the death of Middleton, the appointment of city chronologer, with a salary of 100 nobles a year, was bestowed upon him. He appears to have considered the duties of his office as purely ornamental; but in 1631 his salary was suspended until he should have presented some fruits of his labours in his place, or—as he more succinctly phrased it—"yesterday the barbarous court of aldermen have withdrawn their chandlerly pension for verjuice and mustard, £33, 6s. 8d." Arrested in 1628 by mistake on the false charge of having eulogized the assassin of Buckingham, he was soon released, and apology was made for the error. In 1629 he once more essayed the stage with the comedy of *The New Inn*, which was damned on the first performance. It was printed in 1631, "as it was never acted but most negligently played"; and Jonson defended himself against his critics in his spirited *Ode to Himself*. The epilogue to *The New Inn* having dwelt not without dignity upon the neglect which the poet had experienced, King Charles sent the unlucky author a gift of £100, and then increased his standing salary to the same sum, with the addition of an annual tierce of canary—the poet-laureate's customary royal gift, though this designation of an office, of which Jonson discharged some of what became the ordinary functions, is not mentioned in the warrant dated March 26, 1630. In 1634, by the king's desire, Jonson's salary as chronologer to the city was again paid. To his later years belong the comedies, *The Magnetic Lady* (1632) and *The Tale of a Tub* (1633), both printed in 1640, and some masques. Jonson had quarrelled with Inigo Jones, and mocked him as Vitruvius Hoop in his last comedy.

The patronage of liberal-minded men, such as the earl, afterwards duke, of Newcastle—by whom he must have been commissioned to write his last two masques *Love's Welcome at Welbeck* (1633) and *Love's Welcome at Bolsover* (1634)—and Viscount Falkland, was not wanting. Jonson was the acknowledged chief of the English world of letters, both at the festive meetings where he ruled the roast among the younger authors whose pride it was to be "sealed of the tribe of Ben," and by the

avowal of grave writers, old or young, not one of whom would have ventured to dispute his titular pre-eminence. Nor was he to the last unconscious of the claims upon him which his position brought with it. When, nearly two years after he had lost his surviving son, death came upon the sick old man on Aug. 6, 1637, he left behind him an unfinished work of great beauty, the pastoral drama of *The Sad Shepherd* (printed in 1641). For 40 years, he said in the prologue, he had feasted the public; at first he could scarce hit its taste, but patience had at last enabled it to identify itself with the working of his pen.

Jonson was buried on the north side of the nave in Westminster Abbey, and the inscription, "O Rare Ben Jonson," was cut in the slab over his grave. In the beginning of the 18th century a portrait bust was put up to his memory in the Poets' Corner by Harley, earl of Oxford. Of Honthorst's portrait of Jonson at Knole Park there is a copy in the National Portrait Gallery; another was engraved by W. Marshall for the 1640 edition of his *Poems*.

We are so accustomed to think of Ben Jonson presiding, attentive to his own applause, over a circle of younger followers and admirers that we are apt to forget the hard struggle which he had passed through before gaining the crown now universally acknowledged to be his. Howell records, in the year before Ben's death, that a solemn supper at the poet's own house, where the host had almost spoiled the relish of the feast by vilifying others and magnifying himself, "T. Ca." (Thomas Carew) buzzed in the writer's ear "that, though Ben had barrelled up a great deal of knowledge, yet it seemed he had not read the *Ethics*, which, among other precepts of morality, forbid self-commendation." Jonson's quarrels do not appear to have entered deeply into his soul, or indeed usually to have lasted long. He was too exuberant in his vituperations to be bitter, and too outspoken to be malicious. He loved of all things to be called "honest," and there is every reason to suppose that he deserved the epithet. The old superstition that Jonson was filled with malignant envy of the greatest of his fellow-dramatists, and lost no opportunity of giving expression to it, hardly needs notice. Those who consider that Shakespeare was beyond criticism may find blasphemy in the saying of Jonson that Shakespeare "wanted art." Occasional jesting allusions to particular plays of Shakespeare may be found in Jonson, among which should hardly be included the sneer at "mouldy" Pericles in his *Ode to Himself*. But these amount to nothing collectively, and to very little individually; and against them have to be set, not only the many pleasant traditions concerning the long intimacy between the pair, but also the lines, prefixed to the first Shakespeare folio, as noble as they are judicious, dedicated by the survivor to "the star of poets," and the adaptation, clearly sympathetic notwithstanding all its buts, *de Shakespeare nostrat.* in the *Discoveries*.

Non-dramatic Works.—Jonson's learning and industry, which were alike exceptional, by no means exhausted themselves in furnishing and elaborating the materials of his dramatic works. His classical scholarship shows itself in other directions besides his translations from the Latin poets (the *Ars poetica* in particular), in addition to which he appears to have written a version of Barclay's *Argenis;* it was likewise the basis of his *English Grammar*, of which nothing but the rough draft remains (the ms. itself having perished in the fire in his library). And its effects are very visible in some of the most pleasing of his non-dramatic poems, which often display that combination of polish and simplicity hardly to be reached—or even to be appreciated—without some measure of classical training.

Exclusively of the few lyrics in Jonson's dramas his non-dramatic works are comprised in the *Epigrams* (published in the first folio of 1616), the lyrics and epistles of *The Forest* (also in the first folio); and the miscellaneous poems in *Underwoods* (published collectively in the 2nd folio). To these pieces in verse should be added the *Discoveries—Timber, or Discoveries made upon Men and Matters*, a commonplace book of aphorisms noted by the poet in his daily readings—thoughts adopted and adapted in more tranquil and perhaps more sober moods than those which gave rise to the outpourings of the *Conversations at Hawthornden*. As to the critical value of these *Conversations* it is far from being only negative; he knew how to admire as well as how to disdain. For these thoughts, though abounding with biographical as well as general interest, Jonson was almost entirely indebted to ancient writers, or to the humanists of the Renaissance.

His Dramatic Genius.—The extant dramatic works of Ben Jonson fall into three or, if his fragmentary pastoral drama be considered to stand by itself, into four distinct divisions. The tragedies are only two in number—*Sejanus his Fall* and *Catiline his Conspiracy*. Of these the earlier, as is worth noting, was produced at Shakespeare's theatre, in all probability before the first of Shakespeare's Roman dramas, and still contains a considerable admixture of rhyme in the dialogue. In both plays the action is powerfully conducted, and the care bestowed by the dramatist upon the great variety of characters introduced cannot, as in some of his comedies, be said to distract the interest of the reader. Both these tragedies are noble works, but both were alike too manifestly intended by their author to court the goodwill of what he calls the "extraordinary" reader. It is difficult to imagine that (with the aid of judicious shortenings) either could altogether miss its effect on the stage; but, while Shakespeare causes us to forget, Jonson seems to wish us to remember, his authorities. He has had to pay the penalty incurred by too obvious a desire to underline the learning of the author.

The strength of Jonson's dramatic genius lay in the power of depicting a great variety of characters, and in comedy alone he succeeded in finding a wide field for the exercise of this power. There may have been no very original or very profound discovery in the idea which he illustrated in *Every Man in his Humour*, and, as it were, technically elaborated in *Every Man out of his Humour* —that in many men one quality is observable which so possesses them as to draw the whole of their individualities one way, and that this phenomenon "may be truly said to be a humour." By refusing to apply the term "humour" (*q.v.*) to a mere peculiarity or affectation of manners, and restricting its use to actual or implied differences or distinctions of character, he broadened the whole basis of English comedy after his fashion, as Molière at a later date, keeping in closer touch with the common experience of human life, with a lighter hand broadened the basis of French and of modern Western comedy at large. It is a futile criticism to condemn Jonson's characters as a mere series of types of general ideas; on the other hand, it is a very sound criticism to object, with Barry Cornwall, to the "multitude of characters who throw no light upon the story, and lend no interest to it, occupying space that had better have been bestowed upon the principal agents of the plot."

Dryden, when criticizing Ben Jonson's comedies, thought fit, while allowing the old master humour and incontestable "pleasantness," to deny him wit and those ornaments thereof which Quintilian reckons up under the terms *urbana, salsa, faceta* and so forth. Such wit as Dryden has in view is the mere outward fashion or style of the day, the euphuism or "sheerwit" or *chic* which is the creed of Fastidious Brisks and of their astute purveyors at any given moment. In this Ben Jonson was no doubt defective; but it would be an error to suppose him, as a comic dramatist, to have maintained towards the world around him the attitude of a philosopher, careless of mere transient externalisms. It is said that the scene of his *Every Man in his Humour* was originally laid near Florence; and his *Volpone*, which is perhaps the darkest social picture ever drawn by him, plays at Venice. But the real atmosphere of his comedies is that of London town; and Ben Jonson's times live for us in his men and women, his country gulls and town gulls, his alchemists and exorcists, his "skeldring" captains and whining Puritans, and the whole ragamuffin rout of his *Bartholomew Fair*, the comedy *par excellence* of Elizabethan low life. He described the pastimes, fashionable and unfashionable, of his age, its feeble superstitions and its flaunting naughtinesses, its vapouring affectations and its lying effronteries, with an odour as of "divine tobacco" pervading the whole.

The richness and versatility of Jonson's genius cannot be fully appreciated without the study of what is preserved to us of his

"masques" and cognate entertainments. He was conscious enough of his success in this direction—"next himself," he said, "only Fletcher and Chapman could write a masque." He introduced, or at least established, the ingenious innovation of the anti-masque, which Schlegel has described as a species of "parody added by the poet to his device, and usually prefixed to the serious entry," and which accordingly supplies a grotesque antidote to the often extravagantly imaginative main conception. Jonson's learning, creative power and humorous ingenuity—combined, it should not be forgotten, with lyrical genius—all found abundant opportunities in these productions. The masque was by him thoroughly domesticated in the high places of English literature. He lived long enough to see its poetic masterpiece in *Comus*.

The Sad Shepherd, of which Jonson left behind him three acts and a prologue, is distinguished among English pastoral dramas by its freshness of tone; it breathes something of the spirit of the greenwood, and is not unnatural even in its supernatural element. The piece, with its charming love-scenes between Robin Hood and Maid Marion, unhappily, remains a fragment.

Though Ben Jonson never altogether recognized the truth of the maxim that the dramatic art has properly speaking no didactic purpose, his long and laborious life was not wasted upon a barren endeavour. In tragedy he added two works of uncommon merit to our dramatic literature. In comedy his aim was higher, his effort more sustained, and his success more solid than were those of any of his fellows. In the subsidiary and hybrid species of the masque, he helped to open a new and attractive though undoubtedly devious path in the field of dramatic literature. His intellectual endowments surpassed those of most of the great English dramatists in richness and breadth; and in energy of application he probably left them all behind. Inferior to more than one of his fellow-dramatists in the power of imaginative sympathy, he was first among the Elizabethans in the power of observation; and there is point in Barrett Wendell's paradox, that as a dramatist he was not really a poet but a painter. Yet it is less by these gifts, or even by his unexcelled capacity for hard work, than by the true ring of manliness that he will always remain distinguished among his peers.

BIBLIOGRAPHY.—The first folio volume of Jonson's *Works* (of which title his novel but characteristic use in applying it to plays was at the time much ridiculed) appeared in 1616; the second, professedly published in 1640, is described by Gifford as "a wretched continuation of the first, printed from mss. surreptitiously obtained during his life, or ignorantly hurried through the press after his death, and bearing a variety of dates from 1631 to 1641 inclusive." The works were reprinted in a single folio volume in 1692, in which *The New Inn* and *The Case is Altered* were included for the first time, and again in 6 vols. 8vo in 1715. Modern editions are by William Gifford (9 vols., 1816; often reprinted); a complete critical edition in preparation for the Clarendon Press by C. H. Herford and P. Simpson; selections in the Mermaid Series (3 vols, 1893–95), ed. B. Nicholson (re-issue, with pref. by C. H. Herford, 1904). There are numerous critical editions of individual plays, for particulars of which the reader may be referred to the articles on the separate plays in E. K. Chambers, *The Elizabethan Stage* (1923), vol. iii.; among these may be mentioned the editions of *Every Man in his Humour* and *Everyman out of his Humour* in Nos. 16 and 17 (1905 and 1907) of Bang's *Materialien zur Kunde des alten englischen Dramas*, by W. Bang and W. W. Greg; some by American scholars in the *Yale Studies in English*, ed. by A. S. Cook—*The Poetaster*, ed. H. S. Mallory (1905); *The Alchemist*, ed. C. M. Hathaway (1903); *The Devil is an Ass*, ed. W. S. Johnson (1905); *The Staple of News*, ed. De Winter (1905); *The New Inn*, ed. by G. Bremner (1908); *The Sad Shepherd* (with Waldron's continuation) has been edited by W. W. Greg for Bang's *Materialien zur Kunde des alten englischen Dramas* (Louvain, 1905).

The criticisms of Ben Jonson are too numerous for cataloguing here; among those by eminent Englishmen should be specially mentioned John Dryden's, particularly those in his *Essay on Dramatic Poësy* (1667–68; revised 1684), and in the preface to *An Evening's Love, or the Mock Astrologer* (1668), and A. C. Swinburne's *Study of Ben Jonson* (1889), in which, however, the significance of the *Discoveries* is misapprehended. *See* also F. G. Fleay, *Biographical Chronicle of the English Drama* (1891), i. 311–387, ii. 1–18; C. H. Herford, "Ben Jonson" (art. in *Dict. Nat. Biog.*, vol. xxx., 1802); A. W. Ward, *History of English Dramatic Literature* (2nd ed., 1899), ii. 296–407; and for a list of early impressions, W. W. Greg, *List of English Plays written before 1643 and printed before 1700* (Bibliographical Society, 1900), pp. 55–58 and supplement 11–15. An important French work on Ben Jonson, both biographical and critical, and containing, besides many translations of scenes and passages, some valuable appendices, to more than one of which reference has been made above, is Maurice Castelain's *Ben Johnson, l'homme et l'oeuvre* (1907). Among treatises or essays on particular aspects of his literary work may be mentioned Emil Koeppel's *Quellenstudien zu den Dramen Ben Jonson's*, etc. (1895); the same writer's "Ben Jonson's Wirkung auf zeitgenössische Dramatiker," etc., in *Anglicistische Forschungen*, 20 (1906); F. E. Schelling's *Ben Jonson and the Classical School* (1898); and as to his masques, A. Soergel, *Die englischen Maskenspiele* (1882) and J. Schmidt, "Über Ben Jonson's Maskenspiele," in Herrig's *Archiv*, etc., xxvii. 51–91. *See* also H. Reinsch, "Ben Jonson's Poetik und seine Beziehungen zu Horaz," in *Münchener Beitrage*, 16 (1899), and G. Gregory Smith, *Ben Jonson* (1910) in the English Men of Letters Series. (A. W. WA.; X.)

JONSON (JOHNSON, JANSON, JANSSENS), **CORNELIS VAN CEULEN** (Cologne) (1593–1662), Flemish painter, was apparently born in London and baptized on Oct. 14, 1593. His family derived originally from Cologne and emigrated from Antwerp to England about 1568. He worked in England from 1618 to 1643, and afterwards retired to Holland, working at Middelburg, Amsterdam, The Hague and Utrecht. In England he was patronized by James I. and the court, and under Charles I. he continued to paint the numerous portraits which adorn many English mansions and collections. Janssen's pictures, chiefly portraits, are distinguished by clear colouring, delicate touch, good taste and careful finish. He generally painted upon panel, and often worked on a small scale, sometimes producing replicas of his larger works. In all probability his earliest portrait (1618) was that of John Milton as a boy of ten.

JOOS VAN CLEVE (*c.* 1480–1540), Flemish painter. His full name was Joos van der Beke van Cleve. He is now commonly accepted as the author of the pictures, formerly grouped under the name of the Master of the Death of the Virgin, and it is suggested that he was the pupil of Jan Joest of Haarlem, sometimes called of Calcar, the painter of the great altarpiece at Calcar. The earliest work ascribed to Joos, the two wings with Adam and Eve, dated 1507, in the Louvre, show marked affinities with Joest's style. Joos is first mentioned in 1511, when he entered the Antwerp guild as a master painter. He soon received commissions from Cologne. The date 1515 is on one of the two well-known triptychs which he painted for the Hackeney family of Cologne, representing the "Death of the Virgin" on the central panel and the portraits of the male and female members of the family grouped on the wings. The larger picture is in the Munich Pinakothek, and the smaller is in the Cologne museum. These two pictures, which gave the artist the provisional name of "the Master of the Death of the Virgin," brought the Flemish tradition to Cologne, and exercised a far-reaching influence on the local school. Another picture painted for Cologne is "the Pieta" at Frankfurt (1524), commissioned by the senator J. Schmitgen for the church of Sancta Maria in Lyskirchen.

In 1520 Joos was appointed dean of his guild in Antwerp. In that year Dürer visited the city, and Joos must have admired his work for he copied the German master's "St. Jerome." It seems to have been his custom to copy other masters. "The Virgin" in the Spiridon collection in Paris recalls Van Eyck; "The Deposition" in the Johnson collection at Philadelphia is founded on Roger van der Weyden; the saviour in the Louvre on Quentin Massys; the "Two Children Embracing," of which there are many replicas, on Leonardo. He must have felt drawn to the great Italian by his delight in delicate modelling, and he may have seen some of Leonardo's work in France; for we know on the authority of Guicciardini that when Francis I. of France sent to Flanders for a good portrait painter, Joos van Cleve was chosen among others; he was rightly described as a good colourist. The originals of the portraits which he painted of the king, and of his wife, Eleanor of Austria, are no longer extant; but it is thought that the portraits of the king at Hampton Court and in the Johnson collection at Philadelphia, and of the queen at the Vienna museum, are replicas of his work. An attractive portrait by his hand, of Henry VIII. when young, at Hampton Court, suggests that the artist visited England. He also painted the emperor Maximilian (André collection, Paris). In the Louvre is a large altarpiece with a "Pieta" in the central panel, a "St. Francis" in the lunette and a "Last Supper" on the predella, which came from a church in Genoa. The "Last Supper" is founded on

the famous fresco of Leonardo da Vinci at Milan. Three more altarpieces were painted by Joos for Genoa; one of these is still in the church of San Donato; another is "The Crucifixion," now in the Blumenthal collection at New York; and the third is the larger version of the two "Adorations of the Magi," by the master, in the Dresden gallery. It is therefore probable that he visited Italy some time after 1530. He died at Antwerp in 1540.

Besides the pictures mentioned the following may be noted:— "The Crucifixion" in the Gardner collection, Boston; and "The Crucifixion" in the Naples museum; "The Annunciation" in the Friedsam collection, New York. Joos is at his best when painting the "Virgin and Child." His fame rests on "The Madonna" at Ince Hall and on "The Madonna" at the Vienna museum. The heads are delicately modelled, with pretty complexions and sweet expressions. There is much to remind us of Mabuse. Characteristic of his work are the accessories which he introduced in the foreground, such as a bowl of fruit, a knife, a lily in a glass, an open manuscript carefully finished—as in "The Madonna" in the Fitzwilliam museum at Cambridge, and one belonging to Mme. Nielson in Paris, and as in the "Virgin and Child and St. Anne" at Modena The landscape backgrounds often recall the style of Joachim Patinir, who settled at Antwerp in 1515. The landscape in "St. John at Patmos" in the Kahn collection, New York, seems certainly to be by Patinir Joos Van Cleve is sometimes called the Elder to distinguish him from his son, Cornelis van Cleve (1520–67), a distinguished portrait painter commonly known as Sotte Cleve, because he lost his reason.

See Max Friedländer, *Von Van Eyck bis Brueghel* (1921); Martin Conway, *The Van Eycks and their Followers* (1921); Ludwig Baldass, *Joos van Cleve* (Vienna, 1925).

JOPLIN, a city of Jasper county, Mo, U.S.A., on Joplin creek, 140m. S. of Kansas City. It is on Federal highways 66 and 71, and is served by the Frisco, the Kansas City Southern, the Missouri and Northern Arkansas, the Missouri-Kansas-Texas, the Missouri Pacific and the Santa Fe railways, and by electric interurban lines. The population was 29,902 in 1920 (95% native white) and was estimated locally at 35,000 in 1928. Joplin is the shipping point for a rich farming, fruit-growing and stock-breeding district, and is the commercial centre of the most productive zinc and lead region of the country, which to the end of 1927 had produced ores amounting in value to $731,572,254. The coal mines of south-eastern Kansas are within a short distance, and natural gas is piped in from the Kansas fields. There are important manufacturing industries (including lead smelters) with an output in 1925 valued at $24,028,519. The first settlement in this neighbourhood was made in 1838. Joplin was laid out and incorporated as a town in 1871. In 1872 it united with a rival town across the creek to form Union City, which in 1873 was chartered as a city under the name of Joplin. The name was first applied to the creek, in honour of the Rev. Harris G. Joplin, a native of Tennessee. The city's period of greatest growth was the decade 1890–1900, when the population increased 162%.

JOPPA, an ancient city on the sea-coast of Palestine, and port for Jerusalem. Mod. *Yāfā,* Jaffa. It was taken in 1472 B.C. by the general of Thutmose III. by a clever stratagem. It is twice mentioned (Ya-pu) in the Tell-Amarna letters; and in the Papyrus Anastasi I. (13th century B.C.) the travelling "mohar" found here excellent workers in wood, metal and leather. In the Old Testament it is ascribed to Dan, and is mentioned as a seaport for the importation of Lebanon timber floated down the coast (1 Ki. ix. 26). In 701 B.C. Sinaherib besieged Joppa, then a fief of Askalon. The inscriptions of Eshmunazar (*c.* 400 B.C.) record that Jaffa was given to the Sidonians by the Persian monarch, but 50 years later it is recorded as independent. The conquest of Alexander, who established here a mint, changed its name to Joppe. Ptolemy I. garrisoned it (318 B.C.) and it was besieged and taken by Antigonus (315 B.C.). A den of pirates (*see* STRABO), it was destroyed by Vespasian during the Jewish War (A.D. 68). St. Peter remained at Joppa for a season, restored there Tabitha to life, and had his remarkable vision. The legend of Andromeda and the sea monster is located here, and Pompey's captain, Scaurus, could display to the wondering eyes of Rome the carcass of the monster which he had transported from Joppa.

In Christian times it became the see of a bishop. The Crusaders captured it (1126) and lost it to Saladin (1187). It was recaptured by Richard Lionheart (1191) and finally lost in 1196. Joppa was razed to the ground and its harbour choked by Sultan Nasir ed-Din Muhammad in 1345, because of a threatened new crusade. Towards the end of the 17th century, it began afresh to develop as a seaport. Napoleon took possession of the town in 1799. On Nov. 16, 1917, it was entered by British troops without opposition.

The population of Jaffa in 1922 was 47,700 (32,000 Muslims, 12,000 Jews). It is a great pilgrim port for Jerusalem. About 400 steamers call there annually. The chief exports are fruit (especially oranges), corn, sesame, cotton and leather. The imports include cotton and woollen manufactures, colonial requisites, iron, bricks, wood and building materials generally. One mile away is the thriving Jewish colony of Tell Aviv, which dates from 1909. Its population has grown rapidly and is now 45,000. Jaffa gives its name to one of the seven official districts into which the Mandated Territory has been divided for administrative purposes. It has no proper harbour. Plans for a harbour have been prepared, but their execution has been delayed owing to cost. Haifa is now proving a formidable rival to Jaffa. The industries of the town include soap-making, milling, cement-making, building and the manufacture of furniture. The streets and the buildings have little to commend them. Electricity has recently been introduced. Jaffa has daily rail and post communication with Egypt and Haifa; it has several monasteries and four hospitals.

See S. Tolkowsky, *The Gateway of Palestine: A History of Jaffa* (1924); *ibid*, "New Light on the History of Jaffa," *Journ. Pal Orient. Soc.* 5 (1925) 82 *seq.* (E. Ro.)

JORDAENS, JACOB (1593–1678), Flemish historical, genre and portrait painter, was born at Antwerp on May 19, 1593, and died there on Oct. 18, 1678. He studied, like Rubens, under Adam van Noort, and he married his master's daughter in 1616, the year after his admission to the gild of painters as a painter in water colours, though he painted mostly in oil. He never went to Italy as did the other Flemish artists of his time and his work is essentially Flemish in its exaggerated treatment of form and crude humour. His colour is warm and glowing, his figures incline to corpulency, his faces are red and healthy. He was a prolific painter, and employed a large number of pupils in his studio. Although he was a Calvinist he received numerous commissions for Catholic churches, and after the death of Rubens he was considered the greatest painter in his country. He is represented in almost all important European galleries and in the Metropolitan museum of art in New York. In 1652 he decorated the "Huis ten Bosch" near The Hague with mural paintings representing "the Triumph of Frederick Henry of Orange, Stadtholder of Holland," and "The Victory of Time."

He also executed designs for tapestries A large number of his drawings and water colours are still extant; and nine engravings are ascribed to him. .

See Max Rooses, *J. Jordaens, his Life and Work* (English trans, 1908).

JORDAN, CAMILLE (1838–1922), French mathematician, was born at Lyons on Jan. 5, 1838. He was educated at Paris, and was professor of mathematics in the École polytechnique from 1876 until he retired in 1912; at the same time he was "suppléant" in the Collège de France. Jordan edited the *Journal de Mathématiques* from 1885 until he died at Milan on Jan. 20, 1922.

Jordan's early researches were on geometry. In 1870 he was awarded the Poncelet prize for his *Traité des substitutions et des équations algébriques.* This book contains a comprehensive account of Galois' theory of groups of substitutions, and Jordan applied it to algebraic equations. He extended the work on to primitive transitive and composite groups and was able to solve a problem suggested by Abel as to whether a given algebraic equation is soluble by radicals. Jordan published his lectures, together with

most of his researches on analysis, in his *Cours d'Analyse de l'École Polytechnique* (3 vols., 1882). The 2nd edition (1893–1900) of this notable work contained a good deal more of Jordan's own work than the first. He treated the theory of functions from the modern point of view. He dealt with the function of bounded variation, and applied it to the curve known as Jordan's curve.

JORDAN, CAMILLE (1771–1821), French politician, was born at Lyons on Jan. 11, 1771. He took part in the resistance offered by Lyons to the Convention, and after the fall of the city in Oct. 1793, went into exile. In 1796 he returned to France, and in 1797 was returned by Lyons to the Council of the Five Hundred, where he advocated religious toleration; his appeal on behalf of church bells, in his *Rapport sur la Liberté des Cultes* won for him the sobriquet of Jordan-Cloche. Proscribed at the *coup d'état* on the 18th Fructidor (Sept. 4, 1797), he fled to Basle, and then to Germany. He returned to France in 1800 and, in spite of a pamphlet written against Bonaparte, was unmolested. Jordan became a leader of the constitutional opposition after the Restoration. He died in Paris on May 19, 1821.

His works include *Histoire de la conversion d'une dame parisienne* (1792); *Le vrai Sens du Vote national pour le Consulat à vie* (1802); *Sur les troubles de Lyon* (1818); other political pamphlets; and some translations from the German. His *Discours politiques* were collected in 1818.

JORDAN, DAVID STARR (1851–), American educator and naturalist, was born at Gainesville (N.Y.), on Jan. 19, 1851. He studied at Cornell university, at the Indiana Medical college and at Butler university. He was instructor in botany at Cornell (1871–72) and professor of natural history at Lombard university (Ill.) (1872–73). He was principal of the Appleton (Wis.) collegiate institute (1873–74) and taught in the Indianapolis high school from 1874 to 1875, when he was appointed professor of biology at Butler university. In 1879 he became professor of zoology at Indiana university, of which institution he was made president in 1885. In 1891 he was appointed president of Leland Stanford Jr. university, becoming its chancellor in 1913 and retiring in 1916.

Dr. Jordan was a member of the U.S. fish commission (1877–91, 1894–1909), U.S. commissioner in charge of fur, seal and salmon investigations for Alaska, and international commissioner of fisheries for Canada and the United States (1908–10). He was active in promoting the cause of international peace, being chief director of the World Peace Foundation (1910–14), president of the World's Peace Congress in 1915, and vice president of the American Peace Society. He also held many offices in learned societies. He was the author of a large number of books, among which are *Fishes of North and Middle America* (with B. W. Evermann, 4 vols., 1896); *Evolution and Animal Life* (with V. L. Kellogg, 1907); *World Peace and the College Man* (1914); *Democracy and World Relations* (1918); *Classification of Fishes* (1922); and *The Days of a Man* (autobiography in 2 vols., 1922).

JORDAN, DOROTHEA (1762–1816), Irish actress, was born near Waterford, Ireland, in 1762. Her mother, Grace Phillips, at one time known as Mrs. Frances, was a Dublin actress. Her father, whose name was Bland, was according to one account an army captain, but more probably a stage hand. Dorothy Jordan made her first appearance on the stage in 1777 in Dublin as Phoebe in *As You Like It*. In 1785 she made her first London appearance at Drury Lane as Peggy in *A Country Girl*. Before the end of her first season she had become an established public favourite, her acting in comedy being declared second only to that of Kitty Clive. Her engagement at Drury Lane lasted till 1809, and she played a large variety of parts. Among her most successful parts were Lady Teazle, Rosalind and Imogen, and such "breeches" parts as William in *Rosina*. During the rebuilding of Drury Lane she played at the Haymarket; she transferred her services in 1811 to Covent Garden. Here, in 1814, she made her last appearance on the London stage, and the following year, at Margate, retired altogether. Mrs. Jordan had a daughter by her first manager, in Ireland, and four children by Sir Richard Ford, whose name she bore for some years. In 1790 she became the mistress of the duke of Clarence (afterwards William IV.), and bore him ten children, who were ennobled under the name of Fitz Clarence, the eldest being created earl of Munster. In 1811 they separated by mutual consent, Mrs. Jordan being granted a liberal allowance. In 1815 she went abroad. She is generally understood to have died at St. Cloud, near Paris, on July 3, 1816, but the story that under an assumed name she lived for seven years after that date in England finds some credence.

See James Boaden, *Life of Mrs. Jordan* (1831).

JORDAN, THOMAS (1612?–1685), English poet and pamphleteer, was born in London and started life as an actor at the Red Bull theatre in Clerkenwell. He published in 1637 his first volume of poems, entitled *Poeticall Varieties*, and in the same year appeared *A Pill to Purge Melancholy*. In 1639 he recited one of his poems before King Charles I. He was a prolific Royalist pamphleteer, wrote many volumes of verse, and after the Restoration many plays, in at least one of which, *Money is an Ass* (1668), he acted. In 1671 he was appointed laureate to the city of London; from this date till his death in 1685 he annually composed a panegyric on the lord mayor, and arranged the pageantry of the lord mayor's shows, which he celebrated in verse. Many volumes of these curious productions are preserved in the British Museum. In addition to his numerous printed works, of which perhaps *A Royal Arbour of Loyall Poesie* (1664) and *A Nursery of Novelties in Variety of Poetry* are most deserving of mention, several volumes of his poems exist in manuscript.

See F. W. Fairholt, *Lord Mayor's Pageants* (Percy Society, 1843), containing a memoir of Thomas Jordan.

JORDAN, WILHELM (1819–1904), German poet and novelist, was born at Insterburg in East Prussia on Feb. 8, 1819. After studying at the Universities of Königsberg and Berlin, he settled in Leipzig as a journalist; but the democratic views expressed in some essays and the volumes of poems *Glocke und Kanone* (1481) and *Irdische Phantasien* (1842) led to his expulsion from Saxony in 1846. After the revolution of 1848 he was elected member for Freienwalde, in the first German parliament at Frankfort-on-Main. For a short while he sided with the Left, but soon joined the party of von Gagern. He was made ministerial councillor (*Ministerialrat*) in the naval department of the Government. When the project of the establishment of a German navy was abandoned, Jordan was pensioned and afterwards resided at Frankfort-on-Main until his death on June 25, 1904, devoting himself to literary work.

Among his best known works are: *Demiurgos* (3 vols., 1852–54), a "Mysterium," *Nibelunge*, an epic poem in alliterative verse, in two parts, (1) *Sigfriedsage* (1867–68; 13th ed. 1889) and (2) *Hildebrants Heimkehr* (1874; 10th ed., 1892); a tragedy, *Die Wittwe des Agis* (1858); the comedies, *Die Liebesleugner* (1855) and *Durchs Ohr* (1870; 6th ed. 1885); and the novels *Die Sebalds* (1885) and *Zwei Wiegen* (1887).

JORDAN (the down-comer; Arab. *esh-Sheri'a*, the watering-place), a river of Palestine flowing from north to south in one of the most remarkable depressions of the earth's crust. It was the Aulon of the Greeks and the Ghōr of the Arabs.

The Jordan valley is considered to be a great rift valley, in which a large section of the earth's crust has been let down between a series of faults. This line of weakness can be traced north of the Jordan valley proper between Lebanon and Hermon and southwards through the Dead sea, Wel Jeib, the Gulf of 'Akaba, the Red sea and into East Africa. The valley of Jordan proper has Cretaceous material on both its banks, with patches of Eocene on the north-west of the Sea of Galilee and on the west bank near the mouth of the Brook Cherith. The northern reaches of the valley, particularly in the neighbourhood of the Sea of Galilee has much volcanic material, perhaps in part responsible for the formation of the lake. River terraces are very marked throughout the course. For two-thirds of its length the river lies below the level of the sea; navigation is impossible.

Throughout history it has roughly divided the settled from the nomadic populations; and the crossing of Jordan, one way or the other, was always an event in the history of Israel. In Hebrew times its valley was regarded as a "wilderness" and, except in the Roman era, seems always to have been as sparsely inhabited as now.

Such human life as may be found in the valley is mainly

migratory. The villagers use it in winter as pasture-ground, and cultivate plots here and there. They retire on the approach of summer. Jericho is the only considerable settlement in the lower valley, and it lies some distance west of the stream on the lower slopes of the Judaean heights.

From its sources to the Dead sea the Jordan flows down a continuous inclined plane, broken here and there by rapids and small falls; between the Sea of Galilee and the Dead sea it meanders to such an extent that in a direct distance of 65 m. it traverses at least 200 m. The mean fall is about 9 ft. in the mile. The Jordan has two great sources, one in Tell el-Kadi (Dan) whence springs the Nahr Leddan, the other at Banias (anc. Paneas, Caesarea-Philippi), some 4 m. N., where the Nahr Banias issues from a cave in the Cretaceous rock. Two longer streams with less water may be included among the sources—the Nahr Barrighit and the Nahr Hasbany; the latter occupies a portion of the northward continuation of the Jordan structural depression. The four streams unite below Banias, once the gateway of the valley, and flow into a marshy tract now called Huleh (Semechonitis, and perhaps Merom of Joshua). There the Jordan begins to fall below sea-level, rushing down 680 ft. in 9 m. to a delta, which opens in to the Sea of Galilee.

Thereafter it follows a valley which is usually not above 4 m. broad, but opens out twice into the small plains of Bethshan and Jericho. The river actually flows in a depression, the Zor, which it has hollowed out for itself in the bed of the Ghor. During the rainy season (January and February), when the Jordan overflows its banks, the Zor is flooded, but when the water falls it produces rich crops. The floor of the Ghor falls gently to the Zor, and is intersected by deep channels, which have been cut by the small streams and winter torrents that traverse it on their way to the Jordan. As far south as Kurn Surtabeh most of the valley is fertile, and even between that point and the Dead sea there are several well-watered oases. In summer the heat in the Ghor is intense, 110° F in the shade, but in winter the temperature falls to 40°, and sometimes to 32° at night. During the seasons of rain and melting snow the river is very full. On leaving the Sea of Galilee the water is clear, but it soon becomes laden with soft marl which it washes away from its banks and deposits in the Dead sea. On the whole it is an unpleasant foul stream running between poisonous banks, and as such it seems to have been regarded by the Jews and other Syrians.

The Hebrew poets did not sing its praises, and others compared it unfavourably with the clear rivers of Damascus. The clay of the valley was used for brickmaking, and Solomon established brass foundries there. In Roman times it had extensive palm-groves and some small villages, and there were bridges on all the great lines of communication between eastern and western Palestine, and ferries at other places The natural products of the Jordan valley—a tropical oasis sunk in the temperate zone, and overhung by Alpine Hermon—are unique. Papyrus grows in Lake Huleh, and rice and cereals thrive on its shores, whilst below the Sea of Galilee the vegetation is almost tropical. Sugar-cane has been grown since the days of the Crusades. The flora and fauna present a large infusion of Ethiopian types; and the fish have a great affinity with those of the rivers and lakes of east Africa. The neighbourhood of the Dead sea is very barren. It reaches the lake at 1,290 ft. below the level of the Mediterranean, the depression continuing downwards to twice that depth in the bed of the Dead sea. From the left the Jordan receives the Yarmuk (Hieromax) which flows in from the volcanic water bearing Jaulan a little south of the Sea of Galilee, and the Jabbok (Zerka) which comes from the Belka district to a point more than half-way down the lower course. On the right the Jalud descends from the plain of Esdraelon to near Beisan, and the Fara from near Nablus. Various salt springs rise in the lower valley. The rest of the tributaries are wadis, dry except after rains.

JORDANES (*fl. c.* 550), the historian of the Gothic nation. In his history of the Goths (cap. 50), he tells us that his grandfather Paria was notary to Candac, the chief of a confederation of Alans and other tribes settled during the latter half of the 5th century on the south of the Danube, and that he himself was the notary of Candac's nephew, the Gothic chief Gunthigis, until he became a monk. He belonged to a confederation of Germanic tribes, embracing Alans and Scyrians, which had come under the influence of the Ostrogoths settled on the lower Danube. He is accordingly friendly to the Goths, even apart from the influence of Cassiodorus, to whom he is largely indebted for his material; but he is also prepossessed in favour of the eastern emperors in whose territories this confederation lived This makes him an impartial authority on the last days of the Ostrogoths. His interests lie, as Mommsen says, within a triangle of which the three points are Sirmium, Larissa and Constantinople.

We pass from the shadowy personality of Jordanes to his works.

1. The *Romana*, or, as he himself calls it, *De summa temporum vel origine actibusque gentis Romanorum*, was composed in 551. It was begun before, but published after, the *Getica*. It is a sketch of the history of the world from the creation, based on Jerome, the epitome of Florus, Orosius and the ecclesiastical history of Socrates, but it is valuable only for Jordanes's own period.

2. The other work commonly called *De rebus Geticis* or *Getica*, was styled by its author, *De origine actibusque Getarum*. He informs us that while he was engaged upon the *Romana* a friend named Castalius invited him to compress the twelve books—now lost—of the senator Cassiodorus, on *The Origin and Actions of the Goths*. Jordanes professes to have had this work for but three days, and to reproduce the sense not the words; but his book evidently contains long verbatim extracts. The preface is also taken almost word for word from Rufinus's translation of Origen's commentary on the epistle to the Romans. In the 18 years which elapsed between 533, the date when Cassiodorus finished his work, and the composition of the *Getica* of Jordanes, great events, most disastrous for the Romano-Gothic monarchy of Theodoric, had taken place. It was no longer possible to write as if the whole civilization of the Western world would sit down contentedly under the shadow of East Gothic dominion and Amal sovereignty. And, moreover, the instincts of Jordanes, as a subject of the Eastern Empire, predisposed him to flatter Justinian who had overthrown the barbarian kingdom in Italy Hence we perceive two currents in the *Getica* On the one hand, as a transcriber of the philo-Goth Cassiodorus, he magnifies the race of Alaric and Theodoric, and on the other hand he speaks of the great anti-Teuton emperor Justinian, and of his reversal of the German conquests of the 5th century, in language which would have grated on the ears of Totila and his heroes.

The *Getica* falls naturally into four parts. The first (chs. i.–xiii.) gives a geographical description of the three-quarters of the world, and in more detail of Britain and Scanzia (Sweden), from which the Goths under their king Berig migrated to the southern coast of the Baltic. Their migration across what has since been called Lithuania, and their differentiation into Visigoths and Ostrogoths, are next described. The second section (chs. xiv–xxiv.) sets forth the genealogy of the Amal kings, and describes the inroads of the Goths into the Roman Empire in the 3rd century, with the foundation and the overthrow of the kingdom of Hermanric. The third section (chs. xxv.–xlvii.) traces the history of the West Goths from the Hunnish invasion to the downfall of the Gothic kingdom in Gaul under Alaric II. (376–507), the best part being the seven chapters devoted to Attila's invasion of Gaul and the battle of the Mauriac plains. The fourth section (chs. xlviii.–lx) traces the history of the East Goths from the same Hunnish invasion to the first overthrow of the Gothic monarchy in Italy (376–539).

Jordanes has preserved extremely precious information. The Teutonic tribes whose dim origins he records have in the course of centuries attained to world-wide dominion The battle in the Mauriac plains of which he is really the sole historian, is now seen to have had important bearings on the destinies of the world. Thus the hasty pamphlet of a half-educated Gothic monk has been forced into prominence, almost into rivalry with finished classical productions.

The classical edition of the above works is that of Mommsen (in

Mon. Germ. hist. auct. antiq, v., 1882), which supersedes the older editions, such as that in Muratori's *Scriptt. rer. Ital.*, vol. i. *See* Von Sybel, *De fontibus Jordanis* (1838); Schirren, *De ratione quae inter Jordanem et Cassiodorum intercedat Commentatio* (Dorpat, 1858); Kopke's *Die Anfänge des Konigthums bei den Gothen* (1859); Dahn's *Die Könige der Germanen*, vol. ii. (Munich, 1861); Ebert's *Geschichte der Christlich-Lateinischen Literatur* (Leipzig, 1874); Wattenbach's *Deutschlands Geschichtsquellen im Mittelalter* (1877); and the introduction of Mommsen to his edition.

JORDANUS (JORDAN CATALANI) (*fl* 1321–1330), French Dominican missionary and explorer in Asia, was born at Séverac in Aveyron, north-east of Toulouse In 1302 he accompanied Thomas of Tolentino, via Negropont, to the East; in 1321 he was in western India, in the company of the same Thomas and certain other Franciscan missionaries on their way to China. Ill-luck detained them at Tana in Salsette island, near Bombay; and here Jordanus' companions ("the four martyrs of Tana") fell victims to Muslim fanaticism (April 7, 1321). Jordanus, escaping, worked some time at Baruch in Gujarat, near the Nerbudda estuary, and at Suali, near Surat. The *Epistles* of Jordanus, like the contemporary *Secreta* of Marino Sanuto (1306–1321), urge the pope to establish a Christian fleet upon the Indian seas. Jordanus, between 1324 and 1328 (if not earlier), probably visited Kulam and selected it as the best centre for his future work.

He probably revisited Europe about 1328, passing through Persia, and perhaps touching at the great Crimean port of Soldaia or Sudak. He was appointed a bishop in 1328 and nominated by Pope John XXII to the see of Columbum in 1330. Together with the new bishop of Samarkand, Thomas of Mancasola, Jordanus was commissioned to take the pall to John de Cora, archbishop of Sultaniyah in Persia, within whose province Kulam was reckoned; he was also commended to the Christians of south India by Pope John. Either before going out to Malabar as bishop, or during a later visit to the west, Jordanus wrote his *Mirabilia*, which from internal evidence can only be fixed within the period 1329–1338; in this work he furnished the best account of Indian regions, products, climate, manners, customs, fauna and flora given by any European in the Middle Ages We have no more knowledge of Jordanus after April 8, 1330.

Of Jordanus' *Epistles* there is only one MS., viz. Paris, National Library, 5006 Lat., fol 182, r. and v.; of the *Mirabilia* also one MS. only, viz, London, British Museum, *Additional MSS.*, 19,513, fols. 3, r.–12 r. The text of the *Epistles* is in Quétif and Echard, *Scriptores ordinis praedicatorum*, i 549–550 (Epistle I.); and in Wadding, *Annales minorum*, vi. 359–361 (Epistle II.); the text of the *Mirabilia* in the Paris Geog. Soc.'s *Recueil de voyages*, iv. 1–68 (1839). The Papal letters referring to Jordanus are in Raynaldus, *Annales ecclesiastici, 1330*, §§ lv. and lvii. (April 8; Feb. 14). *See* also Sir H. Yule's *Jordanus*, a version of the *Mirabilia* with a commentary (Hakluyt Soc., 1863) and the same editor's *Cathay*, giving a version of the *Epistles*, with a commentary, etc. (Hak. Soc., 1866).

JORGA, NICOLAS (1871–), Rumanian historian and statesman, was born at Botosani on June 17, 1871, and studied in Jassy, Paris, Berlin and Leipzig. In 1894 he was appointed professor of universal history at the University of Bucharest. Jorga made extensive researches in libraries and archives abroad and collected notes referring to the history of the Rumanian nation. As a result of his researches, he published over 20,000 documents in the *Annals* of the Rumanian Academy, of which he became one of the most prominent members. He was also associate professor at the Sorbonne, and holder of many foreign distinctions.

Jorga produced innumerable biographical and historical works, as well as many volumes on Rumanian art, towns, monasteries and historical monuments. He wrote several plays (historical dramas and comedies) which form part of the repertory of the Rumanian national theatres. He became also the director of *Neamul Românesc*, the official organ of the National Rumanian party. Jorga was for many years the chief of the nationalist party, which fused with the National party of Transylvania and the followers of Take Jonescu under the name of the National Rumanian party. Among his best known works are: *Geschichte des rumänischen Volkes* (1905); *Geschichte des osmanischen Reiches* (5 vol., 1908, etc.); *The Byzantine Empire* (Eng. trans. by A. H. Powles, 1907); *Histoire des états balcaniques jusqu'à 1924* (1925), and a *History of Rumania* (Eng. trans. 1925, bibl.). He also wrote numerous historical works in French, Italian and Swedish.

JORIS, DAVID, the common name of JAN JORISZ or JORISZOON (*c.* 1501–1556), Anabaptist heresiarch who called himself later JAN VAN BRUGGE; was the son of Georgius Joris de Koman, otherwise Joris van Amersfoordt, of Delft. In the year 1524 he began to issue appeals in prose and verse against the Mass and against the pope as antichrist. On Ascension Day 1528 he committed an outrage on the Eucharist carried in procession; he was placed in the pillory, had his tongue bored, and was banished from Delft for three years. He turned to the Anabaptists, was rebaptized in 1533, and for some years led a wandering life. He came into relations with John à Lasco, and with Menno Simons. Much influenced by Melchior Hofman, he had no sympathy with the fanatic violence of the Münster faction. At the Buckholdt conference in August 1536 he played a mediating part. His mother, in 1537, suffered martyrdom as an Anabaptist. Soon after he took up the rôle of a new Messiah. From April 1, 1544, bringing with him some of his followers, he lived in Basel, which was to be the New Jerusalem, under the name of Jan van Brugge. His writings all in Dutch amounted to over 200 in number. His *magnum opus* was *'T Wonder Boeck* (*n.d.* 1542, 2 pts.; 1551, 4 pts; both edns. anonymous). He died on Aug. 25, 1556, and was buried, with all religious honours, in the church of St Leonard, Basel. Three years later, Nicolas Blesdijk denounced the dead man to the authorities of Basel. An investigation took place in 1559, a conviction for heresy followed, and the exhumed body of Jorisz was burned, together with his portrait

See P. Burckhardt, *Basler Biographien* (1900); Hegler, in Hauck's *Realencyklopädie* (1901), and the bibliography by A. van der Linde, 1867, supplemented by E. Weller, 1869.

JOSEPH, in the Old Testament, the son of the patriarch Jacob by Rachel; the name of a tribe of Israel. Unlike the other "sons" of Jacob, Joseph is usually reckoned as two tribes (viz his "sons" Ephraim and Manasseh), and closely associated with them is the small tribe of Benjamin (*q.v.*), which lay immediately to the south. These three constituted the "sons" of Rachel (the ewe), and with the "sons" of Leah (the antelope?) are thus on a higher level than the "sons" of Jacob's concubines. The "house of Joseph" and its offshoots occupied the centre of Palestine from the plain of Esdraelon to the mountain country of Benjamin, with dependencies in Bashan and northern Gilead (*see* MANASSEH). Practically it comprised the northern kingdom, and the name is used in this sense in 2 Sam xix 20; Amos v. 6; vi 6; the extension of the term being parallel to the development of the name Jacob. The story of the tribal ancestor is recounted in Gen. xxxvii–l. (*see* GENESIS) Joseph, the younger and envied son, is seized by his brothers at Dothan and is sold to a party of Ishmaelites or Midianites, who carry him down to Egypt. After various vicissitudes he gains the favour of the king of Egypt by the interpretation of a dream, and obtains a high place in the kingdom. Forced by a famine his brothers come to buy food, and in the incidents that follow Joseph shows his preference for his young brother Benjamin (*cf.* the tribal data above). His father Jacob is invited to come to Goshen, where a settlement is provided for the family and their flocks. This is followed many years later by the exodus, the conquest of Palestine, and the burial of Joseph's body in the grave at Shechem which his father had bought. (T. H. R.)

JOSEPH, in the New Testament the husband of Mary. His genealogy appears in Matt. i., 1–17 and Luke iii., 23–28. The former, obviously artificial in structure (notice 3×14 generations), traces the Davidic descent through Kings to prove the Messianic claim. The facts concerning Joseph, common to the birth-narratives (Matt. i.–ii., Luke i.–ii.), are (*a*) that he was a descendant of David; (*b*) that Mary was already betrothed to him at the birth of Jesus; and (*c*) that after the birth he lived at Nazareth; but these facts are handled differently, Joseph being prominent in Matt. but completely subordinated in Luke. At Nazareth Joseph followed the trade of a carpenter or builder (Matt. xiii., 55), and probably died before the public ministry of Christ began (*cf.* John xix., 26.).

Joseph was the father of several children (Matt. xiii., 55), but, according to tradition, by a former marriage. The reading of Matt. i., 16, in the Siniatic palimpsest makes Joseph the natural father of Jesus—a view held by certain early heretical sects, but never in orthodox Christian circles. In the Roman Catholic Church, March 19th is a Feast in Joseph's honour, as well as the Third Sunday after Easter (the patronage, St. Joseph being the patron of the whole Church); Jan. 23rd commemorates the betrothal of Mary and Joseph. *See* further JOHN THE BAPTIST for Birth-Narratives.

JOSEPH I. (1678–1711), Roman emperor, elder son of the emperor Leopold I. and his third wife, Eleanora, was born in Vienna on July 26, 1678. In 1687 he received the crown of Hungary, and he was elected king of the Romans in 1690. In 1699 he married Wilhelmina Amalia of Brunswick-Lüneburg, by whom he had two daughters. In 1702, on the outbreak of the War of the Spanish Succession, he joined the imperial general Louis of Baden in the siege of Landau. He succeeded his father as emperor in 1705, and during his reign the imperial general Prince Eugène, either acting alone in Italy or with the duke of Marlborough in Germany and Flanders, defeated the armies of Louis XIV. Hungary was disturbed by the conflict with Francis Rákóczy II., who eventually took refuge in France. The conflict was ended by the peace of Szatmar (1711). The emperor reversed many of the pedantically authoritative measures of his father, but he fought stoutly for what he believed to be his rights. Joseph showed himself hostile to the Jesuits, by whom his father had been much influenced. He began the attempts to settle the question of the Austrian inheritance by a pragmatic sanction (*see* HABSBURG, HOUSE OF), which were continued by his brother Charles VI Joseph died in Vienna on April 17, 1711, of small-pox He was a good musician; his musical works, with those of Ferdinand III and Leopold I. were edited in 1892–93 by G. Adler.

See F. Krones von Marchland, *Grundriss der Oesterreichischen Geschichte* (1882); F. Wagner, *Historia Josephi Caesaris* (1746); J. C. Herchenhahn, *Geschichte der Regierung Kaiser Josephs I.* (1786–89); C. van Noorden, *Europaische Geschichte im 18. Jahrhundert* (1870–82).

JOSEPH II. (1741–1790), Roman emperor, eldest son of the empress Maria Theresa and her husband Francis I., was born on March 13, 1741, in the first stress of the War of the Austrian Succession. Maria Theresa gave orders that he was only to be taught as if he were amusing himself; the result was that he acquired a habit of crude and superficial study. He derived his real education from the writings of Voltaire and the encyclopaedists and from the example of Frederick the Great. Government officials instructed him in the mechanical details of the administration of the Austrian hereditary lands. In 1761 he was made a member of the newly constituted council of State (*Staatsrath*) and began to draw up memoranda (*Reveries*) for his mother to read. These papers contain the germs of his later policy. He was a friend to religious toleration, anxious to reduce the power of the church, to relieve the peasantry of feudal burdens, and to remove restrictions on trade and on knowledge. So far he did not differ from Frederick, Catherine of Russia or his own brother and successor Leopold II, all enlightened rulers of the 18th-century stamp. Where Joseph differed from great contemporary rulers was in the fanatical intensity of his belief in the power of the State when directed by reason, of his right to speak for the State uncontrolled by laws, and of the reasonableness of his own reasons.

After the death of his father in 1765 he became emperor and was made co-regent by his mother in the Austrian dominions, but until his mother's death his activity was limited to the army, foreign affairs, and a limited jurisdiction in the administration of justice. Maria Theresa was resolved that neither husband nor son should ever deprive her of sovereign control in her hereditary dominions. Joseph, by threatening to resign his place as co-regent, could induce his mother to abate her dislike to religious toleration. He could, and he did, place a great strain on her patience and temper, as in the case of the first partition of Poland and the Bavarian War of 1778, but in the last resort the empress spoke the final word. During these wars Joseph met Frederick the Great privately at Neisse in 1769, and again at Mährisch-Neustadt in 1770. On the second occasion he was accompanied by Prince Kaunitz, whose conversation with Frederick may be said to mark the starting-point of the first partition of Poland To this and to every other measure which promised to extend the dominions of his house Joseph gave hearty approval Thus he was eager to enforce its claim on Bavaria upon the death of the elector Maximilian Joseph in 1777. In April of that year he paid a visit to his sister the queen of France (*see* MARIE ANTOINETTE), travelling under the name of Count Falkenstein. His observations led him to predict the approaching downfall of the French monarchy, and he was not impressed favourably by the army or navy. In April 1780 he paid a visit to Catherine of Russia, against the wish of his mother.

The death of Maria Theresa on Nov. 27, 1780, left Joseph free. He immediately directed his Government on a new course, full speed ahead. He proceeded to attempt to realize his ideal of a paternal despotism acting on a definite system for the good of all. He completed the emancipation of the serfs begun by his mother. Other changes were the spread of education, the secularization of church lands, the reduction of the religious orders and the clergy to complete submission to the lay State, and the promotion of unity by the compulsory use of the German language. He established asylums, hospitals, orphanages, and training institutions. He settled German colonists in Hungary and on the Slav lands of the Empire. Joseph also sought to realize large reforms in taxation and in the administration of justice. His anti-clerical innovations (*Josephiomus*) induced Pope Pius VI. to pay him a visit in July 1782. Joseph received the pope politely, and showed himself a good Catholic, but refused to be influenced.

Joseph's anti-clerical policy and his interference with ancient custom caused unrest in the hereditary lands of the empire. Meanwhile he adopted a succession of foreign policies all aimed at aggrandisement, and all equally calculated to offend his neighbours—all taken up with zeal, and dropped in discouragement He endeavoured to get rid of the Barrier Treaty, which debarred his Flemish subjects from the navigation of the Scheldt; when he was opposed by France he turned to other schemes of alliance with Russia for the partition of Turkey and Venice They also had to be given up in the face of the opposition of neighbours, and in particular of France. Then he resumed his attempts to obtain Bavaria—this time by exchanging it for Belgium—and only provoked the formation of the *Furstenbund* organized by the king of Prussia. Finally he joined Russia in an attempt to pillage Turkey, beginning with an unsuccessful attempt to surprise Belgrade in time of peace. In the Turkish campaign of 1788 he accompanied his army, but showed no capacity for war. In November he returned to Vienna with ruined health, and during 1789 was a dying man. The concentration of his troops in the east gave the malcontents of Belgium an opportunity to revolt In Hungary the nobles were all but in open rebellion, and in his other States there were peasant risings, and a revival of particularist sentiments Joseph was left entirely alone His minister Kaunitz refused to visit his sick-room, and did not see him for two years. His brother Leopold remained at Florence. At last Joseph, worn out and broken-hearted, recognized that his servants could not, or would not, carry out his plans. On Jan. 30, 1790, he formally withdrew all his reforms, and he died on Feb. 20.

Joseph II. was twice married, first to Isabella (d. 1763), daughter of Philip, duke of Parma, to whom he was attached After her death, a political marriage was arranged with Josepha (d. 1767), daughter of Charles Albert, elector of Bavaria (the emperor Charles VII.). It proved extremely unhappy. Joseph left no children, and was succeeded by his brother Leopold II.

Many volumes of the emperor's correspondence have been published. Among them are *Maria Theresia und Joseph II. Ihre Korrespondenz samt Briefen Josephs an seinen Bruder Leopold* (1867–68); *Joseph II. und Leopold von Toskana. Ihr Briefwechsel 1781–1790* (1872); *Joseph II. und Katharina von Russland. Ihr Briefwechsel* (1869); and *Maria Antoinette, Joseph II. und Leopold II. Ihr Briefwechsel* (1866); all edit. by A. Ritter von Arneth. Other collections are: *Joseph II., Leopold II. und Kaunitz. Ihr Briefwechsel*, edit. by A. Beer (1873); *Correspondances intimes de l'empereur Joseph II. avec son ami, le comte de*

Cobenzl et son premier ministre, le prince de Kaunitz, edit. by S. Brunner (1871); *Joseph II. und Graf Ludwig Cobenzl. Ihr Briefwechsel*, edit. by A. Beer and J. von Fiedler (1901); and the *Geheime Korrespondenz Josephs II. mit seinem Minister in den Oesterreichischen Niederlanden Ferdinand Graf Trauttmannsdorff 1787–1789*, edit. by H. Schlitter (1902). Among the lives of Joseph may be mentioned: A. J. Gross-Hoffinger, *Geschichte Josephs II.* (1847); A. Fournier, *Joseph II.* (1885); and J. Wendrinski, *Kaiser Joseph II.* (1880). There is a useful small volume on the emperor by J. Franck Bright (1897). Other books which may be consulted are G. Wolf, *Das Unterrichtswesen in Oesterreich unter Joseph II.* (1880), and *Oesterreich und Preussen 1780–1790* (1880), A. Wolf, and H. von Zwiedeneck-Südenhorst, *Oesterreich unter Maria Theresia, Joseph II. und Leopold II.* (1882–84); H. Schlitter, *Die Regierung Josephs II. in den Oesterreichischen Niederlanden* (1900); and *Pius VI. und Joseph II. 1782–1784* (1894); O. Lorenz, *Joseph II. und die Belgische Revolution* (1862); and L. Delplace, *Joseph II. et la révolution brabançonne* (1890); P. P. Mitrofanov, *Joseph II. seine politische und Kulturelle Tatigkeit* (Wien, 1910); J. Walter, *Kaiser Josef II. der Volksfreund auf dem Throne* (Budweis, 1913).

JOSEPH, former Archduke of Austria (1872–), Austro-Hungarian field-marshal, was born at the chateau of Alcsuth in Hungary on August 9, 1872, the son of the Archduke Joseph and Marie Clotilde of Saxe-Coburg. The prince belongs to the "Hungarian branch" of the House of Habsburg-Lorraine, and is a nephew of the last Palatine of Hungary, the Archduke Stephen. Joseph took over at the outbreak of the World War the post of commander of the VII. Army corps and fought against Serbia, then in the Carpathians, and in Poland against Russia; subsequently he commanded the IX. Corps in nine battles on the Isonzo, then commanded on the Russian front, extending from the south-east corner of Transylvania along the ridges of the Carpathians as far as the Upper Theiss, and finally was leader of the V. Army against Italy. He displayed most conspicuous personal bravery, and understood in a remarkable degree how to attach the troops to his person. At the outbreak of the revolution he conducted negotiations, as *homo regius,* between King Charles and the Karolyi party (*see* HUNGARY). After the fall of the Soviet Republic he was at first made Regent of Hungary (Aug.–Sept. 1919), but was compelled to retire owing to the intervention of the Entente Powers, who would not permit any Habsburg to hold a commanding position in Hungary. He married in 1893 the Princess Augusta of Bavaria.

JOSEPH, FATHER (FRANÇOIS LECLERC DU TREMBLAY) (1577–1638), French Capuchin monk, the confidant of Richelieu, eldest son of Jean Leclerc du Tremblay, president of the chamber of requests of the parlement of Paris, served in the army and in diplomacy until 1599, when he entered the Capuchin monastery of Orleans, and became a notable preacher and reformer. In 1606 he aided Antoinette d'Orléans, a nun of Fontevrault, to found the reformed order of the Filles du Calvaire, and wrote a manual of devotion for the nuns. His proselytizing zeal led him to send missionaries throughout the Huguenot centres—he had become provincial of Touraine in 1613. At the conferences of Loudun he opposed the Gallican claims advanced by the parlement, which the princes were upholding. In 1612 he began close personal relations with Richelieu which have indissolubly joined in history and legend the cardinal and the "Eminence grise." As Richelieu's agent he manoeuvred at the diet of Regensburg (1630) to thwart the aggression of the emperor, and then advised the intervention of Gustavus Adolphus, reconciling himself to the use of Protestant armies by the theory that one poison would counteract another. He died in 1638, just as the cardinalate was to be conferred upon him.

See Fagniez, *Le Père Joseph et Richelieu* (1894).

JOSEPH OF ARIMATHAEA (presumably the Ramathaim of 1 Macc. xi. 34 and the Ramathaim-Zophim of 1 Sam. i. 1, in the hill country of Ephraim), according to all four Gospels buried Jesus Christ. According to Mark he was an honourable councillor (εὐσχήμων βουλευτής), who was waiting for the Kingdom of God. The Sabbath was approaching, *i.e.,* it was nightfall on Friday afternoon, and had he not intervened the body would have been left for more than 24 hours. The law of Deut. xxi. 23 ordered that the body of a malefactor hung on a tree should not remain there all night Joseph went to Pilate and got leave to bury the body. He did this with reverence and laid it in a rock-hewn tomb, rolling a stone in front of the entrance. There is no reason to think that he was a disciple of Jesus. Respect for the law is sufficient motive. His approach to Pilate is more intelligible if he was a member of the Sanhedrin or acting on their instructions. He used the nearest tomb; to search for a suitable one at a distance might have entailed breaking the Sabbath.

Such is Mark's story (xv. 42–46), which it is excessive scepticism to doubt. The later narratives add nothing of historical value. Luke and John have access to good Jerusalem tradition for the closing scenes of the Gospel story, but neither they nor Matthew seem to have any other source than Mark for the burial. Their additions and variations must therefore be attributed to the natural growth of Christian tradition. Matthew makes Joseph a rich man and a disciple of Jesus, and the tomb his own new one. Luke makes it clear that he was a member of the Sanhedrin, who had not consented to the condemnation. John says that he was a secret disciple and that Nicodemus was associated with him in the burial. In a later tradition, "the Gospel of Peter," Joseph is a friend of Pilate and arranges with him for the burial before the Crucifixion.

In a picturesque legend Joseph is said to have come to Britain and constructed the first Christian church in the land on an island in Somerset, afterwards Glastonbury. The passages in William of Malmesbury which contain the legend are said by J. A Robinson in his *Two Glastonbury Legends* to be interpolations. In any case they belong to the realm of poetry rather than genuine tradition.

(W. K. L. C)

JOSEPHINE (MARIE ROSE JOSEPHINE TASCHER DE LA PAGERIE) (1763–1814), empress of the French, was born in the island of Martinique on June 23, 1763, being the eldest of three daughters of Joseph Tascher de la Pagerie, lieutenant of artillery. She married in 1779 the vicomte Alexandre Beauharnais. There were two children of the marriage, Eugène and Hortense (*see* BEAUHARNAIS). After a visit to her native island Josephine returned to Paris and made some sensation in society. As the Revolution ran its course her husband, as an ex-noble, incurred the suspicion and hostility of the Jacobins; and his ill-success at the head of a French army on the Rhine led to his arrest and execution. Josephine was left in a position of much perplexity and some hardship, but Barras and Madame Tallien assisted her, and she was one of the queens of Parisian society in the year 1795, when Napoleon Bonaparte's fame was beginning. His nomination to the command of the army of Italy appears to have decided her to marry him. The civil marriage took place Mar. 9, 1796, two days before the bridegroom set out for his command. Josephine declined to accompany him to Nice and Italy

Bonaparte's letters to Josephine during the campaign reveal the ardour of his love, while she rarely answered them. During his absence in Egypt in 1798–1799, her relations to an officer, M. Charles, were most compromising; and Bonaparte on his return thought of divorcing her. Her tears and the entreaties of Eugène and Hortense availed to bring about a reconciliation; and during the period of the consulate (1799–1804) their relations were on the whole happy, though Napoleon's conduct now gave his consort grave cause for concern. His brothers and sisters more than once begged him to divorce Josephine, and from the time when he became first consul for life (August 1802) with large powers over the choice of a successor, he kept open the alternative of a divorce. Josephine's anxieties increased on the proclamation of the Empire (May 18, 1804); and on the 1st of December 1804, the eve of the coronation at Notre Dame, she gained her wish that she should be married anew to Napoleon with religious rites. Despite Josephine's care, Napoleon procured omission of one formality, the presence of the parish priest; but at the coronation scene Josephine appeared radiant with triumph over her envious relatives. The august marriages contracted by her children Eugène and Hortense seemed to establish her position; but her ceaseless extravagance and, above all, the impossibility that she should bear a son strained the relations between Napoleon and Josephine. She complained of his infidelities and growing callousness. The end came in sight after the campaign of 1809, when Napoleon caused the announcement to be made to her that reasons of state compelled him to divorce her. Despite all her pleadings he held to his

resolve. The most was made of the slight technical irregularity at the marriage ceremony of Dec. 1, 1804; and the marriage was declared null and void.

At her private retreat, La Malmaison, near Paris, which she had beautified with curios and rare plants and flowers, Josephine closed her life in dignified retirement. Napoleon more than once came to consult her upon matters in which he valued her tact and good sense. She died on May 24, 1814.

Sergeant, *The Empress Josephine* (1908); Gérard d'Houville, *La vie amoureuse de l'impératrice Joséphine* (1925).

JOSEPHUS, FLAVIUS (A.D. 37–95?), Jewish historian and military commander, born in the first year of Caligula (37–38). A precocious student of the Law, he made trial of the three sects of Judaism—Pharisees, Sadducees and Essenes—before he reached the age of nineteen. Then, having spent three years in the desert with the hermit Banus, who was presumably an Essene, he became a Pharisee. In 64 he went to Rome to intercede on behalf of some priests, his friends, whom the procurator Felix had sent to render account to Caesar for some insignificant offense. Making friends with Alityrus, a Jewish actor, who was a favourite of Nero, Josephus obtained an introduction to the empress Poppaea and effected his purpose by her help. His visit to Rome enabled him to speak from personal experience of the power of the Empire, when he expostulated with the revolutionary Jews on his return to Palestine. But they refused to listen; and he, with all the Jews who did not fly the country, was dragged into the great rebellion of 66. In company with two other priests, Josephus was sent to Galilee under orders (he says) to persuade the ill-affected to lay down their arms and return to the Roman allegiance, which the Jewish aristocracy had not yet renounced. Having sent his two companions back to Jerusalem, he organized the forces at his disposal, and made arrangements for the government of his province. His obvious desire to preserve law and order excited the hostility of John of Giscala, who endeavoured vainly to remove him as a traitor to the national cause by inciting the Galileans to kill him and by persuading the Sanhedrin at Jerusalem to recall him.

In the spring of 67 the Jewish troops, whom Josephus had drilled so sedulously, fled before the Roman forces of Vespasian and Titus. He sent to Jerusalem for reinforcements, but none came. With the stragglers who remained, he held a stronghold against the Romans by dint of his native cunning, and finally, when the place was taken, persuaded forty men, who shared his hiding-place, to kill one another in turn rather than commit suicide. They agreed to cast lots, on the understanding that the second should kill the first and so on. Josephus providentially drew the last lot and prevailed upon his destined victim to live. Their companions were all dead in accordance with the compact; but Josephus at any rate survived and surrendered. Being led before Vespasian, he was inspired to prophesy that Vespasian would become emperor. When his prophecy was fulfilled he was liberated, assumed the name of Flavius, the family name of Vespasian, and accompanied his patron to Alexandria. He returned to Rome, was awarded a pension, and was made a Roman citizen, receiving an estate in Judaea.

WORKS.—1. *The Jewish War* (Περὶ τοῦ Ἰουδαϊκοῦ πολέμου), the oldest of Josephus' extant writings, was written towards the end of Vespasian's reign (69–79).

2. *The Jewish Antiquities* (Ἰουδαϊκὴ Ἀρχαιολογία) covers in twenty books the history of the Jews from the creation of the world to the outbreak of the war with Rome. It was finished in the thirteenth year of Domitian (93).

3. Josephus wrote a narrative of his own *Life* in order to defend himself against the accusation brought by his enemy Justus of Tiberias to the effect that he had caused the Jewish rebellion.

4. The two books *Against Apion* are a defence or apology directed against current misrepresentations of the Jews. Earlier titles are *Concerning the Antiquity of the Jews* or *Against the Greeks.*

The Greek text of Josephus' works has been edited with full collection of different readings by B. Niese (Berlin, 1887–1895). The Teubner text by Naber is based on this. The translation into English of W. Whiston has been (superficially) revised by A. R. Shilleto (1889–1890). Schürer (*History of the Jewish People*) gives a full bibliography. (J. H. A. H.; X.)

JOSHUA, BOOK OF, the sixth book of the Old Testament, and the first of the group known as the "Former Prophets." It takes its name from Joshua the son of Nūn, an Ephraimite who, on the death of Moses, assumed the leadership to which he had previously been designated by his chief (Deut. xxxi. 14 *seq.*, 23), and proceeded to the conquest of the land of Canaan. The book differs from the Pentateuch in the absence of legal matter, and in its intimate connection with the narrative in the books which follow. It is, however, the proper sequel to the origins of the people as related in Genesis, to the exodus of the Israelite tribes from Egypt, and their journeyings in the wilderness. On these and also on literary grounds it is often convenient to class the first six books of the Bible as a unit under the term "Hexateuch" (*q.v.*), for an exhaustive detailed study has revealed many signs of diversity of authorship which combine to show that the book is due to the incorporation of older material in two main redactions; one deeply imbued with the language and thought of Deuteronomy itself (D), the other of the post-exilic priestly circle (P) which gave the Pentateuch its present form. That the older sources (which often prove to be composite) are actually identical with the Yahwist or Judaean (J) and the Elohist or Ephraimite (E) narratives (on which *see* BIBLE: *Old Testament criticism*) is not impossible, though still uncertain.

The book falls naturally into two main parts, of which the first, the crossing of the Jordan and the conquest of Palestine (i.–xii.), is mainly due to Deuteronomic compilers. It opens with the preparations for the crossing of the Jordan and the capture of the powerful city, Jericho. Ai, near Bethel, is taken after a temporary repulse, and Joshua proceeds to erect an altar upon Mt. Ebal (north of Shechem). The erection of the altar, not at the scene of battle (*cf.* 1 Sam. xiv. 35) but on Mt. Ebal (viii. 30–35, D), presupposes the conquest of central Palestine and the removal of the ark from Gilgal. These, however, are not narrated, and, unless some account of them has been replaced by the present passage, this portion of the conquest was ignored. Possibly the passage is not in its original position: in the Septuagint it appears after ix. 2, while Josephus (*Ant.* v. 1, 19) and the Samaritan Book of Joshua read it before ch. xiii.; Dillmann, however, would place it after xi. 23. The capture of Jericho and Ai is followed by the successful stratagem of the Gibeonites to make peace with Israel (ix.). This involved them in a war with a south Canaanite coalition and Joshua obtains a crowning victory. In x. 16–24 the kings of the south are pursued to Makkedah and slain, in *v.* 11 they are smitten by a great hailstorm in their flight to Azekah (*cf.* 1 Sam. vii. 10, xiv. 15, in the same district). Redactional links have been added, apparently by D, to whom is possibly due the stanza quoted from the Book of Jashar (*v.* 12 *seq.*), a poetical address to the sun and moon, of the nature of a prayer or spell for their aid (*cf.* Judges v. 20, and *see* Ecclus. xlvi. 4). The literal interpretation of this picturesque quotation has been influenced by the prosaic comments at the end of *v.* 13 and beginning of *v.* 14. The description of the conquest of the northern Canaanites is very similar to that of the south. The main part is from an older source (xi. 1, 4–9; *see* DEBORAH), the amplifications (*v.* 2 *seq.*) are due to D, as also are the summary (*vv.* 10–23, *cf.* style of x. 28–43), and the enumeration of the total results of the invasion (xii.), which includes names not previously mentioned.

The result of the events narrated in the first part of the book is to ascribe the entire subjugation of Canaan to Joshua, whose centre was at Gilgal (x. 15, 43). He is now "old and advanced in years," and although much outlying land remained to be possessed, he is instructed to divide the conquered districts among the western tribes (xiii. 1 *sqq.*). This is detailed at length in the second part of the book. With the completion of the division his mission is accomplished. The main body of this part (xiii. 15–xiv. 5; xv.–xvii.; xviii. 11–xxi. 42; xxii. 7–34) is in its present form almost entirely due to P. As regards details, P's account of the altar beyond the Jordan (*see* xxii. 34) is apparently a late re-writing of some now obscure incident to emphasize the unity of worship. The

account of the distribution of land among the *nine and a half* tribes by Eleazar and Joshua (from xiv. 1–5 to xix. 51) appears to have been on the lines laid down in Num. xxxiv. (P). The scene, according to xviii. 1, is Shiloh, and this verse, which does not belong to the context, should apparently precede P's narrative in xiv. 1. But of the occupation of Shiloh, the famous Ephraimite sanctuary and the seat of the ark, we have no information. The older source, however, presupposes that Judah and the two Joseph tribes have acquired their territory; the remaining seven are blamed for their indifference (xviii. 2–10), and receive their lot conjointly at the camp at *Shiloh*. But if the location is an attempt to harmonize with xviii. 1, *Gilgal* should probably be restored. The section xviii. 2–10 is followed by xxi. 43 *seq.* and may have been preceded originally by xiii. 1, 7 (where read: inheritance for the *seven* tribes); in its present form it appears to be due to D. Another account of the exploits of Judah and Joseph can be traced here and there; *e.g.*, in xiv. 6–15 (where Caleb receives Hebron as his inheritance and the "land had rest from war"), and xvii. 14–18 (where Joseph receives an additional lot); but where these traditions have not been worked into later narratives, they exist only in fragmentary form. They are characterized by the view that the conquest was neither the work of a single man nor at his instigation, but due entirely to individual or tribal achievements. This view can be traced in xiii. 13, xv. 63 (*cf.* the parallel Judges i. 21 in contrast to *v.* 8), xvi. 10 (Judges i. 29), xvii. 11–13 (Judges i. 27 *seq.*), and in the references to separate tribal or family exploits: xv. 13–19, xix. 47 (*cf.* Judges i. 34 *seq.*, xviii.).

Two closing addresses are ascribed to Joshua, one an exhortation similar to the homilies in secondary portions of Deuteronomy (xxiii.; *cf.* Moses in Deut. xxviii. *seq.*, and Samuel's last address in 1 Sam. xii.), which virtually excludes the other (xxiv.), where Joshua assembles the tribes at Shechem (Shiloh, in the Septuagint) and passes under review the history of Israel from the days of heathenism (before Abraham was brought into Canaan) down through the oppression in Egypt, the exodus, the conquest in East Jordan and the occupation of Canaan. A few otherwise unknown details are to be found (xxiv. 2, 11 *seq.* 14). The address (which is extremely important for its representation of the religious conditions) presupposes the complete subjugation of the Canaanites. A solemn covenant, whereby the people agree to cleave to Yahweh alone, is commemorated by the erection of a stone under the oak by the sanctuary of Yahweh (for the tree with its sacred pillar, *see* Gen. xxxv. 4; Judges ix. 6). The people are then dismissed, and the book closes in ordinary narrative style with the death of Joshua and his burial in his inheritance at Timnath-serah in Mt. Ephraim (*cf.* xix. 49 *seq.*); the burial of Joseph in Shechem; and the death and burial of Eleazar the son of Aaron in the "hill of Phinehas."

Both Joshua xxiii. and xxiv. are closely connected with the very complicated introduction to the era of the "judges" in Judges ii. 6 *seq*, and ii. 6–9 actually resume Joshua xxiv. 28 *seq.*, while the Septuagint appends to the close of Joshua the beginning of the story of Ehud (Judges iii. 12 *seq.*). Both Judges i–ii. 5 and chap. xvii.–xxi. are of post-Deuteronomic insertion, and they represent conditions analogous to the older notices embedded in the later work of P (Judges i. 21, xix. 10–12, *cf.* Joshua, xv. 63). Moreover, P in its turn shows elsewhere definite indications of different periods and standpoints, and the fluid state of the book at a late age is shown by the presence of Deuteronomic elements in Joshua xx, not found in the Septuagint, and by the numerous and often striking readings which the latter recension presents.

The value of the book of Joshua is primarily religious; its conviction of the destiny of Israel and its inculcation of the unity and greatness of the God of Israel give expression to the philosophy of Israelite historians. As an historical record its value must depend upon a careful criticism of its contents in the light of biblical history and external information. Its description of the conquest of Canaan comes from an age when the event was a shadow of the past. It is an ideal view of the manner in which a Divinely appointed leader guided a united people into the promised land of their ancestors, and, after a few brief wars of extermination (x.–xii.), died leaving the people in quiet possession of their new inheritance (xi. 23; xxi. 44 *seq.*; xxiii. 1). To this there is, as Moore points out (*Ency. Bib.* col. 2608 n.2), an instructive parallel in the Greek legends of the Dorian invasion of the Peloponnesus (the "return" of the Heracleidae, the partition of the land by lot, etc.). On the other hand the earlier inhabitants were not finally subjugated until Solomon's reign (1 Kings ix. 20); Jerusalem was taken by David from the Jebusites (2 Sam. v.), and several sites in its neighbourhood (including Gibeon, 2 Sam. xxi. 2), together with important fortresses like Gezer, Megiddo and Taanach, were not held by Israel at the first. There are traces of other conflicting traditions representing independent tribal efforts which were not successful, and the Israelites are even said to live in the midst of Canaanites, intermarrying with them and adopting their cult (Judges i–iii. 6). From a careful consideration of all the evidence, both internal and external, biblical scholars are now almost unanimous that the more finished picture of the Israelite invasion and settlement cannot be accepted as a historical record for the age. It accords with this that the elaborate tribal-lists and boundaries prove to be of greater value for the geography than for the history of Palestine, and the attempts to use them as evidence for the early history of Israel have involved numerous additional difficulties and confusion.

The prominence of Joshua as military and religious leader, and especially his connection with Shechem and Shiloh, have suggested that he was a hero of the Joseph tribes of central Palestine (viz. Ephraim and Manasseh). But he probably had no place in the oldest narratives of the exodus; and only later sources add him to Caleb (Num. xiv. 30; the reference in Deut. i. 38 is part of an insertion), or regard him as the leader of all the tribes (Deut. iii. 21, 28). As an attendant of Moses at the tent of meeting he appears in quite secondary passages (Exod. xxxiii. 7–11; Num. xi. 28). His defeat of the Amalekites is in a narrative (Exod. xvii. 8–16) which belongs more naturally to the wilderness of Shur, and it associates him with traditions of a movement direct into south Palestine which finds its counterpart when the clan Caleb (*q.v.*) is artificially treated as possessing its seats with Joshua's permission.

JOSHUA THE STYLITE, the reputed author of a chronicle which narrates the history of the war between the Greeks and Persians in 502–506, and which is one of the earliest and best historical documents preserved to us in Syriac. The author was an eyewitness of many of the events which he describes, and must have been living at Edessa during the years when it suffered so severely from the Persian War.

The chronicle was first made known by Assemani's abridged Latin version (*B.O.* i. 260–283), and was edited in 1876 by the abbé Martin, and (with an English translation) by W. Wright, in 1882. After an elaborate dedication to a friend—the "priest and abbot" Sergius—a brief recapitulation of events from the death of Julian in 363, and a fuller account of the reigns of the Persian kings Pērōz (457–484) and Balāsh (484–488), the writer enters upon his main theme—the history of the disturbed relations between the Persian and Greek Empires from the beginning of the reign of Kawād I. (489–531), which culminated in the great war of 502–506.

JOSIAH, was the grandson of Manasseh, king of Judah (II Kings xxii. 1–xxiii. 30). He was born in 647 B.C., and ascended the throne after the assassination of his father Amon in 639. His reign witnessed the collapse of the Assyrian empire, whose last great king, Asshur-bani-pal, died in 626, and the final destruction of Nineveh. Egypt also was weak, and few kings of Judah since the days of Solomon can have been as independent as Josiah. It was, perhaps, this freedom from interference which enabled him to carry out in 621 a thorough religious reform, based on a book of law discovered in the Temple during some repairs, and commonly (though not now universally) identified with Deuteronomy or a part of it. The Temple at Jerusalem was purged of all foreign

cults, and dedicated wholly to the worship of Yahweh, and all local sanctuaries were abolished, sacrifice being concentrated at Jerusalem. (*See* DEUTERONOMY, JEREMIAH.)

Egypt, meanwhile, had revived, and the young king Necho made an effort to save the falling Assyrian empire. Josiah seems to have taken the opposite side, either secretly or openly. He met Necho during one of the latter's expeditions to Mesopotamia, and was put to death at Megiddo. The Chronicler (II Chron. xxxv. 20–24) speaks of a battle in which Josiah was killed by the Egyptian archers, but this may be a much later exaggeration of a slight skirmish in which his attendants were involved, and the Book of Kings does not in the least suggest an armed expedition.

Josiah was long remembered as approaching the Israelite ideal of monarchy, kindly, open and democratic in ways and spirit, and scrupulously fair in judicial procedure. (T. H. R.)

JÓSIKA, MIKLOS, BARON (1794–1865), Hungarian novelist, born on April 28, 1794, at Torda, Transylvania, served in the army until 1818. He then settled on his estate at Szurdok, Transylvania, and he took part in the famous diet of 1834. He made his literary reputation by his *Abafi*, a romance of Transylvanian life in the days of Sigismund Bathory. Jósika became a member of the Hungarian Academy of Sciences and of the Kisfaludy Society. As deputy for Sznolnok in the Transylvanian diet of 1847 he supported the proposal for the union of Transylvania with Hungary. Both as a magnate of the Hungarian upper house and by his writings Jósika aided the revolutionary movement, and after the capitulation of Világos (Aug. 13, 1849) he fled the country. He died at Dresden on Feb. 27, 1865. The romances of Jósika, written somewhat after the style of Sir Walter Scott, are chiefly of an historical and social-political character, his materials being drawn almost entirely from the annals of his own country. Among his more important works may be specially mentioned, besides *Abafi, The Poet Zrinyi* (1843); *The Last of the Bátoris* (1837); *The Bohemians in Hungary* (1839); *Esther* (1853); *Francis Rákóczy II.* (1861); and *A Végváriak*, a tale of the time of the Transylvanian prince Bethlen Gábor, 1864. Many of the Jósika novels have been translated into German.

See K. Mocnich and S. Vutkovich, *Magyar Irók Névtára* (1876); M. Jókai, "Jósika Miklós Emlékezete," *A Kisfaludy-Társaság Evlapjai, Új folyam*, vol. iii. (1869); G. W. Steinacker, *Ungarische Lyriker* (1874). *Cf.* also Jósika's autobiography—*Emlékirat*, vol. iv. (1865).

JOSIPPON, the name of a chronicle of Jewish history from Adam to Titus attributed to "Josippon" or Joseph ben Gorion (*see* Josephus, *Bell. Jud.*, ii. 20. 3, with Whiston's notes). The name, once identified with Josephus, is perhaps a corruption of Hegesippus on whom (according to Tricher) the author drew largely. The chronicle was probably compiled in Hebrew early in the 10th century, by a Jew of south Italy. It was first printed at Mantua in 1476, and subsequently appeared in many forms, abridged or interpolated, one of the most popular being in Yiddish, with quaint illustrations. Though the chronicle is mainly legendary, the author probably used some good and ancient sources. Peter Morvyn in 1558 translated an abbreviated version into English, and many editions were asked for. Lucien Wolf has shown that the English translations of the Bible roused much interest among the Jews, and led to this wide circulation of *Josippon*, which thus bore a part in the chain of events that ended in the readmission of the Jews to England under Cromwell.

JOSQUIN DES PRÉS: *see* DES PRÉS, JOSQUIN.

JOSS, in the pidgin-English of the Chinese seaports, the name given to idols and deities. It is used adjectivally in regard to many things connected with religious rites, such as "joss-house," a temple; "joss-stick," a stick which is burned as incense; "joss-paper," paper cut to resemble money (and sometimes with prayers written upon it) burned in funeral and other ceremonies. "Joss" is possibly a corruption of Port. *deos*, god, applied by Portuguese navigators in the 16th century to the idols worshipped in the East Indies.

JOTA, a Spanish national dance. It is a form of waltz in three time danced in couples and is usually accompanied with guitars, castanets and other instruments. The Jota takes many forms, each town having its own variation.

JOTUNHEIM or **JOTUN FJELDE,** a mountainous region of southern Norway, lying between Gudbrandsdal and Jostedalsbrae. Within an area of about 950 sq.m. it contains the highest mountain in the Scandinavian Peninsula—Galdhöpiggen (8,399 ft.)—and several others but little inferior. Such are Glittertind (8,380), and Memurutind (7,966), which face Galdhöpiggen across the northward-sloping Visdal; Knutshultind (7,812) and several other peaks exceeding 7,000 ft., to the south, between lakes Gjende and Bygdin, and Skagastölstind (7,723) in the west of the region, above the Utladal, the chief summit of the magnificent Horunger. The upper parts of the main valleys are of characteristic form, not ending in lofty mountain-walls but comparatively low and level, and bearing lakes.

JOUBERT, BARTHÉLEMY CATHERINE (1769–1799), French general, was born at Pont de Vaux (Ain) on April 14, 1769. He joined the revolutionary army in 1791, and fought with the army in Italy in 1793. By the end of 1796 he was a general of division. He was in charge of the retaining force at the battle of Rivoli, and in the campaign of 1799 (invasion of Austria) he commanded the detached left wing of Bonaparte's army in Tirol, and fought his way through the mountains to rejoin his chief in Styria. He held various commands in Holland, on the Rhine and in Italy, where up to January 1799 he commanded in chief. Resigning the post in consequence of a dispute with the civil authorities, Joubert returned to France. He was almost immediately summoned to take over the command in Italy from Moreau; but he persuaded his predecessor to remain at the front and was largely guided by his advice. The odds against the French troops in the disastrous campaign of 1799 (*see* FRENCH REVOLUTIONARY WARS) were too heavy. Joubert and Moreau were compelled to give battle by Suvorov, and Joubert fell at the battle of Novi (Aug. 15, 1799). Joubert died before it could be shown whether his genius was of the first rank, but he was marked out as a future great captain by Napoleon, and his countrymen associated him with Hoche and Marceau as a great leader.

See Guilbert, *Notice sur la vie de B. C. Joubert;* Chevrier, *Le Général Joubert d'après sa correspondance* (2nd ed. 1884).

JOUBERT, JOSEPH (1754–1824), French moralist, born at Montignac (Corrèze) on May 6, 1754, is famous for the luminous criticism of literature and morals contained in the posthumous *Pensées, essais, maximes et correspondance* (2 vols., 1842), edited by his nephew, Paul de Raynal. Some part of this work was already known, for Chateaubriand, to whose charge Joubert had left his mss, had issued a selection for private circulation in 1838. Joubert began his career as a teacher in Toulouse, but early in 1778 went to Paris where he became closely allied with Diderot and with the abbé de Fontanes. In 1790 he returned to Montignac as *juge de paix*. During the Terror he had made the acquaintance, in a Burgundian village, of Madame de Beaumont, and from that time until her death in 1803 much of his time was spent with her. He survived her until May 3, 1824, but wrote little after her inspiration was removed. Moreover from 1809 onwards, when on the recommendation of Joseph de Bonald he became inspector-general of education, he was much absorbed in his professional work.

See Matthew Arnold, *Essays in Criticism* (1st series); Sainte-Beuve, *Causeries du Lundi* vol. i., and *Portraits littéraires* vol. ii.

JOUBERT, PETRUS JACOBUS (1834–1900), commandant-general of the South African republic from 1880 to 1900, was born at Cango, in the district of Oudtshoorn, Cape Colony, on Jan. 20, 1834, of a family of Huguenot origin. Left an orphan at an early age, Joubert migrated to the Transvaal, where he settled in the Wakkerstroom district near Laing's Nek and the north-east angle of Natal. There he farmed with great success, and studied law. He was elected to the *volksraad* as member for Wakkerstroom early in the sixties, Marthinus Pretorius being then in his second term of office as president. In 1870 Joubert was again elected, he became attorney-general of the republic, and in 1875 was acting president.

During the first British annexation of the Transvaal, Joubert was a consistent irreconcilable. In the war of 1880–81, he was commandant-general of the Boer forces and a member of the

triumvirate that administered the provisional Boer Government set up in Dec. 1880 at Heidelberg. He was in command of the Boer forces at Laing's Nek, Ingogo, and Majuba Hill, and he conducted the earlier peace negotiations that led to the conclusion of the Pretoria convention.

In 1883 he was a candidate for the presidency of the Transvaal, but received only 1,171 votes as against 3,431 cast for Kruger. In 1893 he again opposed Kruger in the contest for the presidency, representing the progressive Boer elements. He was defeated by a small majority, 7,911 votes being cast for Kruger and 7,246 for Joubert. He stood again in 1898, but the Jameson raid had made Kruger's position impregnable. When war broke out with Great Britain Joubert assumed nominal command of the operations, but he gave up to others the chief share in the direction of the war. His cautious nature had in early life gained him the sobriquet of "Slim Piet." He died at Pretoria on March 28, 1900.

JOUFFROY, THÉODORE SIMON (1796–1842), French philosopher, was born at Pontets, near Mouthe. At the normal school, Paris, he came under the influence of Victor Cousin, and in 1817 was appointed assistant professor of philosophy at the normal and Bourbon schools. Attracted to the philosophical system of Reid and Stewart, he wrote in 1826 a preface to a translation of the *Moral Philosophy* of Stewart, demonstrating the possibility of a scientific statement of the laws of consciousness. In 1828 he began a translation of the works of Reid, and in his preface estimated the influence of Scottish criticism upon philosophy. He was appointed professor of Greek and Roman philosophy at the college of France in 1833, and shortly afterwards published the *Mélanges philosophiques* (4th ed. 1866; Eng. trans., Boston, 1835). He had already demonstrated in his prefaces the possibility of a psychology apart from physiology, of the science of the phenomena of consciousness distinct from the perceptions of sense. He now classified the mental faculties as personal will, primitive instincts, voluntary movement, natural and artificial signs, sensibility and the faculties of intellect. In his *Cours de droit naturel* (1835), he reasons from the conception of a universal order in the universe to a Supreme Being, who has created it and who has conferred upon every man in harmony with it the aim of his existence, leading to his highest good. Following a visit to Italy in search of health in 1835, he became librarian to the University of Paris, and took the chair of philosophy at the faculty of letters. He died in Paris on Feb. 4, 1842, having done much to arouse in France an interest in the Scottish school. After his death were published *Nouveaux mélanges philosophiques* (3rd ed. 1872) and *Cours d'esthétique* (3rd ed. 1875). His correspondence was edited by A. Lair (Paris, 1901). His claim to distinction rests upon his ability as an expositor of other men's ideas.

See L. Lévy Bruhl, *Hist. of Modern Philos. in France* (1899); C. J. Tissot, *Th. Jouffroy: sa vie et ses écrits* (1876); J. P. Damiron, *Essai sur l'histoire de la philos. en France au xixe siècle* (1846).

JOUGS, JUGGS or **JOGGS**, an instrument of punishment formerly in use in Scotland, Holland and possibly other countries. It was an iron collar fastened by a short chain to a wall, often of the parish church, or to a tree. The collar was placed round the offender's neck and fastened by a padlock. It was used for ecclesiastical as well as civil offences. (*See* PILLORY.)

JOUHAUX, LÉON (1878–), French labour leader, was before the World War one of the chief propagandists of revolutionary syndicalism, his chief organ being *La Bataille Syndicaliste* which he edited 1911–21. During the war his views changed; he advocated co-operation with the Socialist Party and also with the Government. As secretary and most influential leader of the Confederation Général du Travail (C.G.T.; the federation of French trade unions), he secured the adoption of this policy by that body. After the war he resisted the spread of Communist and revolutionary ideas, led the majority at the congress of Orléans (1920) and after the ensuing split into "C.G.T.U." and "C.G.T." remained at the head of the latter body. He was French labour representative till 1928 at the International Labour Office. His *Le Syndicalisme et la C.G.T.* (1920) expounds the policy of the C.G.T. under his direction.

JOULE, JAMES PRESCOTT (1818–89), English physicist, was born on Dec. 24, 1818, at Salford, near Manchester. He owned a large brewery but devoted himself to scientific research. From the first he appreciated the importance of accurate measurement, and all through his life the attainment of exact quantitative data was one of his chief considerations. In 1840 Joule gave a quantitative statement of the law according to which heat is produced in a conductor by the passage of an electric current. He continued to study the relations between electrical, mechanical and chemical effects and was led to the discovery of the first law of thermodynamics. He determined the mechanical equivalent of heat in four ways. By rotating a small electro-magnet in water, between the poles of another magnet, and then measuring the heat developed in the water and other parts of the machine, the current induced in the coils, and the energy required to maintain rotation, he made one determination. At the same time he made another determination based on the heating effects observable when water is forced through capillary tubes. A third method, depending on the observation of the heat evolved by the mechanical compression of air, was employed a year or two later; and a fourth was the well-known frictional one of stirring water with a sort of paddle-wheel (see *Brit. Assoc. Report*, 1845). In 1849 he presented to the Royal Society a memoir which, together with a history of the subject, contained details and results of a long series of determinations. A good many years later he was entrusted by the committee of the British Association on standards of electric resistance with the task of deducing the mechanical equivalent of heat from the thermal effects of electric currents. The practical unit of energy is named after Joule. In addition, numerous other researches stand to Joule's credit—the work done in compressing gases and the thermal changes they undergo when forced under pressure through small apertures (with Lord Kelvin), known as the Joule-Thomson porous plug experiment, the change of volume on solution, the change of temperature produced by the longitudinal extension and compression of solids, etc. It was during the experiments involved by the first of these inquiries that Joule was incidentally led to appreciate the value of surface condensation in increasing the efficiency of the steam engine. Joule carried out a series of investigations and his results, according to Kelvin, led directly and speedily to the present practical method of surface-condensation, one of the most important improvements of the steam engine. Joule died at Sale on Oct. 11, 1889.

His scientific papers were collected and published by the Physical Society of London: the first volume appeared in 1884.

JOURDAN, JEAN BAPTISTE, COUNT (1762–1833), marshal of France, was born at Limoges on April 29, 1762. He was apprenticed to a silk merchant of Lyons, but served in a volunteer regiment in the American War of Independence. Invalided from the army in 1784, he set up business in Limoges, but at the outbreak of the Revolution he volunteered for the army and rose rapidly in the service. In 1793 Carnot appointed him commander-in-chief of the army of the North, and he won the victory of Wattignies (Oct. 15–16, 1793). Suspected of moderation in politics and of pessimism as to the military outlook, he then spent some months in retirement, but was re-instated and appointed (1794) to the command of the army operating on the Sambre. His victory at Fleurus (June 26, 1794) was followed by a campaign on the Rhine in 1795.

In 1796 his army formed the left wing of the advance into Bavaria. The whole of the French forces were ordered to advance on Vienna, Jourdan on the extreme left and Moreau in the centre by the Danube valley, Bonaparte on the right by Italy and Styria. The Austrians were at first driven back by Moreau and Jourdan almost to the Austrian frontier. But the archduke Charles threw his whole weight on Jourdan, who was defeated at Amberg and Würzburg, and forced over the Rhine after a severe rearguard action. Apart from Bonaparte's marvellous campaign in Italy, the operations of the year were disastrous, chiefly owing to the vicious plan of campaign imposed by the government. Jourdan was made the scapegoat of the government's mistakes and was not employed for two years. He occupied himself with politics, and framed the famous conscription law of 1798. In 1799 Jourdan was placed at the head of the army on the Rhine, but again underwent defeat

at the hands of the archduke Charles at Stockach (March 25), and, disappointed and broken in health, handed over the command to Masséna. He resumed his political duties, and opposed the *coup d'état* of 18 Brumaire, after which he was expelled from the Council of the Five Hundred. He accepted from Napoleon fresh military and civil employment and in 1804 was made a marshal of France. In 1806, Joseph Bonaparte, king of Naples, selected him as his military adviser, and he followed Joseph into Spain (1808). After the battle of Vittoria he held no important command under the Empire. Jourdan gave in his adhesion to the restoration government of 1814, and though he rejoined Napoleon in the Hundred Days, he submitted to the Bourbons again after Waterloo. He refused, however, to be a member of the court which tried Marshal Ney. He was made a count, a peer of France (1819), and governor of Grenoble (1816). In politics he was a prominent opponent of the royalist reactionaries and supported the revolution of 1830. Marshal Jourdan died on Nov. 23, 1833, and was buried in the Invalides.

He wrote *Opérations de l'armée du Danube* (1799); *Mémoires pour servir à l'histoire sur la campagne de 1796* (1819); and unpublished personal memoirs. *See* Gachot, *La campagne de 1799; Jourdan en Allemagne et Brune en Hollande* (1906).

JOURNAL, a daily record of events, a diary, a daily newspaper (late Lat. *diurnalis,* daily). A journalist is one who writes for the public press. (*See* NEWSPAPERS and BOOKKEEPING.) "Journal" is also applied to the record, day by day, of the business and proceedings of a public body or learned society, *e.g.,* the journals of the British houses of parliament, a lengthened account written from the "votes and proceedings" (in the House of Lords called "minutes of the proceedings"), made day by day by the assistant clerks, and printed on the responsibility of the clerk to the House, after submission to the "sub-committee on the journals." In the Commons the journal is passed over by the speaker before publication. The journals of the House of Commons begin in the first year of the reign of Edward VI. (1547), and are complete, except for a short interval under Elizabeth. Those of the House of Lords date from the first year of Henry VIII. (1509). Before that date the proceedings in parliament were entered in the rolls of parliament. The journals of the Lords are "records" in the judicial sense, those of the Commons are not. (*See* Erskine May, *Parliamentary Practice,* pp. 201–202, 1906.) The U.S. Constitution directs that each house of congress keep a "journal of its proceedings" and the constitutions of the various States contain similar enactments. In maritime law the word journal is used synonymously for log-book.

JOURNAL, that part of a shaft or axle which makes circumferential contact in the bearing, as distinguished from an end or thrust bearing. An axle-box is often called a journal-box. Journals must be accurately finished and the bearings or "brasses" well fitted to make contact all over the surface, or abrasion, scoring, and hot running are likely to occur. The shaft always rides on a film of oil in a properly fitted bearing; hence it follows necessarily that wear is extremely slow. Where speeds are high or pressures great, the oil is pumped into the bearings copiously, and cooled in the course of its circulation, while the bearing is frequently water-cooled. Ball and roller bearings have to a remarkable extent displaced the solid plain bearings in many classes of machinery.

JOURNALISM, SCHOOLS OF. Till the latter years of the 19th century journalism had been looked on in England as something of a closed career, demanding in its follower little more than a kind of vocation for the press; proficiency was to be attained only through experience, and the idea of formal training would have been derided. With the enormous expansion of journalistic activity in the '90's, based on the literary needs of the newly educated masses, the conception of every man as a potential journalist began to grow, and with it came the possibility of academic courses in journalism.

But though at least one private school of journalism was founded before 1900 no wide or recognized movement towards journalistic education was undertaken till after the World War. The year 1919 marked the establishment at London University of a course in journalism. The course, which terminates in an examination for a diploma, is "designed to give a comprehensive and co-ordinated curriculum of modern or current knowledge combined with instruction and practice in working for the press." Students of the course, which takes two years, must receive instruction in English composition and practical journalism and are given their choice of three subjects from such fields as the History and Development of Science, the History of Political Ideas, the Principles of Criticism, Economics, Philosophy and Psychology. They are expected as well to acquire proficiency in shorthand and typing. Exhibitions have been from time to time awarded through the Newspaper Society, the Press Association, the National Union of Journalists and other bodies.

There is also a course in journalism at Bristol University, and instruction is given by the London School of Journalism. The latter, a private body, was founded in 1919 at the inspiration of Lord Northcliffe and with the support of the chief newspaper proprietors. Its courses are largely postal, there being no lectures, and its curriculum is more severely technical than those of the Universities. In addition other bodies advertising themselves as postal "schools of journalism" have sprung up during recent years, but their claims should, as a rule, be treated with caution. (X.)

In the United States.—Probably the first prominent advocate of schools of journalism was General Robert E. Lee. As president of Washington college (afterwards Washington and Lee university) he began in 1869 some classes in journalism; but his death the following year and the general disfavour with which the idea was received resulted in their speedy discontinuance.

The idea of education for journalism was put on a different footing by the announcement in 1903 of Joseph Pulitzer's agreement to give two million dollars to Columbia university for the foundation of a school of journalism, under the advice of an advisory board "composed of the foremost journalists and editors possessing expert knowledge on the subject." Difficulties as to the nomination of the advisory board and the selection of the first professors in editorial and news writing led to the postponement of the organization of the school, by Pulitzer's wish, until after his death (Oct. 29, 1911). The suggestions he made are, in the main, still in force, not only in the Columbia school, which was opened in 1912, but in other schools.

In the meantime a beginning had been made elsewhere. In 1908 the Missouri school of journalism was established, equal in rank with the other schools of the university. At the universities of Illinois, Indiana, Kansas, Virginia, Washington and Wisconsin, courses of journalism were established. The graduating classes in 1926–27 numbered nearly 1,000.

The strongest schools and departments of journalism were organized in the American Association of Schools and Departments of Journalism, which includes the following universities, schools being marked S:—Missouri (S), Syracuse, Kansas State agricultural college, Indiana, Illinois (S), Kansas, Columbia (S), Northwestern (S), Oklahoma (S), Ohio (S), Oregon (S), Texas, Washington (S), Iowa (S), Montana (S), Nebraska (S), Wisconsin (S), Minnesota, Louisiana and Michigan. Instruction in journalism in about 30 other universities might also be granted first class standing. In addition to these, journalism is taught in nearly 200 other colleges and universities, and in many high schools.

The university authorities have been somewhat divided from the beginning as to whether instruction in journalism should rest upon a high school education or upon four years of college. The general plan has been to require two years of college and to make the other two years required for the degree partly or wholly professional in character. In all the schools and departments of journalism connected with the American Association of Schools and Departments of Journalism, courses are given in reporting, copy reading, editorial writing, feature writing, history of journalism, and the law of libel, varying from about half to nearly all of the student's total work. The other courses include psychology, sociology, political science, economics, history, literature, languages and similar subjects. (J. W. CUN.)

JOURNEY, originally a day's work or travel, and the distance covered in a day, usually reckoned in the middle ages as 20 miles. The early use of "journey" for a day's work, or the amount produced by a day's work, is still found in glassmaking, and also at the British Mint, where a "journey" is taken as equivalent to the coinage of 15 lb. of standard gold, 701 sovereigns, or of 60 lb. of silver. The term "journeyman" distinguishes a qualified workman or mechanic from an "apprentice" on the one hand and a "master" on the other, and is applied to one who is employed by the day.

JOUVENEL, HENRI DE (1876–), French politician, was born in Paris on April 2, 1876. Secretary of the committee of democratic conferences in 1900, he was made *chef de cabinet* in the ministry of justice in 1902, and *directeur de cabinet* in the ministry of commerce in 1905. He entered journalism shortly afterwards as chief correspondent on *Le Matin.* In Jan. 1921 de Jouvenel was elected Senator for the Corrèze, and became a member of the foreign affairs commission. He was a French delegate on the Assembly of the League of Nations in 1922, and was instrumental in admitting Abyssinia to the League, and took an active part in the work of the commission of intellectual cooperation. He again represented his country in the League in 1924, and became minister of public instruction in the second Poincaré cabinet in the same year. In 1925 he was appointed French high commissioner in Syria in succession to General Sarrail (*q.v.*). De Jouvenel at once set himself to the task of pacification, but realizing the need of amicable relations with neighbouring countries he went to Angora early in 1926 and prepared a treaty with Turkey to be ratified by the French Government.

JOUVENET, JEAN (1644–1717), French painter, born at Rouen. He was the most celebrated of a family of artists; and was the son and pupil of Laurent Jouvenet. On arriving in Paris in 1661 he attracted the attention of Le Brun, by whom he was employed at Versailles, and under whose auspices, in 1675, he became a member of the Académie Royale, of which he was elected professor in 1681, and one of the four perpetual rectors in 1707. Four large paintings at the Louvre include the celebrated "Miraculous Draft of Fish." He was the greatest religious painter of his time. Jouvenet died on April 5, 1717.

See *Mém. inéd. acad. roy. de p. et de sc.* (1854), D'Argenville, *Vies des peintres* (1762).

JOUY, VICTOR JOSEPH ÉTIENNE DE (1764–1846), French dramatist, was born at Jouy, near Versailles. He served in the army in Guiana and in India before the Revolution. He then returned to France and served with distinction in the early campaigns, attaining the rank of adjutant-general. He fled under the terror In 1821 his tragedy of *Sylla* gained a triumph due in part to the genius of Talma, who had studied the title-rôle from Napoleon. Under the Restoration Jouy consistently fought for the cause of freedom, and if his work was overrated by his contemporaries, they were probably influenced by their respect for the author himself. He died in the palace of St. Germain-en-Laye on Sept. 4, 1846.

JOVANOVIĆ, LJUBA (1865–1928), Yugoslav politician, was born at Cattaro, then Austrian territory, on Feb. 2, 1865. Owing to his activities in favour of Yugoslav unity, he was forced to emigrate to Montenegro, then to Serbia, where, after fighting as a volunteer in the Serbo-Bulgar war of 1885, he became a teacher, librarian to the National Library (1901), and professor of history at Belgrade University (1903). He had previously joined the Serb radical party as a strong Nationalist, and on entering the Skupština in 1905, became president of the chamber, then minister of the interior (1909), of education (1911) and again of the interior (1914–8). From 1919–20 he was a councillor of State, then again minister of education, and 1923–24 president of the chamber. His attempts to reconcile the Serb radicals with the Croats and alleged federalist inclinations involved him in a quarrel with Nikola Pašić (*q.v.*). In 1924, then, Jovanović published in an annual called *Krv Slovenstva* (Slav Blood) an article entitled "After Vidov Den 1914" alleging that he, Pašić and others had had foreknowledge of the plot against the Archduke Francis Ferdinand in 1914. The British Institute of International Affairs reprinted the article in 1925 as "The Murder of Sarajevo" (*see* also the Belgrade *Politika,* April 7, 1925). After a furious quarrel, Jovanović was, by a majority, excluded from the radical party in 1926. With his adherents, he formed an independent anti-Pašić party, but rejoined the radicals after Pašić's death. He died on Feb. 10, 1928.

JOVELLANOS (Jove Llanos), **GASPAR MELCHOR DE** (1744–1811), Spanish statesman and author, born at Gijon (Asturias) on Jan. 5, 1744. Criminal judge at Seville in 1767, judge in Madrid (1778) and a member of the council of military orders (1780), he was involved in the fall of Cabarrus, and banished (1790–97) to Gijon. Recalled in 1797, he was named minister of grace and justice under Godoy, whose policy and conduct so offended his proud integrity that he combined with his colleague Saavedra to procure Godoy's dismissal. On the latter's return to power (1798), Jovellanos was banished to Gijon and imprisoned (1801) in Majorca. The revolution of 1808 set him at liberty. Disdaining the most brilliant offers from Joseph Bonaparte, Jovellanos joined the central junta and contributed to reorganize the cortes. This accomplished, the junta at once fell under suspicion, and Jovellanos was involved in its fall. He died at Vega (Asturias) on Nov. 27, 1811.

The poetical works of Jovellanos comprise a tragedy, *El Pelayo,* a comedy, *El delincuente honrado,* satires, miscellaneous pieces and a translation of the first book of *Paradise Lost.* His prose works, especially those on political and legislative economy, constitute his real title to literary fame. In them depth of thought and clear-sighted sagacity are couched in a certain Ciceronian elegance and classical purity of style. Perhaps the *Informe sobre un proyecto de ley agraria* (1787) is his most valuable work.

Somoza García-Sala, *Documentos para . . . la biografía de Jovellanos* (1911, 2 vol.).

JOVELLAR Y SOLER, JOAQUÍN (1819–1892), captain-general of Spain, was born at Palma de Mallorca on Dec. 28, 1819. He went to Cuba as captain (1842–51); promoted major in 1853, he accompanied O'Donnell as private secretary to Morocco. Colonel in 1860, brigadier-general in 1863, and in 1864 under-secretary for war, Jovellar was made general of division in 1866, and lieutenant-general in 1872 by King Amadeus He left Spain when the federal republic was proclaimed. In 1873 Castelar sent him to Cuba as governor-general. He commanded the army of the centre against the Carlists when Martinez Campos went to Sagunto to proclaim Alfonso XII. (1874). War minister under Cánovas, he was sent to Cuba as governor-general until the peace of Zaujon (June 18, 1878). Alfonso XII. made him a captain-general, president of the council, life-senator and governor-general of the Philippines. Jovellar died in Madrid on April 17, 1892.

JOVIAN (Flavius Iovianus) (331–364), Roman emperor from June 363 to February 364, was born in 331. As captain of the imperial bodyguard he accompanied Julian in his Persian expedition; and on the day after that emperor's death Jovian was unexpectedly chosen emperor by the army to succeed him. He at once continued the retreat begun by Julian, and, continually harassed by the Persians, succeeded in reaching the banks of the Tigris, where a humiliating treaty was concluded with the Persian king, Shapur II. (*q.v.*). Five provinces which had been conquered by Galerius in 298 were surrendered, together with Nisibis and other cities. The Romans also gave up all their interests in the kingdom of Armenia, and abandoned its Christian prince Arsaces to the Persians. During his return to Constantinople Jovian was found dead in his bed at Dadastana, halfway between Ancyra and Nicaea. Under Jovian, Christianity was established as the state religion and Athanasius was once more reinstated on the archiepiscopal throne of Alexandria. Paganism, however, seems to have been tolerated. In Syriac literature Jovian became the hero of a Christian romance (G. Hoffmann, *Julianus der Abtrünnige,* 1880).

For the relations of Rome and Persia *see* Persia: *Ancient History*.

JOVIUS, PAULUS, or **PAOLO GIOVIO** (1483–1552), Italian historian and biographer, was born at Como on April 19, 1483. After studying the humanities, he applied himself to medicine and philosophy at Padua and Pavia. But instead of practising as a physician he settled at Rome under the patronage of the Cardinal Giulio de' Medici (afterwards Clement VII.), to write the history of his time. He enjoyed the favour of successive popes and held many benefices, including in 1528, the bishopric of Nocera.

After Clement's death Giovio found himself out of favour with the next pope, Paul III. He retired to his villa on the lake of Como, where he spent the wealth he had acquired from donations and benefices in adorning his villa with curiosities, antiquities and pictures. He died upon a visit to Florence in 1552.

Giovio's principal work was the *Historiarum sui temporis libri XLV.* (2 vols. 1551–53; Ital. trans., Florence, 1551), from the invasion of Charles VIII. to the year 1547. His first published work, printed in 1524 at Rome, was a treatise *De piscibus romanis*. After his retirement to Como he produced a valuable series of biographies, entitled *Elogia virorum illustrium* (7 vols. 1549–57), and many miscellaneous works. A complete list of Giovio's works is given in Cicogna, *Delle inscrizioni Veneziane raccolta* (Venice, 1830).

JOWETT, BENJAMIN (1817–1893), English scholar and theologian, master of Balliol college, Oxford, was born in Camberwell on April 15, 1817. His father was one of a Yorkshire family who, for three generations, had been supporters of the Evangelical movement in the Church of England. His mother was a Langhorne, in some way related to the poet and translator of Plutarch. At 12 the boy was placed on the foundation of St. Paul's school (then in St. Paul's Churchyard), and in his 19th year he obtained an open scholarship at Balliol. In 1838 he gained a fellowship, and graduated with first-class honours in 1839. He came to Oxford at the height of the Tractarian movement, and through the friendship of W. G. Ward was drawn for a time in the direction of High Anglicanism; but a stronger and more lasting influence was that of the Arnold school, represented by A. P. Stanley. In the summers of 1845 and 1846, spent in Germany with Stanley, he became an eager student of German criticism and speculation; and came under the influence of the writings of F. C. Baur (*q.v.*). He was appointed to the Greek professorship at Oxford in the autumn of 1855. He had been a tutor of Balliol and a clergyman since 1842.

His pupils became his friends for life. He discerned their capabilities, studied their characters, and sought to remedy their defects by frank and searching criticism. Like another Socrates, he taught them to know themselves, repressing vanity, encouraging the despondent, and attaching all alike by his unobtrusive sympathy. He had the reputation of "the great tutor." From 1846 onwards Jowett threw himself into the movement for university reform, which took effect in the commission of 1850 and the act of 1854. Jowett served on the commission which led to the opening of the Indian Civil Service to competition. A great disappointment, his repulse for the mastership of Balliol, also in 1854, appears to have roused him into the completion of his book on *The Epistles of St. Paul*. This work is original and suggestive, but its publication aroused theological prejudice, which followed him more or less through life. Undeterred by this criticism, he joined with Henry Bristowe Wilson and Rowland Williams, who had been similarly attacked, in the production of *Essays and Reviews* (1860), a book which was the signal for an outbreak of fanaticism. Jowett's influence at Oxford steadily increased. It culminated in 1864, when the country clergy, provoked by the final acquittal of the essayists, had voted in convocation against the endowment of the Greek chair. Jowett's pupils, who were now drawn from the university at large, supported him with enthusiasm.

In the meantime Jowett had been quietly exerting his influence so as to conciliate all shades of liberal opinion, and secure the abolition of the theological test, which was still required for the M A and other degrees, and for university and college offices. He spoke at a meeting upon this question in London (June 10, 1864), which prepared the ground for the University Tests Act of 1871.

In connection with the Greek professorship Jowett had undertaken a work on Plato which grew into a complete translation of the *Dialogues* with introductory essays. At this he worked in the vacations for at least ten years. But his interest in theology had not abated. The university pulpit, indeed, was closed to him, but from 1866 until the year of his death he preached annually in Westminster Abbey, where Stanley had become dean in 1863 In 1870, by an arrangement which he attributed to his friend Robert Lowe, afterwards Lord Sherbrooke (at that time a member of Gladstone's ministry), Scott was promoted to the deanery of Rochester and Jowett was elected to the vacant mastership by the fellows of Balliol. From the vantage-ground of this long-coveted position the *Plato* was published in 1871. While scholars criticized particular renderings, it was generally agreed that he had provided a version of Plato which is an English classic.

If ever there was a beneficent despotism, it was Jowett's rule as master. Since 1866 his authority in Balliol had been really paramount, and various reforms in college had been due to his initiative. The opposing minority were now powerless, and the younger fellows who had been his pupils were more inclined to follow him than others would have been. There was no obstacle to the continued exercise of his firm and reasonable will. He still knew the undergraduates individually, and watched their progress with a vigilant eye. His influence in the university was less assured. The pulpit of St. Mary's was no longer closed to him, but the success of Balliol in the schools gave rise to jealousy in other colleges, and old prejudices did not suddenly give way; while a new movement in favour of "the endowment of research" ran counter to his immediate purposes. Meanwhile, the tutorships in other colleges, and some of the headships also, were being filled with Balliol men, and Jowett's former pupils were prominent in both houses of parliament and at the bar. He continued the practice, which he had commenced in 1848, of taking with him a small party of undergraduates in vacation time, and working with them in one of his favourite haunts, at Askrigg in Wensleydale, or Tummel Bridge, or later at West Malvern. The new hall (1876), the organ there, entirely his gift (1885) and the cricket ground (1889), remain as external monuments of the master's activity. Neither business nor the many claims of friendship interrupted literary work. The six or seven weeks of the long vacation, during which he had pupils with him, were mainly employed in writing. The translation of Aristotle's *Politics*, the revision of Plato, and, above all, the translation of Thucydides many times revised, occupied several years. The edition of the *Republic*, undertaken in 1856, remained unfinished, but was continued with the help of Lewis Campbell.

In 1882 Jowett accepted the vice-chancellorship of the university, in the hope of securing various reforms. The exhausting labours of the vice-chancellorship were followed by an illness (1887); and after this he relinquished the hope of producing any great original writing, contenting himself with his commentary on the *Republic* of Plato, and some essays on Aristotle which were to have formed a companion volume to the translation of the *Politics*. Jowett died on Oct. 1, 1893.

Theologian, tutor, university reformer, a great master of a college, Jowett's best claim to the remembrance of succeeding generations was his greatness as a moral teacher. Many of the most prominent Englishmen of the day were his pupils, and owed much of what they were to his precept and example, his penetrative sympathy, his insistent criticism, and his unwearying friendship. Seldom have ideal aims been so steadily pursued with so clear a recognition of practical limitations. Jowett's theological work was transitional, and yet has an element of permanence. In earlier life he had been a zealous student of Kant and Hegel, and to the end he never ceased to cultivate the philosophic spirit; but he

had little confidence in metaphysical systems, and sought rather to translate philosophy into the wisdom of life. His place in literature rests really on the essays in his Plato.

See *The Life and Letters of Benjamin Jowett*, by E. A. Abbott and Lewis Campbell (1897); *Benjamin Jowett*, by Lionel Tollemache (1895). (L. CAM.; X.)

JOWETT, JOHN HENRY (1864–1923), British divine, was born near Halifax, Yorkshire, Aug. 25, 1864 He was trained for the Congregational ministry at Airedale college, Bradford, the University of Edinburgh and Mansfield college, Oxford. In 1889 he was elected minister of a Congregational church at Newcastle-upon-Tyne, which pastorate he held until 1895 when he was chosen to succeed R. W. Dale at Carr's Lane chapel, Birmingham. During the 15 years of his ministry there his reputation as a preacher grew steadily, and his name became known throughout Great Britain and America. In 1911 he went to the United States to become pastor of Fifth Avenue Presbyterian church, New York. After the signing of the Armistice in 1918, he returned to London as minister at Westminster chapel, Buckingham gate, London. He died on Dec. 19, 1923.

Jowett published a number of books of a devotional character, including *The High Calling* (1909); *Our Blessed Dead* (1909), *The Whole Armour of God* (1916); *The Friend on the Road* (1921), *Life in the Heights* (1924). *See* A. Porritt, *John Henry Jowett* (1924).

JOYCE, JAMES (1882–). Irish author, was born in Dublin on Feb. 2, 1882, and was educated at Clongowes Wood college, Belvedere college, and at University college, Dublin. His first published work was a small volume of lyrics, *Chamber Music* (1907). *Dubliners*, a set of tales and studies of Dublin personalities, followed in 1914; a novel, *A Portrait of the Artist as a Young Man*, in 1916; and *Exiles*, a play, in 1918. Meanwhile Joyce had left Ireland, and lived abroad, in Rome, Zurich, Trieste and Paris. In 1922 appeared the fruit of his work between 1914 and 1921, *Ulysses*, published in Paris. This book, conceived and executed on a very ambitious scale, attracted much attention among critics and men of letters, in France as well as in England and America, as a portent of certain modern tendencies in the development of the novel.

JOYEUSE, town in Ardèche, France, from which the family of Joyeuse derives its name. Anne de Joyeuse (1561–1587) was a favourite of Henry III. of France, who created him duke and peer (1581), admiral of France (1582), and governor of Normandy (1586), and married him to Marguerite de Lorraine-Vaudémont, younger sister of the queen. He had three brothers: François de Joyeuse (d. 1615), cardinal archbishop of Rouen, who brought about the reconciliation of Henry IV with the pope; Henri, count of Bouchage, and later duke of Joyeuse, who was a Capuchin friar, then a soldier, became a marshal of France, and finally re-entered the church, dying in 1608; Antoine Scipion, grand prior of Toulouse in the order of the Knights of Malta, who was one of the leaders in the League, and died in the retreat of Villemur (1592). Henriette Catherine de Joyeuse, daughter of Henri, married in 1611 Charles of Lorraine, duke of Guise, to whom she brought the duchy of Joyeuse. On the death of her great-grandson, François Joseph de Lorraine, duke of Guise, in 1675, without issue, the duchy of Joyeuse was declared extinct, but it was revived in 1714, in favour of Louis de Melun, prince of Épinoy.

JOYEUSE ENTRÉE, a famous charter of liberty granted to Brabant by Duke John III. in 1354. John summoned the representatives of the cities of the duchy to Louvain to announce to them the marriage of his daughter and heiress Jeanne of Brabant to Wenzel duke of Luxembourg, and he offered them liberal concessions in order to secure their assent to the change of dynasty. John III. died in 1355, and Wenzel and Jeanne, on the occasion of their State entry into Brussels, solemnly swore to observe all the provisions of the charter which had been drawn up. From the occasion on which it was first proclaimed this charter has since been known in history as *La Joyeuse Entrée*. By this document the dukes of Brabant undertook to maintain the integrity of the duchy, and not to wage war, make treaties or impose taxes without the consent of their subjects, as represented by the municipalities. All members of the duke's council were to be native-born Brabanters. This charter became the model for other provinces and the bulwark of the liberties of the Netherlands. Its provisions remained practically unchanged from the reign of Charles V. onwards. The ill-advised attempt of the emperor Joseph II. in his reforming zeal to abrogate the *Joyeuse Entrée* caused a Brabançon revolt under Henry van der Noot, before which he had to yield (1789–90).

See E Poullet, *La Joyeuse entrée, ou constitution Brabançonne* (1862).

JOYNSON-HICKS, SIR WILLIAM (1865–), British statesman, eldest son of Henry Hicks, of Bexhill, was born on June 23, 1865. The additional name of Joynson was assumed on his marriage in 1895 to Grace, daughter of Richard Hampson Joynson, of Chasefield, Bowdon. From 1888 he practised as a solicitor in London He contested North Manchester (1900) and North-west Manchester (1906) as a Conservative, both unsuccessfully, but in 1908 he won the latter seat from Winston Churchill, who had sought re-election on his appointment as president of the Board of Trade. At the first general election of 1910, however, he was defeated. He returned to parliament in 1911 as member for the Brentford division of Middlesex, and from 1918 represented the Twickenham division. During the latter days of Lloyd George's administration Sir William—he had been created a baronet in 1919—was prominent among those who favoured the withdrawal of the conservatives from the Coalition, and in the Conservative Government formed by Bonar Law in 1922 he was successively parliamentary secretary to the Overseas Trade Department, postmaster-general and paymaster-general, and financial secretary to the Treasury (with a seat in the cabinet). When Baldwin succeeded Bonar Law as prime minister (1923), he became minister of health and in Baldwin's second administration (1924) he was appointed home secretary. Sir William took an active part in the affairs of the Church of England and was recognized as one of the lay leaders of the Evangelical party. He was one of the foremost opponents of the Prayer Book measure of 1928 He did valuable work in connection with the development of automobilism in Great Britain—notably as chairman of the motor legislation committee of the House of Commons.

He wrote *The Law of Heavy and Light Mechanic Traction on the Highways* (1906); *The Command of the Air* (1916).

JUAN FERNÁNDEZ ISLANDS, a small group in the South Pacific ocean, between 33° and 34° S. lat. and 80° W. long., which belongs to Chile. The principal island is called *Más-a-Tierra* (Span. "nearer land") to distinguish it from a smaller island, *Más-a-Fuera* ("farther out"), 100 m. farther west. Off the south-west of Más-a-Tierra lies the islet of Santa Clara. The aspect of Más-a-Tierra is beautiful; only 13 m. in length by 4 in width, it consists of a series of precipitous volcanic rocks which are rudely piled into irregular blocks and pinnacles, and strongly contrasting with a rich vegetation. The highest of these, 3,225 ft., is called, from its massive form, El Yunque (the anvil). Cumberland bay on the north side is the only fair anchorage, and even there, from the great depth of water, there is some risk. A wide valley collecting streams from several of the ravines on the north side of the island opens into Cumberland bay, and is partially enclosed and cultivated. The inhabitants number only some 300.

The flora and fauna of Juan Fernández are in most respects Chilean. There are few trees on the island, for most of the valuable indigenous trees have been practically exterminated, such as the sandalwood, which the earlier navigators found one of the most valuable products of the island. Ferns are prominent among the flora, about one-third of which consists of endemic species. There are no indigenous land mammals. Pigs and goats, however, with cattle, horses, asses and dogs, have been introduced, have multiplied, and in considerable numbers run wild. Sea-elephants and fur-seals were formerly plentiful. Of birds, a tyrant and a humming-bird (*Eustephanus fernandensis*) are peculiar to the group, while another humming-bird (*E. galeritès*), a thrush, and some birds of prey also occur in Chile. *E. fernandensis* has the peculiarity that the male is of a bright cinnamon colour, while the female is green. Both sexes are green in *E. galerites*.

Juan Fernández was discovered in 1563 by a Spanish pilot of

that name, who obtained from the Spanish Government a grant of the islands, where he resided for some time, stocking them with goats and pigs. He soon, however, appears to have abandoned his possessions, which were afterwards for many years only visited occasionally by fishermen from the coasts of Chile and Peru. In 1616 Jacob le Maire and Willem Cornelis Schouten called at Juan Fernández for water and fresh provisions. Pigs and goats were then abundant on the islands. In Feb. 1700, Dampier called at Juan Fernández and while there Capt. Straddling of the "Cinque Porte" galley quarrelled with his men, 42 of whom deserted but were afterwards taken on board by Dampier; five seamen, however, remained on shore. Other parties had previously colonized the islands but none had remained permanently. In Oct. 1704 the "Cinque Porte" returned and found two of the men, the others having been apparently captured by the French. Straddling was marooned on Más-a-Tierra; one of his crew, Alexander Selkirk (*q.v.*), became the island's most famous colonist, for his adventures are commonly believed to have inspired Daniel Defoe's *Robinson Crusoe* Among later visits, that of Commodore Anson, in the "Centurion" (June 1741) led, on his return home, to a proposal to form an English settlement on Juan Fernández; but the Spaniards, hearing that the matter had been mooted in England, gave orders to occupy the island, and it was garrisoned accordingly in 1750. Philip Carteret first observed this settlement in May 1767, and on account of the hostility of the Spaniards preferred to put in at Más-a-Fuera. After the establishment of the independence of Chile at the beginning of the 19th century, Juan Fernández passed into the possession of that country. On more than one occasion Más-a-Tierra has been used as a State prison by the Chilean Government, particularly for political prisoners.

JUANGS (Patuas, literally "leaf-wearers"), a jungle tribe of Orissa, India, found only in two of the tributary states, Dhenkanal and Keonjhar. They are said to be aborigines. Their language belongs to the Munda family. They live on the game they kill or on snakes and vermin. Their huts measure about 6 ft. by 8 ft., with low doorways. The interior has two compartments. In the first of these the father and all the females of a family huddle; the second is used as a store-room. The boys have a separate hut at the village entrance which serves as a guest-house and general assembly place where the village musical instruments are kept. The Juangs are small and weak-looking, of a reddish-brown colour, with flat faces, broad noses, large mouths and thick lips. The women used to wear nothing but girdles of leaves, the men, a bandage of cloth. The Juangs declare that the river goddess, emerging for the first time from the Gonasika rock, surprised a party of naked Juangs dancing and ordered them to wear leaves, with the threat that they should die if they gave up the custom. The Juangs' weapons are the bow and arrow and a primitive sling. Their religion is a vague belief in forest spirits. They offer fowls to the sun. Polygamy is rare. They burn their dead and throw the ashes into any running stream. The most sacred oaths a Juang takes are those on an ant-hill or a tiger-skin.

JUAN MANUEL, DON (1282–1349), infante of Castile, son of the infante Don Manuel and Beatrix of Savoy and grandson of St. Ferdinand, born at Escalona, May 5, 1282. A favourite of Sancho IV., he served in his twelfth year as *adelantado mayor* of Murcia against the Moors at Granada. In 1304 he successfully conducted political negotiations with James II. of Aragon on behalf of Ferdinand IV., then under age; his marriage with James II.'s daughter, Constantina, added to his prestige. Regent until the proclamation of Alphonso XI.'s majority (1325), his ambitious designs of continuing in power were defeated by the king, who married Constanza, his daughter, and removed Juan Manuel from the scene by nominating him *adelantado mayor de la frontera.* Alphonso XI.'s repudiation of Constanza led to civil war. Don Juan Manuel (whose wife Constantina died in 1327) married Doña Blanca de la Cerda, secured the support of Juan Nuñez, *alférez* of Castile, won over Portugal by promising the hand of the ex-queen Constanza to its infante, and entered into alliance with Mahomet III. of Granada. Faced by this formidable coalition, Alphonso XI. sued for terms in 1328. War speedily broke out anew, and lasted till 1331, when Alphonso XI. invited Juan Manuel and Juan Nuñez to a banquet with the intention, it was believed, of assassinating them; the plot failed and Juan Manuel joined forces with Peter IV. of Aragon. Besieged by Alphonso XI. at Garci-Nuñez, he escaped on July 30, 1336, fled into exile, and kept the rebellion alive till 1338, when he made his peace with the king. He proved his loyalty by serving in further expeditions against the Moors of Granada and Africa, and died a tranquil death in 1349.

Distinguished as an astute politician, Don Juan Manuel is an author of the highest eminence and, considering the circumstances of his stormy life, his voluminousness is remarkable. Setting aside the works that have disappeared—*Libro de los Sabios, Libro de Engeños, Reglas de como se debe trobar, Libro de los Cantares* (all written before 1329), *Libro de la Caballeria* (*c.* 1320–1322)—there remain the *Cronica abreviada* (*c.* 1320–1324), the *Libro de la Caza* (*c.* 1325–1326), the *Libro del Caballero et del Escudero,* the *Libro de los Estados* (1330), *El Conde Lucanor* (1328–1335), a devout *Tractado* on the Virgin (dedicated to the prior of Peñafiel Monastery, to which Juan Manuel bequeathed his manuscripts), the *Libro de los Castigos, Libro infenido* (*c.* 1334), *Las Maneras de Amor* and the *Libro de las Armas,* both about 1334–1337.

The historical summaries, pious dissertations and miscellaneous writings are of secondary interest. The *Libro del Caballero et del Escudero* is on another plane; it is no doubt suggested by Lull's *Libre del orde de Cavalleria,* but the morbid mysticism of Lull is rejected and the carefully finished style justifies the special pride which the author took in this performance. The influence of Lull's *Blanquerna* is likewise visible in the *Libro de los Estados,* but the marked divergences of substance prove Juan Manuel's acquaintance with some version of the Barlaam and Josaphat legend. Nothing is more striking than the curious and varied erudition of the turbulent prince who weaves his personal experiences with historical or legendary incidents, with reminiscences of Aesop and Phaedrus, with the *Disciplina clericalis,* with *Kalilah and Dimnah,* with countless oriental traditions and with all the material of anecdotic literature which he embodies in *El Conde Lucanor* (or *Libro de Patronio*). This work, printed in 1575, revealed Juan Manuel as a master of prose composition, and as the predecessor of Boccaccio in the province of romantic narrative.

A conscious artist, deliberative and selective in his methods, Juan Manuel has not Boccaccio's festive fancy nor his constructive skill; he is too persistently didactic; but he excels in knowledge of human nature, in the faculty of ironical presentation, in tolerant wisdom and in luminous conciseness. He naturalizes the eastern apologue in Spain, and by the laconic picturesqueness of his expression imparts a new quality into Spanish prose. Lope de Vega, Ruiz de Alarcon and Calderon drew on his themes for dramatic purposes, and there is an evident, though remote, relation between *Enxemplo.* xxxv. and *The Taming of the Shrew;* and a more direct connection exists between some of the *enxemplos* and some of Andersen's fairy tales.

Baist (Halle, 1880); *El Libro del Caballero y del Escudero,* ed. S. Grafenberg (*Romanische Forschungen,* vii., 1893); J. B. Trend, Introd. to *Count Lucanor* . . . trans. J. York, 1868 (1924).

JUÁREZ, BENITO (PABLO) (1806–1872), was born at Guelatao, near the city of Oaxaca, Mexico, March 21, 1806, of full-blooded Zapotec parents. He was educated for the church by a charitable merchant of Oaxaca, but in 1827 entered the Institute of Arts and Sciences to study law. In 1832 he received his degree of bachelor of law, and two years later was appointed advocate of the Supreme Court of the republic. He was governor of Oaxaca, 1847–52, and in this post showed himself so ardent a partisan of liberal ideas that, when Santa Anna seized the Government in 1853, he was imprisoned. Escaping to New Orleans, he returned to Mexico in 1855 to assist in a successful revolt against Santa Anna led by Álvarez and Comonfort, and held the portfolio of justice in Comonfort's Government. In this capacity he issued the first of his great reform measures restricting the privileges of the military and the clergy (1855, 1856, 1857), which, culminating in the famous anti-clerical Constitution of 1857, caused a

nation-wide rebellion and precipitated the War of the Reform. In Jan. 1858, Comonfort fled the country and Zuloaga, supported by the clericals and the army, declared himself *de facto* president and seized the capital. Juárez, as constitutional successor to Comonfort, declared himself the *de jure* head of the nation and established himself at Veracruz (May 1858). His Government was recognized by the United States in April 1859, and in July he felt himself strong enough to issue the Reform Laws of 1859, which completely nationalized and secularized the church. By the beginning of 1861 the clericals had been everywhere defeated, and on Jan. 11, 1861, Juárez entered Mexico City, and was constitutionally elected president. But his Government was without funds, foreign creditors were clamouring for satisfaction, and the country, after five years of civil war, was in a state of economic chaos; so that in July 1861 he issued a decree suspending for two years payment on the national debt. This embroiled him immediately in a new conflict. Napoleon III., who had for some time been contemplating intervention in Mexico, promptly seized upon Juárez's decree as a pretext, and induced England and Spain (Convention of London, Oct. 1861) to join him in the ostensible purpose of enforcing the payment of foreign creditors Armed forces appeared at Veracruz in Dec. 1861. Juárez showed himself conciliatory and in Feb. 1862 commissioners of the four Governments ratified the peace treaty of La Soledad. In March Gen. Lorencez landed with large French reinforcements; the English and Spanish commissioners withdrew their co-operation, and on April 12, 1862, Juárez declared war upon France. In June 1863 Gen. Bazaine entered Mexico City and on July 8 declared a monarchy. Maximilian arrived on May 28, 1864, and was crowned in the capital in July. By the spring of 1865 there were 30,000 French soldiers in the country, Juárez had been driven northward to the Paso del Norte, almost to the U S. border, his armies were shattered, his Government almost penniless. But he refused to relinquish his stand as constitutional president. The end of the year saw a great change. Maximilian was bankrupt; Napoleon saw the futility of his imperial project and the United States, now that the Civil War was over, insistently demanded the withdrawal of the French troops. In Feb. 1867, the last French troops sailed from Veracruz. Maximilian was captured at Querétaro on May 15 and executed on June 19, and on July 15 Juárez returned to Mexico City. He was re-elected president in August. But his genius was not equal to the appalling problem of reconstruction which confronted him. Insurrections and revolts harassed his entire term. In the election of 1870 Porfirio Díaz and Lerdo de Tejada appeared as rival candidates, and Díaz, when congress announced that Juárez had been again re-elected, immediately headed a revolt. The movement failed, but in the midst of it, on July 18, 1872, Juárez died of apoplexy in Mexico City. With his death ends one stage of Mexican history. He did not, as Díaz was to do, wholly dominate his epoch, but during the most momentous period of Mexico's history he was the guiding genius, and is by many called Mexico's national hero.

For a comprehensive bibliography of the life and career of Juárez, *see* H. I. Priestley, *The Mexican Nation—a History* (New York, 1923).

JUBA, the name of two kings of Numidia.

JUBA I. (1st century B.C.), son and successor of Hiempsal, king of Numidia. During the civil wars at Rome he sided with Pompey, partly from gratitude because he had reinstated his father on his throne (Appian, *B.C.*, i. 80), and partly from enmity to Caesar, who had insulted him at Rome by pulling his beard (Suet., *Caesar*, 71). Further, C. Scribonius Curio, Caesar's general in Africa, had proposed, 50 B.C., when tribune of the plebs, that Numidia should be sold to colonists, and the king reduced to a private station. In 49 Juba heavily defeated the Caesarean army, in which Curio was slain (Vell. Pat. ii. 54; Caesar, *B.C.* ii. 40). Juba's attention was distracted by a counter invasion of his territories by Bocchus the younger and Sittius; but he rejoined the Pompeians with a large force, and shared the defeat at Thapsus. Fleeing from the field with the Roman general M. Petreius, he wandered about as a fugitive. At length, in despair, Juba killed Petreius, and sought the aid of a slave in despatching himself (46). Juba was a thorough savage; brave, treacherous, insolent and cruel. (*See* NUMIDIA.)

JUBA II., son of the above. On the death of his father in 46 B.C. he was carried to Rome to grace Caesar's triumph. Augustus in 29, after Mark Antony's death, gave him the hand of Cleopatra Selene, daughter of Antony and Cleopatra, and placed him on his father's throne. In 25, however, he transferred him from Numidia to Mauretania, to which was added a part of Gaetulia. (*See* NUMIDIA.) In A.D. 6 the Gaetulians rose in a revolt, which was suppressed by Cornelius Lentulus Cossus. The date of Juba's death has been put between A.D. 19 and 24. Juba, according to Pliny, is mainly memorable for his writings. He has been called the African Varro.

He wrote many historical and geographical works, of which some seem to have been voluminous and of considerable value on account of the sources to which their author had access: (1) Ῥωμαϊκὴ ἱστορία: (2) Ἀσσυριακά: (3) Λιβυκά: (4) *De Arabia sive De expeditione arabica;* (5) *Physiologa;* (6) *De Euphorbia herba;* (7) Περὶ ὄπου: (8) Περὶ γραφικῆς (Περὶ ζωγράφων): (9) Θεατρικὴ ἱστορία: (10) Ὁμοιότητες: (11) Περὶ φθορᾶς λέξεως: (12) Ἐπίγραμμα.

Fragments and life in Müller, *Frag. Hist. Graec.*, vol. iii.; *see* also Sevin, *Mém. de l'Acad. des Inscriptions*, vol. iv.; Hullemann, *De vita et scriptis Jubae* (1846). For the denarii of Juba II. found in 1908 at El Ksar on the coast of Morocco *see* Dieudonné in *Revue Numism.* (1908), pp. 350 *seq.* They are interesting mainly as throwing light on the chronology of the reign.

JUBA or **JUB,** a river of east Africa, exceeding 1,000 m. in length, rising on the south-east border of the Abyssinian highlands and flowing south, leaving Abyssinia at Dolo and then flowing through Italian Somaliland It is formed by the junction of three streams, all having their source in the mountain range north-east of Lake Rudolf which is the water-parting between the Nile basin and the rivers flowing to the Indian ocean.

Of the three headstreams, the Web, the Ganale and the Daua, the Ganale is the central river. It has two chief branches, the Black and the Great Ganale. The last-named, the most remote source of the river, rises in 7° 30′ N., 38° E. at an altitude of about 7,500 ft. The banks are clothed with dense jungle and the hills beyond with thorn-bush. Lower down the river has formed a narrow valley, 1,500 to 2,000 ft. below the general level of the country, after which it enters a large slightly undulating grass plain which extends south of the valley of the Daua and occupies all the country eastward to the junction of the two rivers. The Web, which near its source passes through a cañon 500 ft. deep and then underground for some distance, joins the Ganale (left) above its junction with the Daua (right). The latter is similar to the Ganale and their courses are parallel.

Below the Daua the river, now known as the Juba, receives no tributary of importance. It first flows in a valley bounded, especially towards the west, by the escarpments of a high plateau, and containing the towns of Lugh (in 3° 50′ N., the centre of active trade), Bardera, with Serenli opposite to it 387 m. above the mouth at a crossing-place for caravans. Beyond 1° 45′ N. the country becomes more level and the course of the river very tortuous. Just south of the equator channels from the long, branching Lake Deshekwama, fed by the Lakdera river, enter from the west, and in 0° 15′ S. the Juba enters the sea across a dangerous bar, which has only one fathom of water at high tide. From its mouth to 20 m. above Bardera, where at 2° 35′ N. rapids occur, the Juba is navigable by shallow-draught steamers. Just above its mouth it is a fine stream 250 yd. wide, with a current of 2½ knots.

The hills in which the river rises are formed of Archean rocks (schists, gneisses, granites, etc.). In its middle course it crosses Triassic rocks and lower down passes over the Jurassic formations which disappear beneath the coastal alluvium near Sarori. Below the mountainous region of the headstreams the Juba and its tributaries flow through a country generally arid away from the banks of the streams. The soil is sandy, covered either with thorn-scrub or rank grass, which in the rainy season affords herbage for the herds of cattle, sheep and camels owned by the Boran Gallas and the Somali who inhabit the district. But by the banks of the lower river the character of the country changes. The soils of the Gosha district of the Lower Juba are clayey, but remarkably rich in lime and magnesia and with adequate amounts of potash and

phosphoric acid. Here are considerable tracts of forest, and the level of flood water is higher than much of the surrounding land. This low-lying fertile belt stretches for about 300 m., but is not more than a mile or two wide. In the river valley maize, rice, cotton and other crops are cultivated.

JUBALAND, East Africa, formerly a province of Kenya Colony. In 1925 the greater part of the province, some 36,000 sq.m. (including the port of Kismayu), was transferred from Great Britain to Italy. Trans-Juba (Oltre Giuba) the ceded territory, after being administered as a separate colony for exactly a year, was incorporated into Italian Somaliland (*q.v.*). Before the transfer the river Juba formed the frontier. The valley of the Juba is fertile, the rest of the area is semi-arid. The inhabitants (some 130,000) are Somalis whose chief wealth is in cattle and camels.

The British White Paper *Treaty Series No. 29* (1925) gives the text of the Anglo-Italian treaty and a map. *See* also R. Cani, *Il Giubaland* (Naples, 1921); *La Vallata del Giuba* (ed. G. de Agostini, Turin, 1928) and papers on Jubaland by L. N. King and E. H. Clifford in *Geog. Jnl.*, Nov. 1928.

JUBBULPORE or **JABALPUR,** a city district and division of British India in the Central Provinces. The city is 616 miles N.E. of Bombay by rail and 220 miles S.W. of Allahabad. The numerous gorges in the neighbouring rocks have been taken advantage of to surround the city with a series of small lakes which, shaded by fine trees and bordered by fantastic crags, add much beauty to the suburbs. The city itself is modern and is laid out in wide and regular streets. The cantonment and civil station have largely expanded and the total population is now over 108,000.

Jubbulpore is a large military station with a Government gun-carriage factory, a railway centre on the Bombay-Calcutta route via Allahabad, and it is also the educational and missionary centre of the Hindi-speaking districts of the Central Provinces. A narrow gauge line connects it with the Satpura districts and the south of the Province. It has a large cotton mill, a glass factory and pottery works and carries on an important trade, being the collecting and distributing centre for a considerable area of country. The population has nearly doubled since 1872 and includes 24,000 Mohammedans and 6,000 Christians.

The DISTRICT OF JUBBULPORE has an area of 3,912 sq.m. and a population of 745,685. The northern and eastern tracts drain into the Jumna and Ganges, but the southern and south-western portions lie in the Nerbudda valley and this area is a fertile plain with rich black soil and embanked fields producing a splendid wheat crop. There are deposits of iron ore which are smelted in small charcoal furnaces in the jungle. There is manganese ore of low grade and very valuable limestone, as well as clays and earths specially suitable for bricks, pottery and glassware. The Nerbudda, 11 m. from Jubbulpore, after a fall of 30 ft., forces its way through the famous "Marble Rocks" gorge. The district is a beautiful one, well wooded, with hills always in view, and there are many sacred spots on the Nerbudda river. The rich country is almost immune from famine, but the light soil areas producing rice and small millets have suffered very severely from recurring droughts. Of the population, 87% are Hindus, Mahommedans 5½%, Christians under 1%, Animists (chiefly Gonds and Kols) 7%. The principal cultivating castes are Kurmis and Lodhis, while the Brahmans (62,000) are more numerous than in any other district of the Province. Murwara (Katni) on the East Indian railway, 57 m. N. of Jubbulpore, has grown from a village of 2,000 to a busy town of 16,000 and is the centre of the lime and cement industry.

JUBÉ, the French architectural term (taken from the imperative of Lat. *iubere,* to order) for the chancel or choir screen, which in England is known as the rood-screen. (*See* ROOD.) Above the screen was a gallery or loft, from which the words *Iube Domine benedicere* were spoken by the deacon before the reading of the Gospel, and hence probably the name. One of the loveliest in France is that of the church of the Madeleine at Troyes, in rich flamboyant Gothic. There is a lavish jubé of the Renaissance period, *c.* 1600, in the church of St. Étienne du Mont, Paris. A magnificent example of the Marble jubés of the Low Countries is that from Bois-le-Duc, now in the Victoria and Albert museum, London.

JUBILEE or **JUBILE,** YEAR OF, in the Bible the name applied in the Holiness section of the Priestly Code of the Hexateuch (Lev. xxv.) to the observance of every fiftieth year (determined by the lapse of seven seven-year periods) as a year of perfect rest, when there was to be no sowing, nor even gathering of the natural products of the field and the vine. At the beginning of the jubilee-year the liberation of all Israelitish slaves and the restoration of ancestral possessions was to be proclaimed. Modern scholars are agreed that the name (Heb. *yōbēl*) signifies "ram" or "ram's horn"; "Year of Jubilee" would mean, therefore, the year that is inaugurated by the blowing of the ram's horn (Lev. xxv. 9).

According to Lev. xxv. 8–12 at the completion of seven sabbaths of years (*i.e.,* $7\times7=49$ years) the trumpet of the Jubilee is to be sounded "through the land" on the 10th day of the seventh month (Tisri 10), the great Day of Atonement. The fiftieth year thus announced is to be "hallowed," *i.e.,* liberty is to be proclaimed everywhere to everyone, and the people are to return "every man unto his possession and unto his family." The conditions of the Sabbatical year are repeated as regards the law of real property in relation to the Jubilee (*cf.* Lev. xxv. 13–34).

The tendency to impose checks upon the alienation of landed property was exceptionally strong in Israel. The fundamental principle is that the land is a sacred possession belonging to Yahweh, and as such it is not to be alienated from Yahweh's people, to whom it was originally assigned. For the law as to property in slaves, especially as this affected Hebrews who had sold themselves into slavery, *see* Lev. xxv. 35–55. It should be noted that these enactments are found only in the latest legal code of the Hexateuch. They can only be understood in the light of the previous enactments regarding the Sabbatical year (*cf.* Exod. xxi. 2 *seq.,* xxiii. 10 *seq.;* Deut. xv.).

The Book of the Covenant enjoined that the land should lie fallow and Hebrew slaves be liberated in the seventh year; Deuteronomy required also the remission of debts (*see* Benzinger). It is evident that these enactments proved impracticable (*cf.* Jer. xxxiv. 8 *seq.*), and so it became necessary in the later legislation of P., represented in the present form of Lev. xxv., to relegate them to the fiftieth year, the year of Jubilee. This, however, was a purely theoretical development, which never could have been actually carried out. Further, according to Rabbinical tradition the Jubilee years though reckoned were not observed.

The conjecture of Kuenen that originally Lev. xxv. 8 *seq.* had reference to the seventh year is a highly probable one. This may also be the case with Ezek. xlvi. 16–18 (*cf.* Jer. xxxiv. 14). A later Rabbinical device for evading the provisions of the law was the *prosbul* (ascribed to Hillel).

Further enactments regarding the Jubilee are found in Lev. xxvii. 17–25 and Num. xxxvi. 4. (G. H. B.)

JUBILEES, BOOK OF, an apocryphal work of the Old Testament. It is the most advanced pre-Christian representative of the Midrashic tendency, which had already been at work in the Old Testament Chronicles. As the chronicler had rewritten the history of Israel and Judah from the standpoint of the Priests' Code, so our author re-edited from the Pharisaic standpoint of his time the history of the world from the creation to the publication of the Law on Sinai. His work constitutes the oldest commentary in the world on Genesis and part of Exodus, an enlarged Targum on these books, in which difficulties in the biblical narration are solved, gaps supplied, dogmatically offensive elements removed and the genuine spirit of later Judaism infused into the primitive history of the world.

Titles of the Book.—"Jubilees" is an admirable title as the book divides into jubilee periods of forty-nine years each the history of the world from the creation to the legislation on Sinai. It is also frequently designated "The Little Genesis," a title which may have arisen from its dealing more fully with details and minutiae than the biblical work. For the other names by which it is referred to, see Charles's *The Book of Jubilees,* pp. xvii.–xx.

Object.—The object of our author is the defence and exposi-

tion of Judaism from the Pharisaic standpoint of the 2nd century B.C. against the disintegrating effects of Hellenism. In his elaborate defence of Judaism our author glorifies circumcision and the sabbath, the bulwarks of Judaism, as heavenly ordinances, the sphere of which was so far extended as to embrace Israel on earth. The Law, as a whole, was to our author the realization in time of what was in a sense timeless and eternal. Though revealed in time it was superior to time. Before it had been made known in sundry portions to the fathers, it had been kept in heaven by the angels, and to its observance there was no limit in time or in eternity. Our author next defends Judaism by his glorification of Israel. Whereas the various nations of the Gentiles were subject to angels, Israel was subject to God alone. Israel was God's son, and not only did the nation stand in this relation to God, but also its individual members. Israel received circumcision as a sign that they were the Lord's, and this privilege of circumcision they enjoyed in common with the two highest orders of angels. Hence Israel was to unite with God and these two orders in the observance of the sabbath. Finally the destinies of the world were bound up with Israel. The world was renewed in the creation of the true man Jacob, and its final renewal was to synchronize with the setting-up of God's sanctuary in Zion and the establishment of the Messianic kingdom. In this kingdom the Gentiles had neither part nor lot.

Date.—(1) The book was written during the pontificate of the Maccabean family, and not earlier than 135 B.C. For in xxxii. 1, Levi is called a "priest of the Most High God." Now the only high priests who bore this title were the Maccabean, who appear to have assumed it as reviving the order of Melchizedek when they displaced the Zadokite order of Aaron. Jewish tradition ascribes the assumption of this title to John Hyrcanus. It was retained by his successors down to Hyrcanus II. (2) It was written before 96 B.C. or some years earlier in the reign of John Hyrcanus; for since our author is of the strictest sect, a Pharisee, and at the same time an upholder of the Maccabean pontificate, Jubilees cannot have been written after 96 when the Pharisees and Alexander Jannaeus came to open strife. Nay more, it cannot have been written after the open breach between Hyrcanus and the Pharisees, when the former joined the Sadducean party. We may, however, observe that our book points to the period already past—of stress and persecution that preceded the recovery of national independence under the Maccabees, and presupposes as its historical background the most flourishing period of the Maccabean hegemony.

Author.—The author was a Pharisee of the straitest sect. He maintained the everlasting validity of the law, he held the strictest views on circumcision, the sabbath, and the duty of shunning all intercourse with the Gentiles; he believed in angels, and in a blessed immortality. He was an upholder of the Maccabean pontificate. He glorifies Levi's successors as high-priests and civil rulers, and applies to them the title assumed by the Maccabean princes, though he does not, like the author of the Testaments of the Twelve Patriarchs, expect the Messiah to come forth from among them. He may have been a priest.

The Views of the Author on the Messianic Kingdom and the Future Life.—According to our author the Messianic kingdom was to be brought about gradually by the progressive spiritual development of man and a corresponding transformation of nature. Its members were to reach the limit of 1,000 years in happiness and peace. During its continuance the powers of evil were to be restrained, and the last judgment was apparently to take place at its close. As regards the doctrine of a future life, our author adopts a position novel for a Palestinian writer. He abandons the hope of a resurrection of the body. The souls of the righteous are to enjoy a blessed immortality after death. This is the earliest attested instance of this expectation in the last two centuries B.C.

LITERATURE.—*See* the commentaries by R. H. Charles, *The Book of Jubilees or the Little Genesis* (1902), which deals exhaustively with all the questions treated in this article; his edition in *Apocrypha and Pseudepigrapha* (vol. ii. 1913); and his English translation in the S.P.C.K. *Translations of Early Documents* (1917).

(R. H. CH.; W. O. E. O.)

JUBILEE YEAR, an institution in the Roman Catholic Church, observed every twenty-fifth year, from Christmas to Christmas. During its continuance plenary indulgence is obtainable by all the faithful, on condition of their penitently confessing their sins and visiting certain churches a stated number of times, or doing an equivalent amount of meritorious work. The institution dates from the time of Boniface VIII., whose bull *Antiquorum habet fidem* is dated the 22nd of February 1300. According to contemporary statements, a rumour spread through Rome at the close of 1299 that every one visiting St. Peter's on the 1st of January 1300 would receive full absolution. The result was an enormous influx of pilgrims to Rome, which stirred the pope's attention. Nothing was found in the archives, but an old peasant 107 years of age avowed that his father had been similarly benefited a century previously. The bull was then issued, and the pilgrims became even more numerous, to the profit of both clergy and citizens. At the request of the Roman people, which was supported by St. Bridget of Sweden and by Petrarch, Clement VI. in 1343 appointed, by the bull *Unigenitus Dei filius,* that the jubilee should recur every fifty years instead of every hundred years as had been originally contemplated in the constitution of Boniface; Urban VI., who was badly in need of money, by the bull *Salvator noster* in 1389 reduced the interval still further to thirty-three years (the supposed duration of the earthly life of Christ); and Paul II. by the bull *Ineffabilis* (April 19, 1470) finally fixed it at twenty-five years.

See H. Thurston, art. "Jubilee" in the *Catholic Encyclopaedia.*

JÚCAR, a river of eastern Spain. It rises in the north of the province of Cuenca, at the foot of the Cerro de San Felipe (5,906 ft.), and flows south past Cuenca to the borders of Albacete; here it bends towards the east, and maintains this direction for the greater part of its remaining course. On the right it is connected with the city of Albacete by the Maria Cristina canal. It enters the Mediterranean Sea at Cullera, after a course of 314 miles.

JUD, LEO (1482–1542), known to his contemporaries as Meister Leu, Swiss reformer, was born in Alsace and educated at Basel, where he came under the influence of Zwingli. After serving for four years (1518–22) as pastor of Einsiedeln Jud became Zwingli's colleague at Zürich. He had a share in the translation of the Zürich Bible and also made a Latin version of the Old Testament. He died at Zürich on June 19, 1542.

See *Life* by C. Pestalozzi, *Leo Jud* (1860).

JUDAEA, the southern part of Palestine, occupied by the Jewish community in post-exilic days under Persian, Greek and Roman overlordship. In Luke and Acts the term is sometimes used loosely to denote the whole of western Palestine. The limits of Judaea were never precisely defined and varied from time to time. After the death of Herod, Archelaus became ethnarch of Samaria, Idumaea and Judaea, and when he was deposed Judaea was merged in Syria, being governed by a procurator whose headquarters were in Caesarea.

For a description of the natural features of the country *see* PALESTINE; for its history *see* JEWS and JUDAH. *See* also T. Mommsen, *The Provinces of the Roman Empire,* ch. xi.

JUDAH, a district of ancient Palestine to the south of the kingdom of Israel, between the Dead sea and the Philistine plain. It falls physically into three parts: the hill-country from Hebron northwards through Jerusalem; the lowland (Heb. *Shĕphelah*) on the west; and the steppes or "dry land" (Heb. *Negeb*) on the south. The district is one of striking contrasts, with a lofty and stony table-land in the centre (which reaches a height of 3,300 ft. just north of Hebron), with a strategically important valley dividing the central mountains from the lowland, and with the most desolate of tracts to the east (by the Dead sea) and south. Some parts, especially around Hebron, are extremely fertile, but the land as a whole has the characteristics of the southern wilderness and was more fitted for pastoral occupations; *see* further G. A. Smith, *Hist. Geog. Holy Land,* chs. x.–xv.

Life in ancient Judah is frequently depicted in the Bible, but much of the Judaean history is obscure. In the days of the old Hebrew monarchy there were periods of conflict and rivalry between Judah and Israel—and times when the latter incorporated, or at least claimed supremacy over, the former. Later, from the 5th

century B.C., there was a long and serious breach between the Jews (the name is derived from Judah) and the Samaritans (*q.v.*). Judah's stormy history, continued under Greek and Roman domination, reached its climax in the birth of Christianity, and ended with the fall of Jerusalem in A.D. 70. *See* JEWS, PALESTINE.

JUDAISM. The English word Judaism is derived immediately from a similar Latin word which signified the Jewish quarter of a town[1] or the Jewish community,[2] and ultimately from the name of Jacob's fourth son, *Yehūdhāh* or Judah, whose descendants, later called *Yehūdhīm* or Jews, together with those of his half-brother Benjamin, formed the Jewish, as opposed to the Israelite, kingdom, the capital of which was Jerusalem whence the religion known as Judaism spread over the world It is in the last sense that the word is generally used; the others are archaic. Judaism, then, denotes a religion maintained by the Jews and offered to the world It may be defined as the belief in absolute monotheism and the practical effect of that belief on life. By emphasizing the difference between the human and divine natures (without, however, thereby succumbing to impersonal transcendentalism), Judaism differs from other creeds which also stress the Unity of God, *e g.*, from Unitarianism and Islam, for these faiths assign to Jesus and Mohammed respectively a higher grade than that which Judaism concedes to Moses On the other hand, Judaism differs from theoretical systems of ethics by reason of its historical, ceremonial and racial elements. Judaism is not a mere intellectual conception or a dogmatic confession; it is a course of life lived under discipline. One of its cardinal principles is the belief in the Divine choice of the Jews to preach God's message. This principle is not particularist: it is nothing but the declaration of the function of the Jew and the duty assigned to Judaism; it is another form of the doctrine of the Remnant.

ORIGIN

Abraham is considered to have been the first adherent of Judaism. He is said to have reached, by thought and by revelation, the conclusion that one Supreme God ruled the world and that idols were of no account Critically considered, this is by no means impossible. The recognition by Judaism of Abraham as its founder, even the Midrashic allegories of his contests with Nimrod (*e.g.*, the Midrash of Abraham's childhood, contained in vol. i of A. Jellinck's *Bet ha-Midrasch*, Leipzig, 1853) are not now deemed as fantastic as they would have been half a century ago, when the very existence of Abraham was generally denied. The spirit if not the letter of Jewish views about Abraham and his age is supported by archaeology At the International Congress of Orientalists in Oxford (1928) the lectures of Prof. Langdon and Mr. Woolley showed that at Abraham's city Ur, in Abraham's day and earlier, monotheistic speculations conflicted with crass idolatry and wholesale human sacrifices with purer worship. This is but another way of saying that the idea of One God was gradually evolved in Mesopotamia amid prevalent polytheism and that by the time assigned to Abraham monotheism had secured a group of believers. Nor is the personality of Abraham now categorically repudiated: it is recognised that stories referring to other times and people have been added to the account preserved in Genesis, but this does not eliminate Abraham. "Even in the delineation of the character of Abraham there is an absence of idealism, which makes against the theory that the traditions of Israel were dealing with a purely imaginary person."[3]

From Abraham's days the ideals of monotheism were transmitted by his descendants. The varieties of belief and cult which prevailed in Assyria are mirrored in Abraham's family. According to the Bible story, he left his kindred, who remained pagans, moved about preaching his faith and finally died in exile. To become a missionary involved sacrifice, and the history of Judaism shows a continuous process of testing and sifting. Birth alone is ineffective, for readiness to serve and to suffer is not necessarily hereditary. This is illustrated by subsequent events. Abraham reared and trained Lot, who was his nephew. Lot, preferring the rich pastureland of the plains to the hardships of a nomad, gave up the calling of the wandering preacher and quitted his uncle. Isaac and Ishmael, sons of one father but of different mothers, had to be separated. Jacob and Esau, twin brothers in birth but fundamentally differing in outlook, were driven asunder by the inevitable force of this difference Thus in three successive generations the lesson that birth alone does not avail was driven home with increasing force, starting with uncle and nephew and culminating with uterine brothers.

The winnowing process is regularly repeated throughout the Bible. It is exemplified in the stories of Gideon and Elijah and it is constantly taught until, in prophetical times, the "Survival of the Remnant"[4] became a recognized axiom of Judaism. The "Remnant" or the "Suffering Servant" (Isaiah, liii.) was imperishable, but this ability to withstand time and attack was no free gift arbitrarily bestowed by God on a favoured nation. It was open to all who cared to pay the price. At times this price was even martyrdom; it was always a severe discipline. But the followers of Judaism did not count the cost. They gave their lives and sometimes even more. For when, in Nehemiah's days, wholesale intermarriage threatened to engulf Judaism in barbarism, the people, conscious of their backsliding, were content to sacrifice their homes and to leave their wives in order to save their faith. History can furnish few parallels to this corporate act of renunciation. It was an exceptional expedient. Those who break the laws of God have no more immunity from the consequences than those who violate the laws of nature. The Eurasian problem in India is an example of unhappiness produced in this way. Through the heroism of Nehemiah's contemporaries Judaism was secured from analogous results.

PROSELYTES

The Doctrine of the Remnant corresponds to the scientific theory of the survival of the fittest. Judaism is the religion of a minority but of a minority ever conscious of its duty to the majority. It is the religion of a minority at present, but it aims at being the only religion of the majority at the end The Jew has endeavoured to influence the world in two ways When confronted with paganism, omnipotent and universal, he has engaged in active proselytization The Pharisees compassed land and sea to make one proselyte (Matthew, xxiii , 15) and classical authors testify (*see* PROSELYTE) to the vigour of the Jewish missionary enterprise When Paganism persecuted, Judaism countered with martyrdom. Revolts against Roman rule were never supported by Rabbis until Hadrian determined to suppress Judaism: the fight for liberty under Bar Kochba (*q v.*) was a religious rather than a political war. Judaism, according to the famous saying, admitted the righteous of all peoples to the world to come. This saying is exceptional in wording but normal in spirit, in spite of others, of a contrary tendency, which, viewing gentile sinfulness at its worst, doubted the possibility of regeneration Since Judaism made salvation dependent on conduct and regarded those who abstained from sin but did not accept the whole of Judaism as "Proselytes of the Gate," the attitude towards the environment changed when Paganism gave place to Christianity and to Islam.

Henceforth Judaism was propagated by example: martyrdom was endured when necessary. Proselytes, whose genuineness was proven, were received, but missionary organizations have not been maintained. The reason for this is not indifference to the environment but a recognition that the daughter faiths, though incapable of so true a vision of God, are yet teaching truth[5] The improvement must come in God's own time. The Liturgy often expresses this hope. Thus the central portion of the *'Amidāh* for New Year

[1]Thus, in Cambridge, the Church of All Saints in the Jewry was called All Saints in the Judaism (*in iudaismo*): at Ramsay, Emma the upholstress lived *in iudaismo*. *See* H. P. Stokes, *Studies in Angl.-Jew. Hist.* (1913), pp. 118, 116, etc.

and Atonement contains three famous paragraphs[6] of great antiquity in which Israel, the proselytes and the ultimate conversion of mankind are prayed for. From an early date Judaism differentiated mankind into those who did and those who did not obey the seven Noachian laws, that is to say seven fundamental principles which can be expected of any stage in civilization: the sons of Noah are said to have abstained from idolatry, adultery, murder, robbery, eating limbs severed from living animals, emasculation of animals and breeding of monstrosities.[7] Towards those who had reached a higher stage than mere neutrality or negation of barbarism, *e g*, to Christians and Muslims, Judaism adopted a pragmatic relation. Since salvation, in the Christian sense, depended on works and morals, Judaism felt no impulse to continue missionary propaganda in order to promote a system of theology which it deemed more accurate, but it accepted those who preferred this system to their own.

JUDAISM AND CHRISTIANITY

As Jewish and Christian conceptions of morals are identical, truth or chastity being neither Jewish nor Christian monopolies, and as the reader may be expected to be acquainted with the evolution of Judaism in the Bible, attention may now be directed to the development of post-biblical Judaism and to the points wherein it differs from the Christian religion.

Judaism, rejecting alike the Trinity and the Incarnation, believes in a single universal God, Who is immanent as well as transcendent: man, made in the Divine image, has direct access to his Heavenly Father, without the intervention or mediation of a Son. Judaism further denies the Christian doctrine of the Atonement and teaches that there is no original sin needing a superhuman counterweight, but only the freedom to sin, an inevitable concomitant of free will. Man can therefore, unaided, achieve his own redemption by penitence. Prayer having replaced the sacrifices of the Temple, no extra substitute for them is needed. Hence nothing analogous to the Mass as a propitiatory offering exists in Judaism. This world is not regarded as inherently bad and Judaism consequently repudiates those Gospel sayings and teachings which, inspired by the conviction that the end of the world was imminent (the so-called *interimsethik*), maintained that the pious should abandon the ordinary conditions of settled social life and concentrate on the approaching change in the order of things. Therefore wealth was essentially bad and marriage unnecessary (Luke, vi., 24; xviii., 24–5; James, i. 10; Matthew, xix., 23). Thus while a monk must be a celibate, a Rabbi ought to have a wife, since marriage is the first command in the Bible (Gen. i, 28). Even the *Yēcer ha-ra'* or evil inclination is from God[8]: it is called *Ṭōbh mĕ'ōdh,* exceedingly good, in Genesis Rabba[9] and God instituted it "for His Glory." This phrase is used in the second benediction of the Jewish marriage service[10] On the other hand in the Book of Common Prayer, the Form of Solemnization of Matrimony not only declares matrimony to be an "honourable estate instituted of God" but continues to add that it was "ordained for a remedy against sin and to avoid fornication." The latter sentiment is entirely unjewish.

It will be noted that among the proposed revisions of the Church of England prayer book the deletion of this view of marriage was advocated. In this, as in certain other matters, Christianity is approximating to the Jewish view from which it diverged under the influence of *Interimsethik* and through the agency of St. Paul. Judaism differs also from Christianity in rejecting asceticism. Family ties are not an impediment to the service of God. Elijah sent Elisha back to kiss his father and mother (1 Ki., xix, 20) before following his call, whereas Jesus, in similar circumstances, demanded the renunciation of kith and kin: "If any man cometh unto me and hateth not his own father and mother and wife and children . . . he cannot be my disciple."[11] Again Jesus declares that he comes to set a man at variance with his father, whereas Judaism says, "Ye shall fear every man his mother and his father and ye shall keep my Sabbaths" or "Ye shall keep my statutes, which, if a man do, he shall live by them."[12] The Nazarite had to bring a sin offering because he had abstained from boons with which God had endowed him, and the great authority Samuel stated "he that fasts for self-affliction is called a sinner."[13]

Judaism does not recognize Jesus as divine, as a Son of God or as born of a Virgin. It denies the possibility of his vicarious atonement for the sins of humanity and maintains conversely the doctrine of personal responsibility to God direct. It denies that Jesus was the Messiah and places the Messianic age in the future, some authorities holding that this consummation will be non-catastrophic, but the outcome of the gradual development of the human race, Judaism believing essentially in progressive evolution, while others hold that a personal Messiah, sent by God, will bring the Golden Age to pass. Judaism, as the guide to perfection, will be centralized in Zion, whence the Word of the Lord will go forth. As regards the immortality of the soul, Judaism and Christianity have the same beliefs, both having tacitly dropped the belief in the resurrection of the body. Judaism has no sacraments, only ceremonies and symbols, and no creed, in the sense of an obligatory confession to which adherents are required to subscribe. Not using the term salvation in the Christian sense, it does not require belief in a Jewish doctrine as a condition for enjoying the life to come. It is doubtful whether an atheist who kept the Torah or Jewish ideals of righteousness could be called a Jew,[14] but he would certainly not be damned. Faced with the dilemma of condoning sin (by excluding the possibility of any sin being unforgivable) and the alternative of eternal punishment, the Rabbis usually admitted the latter in theory but took care to examine each notorious sinner, *e.g.*, Jeroboam and Elisha ben Abuya, and then managed to find extenuating circumstances or overlooked virtues in each case

THE MOSAIC LAW

But in addition to these philosophical or theoretical differences between Judaism and Christianity, there was another group, of equal, if not of greater importance This group comprises the observances of the Mosaic law. This law was two-fold, the Written law (*Torāh shĕ-bĕ-Khĕthābh*) and the Oral law (*Torāh shĕ-bĕ-'al Pèh*). The law revealed on Sinai gives general commands, *e g.,* to make fringes on the garments as reminders of God, and prohibitions, *e.g.,* to abstain from work on Sabbath. But these general commands are not defined. According to Exodus xxiv., 12–18, Moses remained on the Mount for 40 days, receiving instructions which amplified the Written law, and these instructions are called the Oral law, each command being styled a *halakhāh lĕ-Moshèh miṣ-Ṣināi,* a law given to Moses on Sinai. (*See* Halakhah: Talmud.) It used to be the fashion to call the Oral law a mere innovation of the later Rabbis: only in a limited sense is this judgment accurate. In point of fact a great mass of the Oral law is merely ancient Jewish tradition, some part indeed being Semitic and taken over by the Jews from the common law and custom of the Semites. Before the days of Jesus there were two parties in Judaism, the Sadducees and the Pharisees (*q.v.*), who differed very much on the law. The former were mostly priests and conservative aristocrats corresponding roughly to the English Church and nobility in the 18th century: the latter, laymen, scholars and revivalists, many of them artisans, may be compared with the Wesleyans. The former took their stand on the letter, the latter on the spirit. Wholesale verdicts must be avoided in Judaism no

less than in Christianity. Not all the churchmen and not all the Sadducees were worldly wise; not all Wesleyans and not all the Pharisees were saints. Unfortunately the information which has come down is one-sided. After the destruction of the Temple the Sadducees vanished: Jewish sources give the Pharisaic side in nearly every instance.

Moreover, Christian sources, *i.e.*, New Testament evidence, being later than the Sadducees and having no interest in Jewish differences, not only are frequently in error about the Sadducees but also make mistakes about their opponents. An example in point will be found with reference to CORBAN For centuries the average Christian estimate of the ethical teaching of the Pharisees has been prejudiced: Pharisee and hypocrite have been treated as synonyms among lettered and unlettered alike. The cause of this misconception is not far to seek. Hitherto the Pharisees have not been studied for their own sake: they have been used as a foil to the Gospels. Their faults have been stressed and their virtues ignored. The present generation, which not only contains learned upholders of the older view, *e g*, Schürer, Bousset and Charles, has witnessed the rise of a newer and more correct school of thought, including Jewish and Christian scholars, *e.g.*, Moore, Lake, Foakes-Jackson, Strack, Billerbeck, Travers Herford, Box, Oesterley, Burkitt and many others among Christian theologians and Montefiore and Abrahams among their Jewish colleagues. The most recent recruit is Prof D. W. Riddle, of Chicago, whose *Jesus and the Pharisees* (Chicago and Cambridge, 1928) deserves the careful attention of every student.

PHARISAIC ORDINANCES

The Pharisees strove to give the Oral law the authority enjoyed by the Written law. As the Sadducees demanded biblical sanction for the Oral law, various hermeneutical devices were invented, and it is these that sometimes appear far-fetched But their purpose was not to introduce some new enactment on slender grounds. It was to support some traditional practice by the rules of logic as then understood There were, however, cases where the Pharisees were almost innovators. An instance is the substitution of compensation for the *Lex Talionis*. In primitive times, when there was no State judicature and no centralized executive of justice, it was the duty of every man to put down wrongdoing and punish the criminal. Abstention was apathy and contrary to public spirit. When, however, institutions developed, it became wrong for the private citizen to take the law into his own hands. Before, it was necessary to check punishment, and the law laid down that no more than measure for measure was to be exacted. Now that a trained and impartial tribunal had charge of the administration of justice, different conditions prevailed. The older alternative of compensation for injury, well known among primitive Semites, was now made general by the efforts of the Pharisees, and in this type of legislation they may be termed innovators.

JESUS AND THE LAW

The Oral and Written law took cognizance of every phase of life. The distinction between sacred and secular spheres is a development in society of relatively modern growth. Judaism legislated for hygiene, inheritance, property, agriculture, dress, diet and business, and for many other matters. It was not only a creed but a course of life. It was on the question of the law that the first clash with Christianity came about. Jesus came "to fulfil the law." It is true that he sometimes seemed to annul it but he was merely an advanced Pharisee, who went further than the rest in deciding that obsolete practices needed revising. "The Sabbath is made for Man" was a Pharisaic adage as well as his. Like the Pharisees he insisted that conformity to the law must not be taken as a substitute for moral conduct, but he went further than the Pharisees.[15] He was prepared to jettison ceremonial. His followers went to still greater lengths: they were ready to give up the entire law. Missionary enterprise was hampered by the law. Rabbis had won countless converts in the Diaspora, but the Apostles found that they could not win adherents if, in addition to the observance of the law, they required the acceptance of Jesus as Messiah. The law had to go and Christianity parted from Judaism.

The Jewish belief that the parting of the ways came not at Stephen's martyrdom but after Bar Kochba's war against Hadrian is now gaining ground. Previously there had been no event sufficiently striking to sever the ties. Christians frequented the synagogues: they were still a Jewish sect. But Bar Kochba was hailed by Aqiba as the Messiah. This the Christians could not condone and they stood aside. Jerusalem fell amid torrents of blood: the Temple-site was desecrated and Jews were debarred from visiting it, while Christians could come and go as they wished To the Jews they seemed traitors who had profited by their treachery. If we would envisage the situation we need only imagine that a victorious enemy had sacked Westminster Abbey and forbidden access to all Englishmen save conscientious objectors who had refused to bear arms. Here we have the cause of the cleft. The Jews regarded the Christians as renegades: the Christians would not fight for Aqiba's Messiah. The die had fallen and there was no recalling the past.

But the law was not originally the obstacle. A simple example will show this. The *Shema* ("Hear, O Israel, the Lord our God is One": Deut , vi., 4–9) has from time immemorial been the *credo* and daily prayer of Judaism. Jesus, as a faithful Jew, repeated this as well as other Jewish prayers[16] Why was the *Shema* dropped from the Christian liturgy by his followers? Intrinsically the declaration is as Christian as it is Jewish. The reason is to be found in the antinomian movement. The recital of the *Shema* has the following technical names. To say the first part is "to take upon oneself the yoke of the Kingdom of Heaven"[17] and to say the latter is "to take upon oneself the yoke of the Commandments (the law)."[18] For this reason the *Shema,* which Jesus recited, was abandoned by his followers. To them, but not to him, the yoke of the law was anathema.[19]

THE SABBATH

It is not possible here to particularise the laws of Judaism: it must suffice to generalize and to say that they moulded the life of the Jew in every detail. Christianity leaves more to the individual: Judaism deems a system of discipline essential. Yet neither faith adheres exclusively to one point of view, Christianity has certain prescriptions and Judaism assigns certain things to the conscience. A typical instance is the list, incorporated in the opening paragraphs of Morning Prayer,[20] of duties, the maximum performance of which is left to man's generous impulse.

This list is old, being derived from the beginning of Mishnah *Pe'ah*. For the development of the law *see* TALMUD. Life under the law is often regarded as dreary by those who view it from without. A more intimate knowledge of Judaism disposes of this mistaken notion. One example will serve as an illustration. There is no subject more governed by law in Judaism than the Sabbath rest. The popular belief is that this day is one of gloom and restriction, hampering natural gaiety and fettering the soul in the shackles of formalism. If this belief were correct, we should expect to find Jewish secular literature saturated with the revolt against the Sabbath. But in secular literature, the Sabbath is universally regarded as Israel's greatest boon. This affection for the day may be seen in any of the *Zemirōth* or carols for Sabbath, of which innumerable specimens exist. One such group containing *inter alia* a song by a Jewish troubadour wherein the Sabbath princess is the heroine, has been rendered into English verse (H. Loewe, *Mediaeval Hebrew Minstrelsy,* Lond. (1926), *see* p. 57). The songs are not ecclesiastical, they are *carmina pauperum*, and reflect the mind of the people. To all, rich and poor alike, Sabbath was the great paraclete. Heine, who became a Christian, hymned the Sabbath: in the present year (1928) the

town council of Tel Abib (Jaffa), a secular body, prosecuted a shopkeeper for violating the Sabbath publicly and has carried the case to the appeal court. As with the Sabbath, so with other ceremonial: the Jew found the law a delight. Just because there is no penal sanction to it, does it command allegiance. The more pecuniary sacrifices it entails the greater is it enjoyed.

Sects have not been unknown in Judaism, as the articles on Samaritans, Essenes, Gnostics and Karaites will show. The apocrypha, especially the great *corpus* of R. H. Charles,[21] contains much sectarian material. The *Minim* or sectaries[22] were varied including Jewish-Christians and Gnostics But sects have never been of great consequence. The number of Karaites is insignificant. In later times the mystic movement almost threatened to become a sect, but Kabbalists, *Ḥasidim* and *Mithnaggedim* (the opponents of the *Ḥasidim*) have remained within the fold. Judaism has gained more than it has lost by congregationalism. Centralization of authority terminated with the Gaonate. (*See* GAON.) The last legal code, the *Shulḥan 'Arūkh* of Joseph Caro (published in 1565), being the first to appear after the invention of printing, has never been followed by another and has standardised Judaism. Nevertheless development has not been arrested. The advent of political emancipation and the ensuing Mendelssohnian and reform movements can be paralleled on the more strictly conservative side.

Whether the Zionist movement (*see* ZIONISM) will, as the Zionists believe, affect Judaism as well as individual Jews, is another matter of debate. It is not impossible that a nucleus of Jews may produce fresh religious results, but Judaism as a whole is quite independent of any material or nationalist enterprises and quite competent to develop without them, *urbi et orbi*. The return to Zion, which is the hope of Judaism, is essentially (though not exclusively) spiritual. Judaism looks forward to the day when its teaching will be accepted universally. In this hope it embraces varieties of conception, ranging from Zionism to modern Liberal Judaism, which lays more stress on universalism than on the law. All these aspects belong to Judaism, one and indivisible. Parallel in purpose though differing in plane, they move forward to the same goal, the bringing of the Kingdom of God within the hearts of every one of his children. (*See* also JEWS, JEWISH PHILOSOPHY.)

JUDAS ISCARIOT or **SCARIOT.** Ἰούδας Ἰσκαριώτης, Ἰσκαριώθ or Σκαριώθ. The twelfth apostle and the traitor (Matt. x. 4). The term Iscariot or Scariot is used also of his father, Simon (John vi. 71; I xiii. 26). The usual explanation of "Iscariot" is a "a man of Kerioth" (*Ish Kerioth*). If this was the Kerioth in Judah (Josh. xv. 25), it implies only that he alone of the twelve was not a Galilean. If the Kerioth in Moab (Jer. xlviii. 24), it suggests also that he was of heathen environment, or even origin, as was the last of the Seven Deacons (Acts vi. 5), who presumably became the founder of the Nicolaitans (Rev. ii. 6). There is one parallel case to this transliteration of *Ish* in II Sam. x. 6, 8, where *Ish Tob* ("a man, or 'men' of Tob") is represented in the Septuagint by Ἰστώβ or Ἐιστώβ and in Josephus (*Antt.* vii. 6, 1 § 121) by Ἴστοβος. Jerome, however, prefers the meaning "of Isachar." "For Isachar is interpreted 'gain,' to signify the reward of the traitor" (on Matt. x. 4, Vallarsi, vii. 57).

There is, however, no little evidence for the reading "Scariot." So the Palestinian Syriac always, the Old Syriac generally, and the Peshitta Syriac and Aphrahat as often as "Iscariot." In Syriac tradition therefore no stress was laid on the first syllable, and the meaning of "man" was not given to it. In view of the facts that it is very rare for the first syllable of words beginning with a vowel and an "s" which is followed by another consonant to be omitted (*Israel* is shortened to *Srahel* once in *Crom.* and to *Srhl* once in T.Z. of the Vulgate MSS. of the N.T.), whereas there is an universal tendency to prefix a vowel to words beginning with "s" especially with "sk" (*e.g.*, Shekaniah becomes Ἰσχανία, I Chr. xxiv. 11. *See* also further Albrecht, *Neuhebr. Gram. auf. Grund der Mizna*, 1913 § 10), it seems probable that the Syriac writers thought primarily not of "Iscariot" but of "Scariot." This indeed is read by D in most places in the Synoptic Gospels, and once in the Fourth (John vi. 71), and is a very common reading in other Greek MSS. and the Latin MSS.

What then does "Scariot" mean? The Tosephta (2nd cent.) of *Nedarim* iv. 3 has *Iscortya* (var. lect. *Scortya*), and the Jerusalem Talmud of *Nedarim* vii. 3 p. 40c has *Scortya* without explanation. But in the parallel passage in the Babylonian Talmud (*Nedarim* 55 b) both forms occur, and the explanation given by Rabba bar BarChanah (*c.* A.D. 300) is "a coat of leather." It is, in fact, the Latin *scorteus*, the feminine of which, *scortea*, is used especially of a leathern garment. Hence John Lightfoot remarks "Now in such aprons they had purses sewn, in which they were wont to carry their money" (*Exercit.* on Matt. x. 4, Pitman xi. 172). Judas, however, held not a bag but a box (γλωσσόκομον) for the money (John xii. 6; xiii. 29), but a portable box would certainly have been covered with leather to preserve it from the Eastern sun. Thus "Scariot" ("Iscariot") may refer to Judas as the one who kept the money-box. If, however, Westcott and Hort's text of John vi. 71; xiii. 26 is really right, in applying the term to the father of Judas it may be that the family were workers in leather.

Judas' object in betraying his Master is regarded in the Gospels as due to selfishness based on avarice. De Quincey thinks that it was rather to compel our Lord to display His Messianic power in saving Himself and delivering the nation (*Judas Iscariot*, 1857, Masson, viii. 177–206).

There are two accounts of what was done with the money that Judas received. Acts i. 18 says that he bought a field; Matt. xxviii. 3–8 that he threw down the money into the temple and the High Priests bought a field for a cemetery. This may be due to different traditions. But if his money was used ultimately to buy Akeldama it might well be said that he himself bought it.

It is difficult, still more difficult, to reconcile the statement of Matt. xxvii. 5 that Judas hanged himself, with that of Acts i. 18, that he became so swollen (πρηνής) that he burst asunder.

Many worthless tales were written in the Middle Ages about the history of Judas before the time he associated himself with our Lord. The popular hatred of Judas has sometimes been strangely expressed. In Corfu the people on Easter Eve throw down quantities of crockery into the streets, thus executing an imaginary stoning of the traitor.

(*See* Lord Kirkwall, *Ionian Islands*, 1864. ii. 47 *sq.*) *Cf* the detestation of Haman expressed by Jews at Purim. (A. L. W.)

JUDAS-TREE, the *Cercis Siliquastrum* of botanists, belonging to the family Leguminosae. It is a native of southern Europe and Asia Minor, and forms a handsome low tree with a flat spreading head. In spring it is covered with a profusion of purplish-pink flowers, which appear before the leaves. The flowers have an agreeable acid taste, and are eaten mixed with salad or made into fritters. The tree was frequently figured by the older herbalists. One woodcut by Castor Durante has the figure of Judas Iscariot suspended from one of the branches, illustrating the popular tradition regarding this tree. Another species, *C. canadensis*, the American Judas-tree, called also redbud, is found in North America from southern Ontario to eastern Nebraska and southward to Florida, Texas and Mexico, and differs from the European species in its smaller size and pointed leaves. The still smaller Texas redbud (*C. reniformis*), with kidney-shaped leaves, occurs in eastern Texas and adjacent Mexico; and the shrubby California redbud (*C. occidentalis*) is found chiefly in foothills and mountains in the interior parts of the State. The Chinese Judas-tree (*C. chinensis*), native to eastern Asia, with large, whitish-margined leaves, is planted as an ornamental shrub.

JUDD, CHARLES HUBBARD (1873–), American psychologist, was born at Bareilly, India, on Feb. 20, 1873. He came to the United States in 1879, and graduated from Wesleyan university, continuing his studies at the University of Leipzig (Ph.D., 1896). He taught philosophy and psychology at Wesleyan university, New York university and the University of Cincinnati, 1896–1902. From 1902 to 1909 he was a member of the faculty of Yale university, becoming in 1907 professor of psychology and director of the psychological laboratory. In 1909 he was appointed professor and head of the department of education and director of the school of education at the University of Chicago, where he served also for a period as chairman of the department of psychology. He took part in numerous educational surveys and edited various monographs and periodicals, including the *Elementary School Journal* and the *School Review*. Among his published works are: *Psychology, General Introduction* (1907); *Psychology of High School Subjects* (1915); *Introduction to the Scientific Study of Education* (1918); *Evolution of a Democratic School System* (1918); and *Psychology of Social Institutions* (1926).

JUDE, EPISTLE OF, a book of the New Testament. As with the epistle of James (*q.v.*) it is uncertain whether the epistle is by an actual brother of Jesus or whether it is pseudonymous. From Hegesippus (*ap.* Philip Sidetes) we learn that the only survivors of the family, late in the reign of Domitian (81-96), were two grandsons of this same Jude, named James and Zoker (Zacharias). An authentic letter of Jude would therefore belong to an early date. To this both external and internal evidence are decidedly opposed The language is not that of an unschooled Galilean, nor is it translated from Aramaic. As F. H. Chase has pointed out: (1) the terms κλητοί, πίστις, σωτηρία, have attained their later, technical sense; (2) "the writer is steeped in the language of the LXX.," employing its phraseology independently of other N.T. writers, and quoting not only from the canonical books but from the broader Alexandrian canon; (3) "he has at his command a large stock of stately, sonorous, sometimes poetical words," which prove him to be a "man of some culture, and. as it would seem, not without acquaintance with Greek writers." Moreover, the avowed object is to defend the purity of the "deposit of the faith (*v.* 3) against the demoralizing perversions of the false teachers who have "crept in privily" to corrupt the Church. These have diverted the writer from addressing his readers (the Church catholic) on the general subject of "our common salvation," and compelled him to undertake his apologetic.

The statement explains why so obscure a name as that of Judas "the brother of James" should be chosen, inasmuch as the writer clearly aims at following the example set in the larger "general" epistle, while making the aim more specific. The series is continued by 2 Pet. (*q.v.*), which incorporates the substance of Jude in its middle chapter. 2 Pet. directs the denunciation still more specifically against those who (according to Polycarp's complaint) "denied the resurrection and judgment." Thus James, Jude and 2 Pet. form a group of post-apostolic writings which use the authority of apostolic names against (1) "vain talk," (2) "lawlessness," and (3) Hellenizing opposition to the apocalyptic type of eschatology which the Church had inherited from Judaism. These are the three forms of error which were regarded by Church leaders of the first half of the 2nd century as most dangerous. If this late date is correct, the entire group must be regarded as pseudonymous.

This relatively late date (100–120?) is confirmed in the case of Jude by the literary connections, which are remarkably abundant for so brief a writing The references to *Enoch* (*v.* 14=*Eth. En.* i. 9, but *cf.* F. H. Chase in Hastings' *Dict. Bible, s.v.* "Jude") and the *Assumption of Moses* (*v.* 9) have a certain bearing on the place of origin, since the stricter canon of the Palestinian synagogue excluded these apocryphal books of 90 B.C. to A.D. 40. A relatively late date is implied by the free use of the Pauline Epistles, especially 1 Cor. x. 1–13, Rom. xvi. 25 *seq.*, and probably both Eph. and Col. Moreover, the writer explicitly refers to the apostolic age as already past, and to the fulfilment of the Pauline prediction (1 Tim. iv. 1 *seq.*) of the advent of heresy (*v.* 17 *seq.*). The Pauline doctrine of "grace" has been perverted to lasciviousness, as by the heretics whom Polycarp opposes (*Ep.* Polyc. vii.), and this doctrine is taught for "hire" (*vv.* 11, 12, 16; *cf.* 1 Tim. vi. 5). The unworthy "shepherds" (*v.* 12; *cf.* Ezek. xxxiv. 8; Joh. x. 12 *seq.*) live at the expense of their flocks, polluting the "love-feasts," corrupting the true disciples. Clement of Alexandria sees in this a portrait (written prophetically) of the Carpocratians, an antinomian Gnostic sect of *c.* 150. We too may recognize the portrait, but should not limit it too closely to the Carpocratians, for Rev. ii 14, 20 shows that as early as A.D. 93 ultra-Paulinists had already given rise to similar scandals in the Church. It is clear, however, that for our author both Pauline teaching and its perversion lie in the past, as is apparent also in Jas. ii. 1–14.

A terminus *ad quem* is furnished by the fact that practically the whole of Jude is taken up into 2 Pet., the later author merely avoiding, so far as he observes them, the quotations from apocryphal writings. The erratic attempt of Spitta (*Zur Gesch. u. Lit. d. Urchristenthums*, ii. 409–411) to ascribe priority in this case to 2 Pet. has been sufficiently refuted by F. H. Chase, *loc. cit.* p. 803. Unfortunately the date of 2 Pet. is itself so difficult to fix that the employment only indicates a date prior to *c.* A.D. 150.

The history of the reception of the epistle into Church canons is similar to that of James. It is quoted as the work of Jude by Clement of Alexandria (*Paed.* iii. 8), referred to by Tertullian (*De cult. fem.* i. 3), and endorsed more or less hesitantly by Origen ("if one might adduce the epistle of Jude," *In Matt.* tom. xvii. 30). Unlike James, Jude is admitted by the *Muratorian Canon* (180–200). Eusebius classed the epistle among the "disputed" books, declaring that "not many of the ancients have mentioned it" (*H.E.* ii 23, 25).

(B. W. BA.)

JUDGE, in the widest legal sense an officer appointed by the sovereign power in a State to administer the law; in English practice, however, justices of the peace and magistrates are not usually regarded as "judges" in the titular sense. The duties of the judge, whether in a civil or a criminal matter, are to hear the statements on both sides in open court, to arrive at a conclusion as to the truth of the facts submitted to him or, when a jury is engaged, to direct the jury to find such a conclusion, to apply to the facts so found the appropriate rules of law, and to certify by his judgment the relief to which the parties are entitled or the obligations or penalties which they have incurred. With the judgment the office of the judge terminates, but the judgment sets in motion the executive whose duty it is to carry it into execution

The following are points more specially characteristic of the Anglo-Saxon system. (1) Judges of the supreme court are absolutely protected from action for anything that they may do in the discharge of their judicial duties. "It is a principle of English law that no action will lie against a judge of one of the superior courts for a judicial act, though it be alleged to have been done maliciously and corruptly." Other judicial officers are also protected, though not to the same extent. (2) They are irremovable except by a resolution passed by both houses and assented to by the sovereign. The inferior judges and magistrates are removable for misconduct by the lord chancellor. (3) The judiciary in England is not a separate profession. The judges are chosen from the bar. (4) Judges of the supreme court (except the lord chief justice) and county court are in England nominated by the lord chancellor. In a few cases municipal corporations may appoint their own judicial officer

See also LORD HIGH CHANCELLOR; LORD CHIEF JUSTICE; MASTER OF THE ROLLS, etc., etc. and the accounts of judicial systems under country headings.

The titles of "judge" and "justice" are applied in the United States to the members of courts of record of both original and appellate jurisdiction in both the Federal and State systems, the statute creating the court indicating which is the proper appellation. Courts not of record have "justices of the peace" and

"magistrates" and frequently the individuals holding these positions are popularly addressed as "judge." Members of the Federal judiciary and of a few of the State courts, such as New Jersey and Minnesota, are appointed by executive authority. In most of the States, such officials are elected by popular vote, although often the governors may make temporary appointments to fill vacancies.

JUDGE-ADVOCATE-GENERAL, an officer appointed in England to assist the Crown with advice in matters relating to military law, and more particularly as to courts-martial. In the army the administration of justice as pertaining to discipline is carried out in accordance with the provisions of military law, and it is the function of the judge-advocate-general to ensure that these disciplinary powers are exercised in strict conformity with that law. Until 1793 the judge-advocate-general acted as secretary and legal adviser to the board of general officers, but on the reconstitution of the office of commander-in-chief in that year he ceased to perform secretarial duties, but remained chief legal adviser. He retained his seat in parliament, and in 1806 he was made a member of the government and a privy councillor. The office ceased to be political in 1892, and in 1905 its terms and conditions were rearranged as follows: (1) A salary of £2,000 a year; (2) the holder to give his whole time; (3) retirement at the age of 70, with claim to gratuity or pension; (4) the holder to be subordinate to the secretary of State for war, without direct access to the sovereign. The appointment is conferred by letters-patent, which prescribe the review of all field-general, general and district courts-martial held in Great Britain and the duty of advising the sovereign as to the confirmation of the finding and sentence. The deputy judge-advocate is a salaried official in the department of the judge-advocate-general and acts under his letters-patent A separate judge-advocate-general's department is maintained in India. The judge-advocate-general and his deputy, being judges in the last resort of the validity of the proceedings of courts-martial, take no part in their conduct; but the deputy judge-advocates frame and revise charges and attend at courts-martial, swear the court, advise both sides on law, look after the interests of the prisoner and record the proceedings.

In the United States there is also a judge-advocate-general's department in the army. In addition to being a bureau of military justice, and keeping the records of courts-martial, courts of inquiry and military commissions, it has the custody of all papers relating to the title of lands under the control of the War Department. The judge-advocate-general has the rank of major-general. The officers who serve as judge-advocates, act as prosecutors, not as judges, in all military trials, and occasionally are associated with counsel for the government in cases in the civil courts. There is also a judge-advocate-general in the navy who has the rank of rear admiral.

See further MILITARY LAW, and consult C. M. Clode, *Administration of Justice under Military and Martial Law* (1872); *Military Forces of the Crown* (1869).

JUDGE-ADVOCATE OF THE FLEET. In England, a practising barrister whose function it is to advise the Admiralty on all matters connected with courts-martial. Though s. 61 of the Naval Discipline Act 1866 recognizes the possibility of his presence at a court-martial, he does not nowadays attend, but is represented by his deputy or by an officiating deputy judge-advocate appointed *ad hoc* by the Admiralty, the commander-in-chief of the fleet or squadron, who convenes the court-martial, or, if no such appointment is made, by the president of the court-martial. But though the judge-advocate of the fleet does not actually attend the courts-martial very responsible duties are imposed upon him. By a minute of the Board passed in 1884 (which is still in force) all proceedings of courts-martial on officers and men of the royal navy, excepting those where the prisoner pleads guilty and no evidence is taken, are to be referred to him, with a view to the consideration of (*a*) the charge, (*b*) the evidence on which the finding is based, and (*c*) the legality of the sentence, and he writes a minute on each case for the information of the lords commissioners of the Admiralty with regard to these points. He has no power to modify a sentence, a power which is reserved to the Admiralty by s. 53 (1) of the Naval Discipline Act 1866, except in the case of a death sentence, which can only be remitted by the Crown. All cases where the prisoner has pleaded guilty are examined in the Admiralty, and if in any case there is any reason to think that there has been any informality or that the prisoner has not understood the effect of his plea, such case is submitted to the judge-advocate of the fleet for his opinion.

The existence of a deputy judge of the fleet appointed by the Admiralty has been recognized by the King's Regulations.

In accordance with the provisions of s. 61 of the Naval Discipline Act 1866, in the absence of the judge-advocate of the fleet and his deputy, an officiating judge-advocate is appointed for each court-martial. His duties are described in detail by the King's Regulations, but may be summed up as consisting of seeing that the charges are in order, pointing out any informalities or defects in the charges or in the constitution of the court, seeing that any witness required by prosecutor or prisoner is summoned, keeping the minutes of the proceedings, advising on matters of law which arise at any time after the warrant for the court-martial is issued, drawing up the findings and sentence, and forwarding the minutes when completed to the Admiralty. The officiating judge-advocate is usually the secretary of the flag-officer convening the court-martial or some other officer of the accountancy branch. He is remunerated for his services by a fixed fee for each day the court sits.

(P.)

JUDGES, THE BOOK OF. This book of the Old Testament constitutes a sequel to the book of Joshua, covering the period of history between the death of this conqueror and the birth of Samuel. It is so called because it contains the history of the Israelites before the establishment of the monarchy, when the government was in the hands of certain leaders who appear to have formed a continuous succession, although the office was not hereditary. The only other biblical source ascribed to this period is Ruth, whose present position as an appendix to Judges is not original. (*See* BIBLE: *Old Testament;* RUTH, BOOK OF)

It is now generally agreed that the present adjustment of the older historical books of the Old Testament to form a continuous record of events from the creation to the Babylonian exile is due to an editor, or rather to successive redactors, who pieced together and reduced to a certain unity older memoirs of very different dates; and closer examination shows that the continuity of many parts of the narrative is more apparent than real. This is very clearly the case in the book of Judges It consists of three main portions: (1) an introduction, presenting one view of the occupation of Palestine by the Israelites (i. 1–ii. 5); (2) the history of the several judges (ii. 6–xvi.); and (3) an appendix containing two narratives of the period.

1. The first section relates events which are said to have taken place after the death of Joshua, but in reality it covers the same ground with the book of Joshua, giving a brief account of the occupation of Canaan, which in some particulars repeats the statements of the previous book, while in others it is quite independent. (*See* JOSHUA.) It is impossible to regard the warlike expeditions described in this section as supplementary campaigns undertaken after Joshua's death; they are plainly represented as the first efforts of the Israelites to gain a firm footing in the land (at Hebron, Debir, Bethel) in the very cities which Joshua is related to have subdued (Josh. x. 39). Here then we have an account of the settlement of Israel west of the Jordan which is parallel to the book of Joshua, but makes no mention of Joshua himself, and places the tribe of Judah in the front. The author of the chapter cannot have had Joshua or his history in his eye at all, and the words "and it came to pass after the death of Joshua" in Judges i. 1 are from the hand of the last editor, who desired to make the whole book of Judges, including ch. i., read continuously with that which now precedes it in the canon of the earlier prophets.

2. The second and main section (ii. 6–xvi.) stands on quite another footing. According to Josh. xxiv. 31 the people "served Yahweh" during the lifetime of the great conqueror and his contemporaries. In Judges ii. 7 this statement is repeated, and the writer proceeds to explain that subsequent generations fell away from the faith and served the gods of the nations among which they dwelt (ii. 6–iii. 6). The worship of other gods is represented,

not as something which went on side by side with Yahweh-worship (*cf.* x. 6), but as a revolt against Yahweh, periodically repeated and regularly chastised by foreign invasion. The history, therefore, falls into recurring cycles, each of which begins with religious corruption, followed by chastisement, which continues until Yahweh, in answer to the groans of his oppressed people, raises up a "judge" to deliver Israel, and recall them to the true faith. On the death of the "judge," if not sooner, the corruption spreads anew and the same vicissitudes follow. This religious explanation of the course of the history, formally expounded at the outset and repeated in more or less detail from chapter to chapter (especially vi. 1–10, x. 6–18), determines the form of the whole narrative. It is in general agreement with the spirit as also with the language of Deuteronomy, and on this account this section may be conveniently called "the Deuteronomic Book of Judges." The sources of the narrative are older than the theological exposition of its lessons, and herein lies the value and interest of Judges. The importance of such documents for the historian lies not so much in the events they record as in the unconscious witness they bear to the state of society in which the narrator poet lived.

To the unity of religious pragmatism in the main stock of the book of Judges corresponds a unity of chronological scheme. Although most of the "judges" had no more than a local influence, they are represented as successive rulers in Israel, and the history is dated by the years of each judgeship and those of the intervening periods of oppression. But it is impossible to reconcile the numbers with the statement elsewhere, that the fourth year of Solomon was the 480th from the exodus (1 Ki. vi. 1). (*See* BIBLE: *Old Testament,* "Chronology."

3. The last section of the book (chs. xvii.–xxi.) appears to owe its position to the latest redactor (akin to the latest stratum in the Hexateuch). It consists of two narratives: (*a*) That of Micah and the Danites (xvii. *seq*) is of value both as a record of the state of religion and for the picture it gives of the way in which one clan passed from the condition of an invading band into settled possession of land and city. Its interest lies in the foundation of the Ephraimite sanctuary by Micah as also in that of Dan. (*b*) The history of the Levite and the Benjamites (xix–xxi.) presupposes a degree of unity of feeling and action among the tribes of Israel which it is not easy to reconcile with the rest of the book. It resembles Ruth in giving a good deal of curious archaeological detail (the feast at Shiloh) in a form which suggests that the usages referred to were already obsolete when the narrative was composed. The older portions include: The story of the Levite (xix.), the vengeance taken by Israel (*e.g.,* xx. 3–8, 14, 19, 29, 36–41, 47), and the reconstruction of the tribe by intermarriage with the women of Shiloh (xxi. 1, 15, 17–19, 21–23). The post-exilic expansions (found chiefly in xx., xxi. 2–14, 16, 24, *seq.*) describe the punishment of Benjamin by the religious assembly and the massacre of Jabesh-Gilead for its refusal to join Israel, 400 virgins of the Gileadites being saved for Benjamin. It is noteworthy that whilst Gibeah and Jabesh-Gilead, which appear here in a bad light, are known to be associated with Saul, the sufferer is a Levite of Bethlehem, the traditional home of David. The account of the great fight in xx. is reminiscent of Joshua's battle at Ai (Josh. vii.–viii.).

The Book of Judges consists of a number of narratives collected by Deuteronomic editors; and to the same circles are due accounts of the invasions of Palestine and settlement in Joshua, and of the foundation of the monarchy in 1 Samuel. The connection has been broken by the later insertion of matter (not necessarily of late origin itself), and the whole was finally formed into a distinct book by a post-exilic hand. The older stories preserved in ii. 6–xvi. 6 reflect tribal rivalry and jealousy (*cf.* Isa. ix 21, and the successors of Jeroboam 2), attacks by nomads and wars with Ammon and Moab; conflicts between newly settled Israelites and indigenous Canaanites have been suspected in the story of Abimelech (*q.v.*). A striking exception to the lack of unity among the tribes is afforded by the account of the defeat of Sisera, and here the old poem represents a combined effort to throw off the yoke of a foreign oppressor, while the later prose version approximates the standpoint of Josh. xi. 1–15 with its defeat of the Canaanites. (*See* DEBORAH.) The general standpoint of the stories (especially Judges v.) is that of central Palestine; the exceptions are Othniel and Samson—the latter interrupting the introduction in x., and its sequel, the former now entirely due to the Deuteronomic editor. Of the narratives which precede and follow, ch. i. represents central Palestine separated by Canaanite cities from tribes to the south and north; it is the situation recognized in Judges xix. 10–12, as well as in passages embedded in the latest portions of the book of Joshua, though it is in contradiction to the older traditions of that book. Chapters xvii. *seq.* (like the preceding story of Samson) deal with Danites, and xix–xxi., by describing the extermination of Benjamin, form a link between the presence of the tribe in the late narratives of the exodus and its new prominence in the traditions of Saul (*q.v.*). As an historical source, therefore, the value of Judges will depend largely upon the question whether the editor (about 600 B.C.) had access to trustworthy documents relating to a period some six or seven centuries previously. (*See* further JEWS, and SAMUEL, BOOKS OF.)

BIBLIOGRAPHY.—*See* G. F. Moore, *Ency. Bib.* art. "Judges," and his commentary in the *Internat. Crit. Comm.* (1895); Lagrange, *Livres des juges* (1903); Cooke, *Camb. Bible* (1913), and C. F. Burney (1918). (W. R. S.; S. A. C.)

JUDGMENT, in logic and psychology, means an act of thought by which something is interpreted with the aid of some idea or concept already acquired. (Sometimes the term judgment is also used to denote the result of such an act of judging or thinking, and sometimes it is used to denote the capacity to judge.) Judgment is the unit of thought, and the most complicated thinking consists of a synthesis of many judgments connected by rational ties. To understand the nature of judgment it is perhaps best to regard it as intellectual orientation based on what has already been learned from past experience. There is an inferior kind of orientation and learning from experience which is more or less blind, merely instinctive, such as is found among the lower animals. At the intellectual level it becomes more or less clear-sighted and articulate. The lessons of past experience are retained in the form of ideas or concepts which can be applied to the interpretation of new situations, which thereby become intelligible, and perhaps manageable. The object or situation which needs interpretation is called the *subject* of the judgment; the idea or concept by means of which it is interpreted is called the *predicate;* and the two, subject and predicate, are called the *terms* of the judgment. When thinking proceeds systematically so that one judgment, or group of judgments, is made the ground (*q.v.*) of another, then we are said to reason, and the derived judgment is called an inference or a conclusion. The verbal expression of a judgment is called a proposition. There are many different kinds of judgments, but as judgments can only be discussed by expressing them first in language, that is in the form of propositions, the subject is dealt with more fully under PROPOSITION.

Here the only other matter that need be referred to is the relation of judgment to belief and disbelief. Judgment, as distinguished from mere phantasy or doubt, is our real interpretation of things, an interpretation therefore which we accept, that is believe. Indeed to judge and to believe are really the same thing, if we are clear about the relation of belief to knowledge and to disbelief, to the elucidation of which a few words may be devoted. There is such a thing as "mere belief," namely, when one does not know, that is, is not quite sure about something and yet believes it. Popularly the term belief is often used for such "mere belief" and is then contrasted with knowledge. But in the wider and more correct sense the term "belief" includes both "knowledge" and "mere belief," for if one can believe what he is not sure about, he certainly believes what he knows for certain. In this wider sense belief may be equated with judgment; the former term stresses the element of acceptance, the latter that of interpretation. Again "disbelief" is really the same kind of attitude as "belief" when both are compared with "doubt" or incapacity to judge. The difference between belief and disbelief is mainly one of content. It comes to the same thing whether one disbelieves that Pilate cared about truth, or believes that he did not care about it. For this reason "belief"

may be said to include the attitude of "disbelief" so far as psychology is concerned. (*See* LOGIC, PSYCHOLOGY, and the bibliographies given there. For judgment in law *see* PRACTICE AND PROCEDURE.)

JUDGMENT DEBTOR, in English law, a person against whom a judgment ordering him to pay a sum of money has been obtained and remains unsatisfied. The term is used similarly in the United States.

JUDGMENT SUMMONS: *see* PRACTICE AND PROCEDURE.

JUDICATURE ACTS: *see* PRACTICE AND PROCEDURE.

JUDICIAL REFORM. By judicial reform is here meant changes in municipal law which have for their object the classification and simplification of law or improvement in the administration of justice. It includes, therefore, the more orderly expression of the law as well as changes in the training and qualifications required of members of the bar in the organization of courts and in judicial procedure. On the other hand, the term does not include those changes in municipal law induced by changes in political, social or economic conditions. The article deals only with the United States.

A member of the bar in the United States is one who has a right to practise in one or more courts of record. The bar in the United States or in any State is not a legally organized body. While each member of the bar of a court has, as such, rights and duties, the members as a group are not a corporation and do not as a body have any privileges or duties. They have not the right to exclude others from being admitted to practise, or even to determine the standards which must be complied with by those seeking the right to practise. They have not the right to establish rules for the regulation of the fees to be charged clients nor to prescribe the conduct to be followed by members of the bar in the practise of law, and they cannot disbar any member of the bar for unethical conduct.

Judicial reform in the United States, therefore, has come, not through an officially organized bar with definite legal powers, but rather as the result of the action of voluntary associations of members of the legal profession—judges, practitioners and law teachers.

These voluntary law associations are of two kinds—jurisdictional and scientific. There are over 400 jurisdictional bar associations. These admit their members from the lawyers within a definite territory rather than from the practitioners at a particular court, though, practically, they never admit a person who is not a member of the bar of some court. Thus, there is a national bar association known as the American Bar Association, founded in 1878, and a State bar association in each of the States, as well as local bar associations in all the large cities and in many of the counties. There has been no integration of these associations. A lawyer may be a member of the American Bar Association, his State association and his local county or city association

With the exception of a few local associations which date from the first part of the 19th century nearly all the local, as well as all the State bar associations, and also the American Bar Association have come into existence since the close of the Civil War. The several scientific legal societies are the American Institute of Criminal Law and Criminology, the American Society of International Law, the American Judicature Society and the American Law Institute. All are of comparatively recent origin. They are all nation-wide in membership and each has been founded to carry on investigation and promote improvement in law, either generally or with reference to particular subjects. Besides these associations the Association of American Law schools, composed of some 60 schools conforming to certain standards of admission, organization and conduct, has done much to promote improvement in legal education.

The American Bar Association and practically all the State and nearly all the local bar associations have committees which from time to time submit to their respective associations drafts of proposed legislation relating to the organization of the courts or to procedure and other matters pertaining to judicial reform. If the association approves the draft, the committee will be authorized to submit it to the legislature of the State and urge its adoption. Rules of court, as well as legislative changes in procedure and cognate matters, usually have their origin in the action of these bar associations.

20TH CENTURY REFORMS

Since 1900 such judicial reforms as have taken place in the United States may be classified as follows:—1. Those designed to elevate the character and improve the efficiency of the members of the bar. 2. Those designed to improve court organization. 3. Those designed to unify, clarify or simplify existing law. 4. Those designed to improve procedure.

Reforms Designed to Improve the Efficiency of the Bar.—The existing requirements for admission to the bar are usually a general education equivalent to graduation from a high-school (the school in which students prepare for college or university), followed by three years of legal study either in a law school, or in a lawyer's office. Two States require at least a year in a lawyer's office irrespective of the amount of law school training received, and in some of the Southern States the required period of legal study is still only two years. Comparing the present requirements with those of the last quarter of the 19th century a decided elevation of standards and improvements in the methods of examination is observed. This has been due in the main to two factors: the development of good law schools in the majority of the States, especially the schools connected with the great State universities where the tuition is practically free, and the activities of the bar associations. Nearly all of these associations have committees on legal education and admission to the bar and in many States these committees have been active in urging on courts and legislatures the necessity for more stringent requirements. In this movement for the elevation of educational standards the American Bar Association has taken the lead.

The legal training of the would-be practitioner being left, especially in the larger centres of population, almost exclusively to the law schools, the law associations are taking a constantly increasing interest in the ethics of members of the bar.

Reform in the Organization of State and Federal Courts.—The unit of State court organization in the United States was, and largely still is, the county or a unit called the judicial district composed of one or more counties The principal trial court of each county or district is independent of similar courts in other counties or districts of the State. From each of these county or district courts there is an appeal on questions of law to an appellate court of State-wide jurisdiction. In some States there are two appellate courts, one for cases involving comparatively small amounts, and in some other States a system of intermediate appellate courts, the case on appeal going from the trial court first to the intermediate appellate and finally to the highest court.

The striking feature of the State court organization in the United States is the absence of any co-ordination of the various State courts for the efficient carrying on of judicial business. Some progress has been made toward better co-ordination. There still remains, though in varying degree in the several States, much to be desired in the way of greater unification of court organization. While little definite progress toward this goal has been made in the last 25 years, there now exists a general recognition of its importance. Perhaps on account of the difficulties involved, the initial steps toward better court organization have come, not so much through the bar associations as through a single scientific legal association—the American Judicature Society, organized in 1913. Though the record of the attempts to adjust court organization to the needs of modern America is significantly small, there is every sign that the coming years will witness considerable progress, and this because there has already been adopted in several important States acts which create judicial councils with power to collect data concerning judicial administration and the operation of the rules of procedure.

The Federal courts, other than the U.S. Supreme Court, were reorganized by the act of Congress of March 3, 1911. Prior to the act, while continental America was nominally divided into nine judicial circuits, the real division for all practical purposes was the district, a much smaller unit. In each district there was a

district court and a circuit court, the district court having Federal criminal jurisdiction and jurisdiction in a few classes of civil cases. The circuit courts were the principal Federal civil courts of first instance. There was an appeal directly from the district and circuit courts to the U.S. Supreme Court. The act referred to abolished the circuit courts, made the district court a court of first instance in practically all Federal civil and criminal matters and divided the United States into nine circuits, with a circuit court of appeal in each circuit to act as an intermediate appellate court on questions of law. The reorganization of the lower Federal courts has proved of very considerable practical advantage while the establishment of the circuit courts of appeal has greatly relieved the Supreme Court. Had such relief not been given, the great increase in the number of Federal cases, owing partly to the natural growth of the country and more especially to the adoption of prohibition and its enforcement by Federal statute, would have created a congestion of cases in the Supreme Court which would have indefinitely delayed all appeals.

Reforms Tending to Unify Existing Law.—The existence of 48 separate State jurisdictions naturally leads in practice to a wide diversity in legislation. Again, while all the States, except Louisiana, have the English common law as modified to meet local conditions, there is no Federal supreme tribunal to reconcile conflicting interpretations of the common law by the highest courts of the several States, and therefore there exists a very considerable diversity in the law. The fact that land law, or the law of inheritance, or even the criminal law varies from State to State causes little or no inconvenience. The United States, however, has attained a remarkable degree of uniformity in economic and social conditions. Economically and socially it is one nation. Diversity in commercial law, therefore, or the law of personal property, or the law of marriage and divorce is a source of much inconvenience and considerable injustice. One of the objects of the formation of the American Bar Association was to promote uniformity of legislation and of judicial decision throughout the United States. The group, who in 1878 founded this association, began to take steps as early as 1881 to achieve this purpose.

The principal outcome of their efforts was the establishment in 1892 of the National Conference of Commissioners on Uniform State laws. This conference is composed of delegates appointed by the governors of the several States, usually under State acts authorizing the appointment. As its name indicates, its object is to draft statutes which it recommends to the State legislatures for adoption. In 1925 the conference had drafted during the 33 years of its existence 34 acts. Many of these acts which deal with commercial subjects have been widely adopted not only by the States but by Alaska and the island possessions of the United States—the Negotiable Instruments Act by 54 jurisdictions; the Warehouse Receipt Act by 48; the Bills of Lading Act by 26. The experience of the conference would seem to show that it takes from 20 to 25 years from the adoption of a uniform commercial act by the conference before it is generally adopted in all the more important States. The conference is not confining its activities to the preparation of commercial acts. Its Desertion and Non-Support Act has been adopted in 21 States. On the other hand, its draft act relative to judicial procedure in divorce and its draft acts dealing with social legislation have met with little acceptation, though many of the provisions of such an act as the Child Labour Act have been incorporated into subsequently adopted State statutes on the subject.

The Clarification and Simplification of the Common Law.—Perhaps the most important of the legal institutions which the United States owes to England is the common law system of expressing and developing law. The fundamental feature of the system is the general judicial recognition that a decision of a court in one case has a degree of binding force when later a case arises which presents similar or analogous facts. The common law is the law developed and expressed by judicial decisions. As a whole the decisions of the English and American courts form one of the two great systems of law in force in the world to-day, the Roman law, the ultimate principal source of the codes of continental Europe and Central and South America, being the other.

The characteristic difference between a principle of law founded on decisions of the courts and a principle expressed in a statute is that the former, or common law principle, is never absolutely binding on a court. The power that makes can always modify if the strict application of the prior rule to the instant case would, in the opinion of the court, produce injustice. The common law, therefore, has a flexibility which the law of statutes and codes does not possess. This flexibility often prevents injustice. Systems of law, however, like human beings, have the defects of their qualities. There is an element of uncertainty in the common law from which law expressed in properly drawn statutes is free. This uncertainty has not often proved a serious defect when the law is expressed and developed by one court or group of courts organized in a unified system. But in the United States with 48 separate State jurisdictions and a large number of Federal courts distinct from the State courts, the conflict between the decisions in different States and between the States and the Federal courts, as well as the uncertainty as to the law in any one State, produces the most unfortunate consequences.

The reported decisions in the United States already number (1928) approximately 800,000 cases recorded in about 11,200 vols., and to this mass there is being added annually some 153,000 printed pages. To this accumulation of American precedent must be added the decisions of the English courts and the courts of other parts of the British empire in *pari materia*, any one of which may be cited as persuasive authority in an appropriate case. It has become manifest that the whole common-law system threatens to fall through the accumulation of an undigestible amount of authority.

The conditions described have given rise to an attempt on the part of the American legal profession to preserve the common-law system by producing an orderly expression of the common law, which, though it will not have the binding force of statute law, will at least be regarded as having an authority far superior to that accorded any existing legal treatise.

The organization undertaking the execution of this work is the American Law Institute, founded in 1923. The institute is a voluntary organization with two classes of members—life members and official members. The number of life members is limited to 750, the membership being confined to the leading judges and lawyers in the several States. The official members are the members of the U.S Supreme Court, the chief judge of the court of last resort in each State, the senior judge of each of the nine circuit courts of appeal, the deans of the law schools belonging to the Association of American Law schools, the president and principal officials of the American Bar Association, the presidents of the State bar associations and the presidents of the principal scientific legal societies. The orderly expression of the common law on which the institute is engaged is called the Restatement of the Law:

Whether regarded from the point of view of expenditure of money, time or skilled professional labour, no work of equal importance or magnitude has ever been undertaken by the members of any legal profession. Indeed, the only work to which it can be compared is the work on the Code, the Digest and the Institutes of the Roman law by Tribonian and his associates undertaken at the direction of the Emperor Justinian That work, however, as well as the modern Code Napoléon and the more recent codes of the nations of continental Europe and South America have had behind them the sanction of the State. The analogous work on the common law, on the other hand, is being undertaken by the lawyers of America as a voluntary enterprise, though they have turned to one of the great public foundations—the Carnegie Corporation—for the necessary financial assistance.

(W. D. L.)

The Reform of Procedure.—Inheriting it from the Colonies, which in turn had copied and adapted it from familiar English sources, the early courts of the several sovereign States followed the system of procedure in lawsuits known as English common-law pleading, a system based upon writs or forms of action, through which certain rights could be enforced in formal manner. The rapid territorial extension of jurisdiction and the growth of cities

soon began to cause gradual modification in each State by statutes passed from time to time, as shortcomings in the simple legal machinery of formerly rural communities were apprehended. During the first half of the 19th century, the chief result of these improvements was to permit some fusion of the forms of equity with common law.

However, in 1848, New York adopted a Code of Civil Procedure introducing a system of procedure and pleading which was rapidly copied by other, and adopted by new States until it is in use in well over half of all. This was the culmination of an agitation and effort for procedural reform largely led by David Dudley Field, based upon earlier writings of Jeremy Bentham in England, Edward Livingston in Louisiana and Napoleon's Code of Civil Procedure. The objects of the New York Code whose provisions can be found almost verbatim in most other American procedural codes, were to consolidate all forms, writs and causes of action into one simple universally applicable form, to remove all distinctions between law and equity, to permit free joinder of parties and causes of action, and to substitute for the previously highly technical and formal language used in the written statements required of parties, a simple, cogent and natural style of expression more in accord with the practice of daily life.

With regard to all but the last of these objects, the code has been successful. Its benefits were felt even in England, where its example was persuasive in forwarding the reforms introduced by the Common Law Procedure Acts of 1852 and 1860, and later the great Judicature Acts of 1873 and 1875. These, in turn, influenced the American Codes, which, since their first enactment, have not remained static but have, just as has the procedure in the so-called common-law States, been frequently amended and, in some cases, improved, by legislative act. In many non-code States most of the procedural reforms of the codes have been adopted without wholly abandoning distinctions and formulas traditionally dear to practitioners trained to revere them.

While the Federal courts in each State are required by the Conformity Act to follow the procedure of the State in actions at law, they are free of such restriction in proceedings in equity, and on that side their practice is uniform throughout the country. The Federal Equity Rules of 1912, promulgated by the Supreme Court in that year, are another landmark in the struggle for reform of procedure, simplifying and modernizing, as they did, a technical but important class of litigations, not only locally but in every State in the Union.

GROWTH OF OUTSIDE TRIBUNALS

Since the great period of commercial expansion which culminated in the Spanish-American War, the best minds at the American bar have more and more had forced upon them an appreciation of the inadequacy of the courts to dispose efficiently of the volume of work being brought into them. Inspired by the delays and uncertainties which marred the work of the regular courts of law, two strong movements away from the courts have manifested themselves. First is the tendency to create administrative quasi-judicial tribunals, manned presumably by experts and unhampered by the traditions and rules of evidence and procedure which strike the average layman and legislator as being responsible for the clumsiness of the courts. In Federal matters instances are the Inter-State Commerce Commission, the Federal Trade Commission, the appeal boards for taxes and customs, and numerous minor bodies in Government departments; in the individual States the Workmen's Compensation Boards and the Public Utility Commissions show a similar drift. In so far as such bodies relieve the courts of difficult and technical questions of fact, they are an unmixed blessing; at the same time they are unavoidably creating, each in its peculiar field, bodies of precedent and law which are making ever more difficult and multifarious the science of jurisprudence. The second tendency away from the courts is the reaction of the business man rather than the legislator, impatient of the ignorance of juries and the stump speeches of eloquent counsel. This induces the growth of arbitration of commercial disputes by trade bodies or organizations on behalf of their members. Large classes of commercial differences are thus kept out of the courts and, as knowledge of the benefits to be gained by this method, and confidence in it, spreads, it will be more and more resorted to. To suppose, however, that there is satisfaction with the results so far accomplished is an error, for many influences are at work to negative the value of these improvements.

The greatest promise for reform in methods of procedure lies in the spread of admiration in the United States for the success achieved by the English courts in simplifying procedure, under the system introduced in the Judicature Acts, by which procedure is regulated not by statutory enactment but by flexible rules made by the courts themselves. A strong movement has developed for the adoption of this system both in the Federal and in the State courts in the United States, forwarded by the writings and utterances of Chief Justice William H. Taft and Elihu Root among public men, Dean Roscoe Pound of Harvard, Dean John H. Wigmore of Northwestern and Prof. Edson R. Sunderland of Michigan among scholars, Thomas W. Shelton of Virginia, Moorfield Story of Massachusetts and others among practising lawyers, and most of all, by the American Judicature Society and its secretary, Herbert Harley, under the munificent endowment of Charles F. Ruggles of Michigan. The nation-wide improvement in Federal equity practice under the rules of 1912 has demonstrated the efficacy of this line of approach.

BIBLIOGRAPHY.—Roscoe Pound has prepared a complete bibliography of procedural reform which he has brought down to 1920 in the form in which it is printed in 5 Mass. *Law Quarterly*, 332. *See* also Hepburn, *Development of Code Pleading* (1897); Rosenbaum, *The Rule-making Authority in the English Supreme Court* (1917); *Bulletins of American Judicature Society;* and Annual Reports of American Bar Association. JUDICIAL SEPARATION: *see* DIVORCE.

JUDITH, THE BOOK OF, one of the apocryphal books of the Old Testament, of which the argument is as follows:—In the 12th year of his reign Nebuchadrezzar, who is described as king of Assyria, having his capital in Nineveh, makes war against Arphaxad, kind of Media, and overcomes him in his 17th year. He despatches his chief general Holofernes to take vengeance on the nations of the west who had withheld their assistance. The children of Israel, newly returned from captivity, are apprehensive of a desecration of their sanctuary and resolve on resistance The inhabitants of Bethulia (Betylūa) and Betomestham in particular, directed by Joachim the high priest, guard the mountain passes near Dothaim and place their trust in God. Holofernes enquires of the chiefs who are with him about the Israelites, and Achior, the leader of the Ammonites, tells how the Israelites are invincible except when they have offended God. Achior is thereupon punished by being handed over to the Israelites, who lead him to Bethulia. Next day the siege begins, and after 40 days the famished inhabitants urge the governor Ozias (Uzziah) to surrender, which he consents to do unless relieved in five days. Judith, a beautiful widow of the tribe of Simeon, now appears on the scene with a plan of deliverance. Wearing rich attire, and accompanied by her maid, she goes over to the hostile camp, where she is conducted to the general, whose suspicions are disarmed by the tales she invents. After four days Holofernes, smitten with her charms, at the close of a sumptuous entertainment invites her to remain within his tent. No sooner is he overcome with sleep than Judith, seizing his sword, strikes off his head and gives it to her maid; both now leave the camp (as they had previously been accustomed to do, ostensibly for prayer) and return to Bethulia where the trophy is displayed amid great rejoicings and thanksgivings. Achior now publicly professes Judaism, and at the instance of Judith the Israelites make a sudden victorious onslaught on the enemy. Judith now sings a song of praise, and all go up to Jerusalem to worship with sacrifice and rejoicing.

The book in its fuller form was most probably written in the 2nd century B.C. The writer places his romance two centuries earlier, in the time of Ochus, as we may reasonably infer from the attack made by Holofernes and Bagoas on Judea; for Artaxerxes Ochus made an expedition against Phoenicia and Egypt in 350 B.C., in which his chief generals were Holofernes and Bagoas.

See Ball, *Speaker's Apocrypha* (1888, bibl.) and Cowley in Charles's *Apocrypha and Pseudepigrapha.* (R. H. CH.; W. O. E. O.)

JUDSON, ADONIRAM (1788–1850), American missionary, was born at Malden, Mass., on Aug. 9, 1788, the son of a Congregational minister. He graduated at Brown university in 1807, was successively a school teacher and an actor, completed a course at the Andover Theological seminary in Sept. 1810, and was at once licensed to preach as a Congregational clergyman. A petition to the general association of ministers that he and several of his fellow students be sent to Asiatic missionary fields, resulted in the establishment of the American board of commissioners for foreign missions. Judson was sent to England to secure, if possible, the co-operation of the London Missionary Society, was captured by a French privateer but completed his mission. On his return he found the American board ready to act independently. His appointment to Burma followed, and in 1812, accompanied by his wife, Ann Hasseltine Judson (1789–1826), he went to Calcutta. Having become advocates of baptism by immersion, and being thus cut off from Congregationalism, they began independent work, although they met with much opposition from the East India Company. In 1814 they began to receive support from the American Baptist Missionary Union, which had been founded with the primary object of keeping them in the field. After a short period at Madras they settled at Rangoon. There Judson mastered Burmese, into which he translated part of the Gospels with his wife's help. In 1824 he removed to Ava, where, during the war between the British and Burma, he was imprisoned for almost two years. In 1827 Judson removed his headquarters to Moulmein, where school buildings and a church were erected, and where in 1834 he married Sarah Hall Boardman (1803–45). In 1834 he completed his translation of the Bible; in succeeding years he compiled a Burmese grammar, a Burmese dictionary and a Pali dictionary. In 1845 his wife's failing health decided Judson to return to America, but she died during the voyage, and was buried at St. Helena. In the United States Judson married Emily Chubbuck (1817–54), a minor poet and novelist, who was one of the earliest advocates in America of the higher education of women. She returned with him in 1846 to Burma, where the rest of his life was devoted largely to the rewriting of his Burmese dictionary. He died at sea on April 12, 1850, while on his way to Martinique, in search of health. Judson was perhaps the greatest, as he was practically the first, of the many missionaries sent from the United States into foreign fields; his fervour, his devotion to duty and his fortitude in the face of danger mark him as the prototype of the American missionary.

A son, Edward, pastor of the Judson Memorial church, in New York city, which was erected largely through his efforts, prepared a biography of Dr. Judson (1883). Others are by Francis Wayland (1854) and R. T. Middleditch (1850). For the three Mrs. Judsons, *see* J. D. Knowles, *Memoir of Ann Hasseltine Judson* (1829), and Ethel D. Hubbard, *Ann of Ava* (1913); Emily C. Judson, *Life of Sarah Hall Boardman Judson* (1849), and A. C. Kendrick, *Life and Letters of Emily Chubbuck Judson* (1861), also monographs by W. N. Wyeth on each of the Mrs. Judsons.

JUEL, NIELS (1629–1697), Danish admiral, was born of a distinguished family on May 8, 1629, at Christiania. He served his naval apprenticeship under Van Tromp and De Ruyter, taking part in all the chief engagements of the war of 1652–54 between England and Holland. During a long indisposition at Amsterdam in 1655–1656 he acquired an excellent knowledge of ship-building, and returned to Denmark in 1656 a thoroughly equipped seaman. He served with distinction during the Swedo-Danish wars of 1658–60 and took a prominent part in the defence of Copenhagen against Charles X. During fifteen years of peace, Juel, as admiral of the fleet, improved the Danish navy, though he bitterly resented the setting over his head in 1663 of Cort Adelaar on his return from the Turkish wars. On the outbreak of the Scanian War he served at first under Adelaar, but on the death of the latter in November 1675 was appointed to the supreme command. He raised Danish sea-power to unprecedented eminence, by the system of naval tactics, afterwards perfected by Nelson, which consists in cutting off a part of the enemy's force and concentrating the whole attack on it. He first employed this manoeuvre at the battle of Jasmund off Rügen (May 25, 1676) when he broke through the enemy's line in close column and cut off five of their ships. A few days after the battle of Jasmund, Cornelius Van Tromp the younger, with 17 fresh Danish and Dutch ships of the line, superseded Juel in the supreme command.

Juel took a leading part in Van Tromp's great victory off Öland (June 1, 1676), which enabled the Danes to invade Scania unopposed. On June 1, 1677 Juel defeated the Swedish admiral Sjöblad off Möen; on June 30, 1677 he won his greatest victory, in the Bay of Kjöge, where, with 25 ships of the line and 1,267 guns, he routed the Swedish admiral Evert Horn with 36 ships of the line and 1,800 guns. For this great triumph he was made lieutenant admiral general and a privy councillor. This victory, besides permanently crippling the Swedish navy, gave the Danes a self-confidence which enabled them to keep their Dutch allies in their proper place. In the following year Van Tromp, whose high-handedness had become unbearable, was discharged by Christian V., who gave the supreme command to Juel. In the spring of 1678 Juel put to sea with 84 ships carrying 2,400 cannon, but as the Swedes did not venture out to sea, his operations were limited to blockading the Swedish ports and transporting troops to Rügen. After the peace of Lund Juel devoted himself to the development of the fleet. He died on April 8, 1697.

See Garde, *Niels Juel* (1842), and *Den dansk. norske Somagts Historie, 1535–1700* (1861).

JUGGERNAUT, a cult-title of the Hindu god Vishnu at Puri in Orissa (Sanskrit, Jagannātha, "Lord of the World"). Legend says that a Savara hillman worshipped a blue-stone idol in the wilds, and that Indradyumna, King of Mālwa, who was conquered by Krishna, sent Brahmans to find it. Removed to Puri, a temple was set up in its honour at a cost of some £500,000, on a site long associated with Buddhism. Indeed the famous festival of the god's car may be the Buddha's Tooth festival, but the celebration merely consists in the thousands of pilgrims taking several days to drag the god's car through deep sand to his country-house, less than a mile from Puri, in the rains. Begun in 1174 and completed 14 years later, the temple is pyramidal in form, 192ft. high, and crowned with Vishnu's wheel and flag. The main enclosure, 400 by 300ft., contains several smaller shrines, besides that of Vishnu (80ft. square). The chief images, roughly hewn in wood, are those of Vishnu and his brother and sister. The god's attendants form 36 orders and 97 classes; and special servants put the god to bed, dress and bathe him. The rent-roll is about £68,000; but to this sum must be added the pilgrims' offerings, estimated at £100,000 a year. To Jagannāth the Koh-i-Nūr is said to have been bequeathed by Ranjīt Singh on his death-bed, despite the fact that he was a Sikh—but apparently the bequest was revoked. Being sacred to Vishnu, a death within the temple would defile it, and the tales of pilgrims being crushed to death during the procession in vast numbers are untrue, though accidents are frequent and occasionally a frenzied pilgrim will throw himself under the car.

See Tavernier, *Travels in India*, II., London, 1925.

JUGGLER, in the modern sense a performer of sleight-of-hand tricks and dexterous feats of skill in tossing balls, plates, knives, etc. (*see* CONJURING). The *joculatores* (jesters) were the mimes of the middle ages (*see* DRAMA); the French word *jongleurs* included the singers known as TROUBADOURS (*q.v.*), and English minstrels of the same type gradually became strolling jugglers.

JUGURTHA (Gr. Ἰογόρθας), king of Numidia, an illegitimate son of Mastanabal, and grandson of Massinissa. After his father's death he was brought up by his uncle Micipsa together with his cousins Adherbal and Hiempsal. Jugurtha inherited much of Massinissa's political ability. Micipsa, naturally afraid of him, sent him to Spain (134 B.C.) in command of a Numidian force, to serve under P. Cornelius Scipio Africanus Minor. He became a favourite with Scipio and the Roman nobles, some of whom put into his head the idea of making himself sole king of Numidia, with the help of Roman money.

In 118 B.C. Micipsa died. By his will, Jugurtha was associated with Adherbal and Hiempsal in the government of Numidia. Scipio had written to Micipsa a strong letter of recommendation in favour of Jugurtha; and to Scipio, accordingly, Micipsa entrusted the execution of his will. His testamentary arrangements

utterly failed. The princes soon quarrelled, and Jugurtha claimed the entire kingdom. Hiempsal he contrived to have assassinated; Adherbal he quickly drove out of Numidia. He then sent envoys to Rome to defend his usurpation on the ground that he was the injured party. The senate decided that Numidia was to be divided, and gave the western, the richer and more populous half, to Jugurtha, while the sands and deserts of the eastern half were left to Adherbal. Jugurtha's envoys appear to have bribed several Roman nobles and senators. Jugurtha at once began to provoke Adherbal to a war of self-defence. He defeated him near the modern Philippeville, and Adherbal sought safety in the fortress of Cirta (Constantine). Here he was besieged by Jugurtha, who forced the place to capitulate, and treacherously massacred all the inhabitants, among them his cousin Adherbal and a number of Italian merchants.

The Roman senate, a majority of which still clung to Jugurtha, were persuaded in the same year (111) to declare war. An army was despatched to Africa under the consul L. Calpurnius Bestia, several of the Numidian towns voluntarily surrendered, and Bocchus, the king of Mauretania, and Jugurtha's father-in-law, offered the Romans his alliance. Jugurtha having at his command the accumulated treasures of Massinissa, succeeded in arranging with the Roman general a peace which left him in possession of the whole of Numidia. But the tribune Memmius insisted that Jugurtha should appear in person and be questioned as to the negotiations. Jugurtha appeared under a safe conduct, but his partisans took care that his mouth should be closed. Soon afterwards he caused his cousin Massiva, then resident at Rome and a claimant to the throne of Numidia, to be assassinated. The treaty was thereupon set aside, and Jugurtha was ordered to quit Rome. On this occasion he uttered the well-known words, "A city for sale, and doomed to perish as soon as it finds a purchaser!" (Livy, *Epit.* 64.)

The war was renewed, and the consul Spurius Albinus entrusted with the command. The Roman army in Africa was thoroughly demoralized. An unsuccessful attempt was made on a fortified town, Suthul, in which the royal treasures were deposited. The army was surprised by the enemy in a night attack, and the camp was taken and plundered. Every Roman was driven out of Numidia, and a disgraceful peace was concluded (109).

The war was now entrusted to Quintus Metellus, an able soldier and stern disciplinarian, and from the year 109 to its close in 106 the contest was carried on with credit to the Roman arms. Jugurtha was defeated on the river Muthul, after an obstinate and skilful resistance. Once again, however, he succeeded in surprising the Roman camp and forcing Metellus into winter quarters. There were fresh negotiations, but Metellus insisted on the surrender of the king's person, and this Jugurtha refused. In 106, Marius was called on by the vote of the Roman people to supersede Metellus, but it was through the perfidy of Bocchus and the diplomacy of L. Cornelius Sulla, Marius's quaestor, that the war was ended. Jugurtha fell into an ambush, and was conveyed a prisoner to Rome. Two years afterwards, in 104, he figured with his two sons in Marius's triumph, and in the subterranean prison beneath the Capitol he was either strangled or starved to death.

Jugurtha mainly owes his historical importance to the full and minute account of him which we have from the hand of Sallust, himself afterwards governor of Numidia.

See A. H. J. Greenidge, *Hist. of Rome* (1904); T. Mommsen, *Hist. of Rome* (1854, etc.), book iv. ch. v.; the chief ancient authorities (besides Sallust) are Livy, *Epit.*, lxii.–lxvii.; Plutarch, *Marius and Sulla;* Velleius Paterculus, ii.; Diod. Sic., *Excerpta,* xxxiv.; Florus, iii. 1. *See* also MARIUS, SULLA, NUMIDIA.

JUILLIARD, AUGUSTUS D. (1840–1919), American capitalist, was born in Canton, O. His parents were French Huguenots, natives of Burgundy, France, who emigrated to America in 1836. He was for many years head of a dry goods commission house in New York city, which bore his name, and a notable figure in banking and insurance circles. In his will, provision was made for the founding of the Juilliard Musical Foundation in New York city, which was incorporated under a special act of the legislature on March 30, 1920, and to which he bequeathed the residue of his estate, estimated at $12,000,000. The purposes of the foundation are: to aid worthy students of music in securing an adequate musical education; to promote enterprises for the education and instruction of the general public in musical arts; to afford facilities for the encouragement of a deeper interest in music in the United States. Juilliard died in New York city on April 25, 1919.

JUJU, a West African word derived from Fr. *joujou,* a toy or plaything. The word was originally applied to the objects which it was supposed the negroes worshipped, and was transferred from the objects themselves to the spirits or gods who dwelt in them, and includes a range from minor deities to inferior spirits, such as gnomes and fairies (*see* FETISHISM and TABU).

See P. A. Talbot, *Peoples of Southern Nigeria* (vol. II., 1926).

JUJUBE. Under this name the fruits of at least two species of *Zizyphus* are usually described, namely, *Z. vulgaris* and *Z. Jujuba.* The genus is a member of the family Rhamnaceae. The species are small trees or shrubs, armed with sharp, straight, or hooked spines, having alternate leaves, and fruits which are edible in most of the species, and have an agreeable acid taste.

Z. vulgaris is a tree about 20 feet high, extensively cultivated in many parts of southern Europe, also in western Asia, China and Japan. In India it extends from the Punjab to the north-western frontier, ascending in the Punjab Himalayas to a height of 6,500 ft., and is found both in the wild and cultivated state. The plant is grown almost exclusively for the sake of its fruit, which both in size and shape resembles a moderate-sized plum; at first the fruits are green, but as they ripen they become of a reddish-brown colour on the outside and yellow within. They ripen in September, when they are gathered and preserved by storing in a dry place; after a time the pulp becomes much softer and sweeter than when fresh. Jujube fruits when carefully dried will keep for a long time, and retain their refreshing acid flavour.

Z. Jujuba is a tree averaging from 30 to 50 ft. high, found both wild and cultivated in China, the Malay Archipelago, Ceylon, India, tropical Africa and Australia. Many varieties are cultivated by the Chinese, who distinguished them by the shape and size of their fruits, which are not only much valued as dessert fruit in China, but are also occasionally exported to England. This species was introduced into American cultivation in North Carolina in 1837 and in California in 1876. It is grown to a limited extent in various mild districts in the United States, attaining its maximum productiveness in the southwestern States and in the interior valleys of California.

As seen in commerce jujube fruits are about the size of a small filbert, having a reddish-brown, shining, somewhat wrinkled exterior, and a yellow or gingerbread coloured pulp enclosing a hard elongated stone.

The fruit of *Zizyphus* does not enter into the composition of the lozenges known as jujubes which are usually made of gum-arabic, gelatin, etc., and variously flavoured.

JU-JUTSU or **JIU-JITSU,** the Japanese method of offence and defence without weapons in personal encounter, upon which is founded the system of physical culture universal in Japan (Sinico-Japanese, muscle-culture). Some historians assert that it was founded by a Japanese physician who learned its rudiments while studying in China, but many writers maintain that ju-jutsu was in common use in Japan centuries earlier. It is certain that the science was originally imported from China but the Japanese have modified it greatly in the course of centuries. Originally it was an art practised solely by the nobility and particularly by the samurai who, possessing the right, denied to commoners, of carrying swords, were thus enabled to show their superiority over common people even when without weapons. It was a secret art, jealously guarded from those not privileged to use it, until the feudal system was abandoned in Japan, and now ju-jutsu is taught in the schools, as well as in public and private gymnasia. In the army, navy and police it receives particular attention. About the beginning of the 20th century, masters of the art began to attract attention in Europe and America, and schools were established in Great Britain and the United States, as well as on the continent of Europe.

Ju-jutsu may be briefly defined as "an application of anatomi-

cal knowledge to the purpose of offence and defence. It differs from wrestling in that it does not depend upon muscular strength. It differs from the other forms of attack in that it uses no weapon. Its feat consists in clutching or striking such part of an enemy's body as will make him numb, and incapable of resistance. Its object is not to kill, but to incapacitate one for action for the time being" (Inazo Nitobe, *Bushido: the Soul of Japan*).

Many writers translate the term ju-jutsu "to conquer by yielding" (Jap. *ju*, pliant), and this phrase well expresses a salient characteristic of the art, since the weight and strength of the opponent are employed to his own undoing. When, for example, a big man rushes at a smaller opponent, the smaller man, instead of seeking to oppose strength to strength, falls backwards or sidewise, pulling his heavy adversary after him and taking advantage of his loss of balance to gain some lock or hold known to the science. This element of yielding in order to conquer is thus referred to in Lafcadio Hearn's *Out of the East:* "In jiu-jitsu there is a sort of counter for every twist, wrench, pull, push or bend: only the jiu-jitsu expert does not oppose such movements. No; he yields to them. But he does much more than that. He aids them with a wicked sleight that causes the assailant to put out his own shoulder, to fracture his own arm, or, in a desperate case, even to break his own neck or back."

BY COURTESY OF A. G. SPALDING

FROM LEFT TO RIGHT, UPRIGHT POSITION AT OPENING OF THE BOUT, FALL AND PUNISHMENT, COMBINATION NECK, WRIST AND ARM TWIST

The knowledge of anatomy mentioned by Nitobe is acquired in order that the combatant may know the weak parts of his adversary's body and attack them. Several of these sensitive places, for instance the partially exposed nerve in the elbow popularly known as the "funny-bone" and the complex of nerves over the stomach called the solar plexus, are familiar to the European, but the ju-jutsu expert is acquainted with many others which, when compressed, struck, or pinched, cause temporary paralysis of a more or less complete nature. Such places are the arm-pit, the ankle and wrist bones, the tendon running downward from the ear, the "Adam's apple," and the nerves of the upper arm. In serious fighting almost any hold or attack is resorted to, and a broken or badly sprained limb is the least that can befall the victim; but in the practice of the art as a means of physical culture the knowledge of the different grips is assumed on both sides, as well as the danger of resisting too long. For this reason the combatant, when he feels himself on the point of being disabled, is instructed to signal his acknowledgment of defeat by striking the floor with hand or foot. The bout then ends and both combatants rise and begin afresh. It will be seen that a victory in ju-jutsu does not mean that the opponent shall be placed in some particular position, as in wrestling, but in any position in which his judgment or knowledge tells him that, unless he yields, he will suffer a disabling injury. This difference existed between the wrestling and the *pancratium* of the Olympic games. In the *pancratium* the fight went on until one combatant acknowledged defeat, but, although many a man allowed himself to be beaten into insensibility rather than suffer this humiliation, it was nevertheless held to be a disgrace to kill an opponent.

A modern bout at ju-jutsu usually begins by the combatants taking hold with both hands upon the collars of each other's jackets or kimonos, after which, upon the word to start being given, the manoeuvring for an advantageous grip begins by pushes, pulls, jerks, falls, grips, or other movements. Once the wrist, ankle, neck, arm or leg of an assailant is firmly grasped so that added force will dislocate it, there is nothing for the seized man to do, in case he is still on his feet, but go to the floor, often being thrown clean over his opponent's head. A fall of this kind does not necessarily mean defeat, for the struggle proceeds upon the floor, where indeed most of the combat takes place, and the ju-jutsu expert receives a long training in the art of falling without injury. Blows are delivered, not with the fist, but with the open hand, the exterior edge of which is hardened by exercises.

The physical training necessary to produce expertness is the most valuable feature of ju-jutsu. The system includes a light and nourishing diet, plenty of sleep, deep-breathing exercises, an abundance of fresh air and general moderation in habits, in addition to the actual gymnastic exercises for the purpose of muscle-building and the cultivation of agility of eye and mind as well as of body. It is practised by both sexes in Japan.

Many attempts have been made in England and America to match ju-jutsu experts against wrestlers, mostly of the "catch-as-catch-can" school, but these trials have, almost without exception, proved unsatisfactory, since many of the most efficacious tricks of ju-jutsu, such as the strangle holds and twists of wrists and ankles, are accounted foul in wrestling. Nevertheless, the Japanese athletes, even when obliged to forgo these, have proved more than a match for European wrestlers of their own weight.

See H. Irving Hancock's *Japanese Physical Training* (1904); *Physical training for Women by Japanese Methods* (1904); *The Complete Kano Jiu-jitsu (Jiudo)* (1905); M. Ohashi, *Japanese Physical Culture* (1904); K. Saito, *Jiu-Jitsu Tricks* (1905); J. Murdoch, *History of Japan*, vol. iii. (1926).

JUJUY, a northern province of the Argentine Republic, bounded north and north-west by Bolivia, north-east, east, south and south-west by Salta, and west by the Los Andes territory. Pop. (1914), 76,631; (1927 estimate), 87,993, including many mestizos. Area, 14,802 sq.m., the greater part being mountainous. The province is traversed from north to south by three distinct ranges belonging to the great central Andean plateau: the Sierra de Santa Catalina, the Sierra de Humahuaca, and the Sierras de Zenta and Santa Victoria. In the south-east angle of the province are the low, isolated ranges of Alumbre and Santa Barbara. Between the more eastern of these ranges are valleys of surpassing fertility, watered by the Rio Grande de Jujuy, a large tributary of the Bermejo. The western part, however, is a high plateau (parts are 11,500 ft. above sea-level), the general characteristics of which are those of the *puna* regions farther west. The surface of this high plateau is broken, semi-arid and desolate, having a very scanty population and no important industry beyond the breeding of a few goats and the fur-bearing chinchilla. There are two large saline lagoons: Toro, or Pozuelos, in the north, and Casabindo, or Guayatayoc, in the south. The climate is cool, dry and healthy, with violent tempests in the summer season. (For a vivid description of this interesting region, *see* F. O'Driscoll, "A Journey to the North of the Argentine Republic," *Geogr. Jour.* xxiv. 1904.) The agricultural productions of Jujuy include sugar cane, wheat, Indian corn, alfalfa and grapes. The breeding of cattle and mules for the Bolivian and Chilean markets is an old industry. Coffee has been grown in the department of Ledesma, but only to a limited extent. There are also valuable forest areas and undeveloped mineral deposits. Large borax deposits are worked in the northern part of the province. The province is traversed from south to north by the Central Northern railway, a national Government line, which has been extended to the Bolivian frontier.

The capital, Jujuy (pop. 1914, 7,956), is situated on the Rio Grande at the lower end of the Humahuaca valley, 942 m. from Buenos Aires by rail. It was founded in 1593 and is 4,035 ft. above sea-level. It has a mild, temperate climate and picturesque natural surroundings.

JUKES, JOSEPH BEETE (1811–1869), English geologist, was born at Summer Hill, near Birmingham, on Oct. 10, 1811. He was naturalist to H.M.S. "Fly" on the expedition (1842) to survey Torres strait, New Guinea and the east coast of Australia. After his return home he served on the geological surveys of Great Britain and of Ireland. He was professor of geology at

the Royal college of Science in Dublin. Jukes died on July 29, 1869.

Jukes wrote many papers for London and Dublin geological journals and he was also the author of *Excursions in and about Newfoundland* (2 vols., 1842); *Narrative of the Surveying Voyage of H.M.S. "Fly"* (2 vols., 1847); *A Sketch of the Physical Structure of Australia* (1850); *Popular Physical Geology* (1853); *Student's Manual of Geology* (1857; 2nd ed. 1862; a later edition was revised by A. Geikie, 1872); the article "Geology" in the *Ency. Brit.* 8th ed. (1858) and *School Manual of Geology* (1863). See *Letters, &c., of J. Beete Jukes, edited, with Connecting Memorial Notes, by his Sister* (C. A. Browne) (1871), to which is added a chronological list of Jukes's writings.

JULIAN (FLAVIUS CLAUDIUS JULIANUS) (*c.* 331–363), commonly called JULIAN THE APOSTATE, Roman emperor, was born in Constantinople in 332 (probably), the son of Julius Constantius and his wife Baslina, and nephew of Constantine the Great. Julian lost his mother not many months after he was born. In 337 Constantine died, and the whole of Julian's family, except his half-brother, Gallus, was murdered by the soldiers to ensure the undisputed succession of the sons of Constantine. Gallus was banished, but Julian was allowed to remain in Constantinople, where he was carefully educated under the supervision of the family eunuch, Mardonius, and of Eusebius, bishop of Nicomedia. About 341 Gallus was recalled, and the two brothers were removed to Macellum, a remote and lonely castle in Cappadocia. Julian was trained to the profession of the Christian religion; but he became early attracted to the old faith, or rather to the idealized amalgam of paganism and philosophy which was current among his teachers, the rhetoricians. The old Hellenic world had an irresistible attraction for him. Love for its culture was, in Julian's mind, associated with loyalty to its religion.

Early Life and Campaigns.—A short visit to Constantinople was followed by exile to Nicomedia again, where he came under the influence of Libanius, though forbidden to attend his lectures, and at this stage probably became finally contracted to paganism. In 351 Gallus was made Caesar, and Julian liberated; but not for long. In 354 Gallus was executed for misgovernment, and Julian came under suspicion again. He was confined in Milan, released, recalled to Milan, and eventually, by the intercession of the empress Eusebia, allowed to return to Athens. Here he was initiated into Mithraism (355). The emperor Constantius and Julian were now the sole surviving male members of the family of Constantine; and, as the emperor again felt himself oppressed by the cares of government, there was no alternative but to call Julian to his assistance. At the instance of the empress he was summoned to Milan, where Constantine bestowed upon him the hand of his sister, Helena, together with the title of Caesar and the government of Gaul.

A task of extreme difficulty awaited him beyond the Alps. During recent troubles the Alamanni and other German tribes had crossed the Rhine; they had burned many flourishing cities, and extended their ravages far into the interior of Gaul. The internal government of the province had also fallen into great confusion. In his first campaign, in 356, he co-operated with Constantius, who advanced from Raetia, while Julian moved up the left bank of the Rhine. The only notable fighting was Julian's successful defence of Sens at the end of the year. The next year he was by himself; Barbatio, left to support him with a large force, deserted, and Julian extricated himself from great danger with a great victory at Strasbourg (357). This season saw the lower Rhine cleared as well. The year 358 was devoted to the recovery of the captures from Gaul beyond the Rhine and the re-organization of the frontier defences. In Gaul, Julian rebuilt the cities which had been laid waste, re-established the administration on a just and secure footing, and, as far as possible, lightened the taxes which weighed so heavily on the poor provincials. Paris was the usual residence of Julian during his government of Gaul, and his name has become inseparably associated with the early history of the city.

Meanwhile the inner circle of Constantine's court were doing their best to poison the emperor's mind against Julian. In 360 he received the emperor's orders withdrawing a number of troops for the renewed war with Persia, and putting them at once under a different command. Julian first objected, then submitted; the soldiers themselves halted at Paris on the way east and proclaimed him emperor. He accepted, and at once tried to negotiate with Constantius, who was campaigning in the East. The message being disregarded, both sides prepared for a decisive struggle. After a march of unexampled rapidity through the Black forest and down the Danube, Julian reached Sirmium, and he was on the way to Constantinople when he received news of the death of Constantius, who had set out from Syria to meet him, at Mopsucrene in Cilicia (Nov. 3, 361). Without further trouble Julian found himself everywhere acknowledged the sole ruler of the Roman empire; it is even asserted that Constantius himself, on his deathbed, had designated him his successor. Julian entered Constantinople on Dec. 11, 361.

His Reign.—Julian had already made a public avowal of paganism, of which he had been a secret adherent at the age of 20. His reign was too short to show what precise form the pagan revival might have taken, how far his feelings might have become embittered by his conflict with the Christian faith, whether persecution, violence and civil war might not have taken the place of moral suasion, which was the method he originally affected. He issued an edict of universal toleration; but in many respects he used his imperial influence to advance the work of restoration. Paganism was demanded of the teachers in the schools; without directly excluding Christians from the high offices of State, he held that the worshippers of the gods ought to have preference. In short, though there was no direct persecution, he exerted much more than a moral pressure to restore the power and prestige of the old faith. Julian himself became *pontifex maximus*, and the new cult was organized on more or less Christian lines as a State church.

Having spent the winter of 361–362 at Constantinople, Julian proceeded to Antioch, to prepare for his great expedition against Persia. His stay there was a curious episode in his life. It is doubtful whether his pagan convictions or ascetic life, after the fashion of an antique philosopher, gave most offence to the so-called Christians of the dissolute city. They soon grew heartily tired of each other, and Julian took up his winter quarters at Tarsus, from which, in the early spring, he marched against Persia. At the head of a powerful and well-appointed army, and accompanied down the Euphrates by a fleet, he advanced through Mesopotamia and Assyria as far as Ctesiphon, near which he crossed the Tigris, in face of a Persian army, which he defeated. Misled by the treacherous advice of a Persian nobleman, he desisted from the siege, and set out to seek the main army of the enemy under Shapur II. (*q.v.*). After a long, useless march he was forced to retreat, and found himself enveloped by the whole Persian army in a waterless and desolate country, at the hottest season of the year. The Romans repulsed the enemy in many an obstinate battle, but on June 26, 363, Julian, who was ever in the front, was mortally wounded. The same night he died in his tent. The story that he was murdered by a Christian is unauthenticated. But though *Vicisti, Galilaee* is a fabrication, it represents the facts. His work died with him.

From Julian's unique position as the last champion of a dying polytheism, his character has always excited interest. Taught from his youth to regard Christianity as a persecuting force, he found sympathy and intellectual companionship only among the pagan rhetoricians and philosophers, and was thus attracted to paganism. But the religion he attempted to foist on the world was not a paganism that had ever existed. The real pagans of the day, like Amnianus, were tolerant monotheists. Julian's creed was a curious mixture of active polytheism, combined with the emotional appeal of the mysteries, which had never in ancient times really coalesced with the formal public worship of gods, and held together by the Neoplatonist philosophy—surely the greatest feat of eclecticism ever performed, even by that eclectic system.

In other respects Julian was no unworthy successor of the Antonines. Though brought up in a studious solitude, he was no sooner called to the government of Gaul than he displayed all the energy, the hardihood and the practical sagacity of an old Roman. In temperance, self-control and zeal for the public good, as he understood it, he was unsurpassed. To these Roman qualities

he added the culture, literary instincts and speculative curiosity of a Greek. One of the most remarkable features of his public life was the perfect ease and mastery with which he associated the cares of war and statesmanship with the assiduous cultivation of literature and philosophy.

BIBLIOGRAPHY.—The works of Julian, of which there are complete editions by E. Spanheim (Leipzig, 1696) and F. C. Hertlein (Teubner series, 1875–76), consist of the following: (1) *Letters,* of which more than 80 have been preserved under his name, although the genuineness of several has been disputed. Six new letters were discovered in 1884 by A. Papadopulos Kerameus in a monastery on the island of Chalcis near Constantinople (see *Rheinisches Museum,* xliii., 1887). Separate edition of the letters by L. H. Heyler (1828); *see* also J. Bidez and F. Cumont, "Recherches sur la tradition ms. des lettres de l'empereur Julien" in *Mémoires couronnées . . . publiés par l'Acad. royale de Belgique,* lvii. (1898) and F. Cumont, *Sur l'authenticité de quelques lettres de Julien* (1889). (2) *Orations,* eight in number—two panegyrics on Constantius, one on the empress Eusebia, two theosophical declamations on King Helios and the Mother of the Gods, two essays on true and false cynicism, and a consolatory address to himself on the departure of his friend Salustius to the East. (3) *Caesares* or *Symposium,* a satirical composition after the manner of Seneca's *Apocolocyntosis.* (4) *Misopogon* (the beard-hater), written at Antioch, a satire on the licentiousness of its inhabitants. (5) Five epigrams, two of which (*Anth. Pal.,* ix. 365, 368) are of some interest. (6) Κατὰ Χριστιανων (*Adversus Christianos*) in three books, an attack on Christianity written during the Persian campaign, is lost. Theodosius II. ordered all copies of it to be destroyed, and our knowledge of its contents is derived almost entirely from the *Contra Julianum* of Cyril, bishop of Alexandria, written 60 years later (see *Juliani librorum contra Christianos quae supersunt,* edit. C. J. Neumann, 1880). *English Translations:* Select works by J. Duncombe (1784) containing all except the first seven orations (viii. and the fable from vii. are included): the theosophical addresses to King Helios and the Mother of the Gods by Thomas Taylor (1793) and C. W. King in Bohn's *Classical Library* (1888); the public letters, by E. J. Chinnock (1901).

1. Ancient authorities: (*a*) Pagan writers. Ammianus Marcellinus (xv. 8–xxv.), a contemporary and in part an eye-witness of the events he describes (other historians are Zosimus and Eutropius); the sophist Libanius, and Claudius Mamertinus, the panegyrist, are less trustworthy. (*b*) Christian writers. Gregory of Nazianzus, the author of two violent invectives against Julian; Rufinus; Socrates; Sozomen; Theodoret; Philostorgius; the poems of Ephraem Syrus written in 363; Zonaras; Cedrenus; and later Byzantine chronographers. The impression which Julian produced on the Christians of the East is reflected in two Syriac romances published by J. G. E. Hoffmann, *Julianos der Abtrunnige* (1880; *see* also Th. Nöldeke in *Zeitschrift der deutschen morgenlandischen Gesellschaft* [1874], xxviii. 263).

2. Modern: For works before 1878 *see* R. Engelmann, *Scriptores Graeci* (8th ed., by E. Preuss, 1880). Of later works the most important are G. H. Rendall, *The Emperor Julian, Paganism and Christianity* (1879); Alice Gardner, *Julian, Philosopher and Emperor* (1895); G. Negri, *Julian the Apostate* (Eng. trans., 1905); E. Müller, *Kaiser Flavius Claudius Julianus* (1901); P. Allard, *Julien l'apostat* (1900–03); G. Mau, *Die Religionsphilosophie Kaiser Julians in seinen Reden auf Konig Helios und die Göttermutter* (1907); J. E. Sandys, *Hist. of Classical Scholarship* (1906), p. 356; W. Christ, *Geschichte der griechischen Litteratur* (1898), sec. 603; J. Geffcken, "Kaiser Julianus und die Streitschriften seiner Gegner," in *Neue Jahrb. f. das klassische Altertum* (1908), pp. 161–195. The sketch by Gibbon (*Decline and Fall,* chs. xix., xxii.–xxiv.) and the articles by J. Wordsworth in Smith's *Dictionary of Christian Biography* and A. Harnack in Herzog-Hauck's *Realencyklopädie für protestantische Theologie* ix. (1901) are valuable, the last especially for the bibliography. *See* also *Cambridge Mediaeval History,* vol. i. (1911). (T. Kl.; J. H. F.)

JULIAN ALPS, the south-eastern extension of the Eastern Alps of Europe, extending from the north-eastern borders of Italy south-eastward through Carniola and Yugo-Slavia to the Karst plateau. The highest point is formed by the Triglav or Terglou (9,394 ft.) which offers one of the finest views in the whole of the Alps and bears on its northern declivity the only glacier in the province. (*See* ALPS; ITALY and CARNIOLA.)

JULIAN DAY, a device of chronological reckoning often used by astronomers in order to avoid the complication due to months and years of unequal length. The days are numbered consecutively starting from the "Julian era," Jan. 1, 4713 B.C. For example, Jan. 1, 1930, is Julian day 2,425,978. The Julian day begins at noon; thus the day above-mentioned terminates at noon on Jan. 2.

JÜLICH (Fr. *Juliers*), a town in the Prussian Rhine province, on the right bank of the Roer, 16 m. N.E. of Aix-la-Chapelle. Pop. (1925) 8,589. Jülich (formerly also Gülch, Guliche), the capital of the former duchy of that name, is the Juliacum of the *Antonini Itinerarium.* It became a fortress in the 17th century, and was captured by the Dutch under Maurice of Orange in 1610, and by the Spaniards in 1622. Till 1860, when its works were demolished, Jülich ranked as a fortress of the second class.

The Duchy of Jülich (or Juliers).—From the 11th to the 15th century Jülich was ruled by a line of hereditary counts. The county was raised to the rank of a duchy in 1356, but its importance in general history is due to its later association with the neighbouring duchies of Berg and Cleves. In 1423 Jülich passed to Adolph, duke of Berg (d. 1437), who belonged to a younger branch of the ruling family. Nearly a century later Mary (d. 1543) the heiress of these two duchies, married John, the heir of the duchy of Cleves. John died in 1539 and was succeeded by his son William who reigned until 1592.

At the beginning of the 17th century the reigning duke, John William, was childless and insane. Among the claimants to his lands the most important were two Protestant princes, Philip Louis, count palatine of Neuburg, husband of the duke's sister Anna, and John Sigismund, elector of Brandenburg, whose wife was the daughter of another sister. Moreover, by virtue of an imperial promise made in 1485 and renewed in 1495, the elector of Saxony claimed the duchies of Jülich and Berg, while the proximity of the coveted lands to the Netherlands made their fate a matter of great moment to the Dutch. The situation was made dangerous by the tension between the Roman Catholics and the Protestants who were fairly evenly matched in the duchies, and by the rivalry between France and the empire. In March 1609 Duke John William died. Having assured themselves of the support of Henry IV. of France and of the Evangelical Union, Brandenburg and Neuburg at once occupied the duchies. Thereupon the emperor Rudolph II. ordered some imperialist and Spanish troops to seize the disputed lands, and a great European war was narrowly avoided. The emperor adjudged the duchies to Saxony, while the Dutch captured the fortress of Julich; but the "possessing princes," as Brandenburg and Neuburg were called, continued to occupy and administer the lands. These two princes had made a compact at Dortmund in 1609 to act together in defence of their rights, but differences soon arose between them which were increased by the conversion of the count palatine's heir, Wolfgang William of Neuburg, to Roman Catholicism, and his marriage with a daughter of the powerful Roman Catholic prince, Duke Maximilian of Bavaria. Each party then invited foreign aid, but through the intervention of England and France the treaty of Xanten was signed in Nov. 1614 by which Brandenburg obtained Jülich and Berg, the rest of the lands falling to the count palatine. In 1666 the great elector, Frederick William of Brandenburg, made with William, count palatine of Neuburg, a treaty providing that in case the male line of either house became extinct the other should inherit its lands.

When, early in the 18th century, the latter family was threatened with extinction, the emperor Charles VI. promised the succession to Jülich to the Prussian king, Frederick William I., in return for a guarantee of the pragmatic sanction. A little later, however, he promised the same duchy to the count palatine of Sulzbach, a kinsman of the count palatine of Neuburg. Then Frederick the Great, having secured Silesia, abandoned his claim to Jülich, which thus passed to Sulzbach when, in 1742, the family of Neuburg became extinct. From Sulzbach the duchy came to the electors palatine of the Rhine, and, when this family died out in 1799, to the elector of Bavaria, the head of the other branch of the house of Wittelsbach. In 1801 Jülich was seized by France, and by the settlement of 1815 it came into the hands of Prussia. Its area was just over 1,600 sq.m. and its population about 400,000.

See M. Ritter, *Sachsen und der juliche Erbfolgestreit* (1873), and *Der jüliche Erbfolgekrieg, 1610 und 1611* (1877); H. H. Koch, *Die Reformation im Herzogtum Jülich* (1883–88); J. Kuhl, *Geschichte der Stadt Julich* (1897); A. Müller, *Der julich-klevesche Erbfolgestreit im Jahre 1614* (1900).

JULIUS, the name of three popes.

JULIUS I., pope from 337 to 352, was chosen as successor of Marcus after an interval of four months. He is chiefly known by

his action in the Arian controversy. After the Eusebians had, at a synod held in Antioch, renewed their deposition of Athanasius they resolved to send delegates to Constans, emperor of the West, and also to Julius, setting forth the grounds on which they had proceeded. Julius, after expressing an opinion favourable to Athanasius, invited both parties to lay the case before a synod to be presided over by himself. This proposal, however, the Eastern bishops declined to accept. On his second banishment from Alexandria, Athanasius came to Rome. Julius in 342 declared him to be innocent and his doctrine orthodox, and a little later he summoned the council of Sardica in Illyria, which was attended only by 76 Eastern bishops, who speedily withdrew to Philippopolis and deposed Julius, along with Athanasius and others. The Western bishops who remained confirmed the previous decisions of the Roman synod; and by its 3rd, 4th and 5th decrees relating to the rights of revision, the council of Sardica endeavoured to settle the procedure of ecclesiastical appeals. Julius on his death in April 352 was succeeded by Liberius.

JULIUS II. (Giuliano della Rovere), pope from Nov. 1, 1503, to Feb. 1, 1513, was born at Savona in 1443. He was sent by his uncle, subsequently Sixtus IV., to be educated among the Franciscans, although he does not appear to have joined that order. During his uncle's pontificate, he was made bishop of Carpentras, bishop of Bologna, bishop of Vercelli, archbishop of Avignon, cardinal-priest of S. Pietro in Vincoli and of Sti. Dodici Apostoli, and cardinal-bishop of Sabina, of Frascati, and finally of Ostia and Velletri. In 1480 he was made legate to France, mainly to settle the question of the Burgundian inheritance, and he acquired an influence in the college of cardinals which became paramount during the pontificate of Innocent VIII. Rivalry, however, growing up between him and Roderigo Borgia, he took refuge at Ostia after the latter's election as Alexander VI., and in 1494 went to France, where he was successful in inciting Charles VIII. to undertake the conquest of Naples. He accompanied the young king on his campaign.

During the pontificate of Alexander VI. Della Rovere remained in France, nominally in support of the pope, for whom he negotiated the treaty of 1498 with Louis XII., but in reality bitterly hostile to him. On the death of Alexander (1503) he returned to Italy and supported the election of Pius III., who died shortly afterwards. Della Rovere then won the support of Cesare Borgia and was unanimously elected pope. Julius II. repudiated the system of nepotism which had flourished under Sixtus IV., Innocent VIII. and Alexander VI., and set himself with courage and determination to restore, consolidate and extend the temporal possessions of the Church. By dexterous diplomacy he first succeeded (1504) in rendering it impossible for Cesare Borgia to remain in Italy. He then pacified the Romagna by reconciling the powerful houses of Orsini and Colonna.

In 1504 he concluded an alliance with France and Germany in order to oust the Venetians from Faenza, Rimini and other towns which they occupied. He freed Perugia and Bologna in the brilliant campaign of 1506. In 1508 he concluded against Venice the famous league of Cambray with the emperor Maximilian, Louis XII. of France and Ferdinand of Aragon, and in 1509 placed the city of Venice under an interdict. By the battle of Agnadello the Italian dominion of Venice was practically lost; but as the allies were not satisfied with merely effecting his purposes, the pope entered into a combination with the Venetians against those who immediately before had been engaged in his behalf. He absolved the Venetians in the beginning of 1510, and shortly afterwards placed the ban on France. At a synod convened by Louis XII. at Tours in September, the French bishops withdrew from the papal obedience and resolved, with Maximilian's co-operation, to seek the deposition of Julius. In Nov. 1511 a council met at Pisa for this object, but without success. Julius forthwith formed the Holy league with Ferdinand of Aragon and with Venice against France, in which both Henry VIII. and the emperor ultimately joined. The French were driven out of Italy in 1512, and papal authority was once more securely established in the States immediately around Rome.

Julius had already issued, on July 18, 1511, the summons for a general council to deal with France, with the reform of the church, and with a war against the Turks. This council, the Fifth Lateran, assembled on May 3, 1512, condemned the pragmatic sanction of the French church, and was still in session when Julius died. In the midst of his combats Julius never neglected his ecclesiastical duties. His bull of Jan. 14, 1505, against simony in papal elections was re-enacted by the Lateran council (Feb. 16, 1513). He condemned duelling by bull of Feb. 24, 1509. He effected some reforms in the monastic orders; urged the conversion of the sectaries in Bohemia; and sent missionaries to America, India, Abyssinia and the Congo. His government of the Papal States was excellent. Julius was a generous patron of art and literature. He laid the foundation-stone of St. Peter's (April 18, 1506); he founded the Vatican museum; and he was a friend and patron of Bramante, Raphael and Michelangelo. Julius was undoubtedly one of the greatest popes since Innocent III., and it is a misfortune of the church that his temporal policy eclipsed his spiritual office. He died of a fever on Feb. 21, 1513, and was succeeded by Leo X.

JULIUS III. (Giovanni Maria del Monte), pope from 1550 to 1555, was born on Sept. 10, 1487. He was created cardinal by Paul III. in 1536, filled several important legations, and was elected pope on Feb. 7, 1550, despite the opposition of Charles V., whose enmity he had incurred as president of the council of Trent. As an adherent of the emperor he suffered in consequence of imperial reverses, and was forced to confirm Parma to Ottavio Farnese, the ally of France (1552). Julius then virtually abdicated the management of affairs, and gave himself up to enjoyment. What progress reform made during his pontificate was due to its acquired momentum, rather than to the zeal of the pope. Yet under Julius steps were taken to abolish plurality of benefices and to restore monastic discipline; the Collegium Germanicum, for the conversion of Germans, was established in Rome, 1552; and England was absolved by the cardinal-legate Pole, and received again into the Roman communion (1554). Julius died on March 23, 1555, and was succeeded by Marcellus II.

JULLIEN, LOUIS ANTOINE (1812–1860), musical conductor, was born at Sisteron, Basses Alpes, France, on the 23rd of April, 1812, and studied at the Paris conservatoire. He came to London where he formed a good orchestra and established promenade concerts. Subsequently he travelled to Scotland, Ireland and America with his orchestra. For many years he was a familiar figure in the world of popular music in England, and his portly form with its gorgeous waistcoats occurs very often in the early volumes of *Punch,* where he was dubbed "the Mons." He brought out an opera, *Pietro il Grande,* at Covent Garden (1852) on a scale of magnificence that ruined him, for the piece was a complete failure. He was in America until 1854, when he returned to London for a short time; ultimately he went back to Paris, where, in 1859, he was arrested for debt. He lost his reason soon afterwards, and died on March 14, 1860.

JULLUNDUR or **JALANDHAR,** a city of British India, giving its name to a district and a division in the Punjab. The city is 260 m. by rail N.W. of Delhi. Pop. (1921), 71,008. It is the headquarters of a brigade.

The DISTRICT OF JULLUNDUR occupies the lower part of the tract known as the Jullundur Doab, between the rivers Sutlej and

Beas, except that it is separated from the Beas by the state of Kapurthala. Area, 1,431 sq.m. Pop. (1921), 822,544; the average density of the rural population is 493 persons per square mile, being the highest in the province. Cotton-weaving and sugar manufacture are the principal industries for export trade, and silk goods and wheat are also exported.

The Jullundur Doab in early times formed the Hindu kingdom of Katoch, ruled by a family of Rajputs whose descendants still exist among the petty princes of the Kangra hills. Under Mohammedan rule the Doab was generally attached to the province of Lahore. In 1766 the town of Jullundur fell into the hands of the Sikhs. It was annexed by Ranjit Singh in 1811 and became the capital of the Lahore possessions in the Doab until the British annexation at the close of the first Sikh war (1846).

JULY, the seventh month in the modern calendar, consisting of thirty-one days. It was originally the fifth month of the year, and as such was called by the Romans *Quintilis*. The later name of Julius was given in honour of Julius Caesar (who was born in the month); it came into use in the year of his death. The Anglo-Saxons called July *Heg-mônath,* "hay-month," or *Maed-mônath,* "mead-month," the meadows being then in bloom.

JUMALA, indicating rather godhead, than a divine being; the supreme god of the ancient Finns and Lapps, among some tribes called Num or Jilibeambaertje, as protector of the flocks.

JUMIÈGES, a village of north-western France, in the department of Seine-Inférieure, 17 m. W. of Rouen by road, on a peninsula formed by a bend of the Seine. Pop. (1926) 244. Jumièges was a great Benedictine establishment. Of the abbey-church (1040–67), there remain the façade with two towers, the walls of the nave, a wall and sustaining arch of the great central tower and débris of the choir (restored in the 13th century). A small museum in a 14th century building contains the grave-stone of Agnes Sorel, and two mysterious recumbent figures of the 13th century, commonly known as the *Énervés*. The church of St. Pierre (14th century), adjoining the south side of the abbey-church, is a continuation of a church of the time of Charlemagne, of which a fragment still survives. Ruins of the chapter-house (13th century) and refectory (12th and 15th centuries) also survive. The abbey was founded about the middle of the 7th century by St. Philibert, whose name may be read on gold and silver coins obtained from the site. It was destroyed by the Normans, but rebuilt in 928 by William Longsword, duke of Normandy; it continued to exist till 1790. Charles VII. often resided there with Agnes Sorel, who had a manor at Mesnilsous-Jumièges, and died in the monastery in 1450.

JUMILLA, a town of eastern Spain, in the province of Murcia, 40 m. N. by W. of Murcia by road, on the right bank of the Arroyo del Jua, a left-bank tributary of the Segura. Pop. (1920), 20,303. The church of Santiago is noteworthy for its paintings and frescoes.

JUMNA, river, northern India. Rising in the Himalayas in Tehri state, about 5 m. N. of the Jamnotri hot springs, in 31° 3′ N. and 78° 30′ E., the stream first flows south, then south-west, and afterwards due south, receiving several small tributaries in its course. It afterwards turns sharply to the west and is joined by the large river Tons from the north. The Jumna here emerges from the Himalayas into the valley of the Dun, and flows south-west, dividing the Kiarda Dun on the west from the Dehra Dun on the east. It then, at the 95th mile of its course, forces its way through the Siwalik hills, and debouches upon the plains of India at Fyzabad in Saharanpur district. By this time a large river, it gives off, near Fyzabad, the eastern and western Jumna canals. From Fyzabad the river flows for 65 m. in a south-south-west direction, receiving the Maskarra stream from the east. Near Bidhauli, in Muzaffarnagar district, it turns due S. for 80 m. to Delhi city, thence south-east for 27 m. to near Dankaur, receiving the waters of the Hindan river on the east. From Dankaur it resumes its southerly course for 100 m. to Mahaban near Muttra, where it turns east for nearly 200 m., passing the towns of Agra, Ferozabad and Etawah, receiving on its left bank the Karwannadi, and on its right the Banganga (Utanghan). From Etawah it flows 140 m. S.E. to Hamirpur, being joined by the Sengar on its north bank, and on the south by the great river Chambal (650 m. long) from the west, and by the Sind. From Hamirpur, the Jumna flows nearly due east, until it enters Allahabad district and passes Allahabad city, below which it falls into the Ganges in 25° 25′ N. and 81° 55′ E. In this last part of its course it receives the waters of the Betwa and the Ken. Where the Jumna and the Ganges unite is the *prayag,* or place of pilgrimage for devout Hindus (*see* GANGES).

The Jumna, after issuing from the hills, has a longer course through the United Provinces than the Ganges, but is not so large nor so important; and above Agra in the hot season it dwindles to a small stream. This is no doubt partly caused by the eastern and western Jumna canals, of which the former irrigates nearly 400,000 acres in the United Provinces; while the latter serves 55,000 acres in the Punjab. The headworks of the two canals are situated near the point where the river issues from the Siwaliks.

The traffic on the Jumna, which is carried in barges, is not large. Its waters are clear and blue, while those of the Ganges are yellow and muddy; the difference between the streams can be discerned for some distance below the point at which they unite. Its banks are high and rugged, as it traverses the extreme edge of the alluvial plain of Hindustan, and in the latter part of its course almost touches the Bundelkhand offshoots of the Vindhya mountains.

The Jumna at its source near Jamnotri is 10,849 ft. above the sea-level; in the next 16 m. it falls at the rate of 314 ft. in a mile. The catchment area of the river is 118,000 sq.m. The Jumna is crossed by railway bridges at Delhi, Muttra, Agra and Allahabad, while bridges of boats are stationed at many places.

JUMPING, an athletic sport practised from the earliest times. Leaping to the music of lutes formed a part of the pentathlon, or quintuple games, at the ancient Olympic games. The Greek chroniclers record that the athlete Phayllus jumped a distance of 50 Olympian feet, but owing to the different conditions, it is impossible to institute comparisons with modern records. It must be remembered that the Greeks used *halteres* or weights to assist their jumping powers (*see* GAMES, CLASSICAL). The three kinds of jumping now standardized as championship events throughout the world, and which are included in the programme of the modern Olympic games, are the running long jump, the running high jump and the hop, step and jump. The technique of jumping has improved amazingly in the last 100 years. When Donald Walker wrote his classical book of *Manly Exercises* in 1834, he stated of the long jump that "on level ground 20ft. is a first-rate leap; 21ft. is extraordinary and 22ft. is very rarely accomplished." And of the high jump that "a good high leaper will clear 5ft., a first-rate one 5½ft., and an extraordinary one 6ft."

In 1874, J. Larne, Ireland, succeeded in jumping 23ft. 1¼in., and he is believed to be the first man ever to pass the 23ft. mark. In 1893, C. B. Fry, Oxford university, created a world's record of 23ft. 6¼in, the American championship of the same year being won by C. S. Reber, 23ft. 4½in. Five years later a veritable Irish giant, the late W. J. M. Newburn, was credited with 24ft. Newburn's record stood but a short time. In 1901 P. O'Connor cleared 24ft. 9in in the Irish championship and 24ft. 11¾in. a few weeks later. His world's record was only once approached, when A. L. Gutterson, U.S.A., won the Olympic event at 24ft. 11¼in at Stockholm in 1912. After the World War a new school of negro jumpers appeared, and E. O. Gourdin, Harvard, in 1921, jumped 25ft. 3in, Sol Butler, S. Cator (Haiti), de Hart Hubbard, University of Michigan (all negroes) also passed 25ft and at Paris, 1924, R. Legendre, Georgetown university, a white American, further increased the world's record to 25ft. 6in. In 1925, Hubbard, who is a very small man, jumped 25ft. 10⅞in., and in 1927 accomplished the incredible leap of 26ft. 2in. The improvement that has taken place may be further emphasized by the performance of Major R. F. B. Naylor, D.S.O., M.C., who, while still at Charterhouse, jumped 21ft. 3in. Up to the time of A. L. Gutterson, long jumpers had taken a fast run and a simple but tremendous spring, tucking the knees up high as they sailed through the air. The 1912 school of jumpers, however, discovered that the

flight might be prolonged by breaking the tucked-up knees position by a vigorous "hitch-kick," or running step, in the air.

Despite Mr. Walker's opinion expressed in 1834 that an extraordinary high leaper could clear 6ft., no record can be found of any such feat ever having been accomplished until 1876, in which year M. J. Brooks (Rugby and Brasenose college, Oxford) achieved 6ft. 2½in. Even then many people refused to believe that which they had not actually seen, and the Scottish professional, Donald Dinnie, wrote to the press to show on *a priori* grounds that such an achievement was impossible. Other and even greater records followed very quickly. In 1880, P. Davin, Ireland, jumped 6ft. 2¾in., and in 1887, W. Byrd Page Jr., University of Pennsylvania, U.S.A., who stood only 5ft. 6¾in. high, cleared 6ft. 4in. G. W. Rowden, England, another small man, in 1890 jumped 6ft. 5¾in., although the record was never passed, and in 1895, M. F. Sweeney, U.S A., achieved 6ft. 5⅝in. Sweeney's height was but 5ft. 8½in., and he has had his prototype in more recent times in R. W. Landon, Yale university, U.S A., who in clearing 6ft. 4in., at the Antwerp Olympiad, 1920, jumped 6in. higher than the top of his own head. England has produced only one great jumper in modern times, B. Howard Baker, who jumped 6ft. 5in. in 1921. This is due to the fact that English athletes have not yet understood the fundamental principle of high jumping discovered by Sweeney. This principle is to change the position of the body from vertical to horizontal in its transit across the bar, so that no part is raised above the centre of gravity of the body. In the Sweeney style, and its variants, 6½ft. was accomplished but never exceeded. About 1912, George Horine, Leland Stanford university, U.S A., evolved a revolutionary style which has since been widely adopted. In the Sweeney style the jumper's body lies out flat and at right angles to the bar as it is crossed, the spring having been made from the outer foot. In the Horine method, commonly called the "western roll," the athlete springs from the foot nearest to the bar, and gives the legs more momentum than the upper part of the body. Above the bar the body is flat out and parallel to the bar, over which it rolls forward with the lower arm down and often actually holding the bar in place by pressing it back against the uprights. In this style Horine first cleared 6ft. 7in., and in 1925, H. M. Osborn, University of Illinois, U.S.A., set the world's record at 6ft. 8¼in. The trick of holding the cross-bar in place by the pressure of the arm was, however, considered unfair, and in 1926 a new rule was passed by the I A.A.F. requiring that the uprights and the pegs supporting the cross-bar should be so placed that the bar can fall off either forward or backward if it is touched by the jumper. The new rule reads as follows: "Each peg supporting the cross-bar shall be flat and square, 1½in. wide and extending 2¾in. from the upright in the direction of the opposite upright. The end of the cross-bar shall rest on the pegs in such a way that the cross-bar easily falls to the ground, either forward or backward, if touched by a competitor."

The hop, step and jump is an event which, formerly, enjoyed its greatest popularity in Ireland. For many years the two Irish brothers, D. F. and T. J. Ahearne, held the world's and Olympic records, the former having accomplished 50ft. 11in. in 1911, and the latter 48ft. 11¼in. in 1908. At the Olympic games, Paris, 1924, the world's record was broken by A. W. Winter, Australia (50ft. $11\frac{3}{16}$in.) while the next four men all surpassed the previous Olympic record; and at the English championships, 1927, W. Peters, Holland, achieved 50ft. 9in. In this event the athlete first lands upon the foot from which his spring has been made, then takes a giant stride and lands upon the opposite foot, from which he makes his final jump and lastly alights upon both feet. The event is a very trying one and should be practised only by those athletes who have very strong legs, as either the knee or ankle is liable to go when a forcible landing is made on hard ground at the end of the hop. Success lies in the ability of the athlete to proportion the triple effort and, during the "step," to so relax one side of the abdomen that the rear leg will be allowed to drag until it is fully extended.

No jumping records were broken in the Ninth Olympic Games (1928) held in Amsterdam.

JUMPING-HARE, a large leaping south and east African rodent, *Pedetes caffer,* typifying a family by itself, the *Pedetidae.* The colour of the creature is bright rufous fawn; the eyes are large; and the bristles round the muzzle very long. The front limbs are short, and the hind ones very long; and although the fore-feet have five toes, those of the hind-feet are reduced to four. The bones of the lower part of the hind leg (tibia and fibula) are united for a great part of their length. The jumping-hare is found in open or mountainous districts. It is nocturnal, and dwells in composite burrows excavated and tenanted by several families. When feeding it progresses on all four legs, but if frightened takes gigantic leaps on the hind-pair alone; the length of such leaps frequently reaches twenty feet. The young are generally three or four in number, and are born in the summer. A second smaller species has been named. (*See* RODENTIA.)

JUMPING-MOUSE, the name of a North American mouse-like rodent, *Zapus hudsonius,* belonging to the family *Jaculidae,* and the other members of the same genus. These rodents are distinguished by their elongated hind limbs, and by four pairs of cheek-teeth in each jaw. There are five toes to all the feet, but the first in the fore-feet is rudimentary, and furnished with a flat nail. The cheeks are provided with pouches. A closely allied genus *Eozapus* is known from N.W. China. *Z. insignis* differs from the typical *Z. hudsonius* by the loss of the premolar. The Szechuen jumping-mouse differs from the typical *Zapus* by the shorter ears, and the white tail-tip. In America these rodents inhabit forest, pasture, cultivated fields or swamps, but are nowhere numerous. When disturbed, they start off with enormous bounds of eight or ten feet in length, which soon diminish to three or four. The nest is placed in clefts of rocks, among timber or in hollow trees, and there are generally three litters in a season. (*See* RODENTIA.)

JUMPING-SHREW, a name for the terrestrial Insectivora (*q.v.*) of the African family *Macroscelididae,* of which there is a number of species ranging over the African continent, representing the tree-shrews of Asia. They are small long-snouted animals, mainly nocturnal, feeding on insects, and with very long metatarsals, as an adaptation to their jumping habits. In some the muzzle is much prolonged, whence the name elephant-shrews is sometimes applied to the family.

JUNAGARH, native state of India (Western India States Agency), Gujarat division of Bombay, extending inland from the southern coast of the peninsula of Kathiawar. Area, 3,336 sq m.; pop. (1921), 465,493; tribute to the British government and the gaekwar of Baroda, £4,100; a considerable sum is also received as tribute from minor states in Kathiawar. The chief products are cotton, millet, rice and sesame. The state is traversed by a railway from Rajkot, to the seaport of Verawal. It includes the sacred mountain of Girnar and the ruined temple of Somnath, and also the forest of Gir, the only place in India where the lion survives. Junagarh ranks as a first-class state among the many chiefships of Kathiawar, and its ruler first entered into engagements with the British in 1807. The present Nawab, born in 1900, was invested with full powers in 1920.

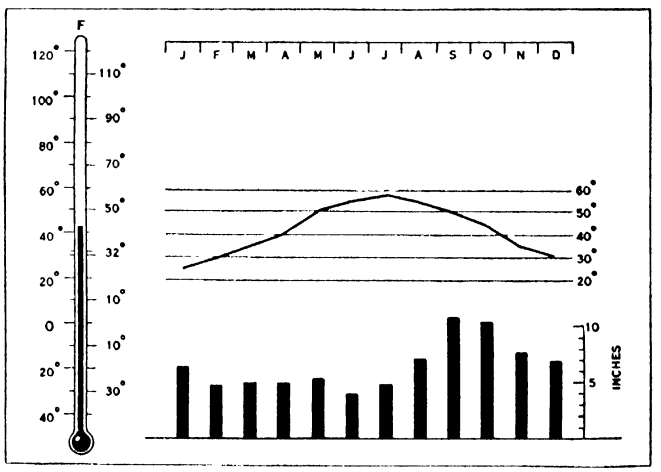
The modern town of JUNAGARH (33,221), 60 m. by rail S. of Rajkot, is handsomely laid out. It contains a college, a hospital, library and museum.

JUNCACEAE (rush family), in botany, a family of flowering plants belonging to the series Liliiflorae of the class Monocotyledones, containing about 800 species in seven genera, widely distributed in temperate and cold regions. It is represented in Great Britain by the two out of the eight genera which comprise the whole family—*Juncus,* rush, and *Luzula,* wood-rush. The same two genera represent the family throughout North America. They are generally perennial herbs with a creeping underground stem and erect, unbranched, aerial stems, bearing slender leaves which are grass-like or cylindrical or reduced to membranous sheaths. The small inconspicuous flowers are generally more or less crowded in terminal or lateral clusters, the form of the inflorescence varying widely according to the manner of branching and the length of the pedicels. The flowers are her-

maphrodite and regular, with the same number and arrangement of parts as in the family Liliaceae, from which they differ in the inconspicuous membranous character of the perianth, the absence of honey or smell, and the brushlike stigmas with long papillae—adaptations to wind-pollination as contrasted with the methods of pollination by insect agency, which characterize the Liliaceae. Juncaceae are, in fact, a less elaborated group of the same series

GREAT HAIRY WOOD-RUSH

as Liliaceae, but adapted to a simpler and more uniform environment than that larger and much more highly developed family.



JUNCO, a genus of finches (*Fringillidae*), of which five species inhabit North America, the commonest being *J. hyemalis,* with ten subspecies, ranging all over the continent in summer, wintering in the south.

JUNCTION CITY, the county seat of Geary county, Kansas, U.S.A., so named because it lies between the Smoky Hill and the Republican rivers where they unite to form the Kansas; 65 m. W. of Topeka, on Federal highways 40S and 77, and served by the Missouri-Kansas-Texas and the Union Pacific railways. The population in 1928 was about 7,500. It is a division point on the Union Pacific, which has large repair shops here; is the trade centre of a stock-raising and farming district; and its industries are chiefly such as serve the agricultural population, including a chick hatchery, feed mills, butter and ice-cream plants.

Three miles east is a military reservation of 23,000 ac., in which is Ft. Riley, a U.S. army post established in 1853, now used for a large cavalry school, with a personnel of 2,500; a permanent camp of the National Guard, used by several States; an Air Corps flying field (Marshall field); and Ogden monument, which marks the geographical centre of the United States. Adjoining the reservation (5 m. N. E. of the city) is the site of the short-lived settlement of Pawnee, where the first territorial legislature of Kansas met (July 2–6, 1855) in a building that still stands. South of the city are a prehistoric Indian mound and the spot agreed upon as the most northerly point reached by Coronado, both marked by monuments. Junction City was founded in 1857 and incorporated in 1859.

JUNE, the sixth month in the modern calendar, consisting of 30 days. Ovid makes Juno assert that the name was expressly given in her honour, but also derives it from *iuniores,* as May had derived from *maiores,* which may be explained by the two months being dedicated respectively to youth and age. Others connect the term with the gentile name Junius, or with the consulate of Junius Brutus. In the old Latin calendar June was the fourth month, and is said to have had 30 days; but at the time of the Julian reform of the calendar its days were only 29. To these Caesar added the 30th day. The Anglo-Saxons called June "the dry month," "midsummer month," and, in contradistinction to July, "the earlier mild month." The summer solstice (*see* SOLSTICE) occurs in June.

JUNEAU, the capital city of Alaska, situated on the continental shore of Gastineau channel, 873 nautical miles from Seattle, Wash., in 58° 18′ N. and 134° 24′ W.; pop. in 1920, 3,058. In 1916, just prior to the entry of the United States in the World War, Juneau and vicinity had a population estimated at seven to eight thousand. The sudden and rapid decrease was due to the cave-in and consequent abandonment of the Treadwell mine on Douglas island, across the channel, the failure of the Alaska gold mines or Gastineau property, owing to the increased cost of mining operations, making it impracticable to work the low grade ores being produced, and to the draft of young men for the war Another low grade gold mine, the Alaska Juneau, with its reducing mill within the city limits, is operating at a profit, with a milling capacity of 12,000 tons daily, at a reduction cost of approximately 55¢ per ton. Besides being the seat of the Territorial Government, Juneau is the headquarters of the 1st division of the district court of Alaska, and of practically all Federal activities in the Territory. The climate of Juneau is temperate, with considerable rainfall. July is the warmest month, with an average of 57·6° above zero, and January the coldest, with an average of 27·3° above Only 53 days of zero weather, or below, have been recorded in 33 years, the coldest of these being −15°.

GRAPH OF THE AVERAGE TEMPERATURE IN JUNEAU, ALASKA
The mercury in the thermometer stands at the normal annual mean temperature. The curve shows the normal monthly mean temperature through the year. The columns below indicate the normal precipitation for each month. Temperatures are given in degrees Fahrenheit

The principal industry in the past has been mining; it has a growing fish industry, and plans were well under way in 1928 for the manufacture of wood pulp and news print paper (W. P. R.)

JUNE-BERRY, the name given in North America to several species of shrubs and small trees of the genus *Amelanchier,* which produce sweet edible fruits, called also service-berry, sugar-berry and shad-bush. Botanically the genus belongs to the rose family (Rosaceae) and is closely allied to the apple. The dwarf juneberry (*A. alnifolia*), found from western Ontario to British Columbia and south to Michigan, New Mexico and California, is a small shrub, sometimes 10 ft. high, bearing thick roundish leaves, coarsely toothed around the blunt outer end, and white flowers in

terminal clusters, appearing very early in spring. The dark-purple, very sweet fruit, about ½ in. in diameter, was extensively eaten, both fresh and dried, by explorers and trappers in pioneer days and also by the Indians. Several choice varieties with larger fruits are in cultivation. Among closely related species in the eastern United States and Canada are the downy-leaved service-berry or shadbush (*A. canadensis*), a tree 30 to 40 ft. high, with the leaves white-woolly when young and rather dry tasteless fruit, and the smooth-leaved service-berry or june-berry (*A. laevis*), a similar tree, with the foliage purplish-bronze or light green when young, and the fruit dark-purple sweet and juicy. All of the foregoing are sparingly planted as ornaments.

JUNG, CARL (1875–), Swiss psychologist, was born on July 26, 1875, at Basle. He was a disciple of Freud until 1911, when he founded with Maeder a new school at Zurich. The main points in Jung's system, which he prefers to call analytical psychology rather than psycho-analysis, are his subtle working-out of his classification of man into introverted and extroverted types, his distinction of the four primary functions of mind as thinking, feeling, sensation and intuition, his rejection of Freud's theory of the sexual aetiology of the psychoneurosis and his emphasis on the creative impulse in man. In his attempt at a synthetic psychology, he draws attention to the possibilities of co-operation between the conscious and the unconscious, the latter being for him that part of the mind which is undeveloped rather than repressed, and which includes both the personal factor and the collective factor or disposition inherited from ancestors.

Jung's chief works are: *Diagnostische Assoziationsstudien* (1906; 2nd ed., 1910); *Psychologie der Dementia praecox* (1907); *Wandlungen und Symbole der Libido* (1912; 2nd ed., 1925; Eng. trans. as *Psych. of the Unconscious,* 1916 and 1921); *Das Unbewusste im normalen und kranken Seelenleben* (1917; 3rd ed., 1926); *Collected Papers on Analytical Psychology* (Eng. trans., 1916 and 1917); *Studies in Word Association* (Eng. trans., 1918) and *Psychologische Typen* (1921; 2nd ed., 1925; Eng. trans., 1923).

See J. H. van der Hoop, *Character and the Unconscious; a critical Exposition of the Psychology of Freud and of Jung* (1923) and J. Corrie, *A.B.C. of Jung's Psychology* (1927).

JUNG, JOHANN HEINRICH (1740–1817), best known by his assumed name of HEINRICH STILLING, German author, was born at Grund, near Hilchenbach, Westphalia, on Sept. 12, 1740, of poor parents. Jung became, by his father's desire, schoolmaster and tailor, but found both pursuits equally wearisome. After various teaching appointments he went in 1768 with "half a French dollar" to study medicine at Strasbourg. There he met Goethe, who introduced him to Herder. The acquaintance with Goethe ripened into friendship, and it was by his influence that Jung's first and best work, *Heinrich Stillings Jugend* (1777) was written. In 1772 he settled at Elberfeld as physician and oculist; he began to lecture on technical subjects in the Kameralschule at Kaiserslautern, and in 1787 became professor of economics at Marburg. In 1803 he resigned and returned to Heidelberg. The grand duke Charles Frederick of Baden pensioned him in 1806 and his last years were spent at Karlsruhe, where he died on April 2, 1817. He was married three times and left a numerous family. His pietistic novels and various other mystical works had considerable influence in their day. But Stilling lives in the autobiography and in the charming picture of him in Goethe's *Dichtung und Wahrheit.*

A complete edition of Jung's works was published at Stuttgart (14 vols., 1835–38). His *Briefe* were published in 1905. There are English translations by Sam Jackson of the *Leben* (1835), of the *Theorie der Geisterkunde* (London, 1834, and New York, 1851); and of *Theobald, or the Fanatic,* a religious romance, by the Rev. Sam. Schaeffer (1846).

See biographies by F. W. Bodemann (1868), J. v. Ewald (1817), R. Peterson (1890), and a critical estimate by G. Stecher, *Jung-Stilling als Schriftsteller* (1913).

JUNG BAHADUR, SIR, MAHARAJA (1816–1877), prime minister of Nepal, was a grand-nephew of Bhimsena Thapa, the famous military minister of Nepal, who from 1804 to 1839 was *de facto* ruler of the state under the rani Tripuri and her successor. Bhimsena's supremacy was threatened by the Kala Pandry, and many of his relations, including Jung Bahadur, went into exile in 1838, thus escaping Bhimsena's fate. The Pandry leaders were in turn assassinated in 1843, and Matabar Singh, uncle of Jung Bahadur, was created prime minister. He appointed his nephew general and chief judge, but shortly afterwards he was himself put to death. Fateh Jung thereon formed a ministry, of which Jung Bahadur was made military member. In the following year, 1846, Fateh Jung and thirty-two other chiefs were assassinated, and the rani appointed Jung Bahadur sole minister. The rani quickly changed her mind, and planned the death of her new minister, who at once appealed to the maharaja. But the plot failed The raja and the rani wisely sought safety in India, and Jung Bahadur firmly established his own position by the removal of all dangerous rivals. In 1850–51 he was in England. The reform of the penal code, and a desultory war with Tibet, occupied his attention until news of the Indian Mutiny reached Nepal. Jung Bahadur resisted all overtures from the rebels, and sent a column to Gorakpur in July 1857. In December he furnished a force of 8,000 Gurkhas, which reached Lucknow on March 11, 1858, and took part in the siege. The moral support of the Nepalese was exceedingly valuable. Jung Bahadur was made a G.C.B., and a tract of country annexed in 1815 was restored to Nepal. He received a visit from the Prince of Wales in 1876. On Feb. 25, 1877 he died. Three of his widows immolated themselves on his funeral pyre.

JUNG-BUNZLAU: *see* MLADA BOLESLAV.

JUNGFRAU, a well-known Swiss mountain (13,669 ft.), admirably seen from Interlaken. It rises on the frontier between the cantons of Bern and of the Valais, and is in the Bernese Oberland, two peaks of which (the Finsteraarhorn, 14,026 ft., and the Aletschhorn, 13,721 ft.) surpass it in height. It was first ascended in 1811 by the brothers Meyer, by the eastern or Valais side. It was not till 1865 that Sir George Young and the Rev. H. B. George made the first ascent from the west or Interlaken side. In 1927 an ascent was made by two guides on the south side from the Rotta. A railway (planned to reach the summit), the highest in Europe, was constructed between 1896 and 1912 to the Jungfraujoch (11,340 ft.) from Scheidegg. The line passes by a tunnel (4¾ m. long) through the Eiger, Mönch and Jungfrau. A hotel was built in 1925 near the upper terminus of the railway.

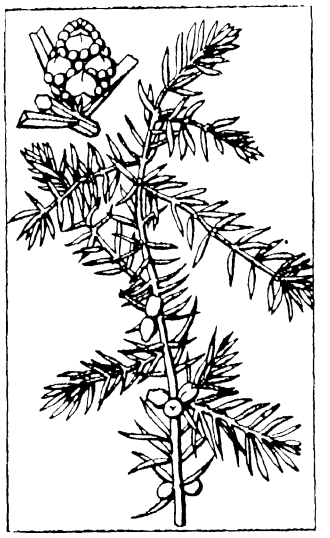
JUNGLE, an Anglo-Indian term for a forest, a tangled wilderness. The Hindustani word *jangal* strictly means waste, uncultivated ground, which tends to become covered with trees or long grass.

JUNGLE FOWL, the name usually applied to wild members of the genus *Gallus,* from which our domestic fowls are derived. The four species are described in detail under FOWL.

JUNIATA, a borough of Blair county, Pa., U.S.A., in the heart of the Allegheny mountains, 1m. N.E. of Altoona, on the Pennsylvania railroad. The population was 7,660 in 1920 (96% native white) and was estimated locally at 9,000 in 1928. The Pennsylvania Railroad has immense shops here, and there are silk and planing mills. The borough was settled about 1880 and incorporated in 1893.

JUNÍN, a *sierra* department of central Peru, bounded on the north by Huánuco, east by Loreto and Cuzco, south by Huancavelica and west by Lima. Area, 22,820 sq.m.; estimated population (1920) 394,393. It includes *sierra* and forested eastern slopes of cordillera with their deep valleys (*see* PERU: *Sierra*). Most of the department consists of a desolate plain (Pampa of Junín) at a height of more than 13,000 ft., across which flows the Mantaro river from its source in Lake Junín. The climate is raw and cold. On account of railway communication with the coast, Junín is the centre of mining developments and of the scientific livestock industry. Formerly silver, copper now leads in mineral production (*see* CERRO DE PASCO) with vanadium (Minasragra), gold, silver, lead, zinc, bismuth, coal and other mines in active operation. Peruvian as well as foreign capital is largely invested here. Agricultural products of the *sierra* include potatoes, cereals and livestock; the eastern valleys raise coffee, sugar, cacao, coca, fruits and other tropical crops. A recent influx

of European colonists, mostly Poles, has reached these valleys. The Central railway from Callao runs south from Oroya to Huancayo and beyond, while a private line connects at Oroya for Cerro de Pasco, with branches to other mining centres. The department is crossed from north to south by a good road, with spurs to neighbouring towns and toward eastern and western valleys. There are now (1927) 644 m. of finished roads in Junín. The capital is Cerro de Pasco (*q.v.*). Other important towns are Huancayo, famous for its commerce and weekly fair, its cereals, poultry and livestock, leather and silver work; Jauja (11,000 ft.) for its tuberculosis sanatorium, a natural health resort; Oroya, for smelter and hydroelectric plants (16,000 h.p. in all); Yauli for mines; Tarma, at the head of the Chanchamayo valley, for its fruits, coffee and brandy. A decisive battle during the wars of independence, was fought near Lake Junín on Aug. 6, 1824.



JUNIOR LEAGUES OF AMERICA, THE ASSOCIATION OF, is an association for the advancement of civic welfare, organized by young women on the principles of representative government. The purpose of the League is to further civic progress throughout its branches in the cities of the United States and Canada through the maintenance of various civic projects. The association also trains its members to co-operate in the various branches of civic work. The type of welfare work to be undertaken is left to the discretion of the individual league.

The nucleus of the present association was the Junior League of the New York College Settlement, organized by Miss Mary Harriman in 1900. This was followed, in 1906, by the founding of a second league in Boston. Baltimore, Brooklyn and Philadelphia having meanwhile joined the ranks, the first general conference was held in 1911. In 1920 the 39 leagues then existing were organized by Mrs. Willard Straight (Dorothy Whitney) into the present association. Six years later a national headquarters was established in New York city, and in the following year an *Anthology of Junior League Poetry* was published. In the same year the *Bulletin*, since 1912 the official organ, was converted into the *Junior League Magazine*. There were 101 leagues in the United States, representing 39 States, and three additional leagues in Canada, in 1928. The same year a national club with offices and exhibition rooms was established in New York city.

(W. B. PAL.)

JUNIPER. The junipers, of which there are about 40 species, are evergreen bushy shrubs or low columnar trees of the pine family (*Pinaceae*), with a more or less aromatic odour, inhabiting the whole of the cold and temperate northern hemisphere, but attaining their maximum development in the Mediterranean region, the North Atlantic islands, and the eastern United States. The leaves are usually articulated at the base, spreading, sharp-pointed and needle-like in form, destitute of oil-glands, and arranged in alternating whorls of three; but in some the leaves are minute and scale-like, closely adhering to the branches, the apex only being free, and furnished with an oil-gland on the back. Sometimes the same plant produces both kinds of leaves on different branches, or the young plants produce acicular leaves, while those of the older plants are scale-like. The male and female flowers are usually produced on separate plants. The mature cone is fleshy, with the succulent scales fused together and forming the fruit-like structure, the berry of the juniper. The berries are red or purple in colour, varying in size from ⅛ in. to ½ in. in diameter. They thus differ considerably from the cones of other members of the order Coniferae, of Gymnosperms (*q.v.*), to which the junipers belong. The seeds are usually three in number, sometimes fewer (1), rarely more (8), and are marked with large glands containing oil. The genus occurs in a fossil state, four species having been described from Tertiary rocks.

The savin, *Juniperus Sabina*, abundant on the mountains of central Europe, is an irregularly spreading much-branched shrub with scale-like glandular leaves, and emitting a disagreeable odour when bruised. The plant is poisonous, acting as a powerful local and general stimulant, diaphoretic, emmenagogue and anthelmintic; it was formerly employed both internally and externally. *J. bermudiana*, a tree about 40 or 50 ft. in height, yields a fragrant red wood, which was used for the manufacture of "cedar" pencils. The tree is now very scarce in Bermuda, and the "red cedar," *J. virginiana*, of North America is employed instead for pencils and is also used for clothes chests, interior finish, fence posts and telegraph poles. The red cedar, which is native to dry soil from Nova Scotia to North Dakota and south to Georgia and Texas, sometimes attains a height of 100 ft and a trunk diameter of 5 ft., though usually much smaller. The galls produced at the ends of the branches have been used in medicine, and the wood yields cedar-camphor and oil of cedar-wood. *J. thurifera* is the incense juniper of Spain and Portugal, and *J. phoenicea* (*J. lycia*) from the Mediterranean district is stated by Loudon to be burned as incense.

BY COURTESY OF THE ROYAL BOTANIC GARDENS
JUNIPER (JUNIPERUS COMMUNIS). MALE CATKIN SHOWN IN UPPER LEFT CORNER

The common juniper, *J. communis*, is a very widely distributed plant, occurring in the whole of northern Europe, central and northern Asia to Kamchatka, and east and west North America. It grows at considerable elevations in southern Europe, in the Alps, Apennines, Pyrenees and Sierra Nevada (4,000 to 8,000 ft.). It also grows in Asia Minor, Persia, and at great elevations on the Himalayas. In Great Britain it is usually a shrub with spreading branches, less frequently a low tree. The common juniper is official in the British pharmacopoeia and in that of the United States, yielding the oil of juniper, a powerful diuretic, distilled from the unripe fruits. The wood is very aromatic and is used for ornamental purposes. In Lapland the bark is made into ropes. The fruits are used for flavouring gin (a name derived from *juniper*, through Fr. *genièvre*). *J. Oxycedrus*, from the Mediterranean district and Madeira, yields cedar-oil which is official in most of the European pharmacopoeias. This oil is used largely in microscopical work for "clearing" sections, etc.

Juniperus drupacea of Asia Minor has large and edible fruits; they are known in the East by the name *habhel*.

In North America about 15 native species of juniper occur, inclusive of the red cedar and the common juniper. Among these are the western red cedar (*J. scopulorum*), which extends from the central Rocky Mountains northwestward to British Columbia; the California juniper (*J. californica*), with reddish fruit, eaten by the Indians; the rock juniper (*J. mexicana*), of Texas and Mexico, with brown wood; the western juniper (*J. occidentalis*), of the Pacific States; the alligator juniper (*J. pachyphloea*), of the southern Rockies, with a distinctly checkered trunk; the creeping juniper (*J. horizontalis*), found from Nova Scotia to British Columbia, with prostrate branches; and the rare drooping juniper (*J. flaccida*), of the Mexican border, with weeping branches.

Many junipers are extensively grown as ornamentals, especially varieties of the savin, the common juniper and the red cedar.

JUNÍPERO SERRA, MIGUEL JOSÉ: *see* SERRA JUNÍPERO, MIGUEL JOSÉ.

JUNIUS, FRANZ (1545–1602), French Huguenot divine, born at Bourges, studied at Geneva, and was professor at Heidelberg and at Leiden, where he died on Oct. 13, 1602. He was a voluminous writer on theological subjects, and translated and composed many exegetical works. He is best known from his own edition of the Latin Old Testament, with a version of the New Testament added (Geneva, 1590; Hanover, 1624).

The *Opera Theologica Francisci Junii Biturigis* were published at Geneva (2 vols., 1613), to which is prefixed his autobiography, written about 1592 (new ed., by A. Kuypers, 1882 *seq.*).

JUNIUS, FRANZ (1589–1677), son of the above, who prepared the first edition of the Gothic Codex of Ulfilas, was born at Heidelberg, and brought up at Leiden. In 1617 he became

pastor at Hillegondsberg, but in 1620 went to England, where he became librarian to Thomas Howard, earl of Arundel, and tutor to his son. He remained in England thirty years, devoting himself to the study of Anglo-Saxon, and afterwards of the cognate old Teutonic languages. In 1651 he returned to Holland; and for two years lived in Friesland in order to study the old dialect. In 1675 he returned to England, and died in the house of his nephew, Isaac Vossius, on Nov. 19, 1677. He was buried at Windsor in St. George's Chapel.

Junius published *De pictura veterum* (1637) (in English by the author, 1638; enlarged and improved edition by J. G. Graevius, who prefixed a life of Junius, with a catalogue of architects, painters, etc., and their works, Rotterdam, 1694); *Observationes in Willerami Abbatis francicam paraphrasin cantici canticorum* (Amsterdam, 1655); *Annotationes in harmoniam latino-francicam quatuor evangelistarum, latine a Tatiano confectam* (Amsterdam, 1655); *Caedmonis monachi paraphrasis poetica geneseos* (Amsterdam, 1655) (*see* criticism under CAEDMON); *Quatuor D.N.I.C. evangeliorum versiones perantiquae duae, gothica scilicet et anglo-saxonica* (Dort, 2 vols., 1665) (the Gothic version in this book Junius transcribed from the Silver Codex of Ulfilas; the Anglo-Saxon version is from an edition by Thomas Marshall, whose notes to both versions are given, and a Gothic glossary by Junius); *Etymologicum anglicanum,* ed. by Edward Lye, and preceded by a life of Junius and George Hickes's Anglo-Saxon grammar (1743) (its results require careful verification in the light of modern research). His rich collection of ancient mss., edited and annotated by him, Junius bequeathed to Oxford. Graevius gives a list of them.

JUNIUS, the pseudonym of a writer who contributed a series of letters to the London *Public Advertiser,* from Jan. 21, 1769, to Jan. 21, 1772. The signature had been already used by him in a letter of Nov. 21, 1768, which he did not include in his collection of the *Letters of Junius* published in 1772. The name was chosen in all probability because he had already signed "Lucius" and "Brutus," and wished to exhaust the name of Lucius Junius Brutus the Roman patriot. Whoever the writer was, he wrote under other pseudonyms before, during and after the period between Jan. 1769 and Jan. 1772. He acknowledged that he had written as "Philo-Junius," and there is evidence that he was identical with "Veteran," "Nemesis" and other anonymous correspondents of the *Public Advertiser.*

There is a marked distinction between the "letters of Junius" and his so-called miscellaneous letters. The second deal with a variety of subjects, some of a purely personal character, as for instance the alleged injustice of Viscount Barrington the secretary at war to the officials of his department. But the "letters of Junius" had a definite object—to discredit the ministry of the duke of Grafton. This administration had been formed in Oct. 1768, when the earl of Chatham was compelled by ill health to retire from office, and was a reconstruction of his cabinet of July 1766. Junius fought for the return to power of Chatham, who had recovered and was not on good terms with his successors. He communicated with Chatham, with George Grenville, with Wilkes, all enemies of the duke of Grafton, and also with Henry Sampson Woodfall, printer and part owner of the *Public Advertiser.* This private correspondence has been preserved. It is written in the disguised hand used by Junius.

The letters are of interest on three grounds—their political significance, their style, and the mystery which long surrounded their authorship. As political writings they possess no intrinsic value. Their matter is always invective. Junius began by a general attack on the ministry for their personal immorality or meanness. He then went on to pour acrimonious abuse on Grafton, on the duke of Bedford, on King George III. himself in the letter of Dec. 19, 1769, and ended with a most malignant and ignorant assault on Lord Chief Justice Mansfield. The practical effect of the letters was insignificant. They provoked anger and retorts. But the letter to the king aroused indignation, and though Grafton's administration fell in Jan. 1770, it was succeeded by the long-lived cabinet of Lord North. Junius confessed himself beaten, in his private letter to Woodfall of Jan. 19, 1773. He had materially contributed to his own defeat by his brutal violence. He sinned indeed in a large company. The employment of personal abuse had been habitual in English political controversy for generations.

If, however, Junius was doing what others did, he did it better than anybody else—a fact which sufficiently explains his rapid popularity. His superiority lay in his style. At his best Junius attains to a high degree of artificial elegance and vigour. He shows the influence of Bolingbroke, of Swift, and above all of Tacitus, who appears to have been his favourite author. The imitation is never slavish. Junius adapts, and does not only repeat. The white heat of his malignity animates the whole.

The pre-established harmony between Junius and his readers accounts for the rapidity of his success, and for the importance attributed to him by Burke and Johnson, far better writers than himself. Before 1772 there appeared at least 12 unauthorized republications of his letters, made by speculative printers. In that year he revised the collection named *"Junius: Stat nominis umbra,"* with a dedication to the English people and a preface. Other independent editions followed in quick succession. Junius himself had been early aware of the advantage he secured by concealment. "The mystery of Junius increases his importance" is his confession in a letter to Wilkes dated Sept. 18, 1771. The calculation was a sound one. For two generations after the appearance of the letter of Jan. 21, 1769, speculations as to the authorship of Junius were rife, and discussion had hardly ceased in 1929. Joseph Parkes, author with Herman Merivale of the *Memoirs of Sir Philip Francis* (1867), gives a list of more than 40 persons who had been supposed to be Junius.

The more plausible of these claims, such as those made for Lord Temple and Lord George Sackville, could not stand the test of examination. Indeed after 1816 the question was not so much "Who wrote Junius?" as "Was Junius Sir Philip Francis, or some undiscoverable man?" In that year John Taylor was led by a careful study of Woodfall's edition of 1812 to publish *The identity of Junius with a distinguished living character established,* in which he claimed the letters for Sir Philip Francis. He had at first been inclined to attribute them to Sir Philip's father, Dr. Francis, the author of translations of Horace and Demosthenes. Taylor applied to Sir Philip, who did not die till 1818, for leave to publish, and received from him answers which to an unwary person might appear to constitute denials of the authorship, but were in fact evasions.

The reasons for believing that Sir Philip Francis (*q.v.*) was Junius are very strong. His evasions were only to be expected. Several of the men he attacked lived nearly as long as himself, the sons of others were conspicuous in society, and King George III. survived him. Sir Philip, who had held office, who had been decorated, and who in his later years was ambitious to obtain the governor-generalship of India, dared not confess that he was Junius. The similarity of his handwriting to the disguised hand used by the writer of the letters is very close. If Sir Philip Francis did, as his family maintain, address a copy of verses to a Miss Giles in the handwriting of Junius (and the evidence that he did is weighty) there can be little further question as to the identity of the two. The similarity of Junius and Francis in regard to their opinions, their likes and dislikes, their knowledge and their known movements, amount, apart from the handwriting, almost to proof. It is certain that many felons have been condemned on circumstantial evidence less complete.

BIBLIOGRAPHY.—The best edition of the *Letters of Junius,* properly so called, with the *Miscellaneous Letters,* is that of J. Ward (1854). The most valuable contributions to the controversy as to the authorship are: *The Handwriting of Junius investigated by Charles Chabot, expert, with preface and collateral evidence by the Hon. E. Twisleton* (1871); *Memoirs of Sir Philip Francis, K.C.B.,* by Parkes and Merivale (1867); *Junius Revealed by his Surviving Grandson,* by H. R. Francis (1894); *The Francis Letters,* edit. by Beata Francis and Eliza Keary, with a note on the Junius controversy by C. F. Keary (1901); and "Francis, Sir Philip," by Sir Leslie Stephen, in *Dict. of Nat. Biog.* The case for those who decline to accept the claim of Sir Philip Francis is stated by C. W. Dilke, *Papers of a Critic* (1875); Abraham Hayward, *More about Junius, Franciscan Theory Unsound* (1868); and C. W. Everett, *The Letters of Junius* (1927), in which a claim is put in for Lord Shelburne. (D. H.; X.)

JUNK. (1) The name of the native sailing vessel, common to the far eastern seas, and especially used by the Chinese and Javanese. It is a flat-bottomed, high-sterned vessel with square bows and masts carrying lug-sails, often made of matting; (2) a nautical term for small pieces of disused rope or cable, cut up to

make fenders, oakum, etc., hence applied colloquially by sailors to the salt beef and pork used on board ship. The word is of doubtful origin; (3) junk has also passed into modern American usage as an expressive term for trash, rubbish and discarded material. A junk dealer is one who buys and sells scrap metal.

JUNKER, WILHELM (1840–1892), German explorer of Africa, was born at Moscow on April 6, 1840. He studied medicine at Dorpat, Göttingen, Berlin and Prague, but did not practise for long. After a series of short journeys to Iceland, Tunis and Lower Egypt, he remained almost continuously in eastern Equatorial Africa from 1875 to 1886. The result of his travels is given in his *Reisen in Afrika* (3 vols., Vienna, 1889–1891, Eng. edit. 1890–2). Perhaps the greatest service he rendered to geographical science was his investigation of the Nile-Congo watershed, when he established the identity of the Welle and Ubangi. The Mahdist rising prevented his return to Europe through the Sudan, as he had planned, and an expedition, fitted out in 1885 by his brother in St. Petersburg, failed to reach him. Junker then determined to go south. Leaving Wadelai on Jan. 2, 1886 he travelled by way of Uganda and Tabora and reached Zanzibar in Dec. 1886. Junker's ethnographical observations in the Niam-Niam (Azandeh) country are especially valuable. He died at St. Petersburg on Feb. 13, 1892.

See the biographical notice by E. G. Ravenstein in *Proceedings of the Royal Geographical Society* (1892), pp. 185–187.

JUNO, the chief Roman and Latin goddess, and the special object of worship by women at all the critical moments of life. Two etymologies have been proposed, (1) from *Iovino,* from same root as *Iup-piter, Iovis;* but it does not appear that in early cult she is associated with Jupiter; (2) connected with *Iuvenis,* hence "young marriageable woman."

That Juno was especially a deity of women, and represents in a sense the female principle of life, is seen in the fact that as every man had his genius, so every woman had her Juno; and the goddess herself may have been a development of this conception. The various forms of her cult all show her in close connection with women. As *Iuno Lucina* she was invoked in time of childbirth, and on March 1, the old Roman New Year's Day, the matrons met and made offerings at her temple in a grove on the Esquiline; hence the day was known as the *Matronalia.* As *Caprotina* she was especially worshipped by female slaves on July 7 (*Nonae Caprotinae*); as *Sospita* she was invoked all over Latium as the saviour of women in their perils, and later as the saviour of the State; and under a number of other titles, *Cinxia, Unxia, Pronuba,* etc., we find her taking a leading part in the ritual of marriage. Her connection with the moon (*Iuno Covella*) is explained by the alleged influence of the moon on the lives of women; thus she became the deity of the Kalends, or day of the new moon, when the wife of the *rex sacrorum* offered a lamb to her in the *regia,* and her husband made known to the people the day on which the Nones would fall. Thus she is brought into close relation with Janus, who also was worshipped on the Kalends by the *rex sacrorum,* and it may be that in the oldest Roman religion these two were closely connected. But in historical times she was associated with Jupiter in the great temple on the Capitoline hill as *Iuno Regina,* the queen of all Junones or queen of heaven, as Jupiter (*q.v.*) there was *Optimus Maximus,* and under the same title she was enticed from Veii after its capture in 392 B.C., and settled in a temple on the Aventine. She thus was identified with Hera (*q.v.*).

JUNOT, ANDACHE, DUC D'ABRANTES (1771–1813), French general, born at Bussy-le-Grand (Côte d'Or), on Oct. 23, 1771. He became secretary to Napoleon during the siege of Toulon, accompanied him to Italy as aide-de-camp, became general of brigade during the expedition to Egypt, and, on his return to France, fought a duel on Napoleon's behalf, and was made commandant of Paris. He was promoted general of division, and married Laure Permon (*see* JUNOT, LAURE), and became a considerable figure in society. He received various appointments, on account of his early devotion to Napoleon, but his uncertain temperament made it dangerous to employ him at court or headquarters. In 1807 he was given command of the force for the invasion of Portugal. Early in November he set out from Salamanca, crossed the mountains of Beira, rallied his wearied forces at Abrantes, and, with 1,500 men, dashed upon Lisbon, but failed to seize the Portuguese fleet, which had just sailed away with the regent and court to Brazil. The whole movement only took a month; it was undoubtedly bold and well-conducted, and Junot was made duke of Abrantes and invested with the governorship of Portugal. But administration was his weak point. He was not a civil governor, but a *sabreur,* brave, truculent, and also dissipated and rapacious. After Wellesley encountered him at Vimiera (*see* PENINSULAR WAR) he was obliged to conclude the so-called convention of Cintra, and to withdraw his forces from Portugal. Junot was sent back to Spain, where, acting under Masséna (1810–11) he was once more seriously wounded. His last campaign was made in Russia, and he received more than a just share of discredit for it. Napoleon next appointed him to govern Illyria. But Junot's mind had become deranged under the weight of his misfortunes, and on July 29, 1813, at Montbard, he threw himself from a window in a fit of insanity.

JUNOT, LAURE, DUCHESS OF ABRANTES (1783–1834), wife of the preceding, was born at Montpellier. She was the daughter of Mme. Permon, to whom during her widowhood the young Bonaparte made an offer of marriage—such at least is the version presented by the daughter in her celebrated *Memoirs.* The Permon family, after various vicissitudes, settled at Paris, and Bonaparte frequented their house a good deal after the downfall of the Jacobin party in Thermidor 1794. Mlle. Permon was married to Junot early in the consulate. The first consul nicknamed her *petite peste,* but treated her and Junot with the utmost generosity, a fact which did not restrain her sarcasms and slanders in her portrayal of him in her *Memoirs.* Her own and her husband's extravagance threatened her with ruin; this perhaps explains why she took some part in the intrigues for bringing back the Bourbons in 1814. She did not side with Napoleon during the Hundred Days. After 1815 she lived chiefly in Rome, where she compiled her spirited but somewhat spiteful *Mémoires* (Paris, 18 vols., 1831–34).

Of her other books the most noteworthy are *Histoires contemporaines* (2 vols., 1835); *Scènes de la vie espagnole* (2 vols., 1836); *Histoire des salons de Paris* (6 vols., 1837–38); *Souvenirs d'une ambassade et d'un séjour en Espagne et en Portugal, de 1808 à 1811* (2 vols., 1837).

JUNTA, a Spanish word originally meaning a meeting (*juntar,* "to join") but also used, and now almost exclusively, in the sense of (1) a committee, or (2) an administrative council or board.

The superior governing body of the Inquisition was the *junta suprema.* The provincial committees formed to organize resistance to Napoleon's invasion in 1808 were so called, and so was the general committee chosen from among them to represent the nation. In all subsequent civil wars or revolutionary disturbances in Spain or Spanish America, similar bodies, elected or self-chosen, have been known as juntas.

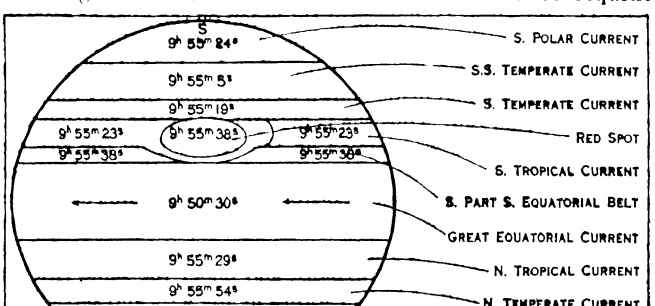
The corrupted form "junto," came into use in English in the 17th century, often in a disparaging sense, of a party united for a political purpose, a faction or cabal. It was particularly applied to the advisers of Charles I., and to the Whigs who controlled the Government in the reign of William III. The name junta is also given to the small group of officials who reorganized British trade unionism after about 1850.

JUPITER, in Latin IUPPITER, DIESPITER or IOVIS, the chief Roman and Italian god; like Zeus, with whom he is etymologically identical (root *diu,* "bright") he was a sky god. One of his most ancient epithets is *Lucetius,* the light-bringer; and later literature has preserved the same idea in such phrases as *sub Iove,* under the open sky. All days of the full moon (*idus*) were sacred to him; as Jupiter *Elicius* he was propitiated with a peculiar ritual, to send rain in time of drought; as *Fulgur* he had an altar in the Campus Martius, and all places struck by lightning were made his property and guarded from the profane by a circular wall. The vintage, which needs especially the light and heat of the sun, was under his particular care, and in the festivals (*Vinalia*) con-

nected with it he was the deity invoked, and his flamen the priest employed.

Throughout Italy we find him worshipped on the summits of hills; thus on the Alban hill south of Rome was an ancient seat of his worship as Jupiter *Latiaris*, which was the centre of the league of 30 Latin cities of which Rome was originally an ordinary member. At Rome itself on the Capitoline hill we find his oldest temple, described by Livy (i. 10); here we have a tradition of his sacred tree, the oak, common to the worship both of Zeus and Jupiter, and here, too, were kept the *lapides silices*, perhaps celts, believed to have been thunderbolts, which were used symbolically by the *fetiales* when officially declaring war or making treaties on behalf of the Roman state. Hence the curious form of oath, *Iovem lapidem iurare*, used at Rome, both in public and private life. (*See* H. J. Rose, *Roman Questions*, p. 75; *Primitive Culture in Italy*, p. 45.)

In Jupiter we undoubtedly see not only the great protecting deity of the race, but one, and perhaps the only one, whose worship embodies a distinct moral conception. He is specially concerned with oaths, treaties and leagues, and it was in the presence of his priest that the most ancient and sacred form of marriage (*confarreatio*) took place. The lesser deities, Dius Fidius and Fides, were, perhaps, originally identical, certainly connected, with him. This connexion with the conscience, with the sense of obligation and right dealing, was never quite lost throughout Roman history. In Virgil's great poem, though Jupiter is in many ways as much Greek as Roman, he is still the great protecting deity who keeps the hero in the path of duty (*pietas*) towards gods, State and family.



But this aspect of Jupiter gained a new force and meaning at the close of the monarchy with the building of the famous temple on the Capitol, of which the foundations are still to be seen. It was dedicated to *Iuppiter Optimus Maximus; i.e.*, the best and greatest of all the Jupiters, and with him were associated Juno and Minerva, in a fashion which clearly indicates a Graeco-Etruscan origin; for the combination of three deities in one temple was foreign to the ancient Roman religion, while it is found both in Greece and Etruria. Its dedication festival fell on Sept. 13, on which day the consuls originally succeeded to office, accompanied by the senate and other magistrates and priests, and, in fulfilment of a vow made by their predecessors, they offered to the great god a white ox, his favourite sacrifice, and after rendering thanks for the preservation of the State during the past year, made the same vow as that by which their predecessors had been bound. Then followed the *epulum Iovis* or feast of Jupiter, in which the three deities seem to have been visibly present in the form of their statues, Jupiter having a couch and each goddess a *sella*, and to have shared the meal with Senate and magistrates. In later times this day became the central point of the great Roman games (*ludi Romani*), originally games vowed in honour of the god if he brought a war to a successful issue. When a victorious army returned home the triumphal procession passed to this temple. (*See* TRIUMPH.)

Throughout the Republic this remained the central Roman cult, and although Augustus's new foundations (Apollo Palatinus and Mars Ultor) were in some sense its rivals, that emperor was far too shrewd to attempt to oust *Iuppiter Optimus Maximus* from his paramount position; he became the protecting deity of the reigning emperor as representing the State, as he had been the protecting deity of the free republic. His worship spread over the whole empire; a Capitol modelled on that of Rome was a feature of numerous important towns (*e.g.*, Ostia), and the fact that the Romans chose the name of Jupiter, in almost every case, by which to indicate the chief deity of the subject peoples, proves that they continued to regard him, so long as his worship existed at all, as the god whom they themselves looked upon as greatest.

See ZEUS, ROMAN RELIGION, also G. Wissowa, *Religion und Kultus*, p. 113, et seq.; articles "Iuppiter" in Roscher's *Lexikon* and Pauly-Wissowa, *Realencyklopädie*, s.v.

JUPITER, in astronomy, the largest of the planets, and with the exception of Mars the most interesting of all for telescopic study. It revolves round the sun at a mean distance of about 5·2 times that of the earth, or 483,000,000 miles; and since its equatorial diameter is about 88,700 miles it presents a disc which at opposition attains an apparent diameter of from 44 to 50 seconds of arc. The planet requires 4,333 days (11·86 years) to complete a sidereal revolution, and its synodical period, or the mean interval between successive oppositions, is 399 days. To the naked eye Jupiter shines with a lustre second only to that of Venus among the planets and under favourable circumstances it is bright enough to cast a shadow. Its albedo is high, viz., 0·44, which means that it reflects 44% of the sunlight falling upon it. Its stellar magnitude at opposition ranges from −2·1 to −2·5. When viewed telescopically the disc of the planet is seen at once to be not circular but considerably flattened at the poles. The amount of this flattening has been determined by micrometrical measurements and theoretically, by H. Struve, from the perturbations of the satellites by the equatorial protuberance of the planet. The probable value is not far from $\frac{1}{15\cdot4}$. The mass of the planet, taking that of the earth as the unit, is nearly 320, and since its volume is over 1,300 times that of the earth its mean density must be rather less than one quarter as great, or 1·3 times that of water.

Surface Features: Belts and Zones.—A quite small telescope will show that the disc of the planet is marked by parallel dark streaks or "belts" separated by bright spaces which are termed "zones." The belts were first detected by Nicolas Zucchi and Daniel Bartoli in May 1630, about 20 years after the discovery of the four large satellites. Modern instruments show them to be broken up frequently into irregular markings, particularly at the edges where dark spots separated by white indentations and rifts are specially liable to occur. Isolated dark spots and brilliantly white areas are also frequently observed on the zones, together with delicate linear markings or wisps, sometimes resembling loops or festoons enclosing white spots and sometimes connecting together dark spots on the belts on opposite sides of the zones. This is especially the case with the equatorial zone. All these markings are subject to changes which may be very rapid. Occasionally a belt or portion of a belt will disappear in the course of a few weeks or months while other features develop for a time and then die out. It is quite evident that there is nothing stable or fixed about Jupiter as seen from the earth, but that what is observed is merely a shell of clouds or vapours which are often in a greatly disturbed condition. The photographs shown under PLANETS (Pl. figs. 4 & 5) give an excellent idea of the general features of the disc as observed telescopically, though the fading of the light and lack of definition near the limb in consequence

JUPITER'S MAIN SURFACE CURRENTS AND THEIR ROTATION PERIODS

of the absorbing effect of the Jovian atmosphere are much more marked photographically than to visual observation.

The planet's surface not infrequently displays striking colours. In particular the two belts north and south of the equator are sometimes very red whereas at other times they may be brown, neutral grey or even bluish. In April 1899 A. Stanley Williams, after a thorough examination of the available material accumulated between the years 1836 and 1898, announced that these belts exhibit a periodic variation in such manner that when one belt attains a maximum of redness the other is colourless or even

bluish and that between the periods of extreme coloration both belts are moderately red. The cycle of changes was found to take place in 12·08 years which is in close agreement with the period of the planet's revolution. Moreover the phase of minimum redness of a belt was found to occur shortly after the autumnal equinox of the hemisphere in which it is situated, which would seem to indicate a seasonal effect. It is hard to understand how the variations can be due to the varying tilt towards the sun of the planet's axis, the inclination of which to the plane of the orbit is only 3° 7′, yet such would appear to be the case. Another point of great interest is Williams's deduction in March 1920 that the equatorial zone also shows a periodic variation in colour in the course of the planet's revolution, assuming a dull orange or tawny hue shortly before the aphelion position is reached.

Rotation.—In 1664 Robert Hooke observed a dark spot in the southern hemisphere, and from its motion J. D. Cassini found a rotation period of 9 h. 56 m. Some few years later Cassini made the important discovery that a spot situated near the equator rotated in a period of about 9 h. 50 m. or in about 6 m. less than the dark spot discovered by Hooke farther south. It was therefore evident that the visible globe of the planet does not rotate like a solid body, and subsequent observations have revealed the fact that in general the rotation periods shown by the markings depend on the latitude in which they are situated. There is, however, no simple relationship between rotation and latitude such as is shown by the sun, although the shortest period is normally that of objects within about 10° or so of the equator. Outside this swiftly rotating region, relatively slow and quick rotations are found in irregular order from the equator polewards, and the arrangement in the northern differs greatly from that in the southern hemisphere.

Special attention has been given to the drift of the surface material in different latitudes by A. Stanley Williams, W. F. Denning and others, and in recent years this department of Jovian study has been followed up assiduously by members of the Jupiter section of the British Astronomical Association. Mean values for the rotation periods are given diagrammatically in fig. 1; an examination of which will show how irregular the arrangement of the "surface currents," as they are commonly called, really is. In general these currents are sharply bounded, though occasionally spots are observed between two of them, especially in the rifts dividing the north and south components of the equatorial belts, which show intermediate periods. The ellipse in the diagram represents the great red spot which will be described presently. Although the figures given may be regarded as fairly reliable *average* values, the periods deduced each year from the observations are found to exhibit variations, and even in the same latitude those of spots in one longitude will differ from those elsewhere. Individual spots, too, often show marked irregularities of motion, while from time to time objects appear with quite abnormal periods. For instance in 1880 a number of black spots in north latitude 23° were found to be rotating in the very short time of about 9 h. 48 m., and in recent years exceptional periods, both long and short, have been observed in other parts of the disc. In 1928 a series of small black spots on the south component of the south equatorial belt rotated in rather more than 9 h. 59 m., the longest period yet recorded.

The Red Spot.—Of all planetary markings it is safe to say that none has aroused so much general interest or received so much attention from observers as Jupiter's great red spot. It came into special prominence in 1878, but was seen actually several years earlier, viz., by W. R. Dawes in 1857, and at various times during the next two decades, especially by Sir W. Huggins, J. Baxendell, Lord Rosse, R. Copeland and H. C. Russell. Since 1878 it has been under constant observation and has been found to vary greatly in colour, form, intensity and motion. It is situated in the southern hemisphere in latitude −20° approximately and commonly appears as an elliptical shading or an elliptical ring in contact with the northern edge of the south temperate belt, and at various times it has presented curiously pointed ends. It is usually about 30,000 miles in length and about 7,000 or 8,000 miles in breadth. In colour it has varied from an intense brick-red to the faintest grey; indeed in some years it has been quite invisible though, fortunately, its position has still been indicated by the "bay" or "hollow" it has made for itself in the southern part of the south equatorial belt in which it is usually seen lying. In recent years the spot itself has as a rule been very faint, but in 1919 and 1927 when the hollow disappeared the spot regained something of its former intensity. In 1927 it also recovered something of its redness. The early history of the red spot has been carefully investigated by W. F. Denning, who, by means of published drawings and records of observations, either of the spot itself or its hollow, has succeeded in carrying our knowledge of the object back as far as Schwabe's drawing of the hollow on Sept. 5th, 1831. He has also suggested the identity of the present red spot with the object observed by Hooke in 1664 to which reference has already been made. But although it seems quite probable that the two objects are one and the same long gaps in the observations make it impossible to regard identity as more than a very plausible speculation. In any case, however, the well established identification with the feature shown by Schwabe shows the red spot to be remarkably long-lived in view of the well-known transitoriness of the Jovian markings in general. It might be imagined from its long enduring nature that the red spot is some sort of projection above the visible superficial vapours or clouds from a more or less solid globe beneath them; but its motion, especially in longitude, shows that this cannot be the case. There is, of course, nothing of a fixed nature visible on Jupiter from which its longitude can be measured. Observers, therefore, make use of a mathematical meridian, rotating uniformly in a period of 9 h. 55 m. 40·6 s., whose relative position to the centre of the planet's disc at any time can be calculated, and which some years ago represented the rotation of the spot very closely. As illustrating the wanderings of the spot Table I. is appended which gives the longitude measured from this meridian at successive oppositions since 1894 when the meridian coincided with the centre of the spot.

TABLE I.

Date of Opposition	°Longitude	Date of Opposition	°Longitude
1894 Dec. 22	0	1912 May 31	304
1896 Jan. 24	7	1913 July 5	261
1897 Feb. 23	15	1914 Aug. 10	208
1898 March 25	22	1915 Sept. 17	171
1899 April 25	31	1916 Oct. 23	130
1900 May 27	40	1917 Nov. 28	77
1901 June 30	46	1919 Jan. 1	11
1902 Aug. 5	42	1920 Feb. 2	317 (?)
1903 Sept. 11	34	1921 March 4	284
1904 Oct. 18	25	1922 April 4	257
1905 Nov. 23	28	1923 May 5	230
1906 Dec. 28	18	1924 June 6	170
1908 Jan. 29	23	1925 July 10	89
1909 Feb. 28	17	1926 Aug. 15	20
1910 March 30	8	1927 Sept. 22	345
1911 April 30	328		

It will be seen that for some years the spot drifted in the direction of increasing longitude, but in the summer of 1902 it reversed its motion and, apart from some irregularities between 1904 and 1908, it has since drifted in the direction of diminishing longitude completely round the planet more than twice relatively to the adopted zero meridian.

The South Tropical Disturbance.—There is another object of long enduring character which calls for mention in connection with the red spot. Like the latter it is situated in the south tropical zone and is known as the south tropical disturbance, but differences in their respective rates of rotation have many times brought the two objects into conjunction. The disturbance was first seen by Major P. B. Molesworth on Feb. 28, 1901. It was then a mere dark hump at the southern edge of the south equatorial belt, but it rapidly developed, spread across the zone and became greatly extended in longitude with a bright spot at each end. At times its length has exceeded 180° and it has frequently displayed much structural detail. It disappeared together with the southern portion of the south equatorial belt and the red spot

hollow—probably in consequence of overlying vapours—in 1919, reappeared in 1920, but again became invisible with the objects above mentioned in 1926. The following points relating to the association of the disturbance with the red spot seem to be of special interest:—

(a) During the earlier part of its history the disturbance was rotating much more rapidly than the red spot and overtook it at intervals of a little more than two years. But its rotation subsequently became slower and in 1925 its period actually exceeded that of the red spot.
(b) It is not known in what way the dark material of the disturbance has got past the red spot at conjunction, whether round it or under it. At the earlier conjunctions there seems to have been an almost immediate transference of dark matter to the other side of the spot, but at later conjunctions the process has been much more protracted.
(c) The red spot has shown a very decided attraction for the disturbance, each end of the latter being accelerated on approaching the spot and retarded after passing it.
(d) Both the red spot and the disturbance have been accelerated during the transference of the dark material of the latter from one side of the spot to the other.

It is very difficult to find any satisfactory explanation of the red spot. The special facts which have to be taken into consideration are the following: its long enduring character; its form and colour and the changes it undergoes; its motion, especially in longitude but also to a slight extent in latitude; its attraction for the south tropical disturbance; its seeming repulsion of the material of the south equatorial belt in which it has formed a bay or hollow; its concomitant association with the disturbance in changes of rotation period. Possibly the vortex theory fits the facts best, but the pointed ends and dark spots at the tips, sometimes seen, would seem to render this hypothesis untenable. More accurate knowledge of the nature and relative levels of the Jovian markings appears to be required before any theory can be put forward with confidence.

Apparent Analogy with the Sun.—All observers have remarked on the very striking analogy between Jupiter and the sun, and the following points of similarity are specially noteworthy: both bodies are of low density, that of Jupiter being 1·3 times and that of the sun 1·4 times that of water; both show a darkening at the limb due to atmospheric absorption: and on both spots near the equator rotate in less time than those in higher latitudes. A resemblance may also be traced between Jupiter's belts and the spot zones on the sun, while, occasionally, bright objects have been observed at or close to the planet's limb which became either inconspicuous or quite invisible near the central meridian, suggesting that like the solar faculae their visibility was due to their elevation. Some of these objects were seen during the apparition of 1919, and E. M. Antoniadi, using the great 32·7 in. refractor at Meudon near Paris, has observed white objects near the limb resembling the solar faculae in appearance as well as in behaviour. It is accordingly tempting to regard Jupiter as a sort of semi-sun, not hot enough to be self luminous to any appreciable extent—for were this the case the satellites would be visible when eclipsed in the planet's shadow—but possessing considerable stores of energy which are the prime cause of the extensive and violent disturbances observed on the visible surface. It seems almost impossible that these disturbances can be the effect of mere solar radiation which can have only $\frac{1}{27}$ part of the intensity it has at the distance of the earth. Reference to Table II., in the article PLANET shows that, at Jupiter's distance, a black, rotating globe without an atmosphere, would have a surface temperature of −152° C. As a matter of fact radiometric measurements by Coblentz and Lampland with the thermocouple and water cell transmission (as described in the article above mentioned) indicate temperature of approximately −100° C. which, though considerably higher than such as could be derived from solar radiation alone, is very much lower than that hitherto thought probable from a consideration of the disturbances in the planet's surface features.

Dr. Harold Jeffreys has come to the conclusion that the temperature of the planet is probably low on theoretical grounds. He first found that on any reasonable estimate of the planet's age its original store of heat could not have maintained to the present day an effective temperature as high as that of the earth, and later showed that a low temperature, like that deduced from the radiometric observations, is consistent with conclusions derived from considerations of the planet's density and ellipticity. The problem is accordingly a perplexing one. It will probably be felt by most telescopic students of the planet that whatever the temperature of the visible superficial layers the internal temperature at any rate must be *relatively* high. It is tempting to attribute the planet's supply of energy to sub-atomic processes; or, possibly, the enveloping layer in which the observed disturbances occur, may be composed of substances with a low boiling-point.

The Planet's Atmosphere.—Plate I. under PLANET (fig. 3) shows photographs taken by W. H. Wright at the Lick observatory in (a) ultra-violet and (b) extreme red light. The former shows the great extent of the Jovian atmosphere, while the latter gives a representation of the surface detail which is rather more like what is seen telescopically. A comparison of the two photographs is very instructive, and it seems that work on these lines is particularly promising from the point of view of determining the relative levels of the features observed and the solution of other problems. The intensity of the red spot in the ultra-violet photograph is very noticeable, and the white band in the southern hemisphere strongly suggests that the disappearance of surface features mentioned earlier in the article is due to overlying atmospheric vapours. In the article PLANET reference has been made to the atmospheric absorption bands in the spectrum of Jupiter and the other outer planets, but the nature of their source has not yet been established.

The Satellites.—Jupiter is accompanied by no less than 9 satellites so far as at present known. Four of them were discovered by Galileo in 1610, and they can be readily seen with a good pair of field glasses. The others are all very small and faint. The fifth was discovered by Barnard with the Lick telescope in Sept. 1892, the sixth and seventh by Perrine, also at the Lick observatory in Dec. and Jan. 1904–1905, the eighth by Melotte at Greenwich in Feb. 1908, and the ninth by S. B. Nicholson at Lick in July 1914, the last four being found photographically. The ninth is probably only about 15 m. in diameter and the eighth may be only slightly larger.

The four principal satellites, commonly known as the Galilean Satellites, are named Io, Europa, Ganymede and Callisto, but they are generally designated by the Roman numerals I., II., III., IV. in the order of their distance from the planet. They are large enough to show sensible discs even in comparatively small instruments. Three of them are about equal to or exceed the earth's moon in size and the other (II.) is very nearly as large. Both III. and IV. have diameters of more than 3,000 miles. If they were not so near the planet they would all be naked-eye objects; indeed it has been reported on various occasions, when the conditions have been favourable, that one or more, or perhaps two of them when close together seen as one, have actually been so glimpsed. Particulars of the orbits of these satellites are given in the table on p. 191, but mention must also be made of a remarkable relationship between the longitudes of I., II. and III. discovered by Laplace, viz., that the longitude of I. plus twice that of III. minus three times that of II. is 180°, so that they cannot all come into conjunction with one another or into opposition or conjunction with the sun at the same time.

The phenomena of these satellites, viz., their transits, occultations, eclipses and the transits of their shadows across the planet's disc are easily observed even with quite small telescopes, of, say, 2 in. aperture and upwards. Photometric observations of their eclipses are of special value and the Harvard series of such observations formed an important part of the material used some years ago by Professor R. A. Sampson in constructing his Theory of the Satellites and the Tables on which the predictions of their phenomena have since been based. A comparison of the times as computed and the times observed has led to the interesting conclu-

sion that the diameter of Jupiter is probably subject to small irregularities, or at any rate that the luminous shell which forms the visible surface of the planet is liable to temporary deformations from atmospheric causes which in turn affect the boundary of the planet's shadow. When projected on Jupiter's surface during transit a satellite near ingress appears as a small white disc, its brightness being much in excess of that of the background near the planet's margin. Shortly afterwards it disappears as the albedos of the two surfaces become equal; reappears later as a relatively dark object projected against the lighter background of the central portions of the planet's surface; it again becomes invisible and reappears as a small bright object shortly before egress. The central parts of III. and IV. are commonly very dark indeed during most of the time these satellites are in transit and IV. especially is often comparable with its shadow in blackness. All four Galilean satellites exhibit definite surface features when observed with sufficiently powerful telescopes under the best conditions. Satellite III. being the largest and brightest has naturally received special attention and several observers have been led to the conclusion that like the earth's moon it rotates on its axis in the period of its orbital revolution and hence presents always the same face to the planet. This conclusion has been based partly on the fact that certain apparent variations in its form, which are doubtless due to dusky spots on its surface, have been found definitely related to the position of the satellite in its orbit. During the 1927 apparition E. M. Antoniadi, observing with the 33 in. refractor at Meudon under very favourable conditions, studied the details of the surface markings with great completeness and his observations will be regarded as definitely establishing the long period above mentioned. Moreover, photometric observations, and especially those made in 1926 by Stebbins with the photo-electric photometer at the Lick observatory, show small variations in the light of all four satellites which are related to their orbital positions and indicate that they all present a constant face to Jupiter.

These Galilean Satellites have proved of great value in two respects: (1) the observed variations in the times of the eclipses of I. with the varying distance of the earth from Jupiter led Römer in 1675 to the discovery of the motion of light and the first determination of its velocity; (2) observations of the phenomena of the satellites were formerly much used for the determination of longitudes by comparing the calculated times of their occurrence, at Greenwich, for instance, with the local times of the place at which they were observed. Of the remaining satellites, V., which is the nearest of all to Jupiter, is in consequence of its smallness and its proximity to the planet visible only in the large instruments. About the same mean distance from the planet, viz., rather over 7,000,000 miles, are VI. and VII., which are also very small. Their two orbits interlock like two links in a chain, but their planes are inclined to one another at an angle of about 28°. Somewhat similar conditions hold for the orbits of VIII. and IX., of which the mean distances are of the order of 15,000,000 miles, and the periods of revolution slightly more than two years. Owing to their great remoteness from Jupiter they are subject to enormous perturbations by the sun. The motion of both these satellites, like that of Phoebe, the outermost satellite of Saturn, is retrograde. (T. E. R. P.)

TABLE II. *The Satellites of Jupiter*

Satellite	Distance from Jupiter in miles	Sidereal Period	Inclination of orbit to planet's orbit	Eccentricity	Diameter in miles
		d. h. m. s.	° ′		
V.	112,600	0 11 57 22·71	3 6·9	0·0028	100?
I. Io . .	261,800	1 18 27 33·51	3 6·7	0·0000	2,109
II. Europa	416,600	3 13 13 42·05	3 5·8	0·0003	1,865
III. Ganymede	664,200	7 3 42 33·35	3 2·3	0·0015	3,273
IV. Callisto	1,168,700	16 16 32 11·21	2 42·7	0·0075	3,142
		d.			
VI.	7,114,000	250·68	29	0·155	*80?
VII.	7,292,000	260·06	28	0·207	*25?
VIII.	14,600,000	739	148	0·38	†17?
IX.	15,000,000	745	156	0·25	†15?

*Large perturbations.
†Very large perturbations.

JUR (DIUR), the Dinka name for a tribe of negroes of the upper Nile valley, whose real name is Luoh, or Lwo. They appear to be immigrants from the south; they now occupy a district of the Bahr-el-Ghazal between the Bongo and Dinka tribes. Of a reddish black colour, fairer than the Dinka, they are well proportioned, with the hair short. Tattooing is not common, but when found is similar to that of the Dinka; they pierce the ears and nose, and in addition to the ornaments found among the Dinka wear a series of iron rings on the forearm covering it from wrist to elbow. They are mainly agricultural, but hunt and fish to a considerable extent; they are also skilful smiths, smelting their own iron, of which they supply quantities to the Dinka. Their chief currency is spears and hoe-blades, and cowrie shells are used in the purchase of wives. Their chief weapons are spears and bows.

See G. Schweinfurth, *The Heart of Africa: Travels 1868–1871*, trans. G. E. E. Frewer (2nd ed., 1874); W. Junker, *Travels in Africa* (Eng. ed., 1890–92).

JURA, a department of France, on the eastern frontier, formed from the southern portion of the old province of Franche-Comté. It is bounded N. by the department of Haute-Saône, N.E. by Doubs, E. by Switzerland, S. by Ain, and W. by Saône-et-Loire and Côte d'Or. Pop. (1926) 230,685. Area, 1,951 sq.m. In the south-east the high Jura (Crêt Pela 4,915 ft.) runs north to south; parallel to the above, west of the Ain, is the forested Jura plateau; next follow the vine-clad hills beyond which, towards the Saône, is the fertile plain of northern Bresse, called the Finage. The department stretches across the lower Doubs, but both banks of the Saône are in Côte d'Or. There are many lakes among the mountains. The climate is, on the whole, cold; the temperature is subject to sudden and violent changes, and among the mountains winter sometimes lingers for eight months. The rainfall is much above the average of France.

Jura is an agricultural department: wheat, oats, maize and barley are the chief cereals, potatoes, tobacco and rape also being grown. Vines are largely grown. Woodlands occupy about a fifth of the area: the oak, hornbeam and beech, and, in the mountains, the spruce and fir, are the principal varieties. Natural pasture is abundant on the mountains. The wild boar still survives in the forests. There are salt mines and stone-quarries. Peat is also worked. Lons-le-Saunier and Salins have mineral springs. Industries include the manufacture of Gruyère, Septmoncel and other cheeses (made in co-operative cheese factories or *fruitières*), sparkling wines, metal founding and forging, saw-milling, the cutting of precious stones (at Septmoncel and elsewhere), the manufacture of nails, tools and other iron goods, paper, leather, brier-pipes, toys and fancy wooden-ware and basket-work; and clocks, watches, spectacles and measures at Morez. The department is served chiefly by the P.L.M. railway, the main line from Paris to Neuchâtel traversing its northern region. The canal from the Rhone to the Rhine, which utilizes the channel of the Doubs over portions of its course, traverses it for 25 m. Lons-le-Saunier is the chief town of Jura, which embraces three arrondissements named after the towns of Lons-le-Saunier, Dôle and St. Claude, with 32 cantons and 585 communes. The department forms the diocese of St. Claude and part of the ecclesiastical province of Lyon, it comes within the region of the VIIth army corps (Besançon) and the educational division (académie) of Besançon, where is its court of appeal. Lons-le-Saunier, Dôle, Arbois, Poligny, St. Claude and Salins are the more noteworthy towns. At Baume-les-Messieurs, 8 m. N.E. of Lons-le-Saunier, there is an ancient abbey with a fine 12th century church.

JURA, an island of the inner Hebrides, the fourth largest of the group, on the west coast of Argyllshire, Scotland. Pop. (1921), 461. On the north it is separated from the island of Scarba by the whirlpool of Corrievreckan, caused by the rush of the tides, on the east from the mainland by the sound of Jura, and on the south and south-west from Islay by the sound of Islay. Craighouse, the chief village, is connected by steamer with W. Loch

Tarbert, and at Feolin there is a ferry to Port Askaig in Islay. Its greatest length is about 27 m., and the breadth varies from 2 m. to 8 m. A chain of hills culminating in the Paps of Jura—Beinn-an-Oir (2,571 ft.), Beinn Siantaidh, and Beinn Chaolais—runs the whole length of the island, interrupted only by Tarbert loch, an arm of the sea, which forms an indentation nearly 6 m. deep and almost cuts the island in two. Cattle and sheep are raised; oats, barley and potatoes are cultivated along the eastern shore, where most of the inhabitants live, and there is some fishing, and a distillery. Granite is quarried and silicious sand employed in glass-making is found.

JURA, a system of mountain ranges between the Rhine and the Rhone, and forming the frontier between France and Switzerland. The Rhine gorge cuts off the Jura from the Swabian and Franconian ranges to the north-east, and the Rhône gorge, the Jura from the Dauphiné to the south. Its three chief rivers—the Doubs, the Loué and the Ain—flow down the western slope, which is much longer and half as steep as the eastern. Some geographers extend the name Jura to the Swabian and Franconian ranges between the Danube, the Neckar and the Main; but, though these are similar to the range to the south, it is most convenient to limit the name of the mountain ridges lying between France and Switzerland, and this narrower sense will be adopted here.

The Jura system is 156 m. long and 38 m. broad, oblong in shape, and raised to an average height of from 1,950 to 2,600 ft. above the surrounding plains. The Juras form essentially a series of ridges parallel to the direction of greatest length of the system. Many transverse gorges or "cluses" cut across these ridges.

Geologically the Jura Mountains belong to the Alpine system; and the same forces which built up the latter produced the folds and faults in the former (*see* ALPS). The rocks of the Juras range from the Permian to the Pliocene, but the Jurassic formation is the most important. The rocks have been folded into a series of parallel anticlines and synclines with a direction from south-west to north-east, but owing to the resistance of the ancient massifs of the central plateau of France on the west and the Vosges-Black Forest on the east the folds are bunched together at the extremities of the range. The intensity of folding decreases northward, away from the Alps. In the east the structure is complicated by block faulting and the beds here are not folded as a general rule. This latter region is known as the Jura tableland (*Jura tabulaire*) while the greater part of the range is known as the folded Jura (*Jura plissé*). In the extreme west the mountains descend steeply to the plain of the Saône, the district being known as the *Région du vignoble.*

Countless blocks of gneiss, granite and other crystalline rocks are found on the slopes of the Jura Mountains. These erratic blocks are of glacial origin having been transported to their present position by glaciers from the Alps which have also left their mark on the Jura range itself in the shape of striations and moraines.

In considering the topography of the Jura, it may be well to take a brief survey of its outer slopes.

1. The *northern face* dominates on one side the famous "Trouée" (or Trench) of Belfort, one of the great geographical centres of Europe, whence routes run north down the Rhine to the North Sea, south-east to the Danube basin and Black Sea, and south-west into France, and so to the Mediterranean basin. It is of great strategical importance. On the other side it overhangs the "Trouée" of the Black Forest towns on the Rhine (Rheinfelden, Säckingen, Laufenburg and Waldshut), through which the central plain of Switzerland is easily gained. On this north slope two openings offer routes into the interior of the chain—the valley of the Doubs (France), and the valley of the Birse (Switzerland). Belfort is the military, Mülhausen the industrial, and Basle the commercial centre of this slope.

2. The *eastern and western faces* offer many striking parallels. The plains through which flow the Aar and the Saône have each been the bed of an ancient lake, traces of which remain in the lakes of Neuchâtel, Bienne and Morat. Both east and west slopes are pierced by many transverse gorges, "cluses" by which access is gained to the great central plateau of Pontarlier, though these are seen more plainly on the east face than on the west; thus the gorges at the exit from which Lons-le-Saunier, Poligny, Arbois and Salins are built balance those of the Suze, of the Val de Ruz, of the Val de Travers, and of the Val d'Orbe. Neuchâtel which commands these eastern gorges is a great military and industrial centre, just as is Besançon on the west. These easy means of communication account for the dialect of Neuchâtel being Burgundian. Mt. Chasseron (5,286 ft.), the central point of the eastern face, commands the two great railways which join Neuchâtel and Pontarlier. The R. Loue which drains the west face of this ridge flows into the Doubs south of Dôle, the only important town of the central portion of the Saône basin. The Chasseron is wholly Swiss, as are the lower summits of Chasseral (5,279 ft.), Mont Suchet (5,220 ft.), Aiguille de Baulmes (5,128 ft.), Dent de Vaulion (4,879 ft.), Weissenstein (4,245 ft.), and Chaumont (3,862 ft.), the two last-named points being probably the best-known points in the Jura, as they are accessible by carriage road from Soleure (Solothurn) and Neuchâtel respectively. South of the Orbe valley the east face becomes a rocky wall which is crowned by all the highest summits (the first and second Swiss, the rest French) of the chain—the Mont Tendre (5,521 ft.), the Dôle (5,511 ft.), the Reculet (5,643 ft.), the Crêt de la Neige (5,653 ft.) and the Grand Crédo (5,328 ft.), the uniformity of level being as striking as on the west edge of the Jura, though there the absolute height is far less. The position of the Dôle is similar to that of the Chasseron, as along the sides of it run the great roads of the Col de St. Cergues (4,051 ft.) and the Col de la Faucille (4,341 ft.), the latter leading through the Vallée des Dappes. The height of these roads shows that they are passages across the chain, rather than through natural depressions.

3. The *southern face* is supported by two great pillars—on the east the Grand Crédo and on the west the ridge of Revermont (2,529 ft.) above Bourg en Bresse; between these a huge bastion (the district of *Bugey*) stretches south, forcing the Rhone to make a long détour. On the two sides of this bastion the plains in which Ambérieu and Culoz stand are the meeting points of the routes which cut through the bastion by means of deep gorges. On the eastern side this great wedge is steep and rugged, ending in the Grand Colombier (5,042 ft.), north of Culoz, and it sinks on the western side to the valley of the Ain, the district of Bresse, and the plateau of Dombes. The junction of the Ain and the Surand at Pont d'Ain on the west balances that of the Valserine and the Rhone at Bellegarde on the east.

The Jura thus dominates on the north one of the great highways of Europe, on the east and west divides the valleys of the Saône and the Aar, and stretches out to the south so as nearly to join hands with the great mass of the Dauphiné Alps. It therefore commands the routes from France into Germany, Switzerland and Italy, and hence its enormous historical importance.

The topography of the interior of the range naturally falls into three divisions, each traversed by one of the three great rivers of the Jura—the Doubs, the Loue and the Ain.

1. The *northern division* is marked by the east and west ridge of the Lomont, and the Mont Terrible; the defile of the Doubs from St. Ursanne to St. Hippolyte, and the "Trouée" of the Black Forest towns. It thus bars access to the central plateau from the north. This division falls again into two distinct portions.

(*a*) The first is the *part east of the deep gorge of the Doubs* below St. Hippolyte. It includes the basin of the river Birse, and the plateau between the Doubs and the Aar, on which, at an average height of 2,600 ft., are situated a number of towns, one of the most striking features of the Jura. These include Le Locle (*q.v.*) and La Chaux de Fonds (*q.v.*), and are mainly occupied with watch-making, an industry well fitted for a mountain district.

(*b*) *The part west of the "clase" of the Doubs:* of this, the district east of the river Dessoubre, isolated in the interior of the range (unlike the Le Locle plateau), is called the Haute Montagne, and is given up to cheese-making, curing of hams, saw-mills, etc. Besançon is the chief French centre of the watch making industry, and is connected with Geneva by a chain of places similarly occupied, which fringe the west plateau of the Jura. The part west of the Dessoubre, or the Moyenne Montagne, a huge

plateau north of the Loue, is more especially devoted to agriculture, while along its north edge metal-working and manufacture of hardware are carried on, particularly at Besançon and Audincourt.

2. The *central division* in which no deep gorges are found, consists of the basin of which Pontarlier is the centre, through notches in the rim of which routes converge from every direction; hence its immense strategical and commercial importance. The north-east roads run to Morteau and Le Locle, the north-west to Besançon, the west to Salins, the south-west to Dôle and Lons-le-Saunier, the east to the Swiss plain. The Pontarlier plateau has only slight indentations in it due to erosion by the river Drugeon. East of this plateau is the Fort de Joux, under the walls of which meet the two railways from Neuchâtel, and to the west Salins, the meeting place of the routes from the Col de la Faucille, from Besançon, and from the French plain.

The Ain rises on the south edge of this plateau, and on a lower shelf which it waters are situated two points of great military importance—Nozeroy and Champagnole. The latter is specially important, since the road leading thence to Geneva traverses one after another the chief valleys which run down into South Jura, and thus commands the routes from the Geneva region, and a branch route along the Orbe river from Jougne.

There are said to be in the central Jura no less than fifteen ridges running parallel to each other, and it is these which force the Loue to the north, and thereby occasion its very eccentric course. The cultivation of wormwood wherewith to make the tonic "absinthe" has its headquarters at Pontarlier.

3. The *southern division* is the most complicated of the Jura. The lofty ridge which bounds it to the east forces all its drainage to the west, and the result is a number of valleys of erosion, quite distinct from the "cluses" or fissures of the Doubs and the Loue. Another point of interest is the number of roads which intersect it, despite its extreme irregularity. This is due to the great "cluses" of Nantua and Virieu, which traverse it from east to west. The plateaux west of the Ain are cut through by the valleys of the Valouse and of the Surand, and do not possess any considerable towns. The Ain receives three tributaries from the east:—

(*a*) The Bienne, which flows from the fort of Les Rousses by St. Claude, the industrial centre of the south Jura, famous for wooden toys; Septmoncel, a centre for gem cutting, and Morez, a watch and spectacle making centre. The industrial prosperity of this valley is of recent origin.

(*b*) The Oignin, which receives the drainage of the lake of Nantua, a town noted for combs and silk, and which communicates by the "cluse" of the Lac de Silan with the Valserine valley, and so with the Rhone at Bellegarde, and again with the various routes which meet at Les Rousses, while Culoz is easily gained by the Val Romey and the Séran.

(*c*) The Albarine, connected with Culoz by the "cluse" of Virieu, and by the Furan flowing south, with Belley, the capital of the district of Bugey (the old name for the south Jura).

The "cluses" of Nantua and Virieu are now both traversed by important railways; and it is even truer than of old that the keys of the south Jura are Lyons and Geneva.

The range is mentioned by Caesar (*Bell. Gall.* i. 2–3, 6 [1], and 8 [1]), Strabo (iv. 3, 4, and 6, 11), Pliny (iii. 31; iv. 105; xvi. 197) and Ptolemy (ii. ix. 5), its name being a word which appears under many forms (*e.g.*, Joux, Jorat, Jorasse, Juriens), and is a synonym for a wood or forest. The German name is Leberberg, *Leber* being a provincial word for a hill.

Politically the Jura is French (departments of the Doubs, Jura, Ain and in the north a small portion of Alsace) and Swiss (parts of the cantons of Geneva, Vaud, Neuchâtel, Berne, Soleure and Basle). (J. I. P.)

JURASSIC SYSTEM, in geology, the succession of rocks deposited during the middle period of the Mesozoic era, succeeding the Trias and preceding the Cretaceous period. This great series of fossiliferous rocks was first studied in Britain by William Smith, who, in his two works *Strata Identified* (1816) and *Stratigraphical System of Organized Fossils* (1817) made it the foundation of stratigraphical geology. Many of his original names for the subdivisions in England have been preserved in the universal terminology of geology. The upper part of the system was originally called the Oolitic series by Conybeare and Phillips (1822) from the characteristic oolitic or roe-like structure of many of the limestones, while the underlying Lias was regarded as a separate series. The name "Jura limestones" for rocks equivalent to the Oolitic series, well developed in the Jura mountains of Switzerland, was first employed by A. Brongniart in 1829 and ten years later was adopted for the whole system by von Buch, who divided it into Lower or Black, Middle or Brown, and Upper or White Jura. The Jurassic rocks and their fossils were studied on the Continent by A. d'Orbigny, F. A. Quenstedt, A. Oppel, M. Neumayr, P. de Loriol, H. Salfeld, and by many other distinguished workers. In England the names of John Phillips, John Lycett, J. Morris, J. F. Blake, W. H. Hudleston, H. B. Woodward, S. S. Buckman, L. Richardson, W. D. Lang, and J. Pringle stand out as the principal geologists to carry on the work begun by William Smith.

Quenstedt in *Der Jura* (1858) subdivided the system into 18 stages, named α to ζ after the letters of the Greek alphabet, and based largely on the lithological divisions in the Jura mountains. Owing to the great petrological diversity of the rocks resulting from their shallow-water origin—clays, sands and limestones succeed one another in different order in different places—Quenstedt's stages have been abandoned and a palaeontological system of zoning has been introduced. The fossils most used have been ammonites, as they have been found to have the most restricted vertical range in the rocks and to be to a certain extent independent of facies. But while there has been general agreement as to the order in which the zonal forms succeed one another, the lines of division between the formations have varied with the opinions of the authors, as have also the number of zones considered worthy of recognition. In addition to the palaeontological zones, a number of stages have been established, named after towns and localities where particular groups of zones are especially well developed, or after any other noteworthy characteristics (*e.g.*, Oxfordian; Virgulian after *Exogyra virgula;* Fullonian after Fuller's Earth).

The Jurassic period was marked by a great extension of the sea, which commenced after the close of the Trias and reached its maximum during the Callovian and Oxfordian stages, the rocks of which consequently have the widest distribution. The marine advance was, however, checked temporarily in certain localities at comparatively early stages (as during the Bajocian and Bathonian in the north of England), and towards the close of the period (Purbeckian) fresh-water marshes became widespread over the continental surfaces, foreshadowing the emergence of the Lower Cretaceous land. In America the Sierras, Cascade mountains, Klamath mountains and Humboldt range began to emerge, but there appears to have been very little crustal disturbance or volcanic activity. Tuffs are known in Argentina and California, and certain volcanic rocks in the islands of Skye and Mull. In the Alpine region marine conditions steadily persisted, forming the local Tithonian stage.

Life of the Period.—The existence of *faunal regions* in Jurassic times was first pointed out by J. Marcou and later the subject was greatly elaborated by M. Neumayr. According to Neumayr, three distinct geographical regions of deposit can be made out among the Jurassic rocks of Europe: (1) The Mediterranean province, embracing the Pyrenees, Alps and Carpathians,

with all the tracts lying to the south. (2) The central European province, comprising the tracts lying to the north of the Alps, characterized principally by abundant coral reefs. (3) The boreal or Russian province, including the middle and north of Russia, Spitzbergen and Greenland. Neumayr was able to trace these faunal belts round the earth, and to detect indications of a similar series in the southern hemisphere. Recent discoveries of the distribution of fossils show that causes other than the mere existence of climatic belts similar to those of the present day must be postulated to explain all the facts.

The Jurassic has been termed the "Age of Reptiles." The most striking forms of life during the period were the dinosaurs, which ranged in size from animals no larger than a rabbit to the gigantic *Atlantosaurus*, 100 ft. long, in the Jurassic of Wyoming. They included many of the carnivorous Theropoda, e.g., *Megalosaurus, Tyrannosaurus, Streptospondylus* and herbivorous Sauropoda, e.g., *Cetiosaurus;* also Ornithischia (rarer, e.g., *Scelidosaurus*. Other land reptiles were the mammal-like theromorpha and lizards. The rivers were stocked with crocodiles (e.g., *Teleosaurus*). In the seas swam innumerable turtles, and the huge extinct ichthyosaurs and plesiosaurs. Even in the air there flew reptiles, the Pterosauria or pterodactyls. By Kimeridgian times (the Solenhofen slates of Germany) the first bird, *Archaeopteryx*, was evolved. It had a long tail with steering feathers growing out at right angles on both sides, claws on its wings and reptilian jaws and teeth. Of mammals there were very few, and all smaller than a rat. Throughout the long Mesozoic era they underwent little change, and must be regarded as eking out an existence in an unfavourable environment, in a world dominated by the Reptilia. They all belong to the Marsupials, and were probably insectivorous. *Phascolotherium, Amphilestes, Stereognathus* and *Amphitherium* have been found in the Stonesfield slate, while *Amblotherium, Plagiaulax* and *Triconodon* occur in the Purbeck beds.

Fish were approaching the modern forms; heterocercal ganoids were becoming scarce, while the homocercal forms abounded (*Gyrodus, Microdon, Lepidosteus, Lepidotus, Dapedius*). The *Chimaeridae* or cat-fish here made their appearance (*Squaloraja*). The ancestors of the modern sturgeons and selachians (*Hybodus, Acrodus*) were numerous. Bony fish were represented by the small *Leptolepis*.

A great change had come over the Crustaceans; in place of the Palaeozoic trilobites we find long-tailed lobster-like forms (*Eryon, Eryma, Glyphaea*) and the broad crab-like type (*Prosopon*). Isopods and Ostracods were common at certain stages (particularly in the Purbeckian). All the orders of insects were represented, but the Neuroptera still predominated.

Mollusca and Molluscoidea (Brachiopods) were extremely abundant, but the most characteristic were the Cephalopods, especially the ammonites, of which an almost endless variety abounded. Crinoids and Echinoids were also abundant, while the corals were important rock-builders (especially in the Corallian period). Sponges, too, occasionally formed rocks, such as the Spongiten Kalk, and the Rhaxella Chert of England.

Vegetation.—The Jurassic vegetation was in the main a continuation of that of Triassic times. In the estuarine and freshwater beds numerous Gymnosperms abound, completely dominating the Jurassic flora. They included Benettitales, Ginkgoales (Ginkgos) and Coniferales in abundance. Until recently there were thought to have been no Jurassic Angiosperms, but Angiospermous fruits have recently been described by H. Thomas from the Estuarine series of Yorkshire (Bajocian) and a Dicotyledonous leaf has been described by Seward from the Stonesfield slate (Bathonian).

Economic Products.—These are very various. Coal occurs principally in the Lias; in Hungary there are 25 workable beds; also in Persia, Turkestan, Caucasus, South Siberia, China, Japan, Farther India, New Zealand and the Pacific Islands. Thin seams of coal occur in the Estuarine series of Yorkshire and in the Oxfordian of Scotland. Iron ores occur at many horizons. Those in Britain will be described under Domerian, Toarcian, Corallian and Kimeridgian; the richest and most plentiful ores are those of Lorraine and Cleveland, in Yorkshire, of Northamptonshire, Lincolnshire and Oxfordshire. Oil shales are found in Germany, and the Kimeridgian and Lower Lias of England are sometimes highly bituminous. Good building stones are obtained from the Aalenian, Bathonian, Portlandian and Purbeckian. Hydraulic cement is made from the Lower Lias, and most of the calcareous beds are burnt for lime. The clays all make excellent bricks, but the most famous are the Oxford clay bricks of Peterborough. In Bavaria the Kimeridgian produces the celebrated lithographic slates of Solenhofen, which are of the highest interest to palaeontologists, as containing the very perfect impression of *Archaeopteryx* (*q.v.*) the oldest known fossil bird, with marked reptilian characteristics.

THE JURASSIC SERIES IN ENGLAND

The sequence of Jurassic rocks as developed in England is full, varied and highly fossiliferous, and may be taken as typical. Although there were no orogenic movements during the period, small earth-movements were probably going on continuously, so that the sediments deposited vary in lithology both in area and in time, and there are many slight unconformities. The fauna to a certain extent varies with the lithology; thus in the clays, belemnites are common and corals rare, while in the limestones, belemnites are rare and corals abundant. The ammonites, on which correlation depends, are found in both types of deposit, and serve to demonstrate that a lithological unit may be of different ages in different places.

Lower Lias.—The name Lias is supposed to be a corruption of the word "layers," used by the quarrymen in the west of England in reference to the stratified clays and limestones of the lower beds. There is a gradual passage from the Trias through the Rhaetic beds into the Lias.

The Lower Lias, the thickest division, is usually divided into the *Hettangian* (from Hettange, Lorraine) below, the *Sinemurian* (from Sinemurum = Semur, Côte-d'Or) in the middle, and the *Charmouthian* (from Charmouth, Dorset) above. It consists almost exclusively of clay, with thin layers of argillaceous limestone. It covers a considerable area in England from the coast of Dorset to north Yorkshire, forming much of the central plain of England. 580 ft. thick in Dorset, it thins out almost completely against the Mendip Hills, thickening again to from 440 ft. to 700 ft. in the Midlands, and 700 ft. in Yorkshire.

See S. S. Buckman, *Jurassic Chronology*, I. Lias, *Q.J.G.S.*, vol. lxxiii. (1917), p. 257, and vol. lxxvi. (1920), p. 62; W. D. Lang, and others, in various papers on the Lower Lias of the Dorset Coast, *Q.J.G.S.*, vol. lxxix. (1923), p. 47; vol. lxxxii. (1926), p. 144; vol. lxxxiv. (1928), p. 179; and *Proc. Geol. Assoc.*, vol. xxxv. (1924), p. 169; A. E. Trueman, on the Lower Lias of the Cardiff District, *Proc. Geol. Assoc.*, vol. xxxi. (1920), p. 93 and of Glamorganshire, *ibid.* vol. xxxiv. (1923), p. 246, of Somerset (with J. W. Tutcher), *Q.J.G.S.*, vol. lxxxi. (1925), p. 595.

Middle Lias or **Domerian** consists principally of sands in the lower part and ferruginous limestone (marlstone) in the upper part. In Dorset, it consists of sands and sandy clays, about 350 ft. thick, with a seam of marlstone (1 ft.) at the top; it is attenuated against the Mendips. Towards the Cotswolds it thickens, the sands to 150 ft., the overlying marlstone to 15 ft. In Oxfordshire, Leicestershire and south Lincolnshire, the marlstone is extensively worked as an iron ore; in Yorkshire, the Middle Lias consists of sandy clays with the valuable Cleveland Ironstone in the upper part.

Upper Lias or **Toarcian** (from Toarcium = Tours) is subdivided into a Lower series or *Whitbian* (from Whitby, Yorkshire) which consists principally of clays, and an Upper series or *Yeovilian* (from Yeovil, Somerset) which is almost entirely arenaceous. The thickness of clays deposited during the Whitbian is greatest in Yorkshire (280 ft.), where they have yielded to commerce alum and jet. In Northamptonshire the clays shrink to 160 ft., and at Fawler, north of Oxford, all the zones are represented in a *remanié* bed a few inches thick. In the Cotswolds, the Whitbian attains its greatest thickness (320 ft.), of which the highest 190 ft.—the Cotswold Sands—are arenaceous. In Dorset, the Whitbian is represented by 10 ft. of clays, resting on a cephalopod bed, 5 ft. thick.

The most important development of the Yeovilian is in Northamptonshire, where, together with the topmost zone of the Whitbian, it contains the Northampton Iron Ore, extensively worked all along the outcrop. The Yeovilian is represented in Yorkshire by sands (50 ft.); near Oxford, by 10 ft. of unfossiliferous clay; in the Cotswold, by a cephalopod bed, some 3 ft. thick; and in Dorset, by the Bridport and Yeovil Sands, 130 ft. thick.

See S. S. Buckman; "Certain Jurassic (Lias-Oolite) Strata of South Dorset, and their Correlation," *Q.J.G.S.*, vol. lxvi. (1910), p. 52; and vol. lxxviii. (1922), p. 378; J. F. Jackson, "The Junction Bed of the Middle and Upper Lias on the Dorset Coast," *Q.J.G.S.*, vol. lxxxii. (1926), p. 490. *The Northampton Sand of Northamptonshire* (1928) (collected papers reprinted); R. H. Rastall, "The Blea Wyke Beds and the Dogger in North-East Yorkshire," *Q.J.G.S.*, vol. lxi. (1905), pp. 441–460.

Bajocian (from Bayeux, Normandy), including at the base the *Aalenian* (from Aalen, Württemberg), and the *Bajocian* (*sensu strictu*) above. These two divisions are usually known as the Inferior Oolite, but are separated by a plane of major unconformity. The Aalenian includes at the base the upper part both of the Bridport Sands of Dorset, and of the Northampton Sands, mentioned above. The greatest development of the Inferior Oolite occurs in the Cotswold Hills (250 ft.); these shallow-water, marine, highly fossiliferous limestones, however, thin out and disappear both to the south in the Mendip region, and to the north on the eastern borders of Oxfordshire. South of the Mendips, in Somerset and Dorset, they reappear as 5 to 15 ft. of limestones; their richness in ammonites (fossils rare in the Cotswolds), and the absence of other fossils common in the Cotswolds, has been taken to indicate that Dorset (with Normandy) formed part of a separate basin of deposition. In Yorkshire, the Bajocian and Aalenian are represented by fissile sandy limestone flags, containing plants—the Lower Estuarine Series; temporary transgressions of the sea are indicated by thin bands with marine fossils.

See S. S. Buckman, "The Bajocian of the Mid-Cotteswolds," *Q.J.G.S.*, vol. li. (1895), p. 388, and "Deposits of Bajocian age in the Northern Cotteswolds," *Q.J.G.S.*, vol. lii. (1897), p. 607 and vol. lvii. (1901), p. 126.

Bathonian (from Bath, Somerset); here taken to consist of a lower division or *Vesulian* (from Vesoul, Haute Saône, France), a middle division or *Fullonian* (from Fuller's Earth), and an upper division or *Bradfordian* (from Bradford-on-Avon, Wiltshire). The Vesulian consists of fossiliferous, gritty ragstones, formerly grouped with the "Inferior Oolite" division; it rests with pronounced unconformity on the denuded surface of the flexured Bajocian. The Fullonian contains the Fuller's Earth Clays and Rock of Dorset, and the highly fossiliferous white limestones of Somersetshire, Gloucestershire and Oxfordshire which might be termed the Great Oolite proper. At Stonesfield, north of Oxford, a local flaggy facies at the base of the Great Oolite is quarried for roofing slates—the Stonesfield Slates. The Bradfordian is subdivided for the most part on lithological grounds (ammonites being absent) into Bradford Clay below and Forest Marble above. In Lincolnshire, the Bradfordian is represented by an argillaceous facies, the Great Oolite Clay.

In Yorkshire, the whole of the Bathonian passes into a poorly fossiliferous series of brackish and freshwater sandstones, the Upper Estuarine Series. The beginning of this change can already be seen in Lincolnshire, where an Estuarine Series separates Great Oolite (upper Fullonian) from the Lincolnshire Limestone.

The **Cornbrash** (from a "brash" or loose rubble which in Wiltshire forms a good soil for corn), the highest member of the old division of Lower Oolites, is usually grouped with the Bradfordian; the upper Cornbrash is however more properly classed with the Callovian.

See for *Vesulian:*—L. Richardson, "The Inferior Oolite and Contiguous Deposits of the Bath-Doulting District," *Q.J.G.S.*, vol. lxiii. (1907), p. 383; and between Rissington and Burford, vol. lxiii. (1907), p. 437; and of the Doulting-Milborne Port District, vol. lxxi. (1915), p. 473; and of the Crewkerne District, vol. lxxiv. (1918), p. 145. *Fullonian-Bradfordian:* M. Odling, "The Bathonian Rocks of the Oxford District," *Q.J.G.S.*, vol. lxix. (1913), p. 484; J. Pringle, "Geology of Oxford," *Mem. Geol. Survey* (1926), p. 13; J. A. Douglas, and W. J. Arkell, "The Stratigraphical Distribution of the Cornbrash," *Q.J.G.S.*, vol. lxxxiv. (1928), p. 172.

Oxfordian (from Oxford) here including the *Callovian* at the base (from Callovium = Kellaways, near Chippenham, Wiltshire), and the *Divesian* (from Dives, Calvados, Normandy) in the middle. The best known feature of this formation is the Oxford Clay, the outcrop of which stretches from Dorset to Yorkshire, forming a belt of low-lying valleys, it is usually a dark clay, and the fossils are often preserved in pyrites. At the base in the Midlands and Wiltshire is a calcareous sandstone (Kellaways Rock), sometimes resting on Callovian clays (Kellaways Clay). The Kelloway Rock of Yorkshire, a highly fossiliferous sandstone, is equivalent not only to the Kellaways Rock and Clay of Wiltshire, but also to the whole of the Lower Oxford Clay. Towards the top of the series (Oxfordian *sensu strictu*) a sandy facies appears at different horizons in different places (Lower Calcareous Grit); although it contains an essentially Oxfordian fauna, it is often grouped with the Corallian. In Yorkshire, a calcareous facies (Hambleton Oolite) appears at the top of the Oxfordian.

See S. S. Buckman, "The Kelloway Rock of Scarborough," *Q.J.G.S.*, vol. lxix. (1913) p. 152; E. Neaverson, "The Zones of the Oxford Clay near Peterborough," *Proc. Geol. Assoc*, vol. xxxvi. (1925), p. 27; J. Pringle, "Geology of Oxford," *Mem. Geol. Survey* (1926), pp. 29–38.

Corallian (from the prevalence of corals) may be used to denote the shallow-water phase separating the Oxford and Kimeridge Clays; this phase began, however, earlier in England than in most places on the Continent, where clays continued to be deposited until the close of the Oxfordian. The Corallian is here considered to begin with the important stratal break at the base of the Argovian, and to embrace the *Argovian* (from Argovia, Jura Mts.), *Rauracian* (from Rauracia) and *Sequanian* (Sequana = Seine) of Continental geologists. The shallow water Corallian includes sandbanks, shelly limestones and oolites, with coral reefs and subordinate clays. The coral reefs were all of the fringing type, rarely more than 20 ft. in thickness, and they grew at various times and places, wherever conditions were suitable. Beginning in Yorkshire at the top of the Oxfordian, where the passage up to the Corallian is gradual and complete, they continued on the Continent into Virgulian times, when Kimeridge clay was forming in England. The fossilized reefs form the rubbly limestones ("coral rag") and this type of rock was repeated at five successive periods in England.

The outcrop of the shallow-water facies is almost continuous from Weymouth to Oxford, and reappears in Yorkshire, in Sutherlandshire, and in the Kent borings. Between Oxford and Yorkshire, with the exception of a local reef at Upware, near Cambridge, the formation is represented by a deep-water facies, the Ampthill Clay, a dark clay with much selenite.

See J. F. Blake and W. H. Hudleston, "The Corallian Rocks of England," *Q.J.G.S.*, vol. xxxiii. (1877), p. 260; W. J. Arkell, "The Corallian Rocks of Oxford, Berks, and North Wilts," *Phil. Trans. Roy. Soc.*, Series B., vol. ccxvi. (1927), p. 67.

Kimeridgian (from Kimeridge or Kimmeridge, Dorset) is divided into the Lower Kimeridgian or *Virgulian* (from the abundance of the lamellibranch *Exogyra virgula*) and the Upper Kimeridgian or *Bononian* (from Boulogne, France). It consists typically of a dark-grey or black shaly and bituminous clay, with selenite and layers of septaria; the outcrop usually forms low-lying pasture lands, such as the Vale of the White Horse, the Vale of Aylesbury, much of the Fens, the Vale of Lincoln and the Vale of Pickering. Part of the Lower Bononian is represented by a sandy facies in Wiltshire, Oxfordshire and Buckinghamshire. Coast sections may be seen at Kimeridge in Dorset and in Filey bay, Yorkshire, while the best inland exposures are in brickyards at Swindon, Culham, Oxford, Brill, Ely and Market Rasen. In recent years all the zones have been proved in the borings in Kent.

At Kimeridge the carbonaceous clay contains bands of highly bituminous shale, which was worked in the 18th century for the extraction of oil, tar and manure. It is still locally used as fuel, but gives off sulphurous fumes. In Holworth Cliffe, Ringstead Bay, spontaneous combustion broke out in 1826 after heavy rain, and continued for several years.

See J. F. Blake, "On the Kimeridge Clay of England," *Q.J.G.S.* xxxi. (1875), p. 196; J. Pringle, "Geology of Oxford," *Mem. Geol. Survey* (1926), pp. 66–67.

Portlandian (from the Isle of Portland, Dorset). In the type localities of Purbeck and Portland there is a gradual passage upwards from the Passage Beds of the Kimeridge Clay into the Lower Portlandian or Portland Sands, 115 ft. thick. The Upper Portlandian or Portland Limestones include (1) the Cherty Series, 60–75 ft. thick, with very large ammonites; (2) the Freestones, 20–40 ft., extensively quarried as building stone; near the top is the "Roach" or Portland Screw bed, consisting largely of *Cerithium portlandicum* and still larger ammonites. In the Vale of Wardour, the Portlandian reappears in much the same form. The most northerly occurrences of Portland rocks are at Swindon, Wilts, and from Shotover near Oxford to Aylesbury, Bucks. Here the Portland sands are missing, the limestones resting directly on a lydite remanié bed of the Kimeridgian. The Cherty series has dwindled to a single "Cockle bed," a few feet thick, overlain by thick yellow sands with impersistent hard bands called Swindon stone, representing the freestones of Dorset. At the top are some chalky limestones and a representative of the "Portland Screw bed" or "Roach."

In Yorkshire a Coprolite bed at the base of the Speeton clay contains rolled Portlandian ammonites of Russian facies.

See Sir A. Strahan, "Geology of the Isle of Purbeck and Weymouth," *Mem. Geol. Survey* (1898), pp. 60–71; C. P. Chatwin and J. Pringle, "The Zones of the Kimmeridge and Portland Rocks at Swindon"; Summary of Progress, *Mem. Geol. Survey* (1922), pp. 162–168; J. Pringle, "Geology of Oxford," *Mem. Geol. Survey* (1926), p. 77.

Purbeckian (from the promontory known as the Isle of Purbeck, Dorset), the highest member of the Jurassic system, consists principally of freshwater lacustrine beds, indicating extensive swamps, which were sometimes invaded by the sea, sometimes elevated into land surfaces on which grew large "cycads" and coniferous trees. They show the transition from the marine Portlandian to the Wealden, the lowest division of the Cretaceous. Freshwater Purbeck beds have not been recognized north of Oxford; the marine equivalents are possibly present in the Speeton Clay of Yorkshire. The Purbeck Marble, which occurs near the top of the series, is a limestone almost entirely composed of the shells of the pond-snail *Paludina carinifera;* it has been extensively used since mediaeval times in the interior decoration of churches and cathedrals.

See Sir A. Strahan, "Geology of the Isle of Purbeck and Weymouth," *Mem. Geol. Survey* (1898), pp. 72–111.

JURAT, a name given to the sworn holders of certain offices. Under the *ancien régime* in France, in several towns of the southwest such as Rochelle and Bordeaux, the *jurats* were members of the municipal body. The title was also borne by officials corresponding to aldermen in the Cinque Ports, but is now chiefly used as a title of office in the Channel Islands. There are two bodies, consisting each of 12 jurats, for Jersey and the bailiwick of Guernsey respectively. They form, with the bailiff as presiding judge, the royal court of justice, and are a constituent part of the legislative bodies. In English law the word jurat (*juratum*) is applied to that part of an affidavit which contains the names of the parties swearing the affidavit and the person before whom it was sworn, the date, place and other necessary particulars.

JURIAN, an independent linguistic stock, a name derived from the Juris, its most important tribe, who live on the border between Brazil and Colombia, between the Putumayo and Yapura rivers, mainly on the Puré, a tributary of the latter in about 1°30′ S. Lat. The Jurian tribes were a friendly, sedentary and agricultural people, who tattooed a considerable part of their faces in black, their full name, *Juru-Pixuna,* meaning "black-mouths." The men wore only leaf coverings, the women going quite naked. The men wore a small labret in the lower lip. The houses were circular, domed, thatched, with a small mud-walled chamber inside, capable of being tightly closed, as a refuge from mosquitoes. The bow with poisoned arrows and blow-gun were their main weapons. Circular shields of tapir hide were used in warfare.

See C. F. P. von Martius, *Beiträge zur Ethnographie und Sprachenkunde Amerikas,* etc. (Leipzig, 1867).

JURIEN DE LA GRAVIÈRE, JEAN BAPTISTE EDMOND (1812–1892), French admiral, was born on Nov. 19, 1812. He entered the navy in 1828, and served in the Crimean and Mexican wars. During the Franco-German War of 1870 he had command of the French Mediterranean fleet, and in 1871 he was appointed "director of charts." Jurien died on March 4, 1892. His works include: *Guerres maritimes sous la république et l'empire,* Eng. trans. by Lord Dunsany; *Sketches of the Last Naval War* (1848); *Souvenirs d'un amiral* (1860), that is, of his father, Admiral Jurien; *La Marine d'autrefois* (1865), largely autobiographical; and *La Marine d'aujourd'hui* (1872)

JURIEU, PIERRE (1637–1713), French Protestant divine, was born at Mer, in Orléanais, where his father was pastor. He studied at Saumur and Sedan and completed his studies in Holland and in England, when he received Anglican ordination. Returning to France he was reordained, and succeeded his father at the church at Mer. His *Traité de la dévotion* (1674) led to his appointment as professor of theology and Hebrew at Sedan. He was pastor of the Walloon church of Rotterdam from 1681 till his death on Jan. 11, 1713. Jurieu helped many sufferers from the revocation of the Edict of Nantes (1685). He himself was persuaded (*Accomplissement des prophéties,* 1686) that the overthrow of Antichrist (*i.e.*, the Roman church) would take place in 1689. H. M. Baird says that "this persuasion, however fanciful the grounds on which it was based, exercised no small influence in forwarding the success of the designs of William of Orange in the invasion of England." Jurieu defended Protestant doctrines against Arnauld, Nicole and Bossuet, but was equally ready to dispute with his fellow Protestant divines (with Louis Du Moulin and Claude Payon, for instance) when their opinions differed from his own even on minor matters. The bitterness and persistency of his attacks led to the expulsion of Pierre Bayle from his chair in 1693.

Jurieu's *Lettres pastorales adressées aux fidèles de France* (3 vols. Rotterdam, 1686–87; Eng. trans. 1689), found its way into France and produced a deep impression on the Huguenots. His last important work was the *Histoire critique des dogmes et des cultes* (1704; Eng. trans. 1715).

See Herzog-Hauck, *Realencyklopädie;* also H. M. Baird, *The Huguenots and the Revocation of the Edict of Nantes* (1895).

JURISDICTION, in general, the exercise of lawful authority, especially by a court or a judge; and so the extent or limits within which such authority is exercisable. It has primarily a territorial signification, but where its powers are otherwise limited, it is rather a matter of competence, and in foreign codes this distinction is more clearly evident. Thus, a county court has a fixed territorial jurisdiction, but within that jurisdiction is not competent to try any actions but those specifically allotted to it by statute. In international law jurisdiction has a wider meaning, namely, the rights exercisable by a State within the bounds of its sovereignty. (*See* INTERNATIONAL LAW.)

In many States, *e.g.*, France, jurisdiction is founded also on nationality; so the Civil Code of the French, commonly called *Code Napoléon,* governs Frenchmen everywhere. Also many States claim criminal jurisdiction over their nationals everywhere. In Great Britain this is confined to a few major crimes.

JURISDICTION IN PRIZE: *see* PRIZE COURTS.

JURISPRUDENCE is the name given to those studies, researches and speculations which aim primarily at answering the plain man's question: What is Law? But because the law is a thing of many aspects, those inquirers who keep that object foremost do not necessarily come quickest at the answer. Indeed the more promising the method pursued, the farther the goal recedes. At the head of English jurisprudence stands Sir Henry Maine. He more than others kept his purpose vividly in mind, yet when at last he came to lay aside his pen whole sciences had been generated, and all their paths diverged. Should the inquirer turn first to the bookseller's catalogue, his expectations will again be defeated. He will certainly come upon a definition, clear, logical and precise, but plain man or philosopher, it will have no meaning for him until he has himself become a master of the law. This perhaps comes nearer to the kind of study the Roman jurists denoted by the name *"Juris prudentia est divinarum atque humanarum rerum notitia, iusti atque iniusti scientia"*; though this promise of connecting the lawyer's daily task with the true inwardness of all things human and divine was hardly fulfilled. The Roman jurists, marvellous science though they had, lacked the philosophic mind. Whatever the explanation, their work was done when they had given to the practical rules they employed a formal perfection; a perfection, be it added, that is still the envy of civil law and common law alike. Such *elegantia* was for them the last word in jurisprudence. Between these greatly opposing conceptions lie a number of methods which have all in one way or another enriched the study of the subject. There is pure philosophy on the one hand, political theory on the other. There is the study of comparative institutions, the history of moral ideas. These and more border upon or overlap the jurist's field. But jurisprudence has an individuality of its own. The methods of social theory are not those of juristic speculation. There is more than political wisdom enshrined in the thought of Burke, but he does not speak the language of Blackstone. Nor does Savigny speak quite with the voice of Kant. And if such has been the case in the past, how much more it is true to-day. The inter-relation of the relevant sciences is now so intricate that no general statement can hope to give an adequate conception of the subject as a whole. Nor will any such statement be even attempted here. It is as a guide to the present position, an indication of the trend of interest, a suggestion of the more hopeful lines of inquiry that this sketch had best be regarded.

HISTORICAL

Plato and Aristotle.—Western speculation as to the meaning of law rightly dates from the Greeks. Their answers to the question: "What is Law?" thrust upon them by political misfortunes, will all be found discussed in the writings of Plato and Aristotle. Mention can only be made of Aristotle's conception of law as a Rule, as an embodiment of Reason whether in the individual or the community: "mind unaffected by impulse" which harmonizes all conflicting elements and secures the well-being of the whole. It would be a mistake to assume that the interest of Greek speculation is now purely historical. In an age of acute specialization there would be less proportion or balance, were it not for the constant testing of theories in the light of what Plato suggested or Aristotle thought. For the jurist's occasional reading nothing could be more helpful. (The following passages may perhaps be cited. Plato, *Gorgias* 482c–484c, 515–517; *Protagoras; Phaedrus* 260–262c, 273,277 *seq; Republic* esp. bks. I.–IV. and X., 619b and c; Aristotle, *Ethics* V. esp. 1129b–14-end; 1131a 25; caps. 6–8 1134–36; *Politics* I. caps. 2 and 3; III. and esp. cap. 16-end; *cf.* E. Barker, *Political Theory of Plato & Aristotle.*)

Mediaeval.—The next landmark is in the middle ages. To the mediaeval mind law was the law of God as revealed in the Bible, through the Church. This law was immutable. It was also remote from the workaday world. Princes and rulers had a limited capacity of interfering with it. Everyday affairs however call for regulation; this therefore had to be effected by means of ordinances. Hence positive law. Such was the great contribution of mediaeval thought to jurisprudence (*cf.* Pollard, *Evolution of Parliament*, cap. xi. and John Dickinson's edition of John of Salisbury). The static character of the law in the minds of the great common lawyers of the 17th century may in part be traced to it; but on the other hand the law-abidingness inherent in English institutions may owe much to it. Again when one hears a modern French lawyer say that his Government has the power but not the right, say, to confiscate the citizen's property without compensation, he is appealing probably to a distinction of mediaeval origin.

The 17th century was the age of the Law of Nature, but this is still a living influence in jurisprudence and as such will be treated in a suitable context.

Modern.—The 19th century is memorable not so much for its direct contributions to jurisprudence, considerable though these were, as for the complete revolution effected in the method of the moral sciences. The traditional method of approach—the selection of a leading idea, followed by its copious analysis and embellishment—had run its course. No progress could be made in that way. With it went a complete reversal of its method. The leading idea, the explanatory theory was now to come after, not before the evidence; and every phase of human life came to be studied in the realistic fashion of the natural sciences and in accordance with the same impersonal standards. With this change of outlook the bounds of knowledge began to extend beyond all expectation. History, which began the century as a complete record of the race, ended it as an episode in the light of the antiquity of man as revealed by archaeology and palaeontology. Not what the Renaissance handed on from the ancients that made us what we are, but the cave-designers of Altamira or conceivably the tool-workers of Foxhall. But beyond thus carrying our knowledge back into remote past, fresh fields were rapidly disclosed on all sides. The lives of the simpler peoples, ancient myths and dreams, were studied. *The Golden Bough* was an event of the century. Then came psychology, experimental, social and analytical. The student to-day is faced in the social sciences with a body of ordered knowledge bearing on his theories. And the jurist, mindful of Maitland's scorn for those "who elegantly stroll along the high priori road," would be the last to wish it otherwise.

Another movement has affected the jurist. This has made him more of a scientist by removing the temptation to regard jurisprudence as an art. In the 17th century Coke was a leader of the parliamentary party, and provided his followers with their political ideals and their party slogans. In a subsequent age, such was the excellence of the *Commentaries* that Blackstone moulded the social thought of his countrymen for the better part of a century (and not always to their good). In Continental Europe apparently the jurist has always been prompter or critic at the political *première*. In the 19th century all this was altered. The flame of continental nationalism, the spirit of economic discontent could never have emerged from the φροντιστήρια ("thinking shops") frequented by Austin, and though Bentham must be credited with many useful social changes, he belonged to a past age. The new democratic world found its own ideals; cheap books and newspapers, intensified electioneering, the growth of clubs and societies, all helped to elbow out the down-at-heels jurist. At the close of the century the school that stood closest to the Benthamite tradition found nothing so alien as the spirit of English law. All this was pure gain to the jurist. To-day he has no political affinities and few social responsibilities. He has the freedom of all the sciences and can pursue truth whithersoever it may lead.

The best historical introduction is found in Roscoe Pound's *Jurisprudence*, in H. E. Barnes' *History and Prospects of the Social Sciences* (1925), and *Interpretations of Legal History* (1923).

THE MEANING OF LAW

The Problems.—The political sciences put two major problems before the jurist. The one is special and in the main presented by the work of the field anthropologist. "Have the simpler peoples a rule of law?" is his first question. In the past society has been conceived on Aristotelian lines. First we find members of a clan taking to a settled mode of life, then for mutual protection neighbouring clans draw together into villages and finally out of a closer union of villages there arises the true political unit, the "city" aiming at the well-being of all. (*See* further 34

Monist [1924], p. 15–62.) The jurist can hardly look upon such peoples as without the law. If this position be accepted, how should we differentiate between these peoples and those others who continue to live under their tribal organization? The customs of such a folk may not exhibit any regularity intelligible to us, yet taboos are observed and their behaviour implies order. They are far removed from the incessant turbulence which Hobbes imagined of people living before the reign of law. The problem here presented is a real one. The relation of taboo to law is an inviting subject of research. But here it must suffice to emphasize the special difficulty of the jurist.

The second problem is of a different order. In social theory law is used in a wider sense than by the practitioner. All social regulatives go to the making of the comprehensive idea to which social science gives the name of law. The jurist finds no difficulty in according to them the title. When Pindar sings of law that is king of all, he understands; when the national anthem swells to the refrain *le Roi, la Loi, la Liberté,* the jurist recognizes that law from observation of the courts and the working of the constitution. His difficulty arises when he tries to understand the relation between law in the practitioner's sense and this larger social meaning. Social science for its part has realized the difficulty; the interrelation of law and custom, or law and morality, has long been pondered and skilfully dealt with (*see* L. T. Hobhouse's *Morals in Evolution*). It is peculiarly a sociological problem, yet social science calls for the jurist's aid.

Emotional Factors.—Apart from extraneous considerations the jurist seeks a significant characteristic to distinguish the two meanings. No merely formal distinction can satisfy. "In tota jurisprudentia," Winkler profoundly observes, "nihil est quod minus legaliter tractari possit quam ipsa principia." The jurist is now precluded from resorting to an *a priori* test. He is an observer of a particular group of social phenomena and he must explain them. Should he light upon emerging values so much the better. Primarily however he is an observer. Many consequences flow from this. For one thing he is concerned with the law as it is administered in the courts, not merely the rules found in practice books. Among the merits of Dicey's studies in the law not the least was this. He never for a moment forgot that the law is something more than the sum of the practitioner's rules. He had the jury constantly in mind, even in describing the rules themselves. Now what happens when a jury comes to the decision of a particular case, an issue of murder, a claim for injuries received in a motor accident, a breach of promise action? Is their verdict an expression of twelve men's "reason"; do they merely apply a general rule to a particular instance? Psychologists look rather to all that animates men acting singly and in a group. Many random influences are there; loyalties, sentiments, habits of mind, prejudices, repressions and all the factors of the unconscious life, the shock of ideas and the play of motives, all evoked by the staging of the trial. The psychologist can be left to study this. What concerns the jurist is that the jury's verdict, however arrived at, is an expression of the law in the wider social sense. In so far as it is arrived at by reference to a rule or standard, that rule or standard is the law as the layman understands it. The principle involved in the jury's decision is often that of the lawyer's practice-book; sometimes it is a qualification of this (as where a jury declares to be manslaughter what counsel must advise is murder); or a complete reversal (as when the jury vindicates "the unwritten law"). In Continental Europe, where the jury is less in evidence, the same influences make themselves felt. Therefore the law is an elastic conception.

Definition.—Definition by differentiation can hardly be the most appropriate form; a centre and circumference formula will prove more suitable. It is proposed to define law for the jurist as *the sum of the influences that determine decisions in courts of justice.* This will be found to satisfy the conditions expected of a working definition.

(1) The definition holds of all rules, of every kind and form of law the jurist is called upon to consider. The term Influence is preferable to Rule, which Salmond employs, because it avoids the strong intellectualist bias inseparable from Rule. Not every ingredient in a judicial decision is intellectual. "Only the trivial elements of the process are controlled by the abstract laws of logic." It is a more appropriate term for many of the factors contributing to the decision. (*See* further 31 *H.L.R.* 1060–62.) There is no legitimate consideration which enters into a judgment which is not covered by the definition.

(2) It makes no impossible demands upon social theory as to the way law is to be there defined. Nor does it prejudice any of the contending theories as to the metaphysical, moral or other basis of law.

(3) It enables the anthropologist's problem to be answered without recourse to artificial distinctions. The ordinary regulatives of life in a savage community may be baffling; Totem and Taboo for example are two of the problems of the hour in anthropology and psychology alike. But the jurist, however, may see the rudiments of justice wherever something in the nature of a trial takes place. Trial by ordeal is general among the simpler peoples. Matters for the ordeal then are matters of law, and trial by ordeal survived the beginnings of the common law. The law of the king's courts was expounded with the aid of the ordeal until the jury took its place. Apparently a similar process occurred in the case of the civil law. *Legis actio* replaced the ordeal, but just before the beginning of the historical period. Historically then there is warrant for the definition covering the "law" of the simpler peoples.

(4) It emphasizes the independent character of law in social development. Political history, economic development, cultural progress have each a different story to tell. These factors may have changed *pari passu* and incontestably they have all reacted on the law. But the law has a history of its own and there is only a limited correspondence between the stages of legal development and those of any of the other social factors.

(5) It is in keeping with a widespread movement in jurisprudence for the development of judge-made law, for enlarging the scope of the judge's functions and liberalizing the influences which condition his work. This is much in evidence in the United States.

The following (among other) authorities should be consulted: J. W. Salmond, *Essays in Jurisprudence* (1891), *First Principles of Jurisprudence* (1893); E. Picaid, *Le Droit Pur* (1899); C. del Vecchio, *I Presupposti* (1905); R. Pound, *Opera Omnia* (*Outlines of Jurisprudence,* 1914, has a useful bibliography); F. Somto, *Juristische grundlehre* (Leipzig, 1917); H. Goitein, *Primitive Ordeal and Modern Law* (1922).

SOVEREIGNTY

The principal rule-making organization in the modern world is the State, but as it happens the theory of the State is the peculiar concern of the political thinker. For forms of government let philosophers contend. When the jurist steps in the whim of Caligula may be as much law as an act of parliament. About a hundred years ago, the law had become petrified and reform all round was long overdue. The reformer was found in Jeremy Bentham, a robust thinker, and a splendid fighter. His nervous prose remains vibrant with the passion of the man. He gained disciples and Austin offered him a Boswell's devotion. Austin had conceived his idea of law in the army, as Mrs. Austin's biography indicates. Law was a command, the command of the sovereign. For centuries legal sovereignty (*i.e.,* the final authentication of rules to be applied in the English courts) had lain with king, lords and commons. That is still the theory of English law. If anything the sovereign chooses to command is law, popular legislation can usher in the Benthamite era. It did; and Austin was all for furthering the good work. He analysed the theory of English law and found the real sovereign to be king, lords and—electors.

The law commands and forbids. This has recently been brought home by a minor social abuse. Motorists spread themselves over the commons leaving litter and refuse behind them. Public annoyance finds vent in complaints to the press. The aid of parliament has been invoked. All to no avail. The law may command, but the police must enforce.

Dickinson, "A Working Theory of Sovereignty," in *Political Science Quarterly*, vol. xlii., pp. 524–548 (1927), and vol. xliii. pp. 32–63 (1928).

THE LEGAL ORDER

In recent jurisprudence the question is constantly to the fore, What is the function or end of law? The immediate object of the law, as anyone can see, is the solution of social conflicts. According to Roscoe Pound, the function of the law is so to balance interests as to secure the utmost of each while sacrificing in the general interest the least of any. But the English courts expect the parties to have delimited their interests for themselves, with or without previous governmental aid. With first hand knowledge of the main factors affecting them, the parties stake out their respective claims, and, with reference to the law of the land, formulate the scheme that is to govern their relations. A price fixing agreement is a common modern example. In the absence of such a formula and when the ordinary law is insufficient, the court may have to find a rule of its own. On the other hand, where social interests have to be weighed (*e.g.*, the validity of contracts in restraint of trade), the court is soon back at its old task of meting out even-handed justice between man and man. The fact is that Roscoe Pound's theory is more truly a theory of legislation and it is in that direction that its practical bearings are so important. All his instances of what is actually going on in legal systems are examples of legislative change. And as a rule a theory of legislation will not serve as a theory of adjudication ("for the wisdom of a law maker is one thing and of a lawyer another"). It may readily be conceded that the policeman on point duty has diminished enormously the number of accidents, but he is not the proper person to decide after a collision which of two insurance companies is to pay for the damage. And conversely, Dr. Johnson had some original notions as to the proper functions of the lord chancellor, but point duty was not one of them. Of more importance perhaps is it to consider the theory that it is the business of the jurist to ascertain and formulate the "jural postulates" of the period. He is to ascertain and weigh the various claims that emerge from among contending social forces and decide how they are to receive recognition by the community. The task is formidable and it argues much for the courage of its supporters that they undertake it. One may well hope with O. W. Holmes that "it is finally for science to determine, so far as it can, the relative worth of our different social ends" (*Collected Papers*, p 242) and yet doubt whether jurisprudence is that science. Let the judge, the text-writer, the great lawyer be as "creative" as a kind Providence may allow, who is he to act the arbiter of the values of the modern world? The theory may well brave ridicule, indeed for its compelling plea for social enlightenment among lawyers it will outlast many a fashion; still the purely descriptive method of Dicey's *Law and Opinion in the 19th Century* seems a much safer guide. There one may see how social conflicts work themselves out and leave a deposit on the law, even though the reader be left in the end with a more chastened view of the jurist's powers. In the meantime the original inquiry has been lost sight of. What after all is the answer to the question first propounded? Hitherto no satisfactory answer has been forthcoming. In the future it may be different, at least if studies like John Dickinson's *Administrative Justice and the Supremacy of Law* are any guide. The question is one for practical judgment. Should workmen's compensation be for the Ministry of Health, or for the county courts? Should the latest frontier incident in the Balkans be settled by the League Council or the Permanent Court? Let the wise decide.

THE NORM OF THE LAW

The norm, the standard form, is inseparable from the law, no matter what the period. It is as implicit in the judgments of Hammurabi as in those of Oliver Wendell Holmes. In the more primitive systems, no doubt, the picture in the books is everything; in Anglo-Saxon law liability for accident is concluded by the carrying of the weapon otherwise than in the manner prescribed. In more developed systems there is a similar reference:—for motorists' liability for accidents, the use or abuse of liberty, only the circumstances are more complicated, the application more involved. Does the character of the norm indicate the obligatory element in the rule of law? Does it differentiate it from other social regulatives? The answers are both Yes and No. Much good law is badly enforced and some doubtful law is enforced perfectly. Enforcement is not inherent in the law, yet when the law is readily reducible to norms it will be found to be the more easily enforceable. Again, what falls outside the scope of the norms is less likely to be law in the strict, or indeed any sense. "Law secures interests," as Roscoe Pound so happily puts it, "by punishment, by prevention, by specific redress or by substitutional redress; and the wit of man has discovered no further possibilities of judicial action" (27 *Int. Jl. Ethics*, 164; the philosophic reader will not want to leave this subject without first pondering John Dewey's "Nature and Reason in Law" which will be found *ibid.* vol. xxv., p. 25).

ORIGIN AND PSYCHOLOGICAL BASIS OF LAW

Maine found the origins of law in Themistes, "decrees," from which, he thought, Themis "law," was derived by abstraction. Except that, as we now think, it was the other way round, Themistes were derived from Themis, everything has tended to confirm what can only be described as an intuition of genius. Themis was one with Ge, Mother Earth, a goddess of no merely local or Hellenic significance. Sir Arthur Evans has shown that the Great Mother, whose worship is so richly illustrated in the Minoan cultures, was indeed a universal figure throughout the older world. Possibly we may go even further. It is not without significance that Pythagoras could identify Themis with a cosmic figure who appears as Themis in the world above, as Dikē (justice) in the world below, and as Nomos (law) in the world of men. There is the almost universal figure of the Mother in pursuit, never to relent till her fury has exacted her "eye for an eye, a tooth for a tooth." Can we doubt then that in this elemental figure we see the primal face of justice and that in man's attitude towards her is to be found the roots of his need for law? Aristotle did not deign to cast a glance behind but hastened to identify reason with the law. Reason is so to order one's life that no offence be ever occasioned (*honeste vivere, alterum non laedere*); but if this cannot always be, then readily to tender or accept amends. But it is hardly in this common sense, wide-eyed world that the law flourishes. Only in the twilight of the inner mind can the grievance be nursed to fruition or the need of revenge swell to a passion for "justice." Two thousand years of reason have failed to light up fully these dark recesses of the mind. Somewhere deep down within us there still lurks a vestige of man's primal need and the phantom figure of the Great Mother must pass to punish or assuage. Nor are traces wholly wanting in the demeanour of those who seek redress in the civil courts. "When I think of the law" writes one of the most distinguished of living judges, "as we know her in the court house and the market, she seems to me a woman sitting by the wayside, beneath whose overshadowing hood every man shall see the countenance of his deserts or needs. The timid and overborne gain heart from her protecting smile. Fair combatants manfully standing to their rights, see her keeping the lists with the stern and discriminating eye of even justice. The wretch who has defied her most sacred commands and has thought to creep through ways where she was not, finds that his path ends with her and beholds beneath her hood the inexorable face of death."

THE LAW OF NATURE

Theories of the law of nature have varied, but they conform in the main to one or other of two types. On the one hand there is the idea which embodies the reaction against the conventions and artificiality of social life. On the other, the scientific ideal in accordance with which the development of the law may be regulated. Of the former type was the law Pindar extolled, the law of the strong right arm with Hercules for hero. This was in essence the conception of Hobbes. Rousseau's name on the other hand has always been linked with the Romantics who, equally resenting the "restraints imposed by the weak and the rabble," sigh for the Golden Age. The two types are interlinked, for this conception also flourished at the time when the Roman jurists were perfecting the scientific conception, their most original contribution to the world's stock of moral ideas. These jurists generalized their own *jus gentium* "law common to all nations," and sought in the fundamental features of similar or universal legal institutions suggestions for the simplification of their own rules and an ideal towards which they might converge. Under the influence of this movement distinctions based on privilege fell away one by one, Quirites and plebeians, Romans and Latins, citizens and colonials and many another, till by the light of the law of nature a man was "a man for a' that" and *civis Romanus* was his boast. This scientific conception has played at all times, the mediaeval period included, a very great role in the development of law; and at no time, perhaps, more significantly than in the 17th and 18th centuries when it gave rise to the modern law of nations. This is not the place to estimate the debt the world owes to Grotius, but the beginnings of international law must always be associated with his name. The idea of the law of nature itself is vast. The reader will find an excellent approach to the subject in Pollock's *Essays in the Law.* Two current phases are of more than passing interest.

Modern English View.—In England, the classic home of justice through juries and legislation by laymen, it is befitting to turn first to a popular movement, which finds expression here as an impatience with the law. Law is no longer the background of life. Life is something bigger than the law. To suggest that well-being or happiness whether of the individual or society is to be sought in such a direction is to invite polite ridicule. This derisory note, by no means always so light hearted, is well caught in a widely fashionable anthology, *The Week End Book,* in the chapter on the Law and How You Break It. Allowing for the graver atmosphere of the House of Commons, we have Sir J. Simon saying: "I am not spending my time in discussing some miserable legal technicality . . . I know . . . that I have been talking law but I am the last person in this House to suppose that law is the whole of life. I have never thought so. . . . There are considerations involved in this whole story which are vastly more important than any merely legal proposition . . . apart from the legal question there is a social question, an industrial question and a human question" (Sir J. Simon on *The General Strike,* 1926, p. 15, 26). No less significant is the feeling that finds expression on the stage. *St. Joan* is surely indicative of its age. It is hard to say whether the play or its popularity is the more remarkable phenomenon. There is no more faithful representation of a trial in the whole of literature, and the audience may be forgiven for believing that they have had revealed to them the last secrets of justice. It may be remembered that in the epilogue the president of the court is brought on to make his avowal as well. This is what he says: "The judges in the blindness and bondage of the law praise thee, for thou hast vindicated the freedom and the vision of the living soul." If this is not of the quintessence of the law of nature English political thought since Wyclif is wholly without meaning.

American and European Views.—The other conception of the law of nature also has its modern counterpart. In the words of a notable American judge, one of the great needs of the law to-day is "a philosophy that will mediate between the conflicting claims of stability and progress and supply a principle of growth" (Cardozo J., 37 *H.L.R.*, p. 279). To meet this need a great body of European speculation and controversy has come into being. There is the work of Saleilles, with which for its lucidity and good sense the revival in France is worthily associated. For Saleilles natural law finally spells the comparative method (*cf.* "École Historique et Droit Naturel," 10 *Rev. Trim. de Droit Civil,* i. [1902] p. 80). Then there is Stammler, a name to conjure with abroad. He dissociates himself from traditional *Naturrecht,* though his peculiar cast of mind sets him in the right line of that tradition. When is what purports to be law really law? When can we be certain that what is law is also just? Every jurist must face problems such as these. For Stammler they presented themselves as essentially theoretical questions. A formal criterion of legal validity, characterized by unity and universality was at once his need and his aim. "Our purpose is to find a universally valid formal method by means of which the necessarily changing material of empirically conditioned legal rules may be so worked out, judged and determined that it shall have the quality of objective justice" (*Theory of Justice,* p. 89). Hence the slogan of his school, "natural law with a variable content." Those who would make sure of the kernel will turn to Oliver Wendell Holmes' "Natural Law" and they will not be disappointed (*Collected Legal Papers,* p. 310).

THE PLACE OF JURISPRUDENCE

A concluding word may be permitted as to the place of jurisprudence. Is it of the study or the market place? Various answers have been returned at different times but none seems to strike the right note like Bacon's sentence: "Studies serve for Delight, for Ornament, and for Ability"; the practical virtue coming third. In the market place the usefulness of jurisprudence is mainly indirect. Its true place is among the humanities. Above all it is for the teacher who, having himself heard, can attune the minds of his hearers to a rhythm beyond the law.

Merkl, *Die hehre con der Rechtskraft* (1923) discusses a number of German writers little known in England; G. Renard, *Le Droit* (3 vols., 1925–27); *Festgabe für R. Stammler,* edit. E. Tatarin-Taruheyden (1926); W. Haensel, *Kants Lehre vom Widerstandsrecht* (1926), the footnotes to which will serve as an admirable bibliography of modern German jurisprudence. *See* also articles by M. R. Cohen in *International Journal of Ethics,* vol. xxiv. (1914), p. 86, xxv. (1915), p. 469, xxvi. (1916), p. 347; in *Harvard Law Review,* vol. ii. (1926), p. 622; *Philosophical Review,* vol. xxv. (1916), p. 761; *Journal of Philosophy* (1925), p. 141. (H. GOT.)

JURISPRUDENCE, COMPARATIVE. The comparative study of law may be treated in two different ways: it may be directed to a comparison of existing systems of legislation and law, with a view to tracing analogies and contrasts in the treatment of practical problems and taking note of expedients and of possible solutions; or it may aim at discovering the principles regulating the development of legal systems, with a view to explain the origin of institutions and to study the conditions of their life. In the first sense, comparative jurisprudence resolves itself into a study of home and foreign law. In the second, comparative jurisprudence is one of the aspects of so-called sociology, being the study of social evolution in the special domain of law. From this point of view it is, in substance, immaterial whether the legal phenomena subjected to investigation are ancient or modern, are drawn from civilized or from primitive communities. The fact that they are being observed and explained as features of social evolution characterizes the inquiry and forms the distinctive attribute separating these studies from kindred subjects. It is only natural, however, that early periods and primitive conditions rather than recent developments should have attracted investigators in this field. The tendency of all evolutionary investigations is to obtain a view of origins in order to follow up the threads of develop-

ment from their initial starting-point. Besides, the simpler phenomena of ancient and primitive society afford more convenient material for generalizations as to legal evolution than the extremely complex legal institutions of civilized nations. But there is no determined line of division between ancient and modern comparative jurisprudence in so far as both are aiming at the study of legal development. The law of Islam or, for that matter, the German civil code, may be taken up as a subject of study quite as much as the code of Hammurabi or the marriage customs of Australian tribes.

The Beginnings of the Study.—The fact that the comparative study of legal evolution is chiefly represented by investigations of early institutions is therefore a characteristic, but not a necessary feature in the treatment of the subject. But it is essential to this treatment that it should be *historical* and *comparative*. Historical, because it is only as history, *i.e.*, a sequence of stages and events, that development can be thought of. Comparative, because comparisons of kindred processes have to be made in order to arrive at any conception of their general meaning and scientific regularity. Comparative jurisprudence differs from the history of law in that it is a study of general legal evolution as distinct from the development of any one particular system. The idea that the legal enactments and customs of different countries should be compared for the purpose of deducing general principles from them is as old as political science itself. It was realized with special vividness in epochs when material could be gathered from different sources and in various forms. The wealth of varieties and the recurrence of certain leading forms led to comparison and to generalizations based on comparison; Aristotle, who lived at the close of a period marked by the growth of free Greek cities, summarized, as it were, their political experience in his *Constitutions* and *Politics*. Another great attempt at comparative observation was made at the close of the pre-revolutionary period of modern Europe. Montesquieu took stock of the analogies and contrasts of law in the commonwealths of his time and tried to show to what extent particular enactments and rules were dependent on certain general currents in the life of societies—on forms of government, on moral conditions corresponding to these, and ultimately on the geographical facts with which various nationalities and states have to reckon in their development.

It is perhaps just worthy of note, in view of the importance folklore and folk customs were to assume, that Blackstone in his comparison was not averse to instances taken from these sources. Thus he would explain the peculiar custom known as *Borough English* (*q.v.*), under which the youngest instead of the eldest son inherits, by a reference to "the practice of the Tartars among whom, according to Father Duhalde, this custom of descent also prevails." (Blackstone's *Commentaries*, Bk. II, Cap. 6.)

These were, however, only slight beginnings, and Montesquieu's remarks read now almost as if they were meant to serve as materials for social utopias, although they were by no means conceived with that object. At this distance of time we cannot help perceiving how uncritical his notions of legal history were, and how strongly his thought was biased by the wish to teach his contemporaries what politics and law should be. It was reserved for the 19th century to come forward with connected and far-reaching investigations in this field as in many others. We are not deceived by proximity and self-consciousness when we affirm that comparative jurisprudence, as here understood, dates from the second half of the century.

19th Century Investigators.—There were many reasons for such a departure. The 19th century was an eminently historical and an eminently scientific age: in the domain of history it may be said that it opened an entirely new vista. Before that time history was conceived as a narrative of memorable events, more or less skilful, more or less sensational, but appealing primarily to the literary sense of the reader; in the 19th century it became an encyclopaedia of reasoned knowledge, a means of understanding social life by observing its phenomena in the past. Apart from the personal efforts of eminent writers, a great and general movement has to be taken into account in order to explain this remarkable stage of human thought. The historic bent of mind of 19th century thinkers was to a great extent the result of heightened political and cultural self-consciousness. It was the reflection in the world of letters of the tremendous upheaval in the states of Europe and America which took place from the close of the 18th century onwards. As one of the greatest leaders of the movement, Niebuhr, pointed out, the fact of being a witness of such struggles and catastrophes as the American Revolution, the French Revolution, the Napoleonic empire and the national reaction against it, taught every one to appreciate the importance of historical factors, to measure the force not only of logical argument and moral impulse, but also of instinctive habits and traditional customs. It is not a matter of chance that the *historical school* of jurisprudence, Savigny's doctrine of the organic growth of law, was formed and matured while Europe collected its forces after the most violent revolutionary crisis it had ever experienced, and in most intimate connection with the romantic movement, a movement animated by enthusiastic belief in the historical, traditional life of social groups as opposed to the intellectual conceptions of individualistic radicalism.

On the other hand, the 19th century was a scientific age and especially an age of biological science. Former periods—the 16th and 17th centuries especially—had bequeathed to it high standards of scientific investigation and a conception of the world as ruled by laws and not by capricious interference. But these scientific views had been chiefly applied in the domain of mathematics, astronomy and physics; and though great discoveries had been made in physiology and other branches of biology, the achievements of 19th century students in this respect far surpassed those of the preceding period. The doctrine of transformation which came to occupy the central place in scientific thought was eminently fitted to co-ordinate and suggest investigations of social facts. Though much is expressed in the one name of Darwin, it is perhaps even more significant as a symbol of the tendency of a great epoch, and to this tendency we are indebted for the rise of anthropology and of sociology, of the scientific study of man and of the scientific study of society. Of course it must not be forgotten that the scope of the subject has been immensely widened by growth of knowledge with regard to savage and half-civilized nations. Ethnography and ethnology have come into the field with a wealth of material and it is with their help that the far-reaching generalizations of modern inquirers as to man and society have been achieved.

Influence of Philological Research.—It is not difficult to see that the comparative study of legal evolution finds its definite place in a scientific scheme elaborated from such points of view. The immediate incitement for the formation of comparative jurisprudence was given by the discoveries of comparative philology, now chiefly associated with the name of Max Müller, which revealed the profound connection between the different branches of the Indo-European languages, and showed that the development of these languages proceeded on lines which might be studied in a strictly scientific manner, on the basis of comparative observation and with the object of tracing the uniformities of the process. Naturally, students of religion, of folklore and of legal institutions took up the same method and tried to win similar results.

It is interesting to note that one of the leading scholars of the Germanistic revival, Jacob Grimm, a compeer of Savigny in his own line, took up with remarkable success not only the scientific study of German but also that of Germanic mythology and popular law. His *Rechtsalterthümer* are still unrivalled as a collection of data as to the legal lore of Teutonic tribes. Their basis is undoubtedly narrow; but the method of treatment is already a comparative one. Grimm takes up the different subjects—property, contract, crime, etc.—and examines them in the light of national, provincial and local customs, sometimes noticing expressly affinities with Roman and Greek law. It would have been well if more of the work in this school had followed this scholarly model, but the results of the new method were too exciting for that. As if the common elements of French, Spanish

and Italian constituted the language Cicero spoke, the newly discovered affinities of the Indo-European languages invites the reconstruction of "Aryan" of which, unlike Latin, there is no record. This perhaps might have passed, but when enthusiasts went on to formulate a code of civil law (with a *jus gentium* thrown in) for the hypothetical users of an inferential language it was time to call a halt. Such extravagances, however, must not blind us to the importance of the immediate effects of the new methods, the rare stimulus to research and enquiry at once offered. For Maine and his contemporaries the triumph of comparative philology was a thing to emulate. "I should, however, be making a very idle pretension if I held out a prospect of obtaining by the application of the comparative method to jurisprudence any results which in point of interest or trustworthiness are to be placed on a level with those which, for example, have been accomplished in comparative philology" (Maine, *Village Communities,* 1871, p. 8).

The comparative study of primitive law assumed a wholly different aspect in the works of Sir Henry Maine. His best personal preparation for the task was that he had come into contact with living legal customs in India. For him the comparison between the legal lore of Rome and that of India did not depend on linguistic roots or on the philological study of the laws of Manu, but was the result of recognizing again and again, in actual modern custom, the rules and institutions of which he had read in Gaius or the Twelve Tables. The sense of historical analogy and evolution had shown itself already in the lectures on *Ancient Law,* which, after all, were mainly a presentment of Roman legal history mapped out by a man of the world, averse to all pedantry. But what appears as the expression of Maine's personal aptitude and intelligent reading in *Ancient Law* gets to be the interpretation of popular legal principles by modern as well as by ancient instances in *Village Communities, The Early History of Institutions, Early Law and Custom.* The evolution of property in land out of archaic collectivism, ancient forms of contract and compulsion, rudimentary forms of feudalism and the like, were treated in a new light in consequence of systematic comparisons with the conditions not only of India but of southern Slavonic nations, mediaeval Celts and Teutons. This breadth of view seemed startling when the lectures appeared, and the original treatment of the subject was hailed on all sides as a most welcome departure in the study of legal customs and institutions. And yet Maine set very definite boundaries to his comparative surveys. He renounced the chronological limitation confining such inquiries to the domain of antiquaries, but he upheld the ethnographical limitation confining them to laws of the same race. In his *Law and Custom* he opposed in a determined manner the attempts of more daring students to extend to the "Aryans" generalizations drawn from the life of savage tribes unconnected with them by blood.

Thus, notwithstanding all diversities in the treatment of particular problems, one leading methodical principle runs through the works of all the above-mentioned exponents of comparative study. It was to proceed on the basis of common origin and on the assumption of a certain common stock of language, religion, material culture and law to start with.

Ethnology and Jurisprudence.—The literary group which started from the discoveries of comparative philology and history was met on the way by what may be called the ethnological school of inquirers. The original impetus was given, in this case, by jurists and historians who took up the study in the field of ancient history, but treated it from the beginning in such a way as to break up the subdivisions of historic races and to direct the inquiry to a state of culture best illustrated by savage customs. The first impulse may be said to have come from J. J. Bachofen (*Mutterrecht,* 1861; *Antiquarische Briefe,* 1880; *Die Sage von Tanaquil*). All the representatives of "Aryan" antiquities were at one in laying stress on the patriarchal and agnatic system of the kindreds in the different "Aryan" nations; even Leist, although dwelling on the importance of cognatic ties, looks to agnatic relationship for the explanation of military organization and political authority. Now, Bachofen discovered in the very tradition of classical antiquity traces of a fundamentally different state of things, the central conception of which was not patriarchal power, but maternity, relationship being traced through mothers, the wife presenting the constant and directing element of the household, while the husband (and perhaps several husbands) joined her from time to time in more or less inconstant unions. Some such a state of society is described by Herodotus in the case of the Lycians, and something of the same nature possibly is noticeable even in later historical times in Sparta (for Herodotus as an anthropologist, *cf.* J. L. Algers in R. R. Marett's *Anthropology and the Classics*). Although chiefly drawing his materials from classical literature, Bachofen included in his *Antiquarian Letters* an interesting study of the marriage customs and systems of relationship of the Malabar Coast in India; they attracted his attention by the contrasts between different layers of legal tradition—the Brahmans living in patriarchal order, while the class next to them, the Nayirs (Nairs), follow rules of matriarchy.

Similar ideas were put forward in a more comprehensive form by J. F. McLennan (*Studies in Ancient History,* 1876). He starts from the wide occurrence of marriage by capture in primitive societies, and groups the tribes of which we have definite knowledge into endogamous and exogamous societies according as they take their wives from among the kindred or outside it. Marriage by capture and by purchase are signs of exogamy, connected with the custom in many tribes of killing female offspring. The development of marriage by capture and purchase is a powerful agent in bringing about patriarchal rule, agnatic relationship, and the formation of clans or *gentes,* but the more primitive forms of relationship appear as variations of systems based on mother-right. These views are supported by ethnological observations and used as a clue to the history of relationship and family law in ancient Greece. In further contributions, published after his death, the peculiarities of exogamous societies are traced back to the even more primitive practice of Totemism (*q.v.*). McLennan's line of inquiry was taken up in a very effective manner not only by anthropologists like E. B. Tylor or scholars like A. Lang, but also in a more special manner by students of primitive family law. A most interesting monograph in this direction is Robertson Smith's study of *Kinship and Marriage in Arabia.*

But perhaps the most decisive influence was exercised by the discoveries of an American, Lewis H. Morgan. In his epoch-making works on *Systems of Consanguinity* (1869) and on *Ancient Society* (1877) he drew attention to the remarkable fact that in the case of a number of tribes—the Red Indians of America, the Australian black fellows, some of the polar races, and several Asiatic tribes, mostly of Turanian race—degrees of relationship are reckoned and distinguished by names, not as ties between individuals, but as ties between entire groups, classes or generations Instead of a mother and a father a man speaks of fathers and mothers; all the individuals of a certain group are deemed husbands or wives of corresponding individuals of another group; sisters and brothers have to be sought in entire generations, and not among the descendants of a definite and common parent, and so forth. There are variations and types in these forms of organization, and intermediate links may be traced between unions of consanguine people—brothers and sisters of the same blood—on the one hand, and the monogamic marriage prevailing nowadays, on the other. Facts of this kind produce very peculiar and elaborate systems of relationship, which have been copiously illustrated by Morgan in his tables. In his *Ancient Society* he attempted to reduce all the known forms and facts of marriage and kinship arrangements to a comprehensive view of evolution leading up to the Aryan, Semitic and Uralian family, as exhibiting the most modern type of relationship.

To complicate the matter still further the existence of classificatory systems of relationship may or may not be accompanied by an ignorance of the fact of paternity. Many of the simpler peoples see no causal connection between conception and birth. This surprising fact first arose to startle the scientific world in

the course of field work by Spencer and Gillen among the Arunta in Australia. It was subsequently confirmed by Rivers for three entirely unconnected peoples and elaborately tested by Malinowski in the case of the Frobriand Islanders (*see* his *Sex in Primitive Societies, Psyche,* vols. iv. and v. and the *I.R.A.I.* 1916). It may therefore now be taken as completely established. For a psychological discussion of the ignorance in question, see a valuable article by Ernest Jones, "*Mother Right and Sexual Ignorance of Savages,*" *International Journal of Psycho-Analysis,* vol. vi., p. 109 (1915).

Totemism and exogamy, sexual ignorance and the classification system have become one of the most difficult topics in anthropology and equally one of the most eagerly canvassed. There is a voluminous literature on the subject; Frazer's *Totemism and Exogamy* heading the list. This great work is a mine of information, and all the principal explanations to account for what after all remain most perplexing phenomena will be found there fully discussed. Students will also refer to his *Folk lore in the Old Testament,* II. vi., and to studies of special peoples that will be found in the I.R.A.I.

Among other works which should be mentioned is Freud's *Totem and Taboo* which offers some highly stimulating psychological reading. The best criticism of it is still that of A. L. Kroeber (22 *American Anthropologist,* 1920, p. 48–55) but unfortunately his note of warning, that henceforth Freud's thesis could never be ignored without stultification, has in some instances passed unheeded, with the result that much patient work has been entirely wasted. On the other hand, some of Freud's followers have not allowed his brilliant suggestions to fructify, but, in their zeal, have reduced them to rigid formulae and spent themselves in elaboration.

Thus there has come about by itself a complete change of perspective in the comparative study of man and society. The right of ethnologists to have their say in regard to legal, political and social development was forcibly illustrated from both ends, as it were. On the one hand, classical antiquity itself proved to be a rather thin layer of human civilization hardly sufficient to conceal the long periods of barbarism and primitive evolution which had gone to its making. On the other hand, unexpected combinations in regard to family, property, social order, were discovered in every corner of the inhabited world, and our trite notions as to the character of laws and institutions were reduced to the rank of variations on themes which recur over and over again, but may be and have been treated in very different ways.

There is no need to speak of the use made of ethnological material in the wider range of anthropological and sociological studies—the works of Westermarck, Tylor and Frazer are in everybody's hands—but attention must be called to the further influence of the ethnological point of view in comparative jurisprudence. An interesting example of the passage from one line of investigation to another, from the historical to the anthropological, is presented in the works of one of the founders of the *Zeitschrift für Vergleichende Rechtswissenschaft*—Franz Bernhöft. He appears in his earlier books as an exponent of the comparative study of Greek and Roman antiquities, more or less in the style of Leist. Like the latter he was gradually incited to draw India into the range of his observations, but unlike Leist, he ended by fully recognizing the importance of ethnological evidence, and the influence of Bachofen and of the ethnologists made itself felt in Bernhöft's treatment of classical antiquity itself. A somewhat similar process will occur to the minds of English readers in the case of Jane Harrison, Gilbert Murray, Sir Arthur Evans and others.

But, of course, the utmost use was made of ethnological evidence by writers who cut themselves entirely free from the special study of classical or European antiquities. The most characteristic representative of these newer methods of extensive comparison was undoubtedly A. H. Post (1839–95)—the author of many works, in which he ranges over the whole domain of mankind—Hovas, Zulus, Maoris, Tunguses, alternating in a kaleidoscopic fashion with Hindus, Teutons, Jews, Egyptians. The order of his compositions is systematic, not chronological or even ethnographical in the sense of grouping kindred races together. He takes up the different subdivisions of law and traces them through all the various tribes which present any data in regard to them. What he sought was not common origin or a common stock of ideas, but recourse to similar expedients in similar situations; and it is one of the most striking results of ethnology that it can show how peoples entirely cut off from one another and even placed in very different planes of development can resort to analogous solutions in analogous emergencies. Is not the custom of the so-called *Couvade*—the pretended confinement of the husband when a child is born to his wife—a most quaint and seemingly recondite ceremony? Yet we find it practised in the same way by Basques, Californian Indians and some Siberian tribes. They have surely not borrowed from each other, nor have they kept the ceremony as a remnant of the time when they formed one race (*see* Frazer *Totemism and Exogamy,* iv. 244, de Jong *Couvade* and Reik *Problems der Religionspsychologie*). Again, an inscription from the Cretan town of Gortyn, published in the American *Journal of Archaeology* (2nd series, vol. i., 1897) by Halbherr, tells us that the weapons of a warrior, the wool of a woman, the plough of a peasant, could not be taken from them as pledges. We find a similar idea in the prohibition to take from a knight his weapons, from a villein his plough, in payment of fines, which obtained in mediaeval England and was actually inserted in Magna Carta. The legal conception of pledge has been carefully worked out on a broad basis of evolutionary comparison by J. H. Wigmore (*The Pledge Idea,* in *Primitive and Ancient Legal Institutions,* Boston, 1915). Here also the similarity extends to details, and is certainly not derived from direct borrowing or common origin but from analogies of situations translating themselves into analogies of legal thought. It may be said in a sense that for the ethnological school the less relationship there is between the compared groups the more instructive the comparison turns out to be.

Criticism of Ethnological Theory.—Ethnologists of Post's school have not had it entirely their own way, however. Not only did their natural opponents, the philologists, historians and jurists, reproach them with lack of critical discrimination, with a tendency to throw the most disparate elements into the same pot. In their own ranks a number of conscientious and scientifically trained investigators protested against the manner in which the most intricate problems had been treated, and sought to evolve more definite methodical rules. A very interesting departure was attempted by Dargun in his studies on the origin and development of property and his treatise on mother-right and marriage by capture. His lead was followed by R. Hildebrand in the monograph on law and custom and subsequently by L. T. Hobheuse, whose series of studies *Morals in Evolution, Mind in Evolution* and the *Material Culture of the Simpler Peoples* are now the recognized works on the subject.

The principal idea of these inquirers may be stated as follows. We must utilize ethnological as well as historical materials from the whole world, but it is no use doing this indiscriminately. Fruitful comparisons may be instituted mainly in the case of tribes on the same level in their general culture and especially their economic pursuits. Hunting tribes must be primarily compared with other hunters, fishers with fishers, pastoral nations with pastoral nations, agriculturists with agriculturists; nations in transitional stages from one type of culture to the other have to be grouped and examined by themselves. The result would be to establish certain parallel lines in the development of institutions and customs. Another line of criticism was opened up from the side of exact sociological study. Its exponent is Steinmetz, who represents with Wilken the Dutch group of investigators of social phenomena. He takes up a standpoint which severs him entirely from the linguistic and historic school. In a discourse on the *Meaning of Sociology* (p. 10) he says: "One who judges of the social state of the Hindus by the book of Manu takes the ideal notions of one portion of the people for the actual conditions of all its parts." In his sense jurisprudence is a part of ethnology and of the comparative history of culture.

The necessity of employing more stringent standards of

criticisms and more exact methods is now recognized, and it is characteristic that the late Joseph Kohler of Berlin, principal editor of the *Zeitschrift für vergleichende Rechtswissenschaft*, often gives expression to this view. Beginning with studies of procedure and private law in the provinces of Germany where the French law of the Code Napoléon was still applied, he has thrown his whole energy into monographic surveys and investigations in all the departments of historical and ethnological jurisprudence. The code of Hammurabi, the legal customs of the different tribes and provinces of India, the materials supplied by investigators of Australian and American tribes, the history of legal customs of the Mohammedans, and numberless other points of ethnological research, have been treated by him in articles in his *Zeitschrift* and in other publications. Comprehensive attempts have also been made by him at a synthetic treatment of certain sides of the law—like the law of debt in his *Shakespeare vor dem Forum der Jurisprudenz* (1883) or his *Primitive History of Marriage*. Undoubtedly we have not to deal in this case with mere accumulation of material or with remarks on casual analogies. And yet the importance of these works consists mainly in their extensive range of observation. *See* also his *Die Anfänge des Rechts und das Recht der primitiven Völker* and for a valuable discussion of Kohler's work, R. Pound's *Interpretations of Legal History* (1923) and *Jurisprudence* in Barnes' *History and Prospects of the Social Sciences* (1925). In Kohler's work and that of some of his compeers and followers, J. E. Hitzig, Hellwig, Max Huber, R. Dareste, more exact forms and means of inquiry are employed and the results testify to a distinct heightening of the scientific standard in comparative jurisprudence. Especially conspicuous in this respect are three tendencies: (*a*) the growing disinclination to accept superficial analysis between phenomena belonging to widely different spheres of culture as necessarily produced by identical causes (*e.g.*, Darinsky's review of Kovalevsky's assumptions as to group marriage among the Caucasian tribes, *Z. für vgl. Rw.* xiv. 151 *seq.*, or Boas and Goldenweiser in their treatment of Totemism); (*b*) the selection of definite historical or ethnological territories for monographic inquiries, in the course of which arrangements observed elsewhere are treated as suggestive material for supplying gaps and starting possible explanations: Kohler's own contributions have been mainly of this kind; (*c*) the treatment of selected subjects by an intensive legal analysis, bringing out the principles underlying one or the other rule, its possible differentiation, the means of its application in practice, etc.: Hellwig's monograph on the right of sanctuary in savage communities (*Das Asylrecht der Naturvölker*) may be named in illustration of this analytical tendency.

The collection of ethnological parallels for the case of sociology and comparative jurisprudence has proceeded in a most fruitful manner, and it has now become all the richer for the valuable contributions of archaeology. The spade has revealed traces of cultures unknown to history, and for the most part lacking all written record. The study of social origins has thus taken on an entirely fresh aspect and though it has only postponed the longer the solution of the big questions comparative jurisprudence had hoped to solve, it has added enormously to the fascination of the subject. The comparison, for example, of the condition of life of the simpler peoples and the products of prehistoric cultures has proved most suggestive; few who have read such a work as Sollas' *Ancient Hunters* can have failed to realize this. (*See* Sir A. Carveth Read, *The Origin of Man;* G. G. MacCurdy, *Human Origins;* Burkett's *Prehistory* [for the *Old Stone Age*]; V. Gordon Childe's *Dawn of History* [for the *New*]).

Assistance from Psychology.—Ethnological studies have to look for guidance to psychology, especially to the psychology of emotional life and of character. Although these branches of psychology have been less investigated than the intellectual processes, they afford material help to the ethnologist and comparative jurist. Steinmetz made an attempt to utilize a psychological analysis of the feelings of revenge in his *Origin of Punishment*. Wundt, too, might be mentioned in this connection, but the wholly new impulse given to the study of psychological questions by the efforts of Freud and his followers has left all such work far behind; his *Totem and Taboo* has already been referred to. It is much too early yet to estimate the results of a movement of so far reaching a character, but the work of an investigator like W. H. Rivers, at once field anthropologist, physician and psychologist, may be mentioned as among the first fruits of the newer methods. Certainly in the whole of the vast field there is no branch where patient research will so richly reward the investigator. John Rickman's *Index Psycho-Analyticus*, 1893–1926, a model bibliography, is here invaluable.

Modern Method.—It is desirable, in conclusion, to review the field and to formulate the chief principles of method. It is evident, to begin with, that a scientific comparison of facts must be directed towards two aims—towards establishing and explaining similarity, and towards enumerating and explaining differences. As a matter of fact the same material may be studied from both points of view, though logically these are two distinct processes.

Cause and Effect.—At this initial stage we have already to meet a difficulty and guard against a misconception; we have, namely, to reckon with the *plurality of causes*, and are debarred from assuming that wherever similar phenomena are forthcoming they are always produced by identical causes. Death may be produced by various agents—by sickness, by poison, by a blow. The habit of wearing mourning upon the death of a relation is a widespread habit, and yet it is not always to be ascribed to real or supposed grief and the wish to express it outwardly: savage people are known to go into mourning in order to conceal themselves from the terrible spirit of the dead which would recognize them in their everyday costume (Frazer's *Golden Bough* iii. 31 and General Index). This is certainly a momentous difficulty at the start, but it can be greatly reduced and guarded against in actual investigation. In the example taken we are led to suppose different origin because we are informed as to the motives of the external ceremony, and thus we are taught to look not only to bare facts, but to the psychological environment in which they appear. And it is evident that the greater the complexity of observed phenomena, the more they are made up of different elements welded into one sum, the less probability there is that we have to do with consequences derived from different causes. The recurrence of group-marriage in Australia and among the Red Indians of North America can in no way be explained by the working of entirely different agencies.

Borrowing.—The easiest way of explaining a similarity is by attributing it to a direct *loan*. The process of reception, of the borrowing of one people from another, plays a notable part in the history of institutions and ideas. The Japanese have in our days engrafted many European institutions on their perfectly distinct civilization; the Romans absorbed an enormous amount of Greek and Oriental law in their famous jurisprudence. A check upon explanation by direct loan will, of course, lie in the fact that two societies may be entirely disconnected, so that it comes to be very improbable that one drew its laws from the other. Although migrations of words, legends, beliefs, charms, have been shown by Theodor Benfey and his school to range over much wider areas than might be supposed, still, in the case of law, in so far as it has to regulate material conditions, the limits have perhaps to be drawn rather narrowly. In any case we shall not look to India in order to explain the burning of widows among the negroes of Africa; *suttee* may be the example of this custom which happens to be most familiar to us, but it is certainly not the only root of it on the surface of the earth.

It is much more difficult to make out the share of direct borrowing in the case of peoples who might conceivably have influenced one another. A hard and fast rule cannot be laid down in such cases, and everything depends on the weighing of evidence and sometimes on almost instinctive estimates. The use of a wager for the benefit of the tribunal in the early procedure of the Romans and Greeks, the *sacramentum* and the *πρυτανεία*, with a similar growth of the sum laid down by the parties in proportion to the interests at stake, has been explained by a direct borrowing by the Romans from the Greeks at the time of the Twelve Tables legislation (Hofmann, *Beiträge zur Geschichte des griechischen und römischen Rechts*). No direct proof is available

for this hypothesis, and the question in dispute might have lain for ever between this explanation and that based on the analogous development in the two closely related branches of law. The further study of the legal antiquities of other branches of the "Aryan" race leads one to suppose, however, that we have actually to do with the latter and not with the former eventuality. Why should the popular custom of the *Vzdání* in Bohemia (Kapras, "Das Pfandrecht in altböhmischen Landrecht," *Z. für vgl. Rw.* xvii. 424 *seq.*), regulating the wager of litigation in the case of two parties submitting their dispute to the decision of a public tribunal, turn out to be so similar to the Greek and the Roman process? And the Teutonic Wedde would further countenance the view that we have to do in this case with analogous expediency or, possibly, common origin, not loans.

Disconnected Analogies.—This leads to the consideration of what we may call disconnected analogies. They are instructive in so far as they go back, not to any continuous development, but to the fundamental, psychological and logical unity of human nature. In similar circumstances human beings are likely to solve the same problems in the same way. But while dwelling on considerations which may disprove the assumption of direct loans, we must not omit to mention circumstances that may render such an assumption the best available explanation for certain points of similarity. We mean especially the recurrence of special secondary traits not deducible from the nature of the relations compared. Terminological parallels are especially convincing in such cases. An example of most careful linguistic investigation attended by important results is presented by Thomsen's treatment of the affinities between the languages and cultures of the peoples of northern and eastern Europe in his *Über den Einfluss der germanischen Sprachen auf die Finnisch-lappischen* (trans. E. Sievers, 1870), p. 166, *seq.* (*cf.* the same writer's *Relations between Ancient Russia and Scandinavia and the Origin of the Russian State*, p. 127 *seq.*, and Miklosich, "Die Fremdwörter in den slavischen Sprachen," *Denkschriften der Wiener Akademie*, Ph. hist. Klasse, XV.).

The Diffusionists.—It is in the light of the foregoing considerations that the claims of the recent Diffusionists, G. Elliott Smith and W. J. Perry, had best be judged. Indeed, had they paid a little more regard to them their original and suggestive theories might have been even more numerous, and there certainly would have been fewer extravagances for their critics to tax them with. For some very temperate criticism, *see* A. A. Manett, *The Diffusion of Culture*. On the subject of borrowings generally, *see* Lowie, *Primitive Society*, and for a psychological discussion of the subject F. C. Bartlett, *Psychology and Primitive Culture*.

Common Origins.—The next group of analogies is formed by cases which may be reduced to common origin. In addition to what has already been said on the subject in connection with the literature of the historical school, we must point out that in the case of kindred peoples this form of derivation has, of course, to be primarily considered. Inferences in the direction of common origin become more doubtful when we argue, not that certain facts proceed from a common stock of notions embodied in the early culture of a race before it was broken up into several branches, but that they have to be accounted for as instances of a similar treatment of legal problems by different peoples of the same ethnic family. The only thing that can be said in such a case is that, methodically, the customs of kindred nations have the first claim to comparison. But it is by no means useless for the investigator of these problems to inform himself about the aspect of such customs in the life of nations of other descent, and especially of the simpler peoples.

Consecutive Stages.—Organizing thought always seeks to substitute order for chaotic variety. Observations as to disconnected analogies lead to attempts to systematize them from some comprehensive point of view. These attempts may take the shape of a theory of consecutive stages of development. Similar facts appear over and over again in ethnological and antiquarian evidence, because all peoples and tribes, no matter what their race and geographical position, go through the same series of social arrangements. This is the fundamental idea which directed the researches of Maine, McLennan, Morgan, Post, Kohler, although each of these scholars formulated his sequence of stages in a peculiar way. McLennan, for instance, puts the idea referred to in the following words:—

"In short, it is suggested to us, that the history of human society is that of a development following very slowly one general law, and that the variety of forms of life—of domestic and civil institution—is ascribable mainly to the unequal development of the different sections of mankind. . . . The first thing to be done is to inform ourselves of the facts relating to the least developed races. To begin with them is to begin with history at the farthest-back point of time to which, except by argument and inference, we can reach. Their condition, as it may to-day be observed, is truly the most ancient condition of man" (*Studies in Ancient History*, 2nd series, 9, 15).

On this basis we might draw up tables of consecutive stages, of which the simplest may be taken from Post:—

"Four types of organization: the tribal, the territorial, the seignorial, and the social. The first has as its basis marriage and relationship by blood; the second, neighbouring occupation of a district; the third, patronage relations between lord and dependants; the fourth, social intercourse and contractual relations between individual personalities" (*Grundriss*, i. 14).

It is, however, at the very least, premature to sketch anything like a course of universal development for legal history. We have grave doubts whether the time will ever come for laying down any single course of that kind. The attempts made hitherto have generally led to overstating the value of certain parts of the evidence and to squeezing special traits into a supposed general course of evolution.

Economic Stages and Types.—Another group of thinkers is therefore content to systematize and explain the material from the point of view, not of universal history, but of correspondence to economic stages and types. This is, as we have seen, the leading idea in Dargun's or Hildebrand's investigations. It is needless to go into the question of the right or wrong of particular suggestions made by these writers, but the general trend of study initiated in this direction is certainly promising, if only investigators are very chary of laying down certain combinations as the necessary outcome of certain economic situations. Such combinations or consequences certainly exist; pastoral husbandry, the life of scattered hunting groups, the conditions of agriculturists under feudal rule, certainly contain elements which will recur in divers ethnical surroundings. But we must not forget that different minds and characters will draw different and perhaps opposite conclusions in exactly similar outward conditions. This may happen in identical or similar geographical environment—as in the case of ancient Greeks and Turks on the Balkan peninsula, for instance, or of ancient Greeks and modern Greeks. But even the same *historical medium* leaves, as a rule, scope for treatment of legal problems on divers lines. Take systems of succession. They exercise the most potent influence on the structure and life of society. Undivided succession, whether in the form of primogeniture or in that of junior right, sacrifices equity and natural affection to the economic efficiency of estates. Equal-partition rules, like *gavelkind* or *parage*, lead in an exactly opposite direction. And yet both sets of rules co-existed among the agriculturists of feudal England; communities placed in nearly identical historical positions followed one or the other of these rules. The same may be said of types of dwelling and forms of settlement. In other words, it is not enough to start from a given economic condition as if it were bound to regulate with fatalistic precision all the incidents of legal custom and social intercourse. We have to start from actual facts as complex results of many causes, and to try to reduce as much as we can of this material to the action of economic forces in a particular stage or type of development.

If one turns to a current number of the *Zeitschrift* one will probably find that the first article deals with some such topic as the Soviet Civil Code, and the last with, say, a biological theory of Totemism. Clearly no one scientific pursuit can embrace such diverse topics, nor would a common origin be even suspected from the opening sentences of this article. The two methods there indicated have indeed diverged. The comparative study of law, narrowing itself to more immediately practical aims, has become a subject all to itself, and the work of Mario Sarfatti

and that of the Institute over which Prof. Edouard Lambert presides amply justify its special recognition. The other method has undergone a more subtle transformation. By almost imperceptible steps comparative jurisprudence passed into juristic ethnography, and then widened out into cultural anthropology. There was little difference of subject matter, hardly any of treatment, only the outlook was broader and the point of view freed from the preoccupations of the jurist. But if the special training of the lawyer is no longer a first requisite in the comprehensive study of social phenomena, that is not to say that the jurist is not concerned for the solution of his own particular problems. In fact, it is precisely from this angle that both jurists and sociologists are coming to discover fresh possibilities for their investigations. Within the realm of the empirical social sciences there is a special pursuit for the jurist: the effort to understand the specific nature of legal institutions and ideas. To add one more to the long list of illustrations this article has already afforded of problems opened up if not solved: the Ordeal, hitherto wholly unintelligible but cardinal in every primitive system of justice, is at last beginning to engage the attention it deserves. After all, it is justice and the law and not social organization or culture that is the primary concern of the jurist. But this is to begin a new chapter. (P. Vi.; H. Got.)

Bibliography.—References to many works on special branches of our subject are given throughout the article; important excerpts from these and others will be found in Wigmore and Kocourek's *Evolution of Law*, 3 vols., 1915–19, Boston. *The Continental Legal History* (edited by J. H. Wigmore, 1912, with an Introduction to vol. iv. by Prof. Vinogradoff) is also invaluable. The list of books in Prof. Vinogradoff's *Historical Jurisprudence*, the footnotes and references in *The History and Prospects of the Social Sciences* (H. E. Barnes, 1915) together with the excellent bibliographies in Park and Burgess, *Introduction to the Science of Sociology* (1924) will serve as a sufficient guide to the vast literature on the subject.

For periodicals, see the list given in the *Journal of the Royal Anthropological Institute* and those mentioned in the last bibliography to Jurisprudence.

JURJĀNĪ, the name of two Arabic scholars.

1. Abū Bakr 'Abdu-l-Qāhir ibn 'Abdur-Raḥmān ul-Jurjānī (d. 1078), Arabian grammarian, belonged to the Persian school and wrote a famous grammar, the *Kitāb ul-'Awāmil ul-Mi'a* or *Kitāb Mi'at 'Āmil,* which was edited by Erpenius (Leiden, 1617), by Baillie (Calcutta, 1803), and by A. Lockett (Calcutta, 1814). Ten Arabic commentaries on this work exist in ms., also two Turkish. Another of his grammatical works on which several commentaries have been written is the *Kitāb Jumal fin-Nahw.*

For other works *see* C Brockelmann's *Gesch. der Arabischen Litteratur* (1898), i.

2. 'Alī ibn Maḥommed ul-Jurjānī (1339–1414), Arabian encyclopaedic writer, was born near Astarābād and became professor in Shīrāz. When this city was plundered by Tīmūr (1387) he removed to Samarkand, but returned to Shīrāz in 1405, and remained there until his death. Of his 31 extant works, many being commentaries on other works, one of the best known is the *Ta'rifāt (Definitions)*, which was edited by G. Flügel (Leipzig, 1845), published also in Constantinople (1837), Cairo (1866, etc.), and St. Petersburg (1897). (G. W. T.)

JURY: *see* Practice and Procedure.

JUS GENTIUM: *see* Roman Law.

JUS (or IUS) PRIMAE NOCTIS, also called *droit du seigneur,* a custom alleged to have existed in mediaeval Europe giving the lord the right to sleep the first night with the bride of any one of his vassals. This custom is paralleled in various primitive societies; however, practically none of the evidence that we have deals with its actual enforcement in Europe, but only with the redemption dues which were paid under various significant names (*cunnagium, cullage, ius cunni,* etc.) to avoid its enforcement. The one document which appears to present it actually in action (decree of the Seneschal of Guyenne, 1302) has been challenged on several grounds. The question is violently controversial, and has been, especially in France, the subject of remarkable displays of embittered and scabrous learning. With some hesitation, it may be said that the weight of evidence does point to the existence of such a custom, at a very early date, in parts of France and possibly also in a few centres in Italy and Germany, but certainly not elsewhere. This observation refers merely to the existence of a recognized custom; irregular oppression of this particular kind was no doubt frequent enough.

See L. Veuillot, *Le droit du seigneur au moyen age* (1854); J. Delpit, *Réponse d'un Campagnard . . . ou Refutation du livre de M. Veuillot* (1857) and *Le Droit du seigneur* (1873), also the *Grand Dictionnaire Larousse, s.v.* "Droit."

JUS RELICTAE, in Scots law, the wife's common law right in the moveable property of her husband, exigible from him or his executors on the dissolution of the marriage by his divorce or death. The right depends upon the husband's domicile being Scottish. The amount of the right is one-third where there are children of the husband surviving, and one-half where there are no surviving children. The right vests on divorce or by survivance, and is independent of the husband's testamentary provisions; it may, however, be renounced by contract, or be discharged by satisfaction. It is subject to alienation of the husband's moveable estate during his lifetime or by its conversion into heritage.

Jus relicti is the statutory right of a husband to a share in his wife's moveable estate, in the event of her dying, domiciled in Scotland. *See* the Married Women's Property (Scotland) Act 1881. It is not due to the husband where the marriage is dissolved by the divorce of his wife, but in other respects as regards amount, exclusion, discharge and satisfaction it is subject to the same rules as *jus relictae.*

JUSSERAND, JEAN ADRIEN ANTOINE JULES (1855–), French author and diplomatist, was born at Lyons on Feb. 18, 1855. Entering the diplomatic service in 1876, he became in 1878 consul in London. After an interval spent in Tunis he returned to London in 1887 as a member of the French embassy. In 1890 he became French minister at Copenhagen, and in 1902 was transferred to Washington. He remained there until his retirement from the service in 1925, serving his country's interests throughout the difficult war and post-war periods with great tact and ability. A close student of English literature, he produced some very lucid and penetrating studies on comparatively little-known subjects: *Le Théâtre en Angleterre depuis la conquête jusqu'aux prédécesseurs immédiats de Shakespeare* (1878); *Le Roman au temps de Shakespeare* (1887; Eng. trans., E. Lee, 1890); *Les Anglais au moyen âge: la vie nomade et les routes d'Angleterre au XIVe siècle* (1884: Eng. trans., *English Wayfaring Life in the Middle Ages,* by L. T. Smith, 1889), and *L'Épopée de Langland* (1893, Eng. trans., *Piers Plowman,* by M. C. R., 1894). His *Histoire littéraire du peuple anglais,* the first volume of which was published in 1895, was completed in three volumes in 1909. In English he wrote *A French Ambassador at the Court of Charles II.* (1892), from the unpublished papers of the count de Cominges. His other works include *With Americans of Past and Present Days* (1916); *The School for Ambassadors, and other Essays* (1924).

JUSSIEU, DE, the name of a French family distinguished for its botanists. The more eminent members are:—

1. Antoine de Jussieu (1686–1758); born at Lyons on July 6, 1686, studied at the university of Montpellier, and travelled with his brother Bernard through Spain, Portugal and southern France. In 1708, he went to Paris where he became director of the Jardin des Plantes. His own original publications are not of marked importance, but he edited Tournefort's *Institutiones rei herbariae* (3 vols., 1719), and J. Barrelier's *Plantae per Galliam, Hispaniam, et Italiam observatae,* etc. (1714). He died at Paris on April 22, 1758.

2. Bernard de Jussieu (1699–1777), younger brother of the above, was born at Lyons on Aug. 17, 1699. He studied medicine at Montpellier, but in 1722, became sub-demonstrator of plants in the Jardin du Roi at Paris. In 1725 he brought out a new edition of Tournefort's *Histoire des plantes qui naissent aux environs de Paris,* 2 vols. Long before Abraham Trembley (1700–84) published his *Histoire des polypes d'eau douce,* Jussieu maintained that these organisms were animals, and not the flowers of marine plants, then the current notion. He died at Paris on

Nov. 6, 1777.

3. JOSEPH DE JUSSIEU (1704–1779), brother of Antoine and Bernard, was born at Lyons on Sept. 3, 1704. Educated for the medical profession, he accompanied C. M. de la Condamine to Peru, in the expedition for measuring an arc of meridian, and remained in South America for 36 years. He introduced *Heliotropium peruvianum*, Linn. into Europe. He died at Paris on April 11, 1779.

4. ANTOINE LAURENT DE JUSSIEU (1748–1836), nephew of the preceding, was born at Lyons on April 12, 1748. He studied medicine and botany in Paris, and in 1789 issued his *Genera plantarum secundum ordines naturales disposita, juxta methodum in horto regio Parisiensi exaratam, anno* MDCCLXXIV., which formed the basis of modern classification. When the Revolution broke out, the author was installed in charge of the hospitals of Paris. From 1770 to 1826 he was professor of botany at the muséum d'histoire naturelle. He produced nearly sixty memoirs on botanical topics. He died at Paris on Sept. 17, 1836.

5. ADRIEN LAURENT HENRI DE JUSSIEU (1797–1853), son of Antoine Laurent, was born at Paris on Dec. 23, 1797. He displayed the qualities of his family in his thesis for the M D., *De Euphorbiacearum generibus medicisque earundem viribus tentamen*, Paris, 1824. He made valuable contributions to botanical literature on the *Rutaceae, Meliaceae* and *Malpighiaceae*, and wrote *Botanique*, which reached nine editions, and was often translated. He died at Paris on June 29, 1853.

JUSTI, KARL (1832–1912), German art historian, born at Marburg on Aug. 2, 1832, the son of a clergyman He studied theology and philosophy at Berlin He was elected professor at Marburg in 1867. After a visit to Italy in 1871 he became professor of philosophy at Kiel, and in 1873 professor of art history at Bonn. His two chief literary works were *Winckelmann, sein Leben, seine werke und Zeitgenossen* (Leipzig, 1866–72), and *Diego Velazques und sein Jahrhundert* (Bonn, 1888) which was translated into English in 1889. He died at Bonn on Dec. 9, 1912.

JUSTICE, a term used both in the abstract, for the quality of being or doing what is just, *i.e.*, right in law and equity, and in the concrete for an officer deputed by the Sovereign to administer justice and do right by way of judgment. It has long been the official title of the judges of two of the English superior courts of common law, and it is now extended to all the judges in the supreme court of judicature—a judge in the high court of justice being styled Mr. Justice, and in the court of appeal Lord Justice The president of the King's bench division of the high court is styled Lord Chief Justice (*q v.*). The word is also applied, and perhaps more usually, to certain subordinate magistrates who administer justice in minor matters, and who are usually called *justices of the peace* (*q v.*)

JUSTICE, DEPARTMENT OF: *see* GOVERNMENT DEPARTMENTS.

JUSTICE OF THE PEACE, a magistrate appointed in England by special commission under the great seal to keep the peace within the jurisdiction for which he is appointed. The title is commonly abbreviated to J.P. and is used after the name. The justices of the peace perform without any other reward than the dignity they acquire from their office a large amount of work indispensable to the administration of the law, including the initiatory stages of all criminal proceedings Although usually not professional lawyers (and therefore unversed in the rules of evidence), for the most part they discharge their multifarious duties with becoming good sense and impartiality. For centuries they were necessarily chosen mainly from the landed gentry; but at the present day both sexes and all classes of the community are represented on the magisterial bench irrespective of social status or political bias, it being recognized—at least in theory—that capacity duly to administer justice rather than creed, position or party influence should regulate selection and appointment. In great centres of population, where the judicial business of justices is heavy, it has been found necessary to appoint paid justices or stipendiary magistrates to do the work, and an extension of the system to the country districts has been often advocated. Where a borough council desire the appointment of a stipendiary magistrate they may present a petition for the same to the secretary of State and it is thereupon lawful for the king to appoint to that office a barrister of seven years' standing. He is by virtue of his office a justice for the borough, and receives a yearly salary, payable in four equal quarterly instalments. On a vacancy, application must again be made as for a first appointment. There may be more than one stipendiary magistrate for a borough.

The commission of the peace assigns to justices the duty of keeping and causing to be kept all ordinances and statutes for the conservation of the peace, and for the quiet rule and governance of the people. Justices for counties are appointed by the Crown on the advice of the lord chancellor, usually with the recommendation of the lord lieutenant of the county. Justices for boroughs having municipal corporations and separate commissions of the peace are appointed by the Crown, the lord chancellor either adopting the recommendation of the town council, the local advisory committee, or acting independently. Justices cannot act as such until they have taken the oath of allegiance and the judicial oath. A justice for a borough, while acting as such, must reside in or within seven miles of the borough or occupy a house or other property in the borough, but he need not be a burgess. The mayor of a borough is *ex officio* a justice during his years of office and during the succeeding year As mayor he takes precedence over all borough justices and is entitled to take the chair at all their meetings But, except when dealing with business relating to the borough, he has not precedence over justices acting in or for the county in which the borough or any part thereof is situated, nor has he precedence over a stipendiary magistrate engaged in administering justice (45 46 Vict. ch. 50, s 155). The chairman of a county council is *ex officio* a justice of the peace for the county, and the chairman of an urban or rural district council for the county in which the district is situated The Criminal Justice Act, 1925 (s. 31) empowers the issue of process by justices throughout England and Wales without endorsement. But English warrants for indictable offences in other parts of Great Britain must be "backed" or endorsed by a justice of the jurisdiction in which they are to be executed. A justice acting partially and corruptly may be proceeded against by a criminal information, and a justice improperly refusing to act may be compelled to do so by the high court of justice. An action will lie against a justice for any act done by him in excess of his jurisdiction, and for any act within his jurisdiction which has been done wrongfully and maliciously and without reasonable or probable cause. But no action can be brought against a justice for a wrongful conviction until it has been quashed The Justices of the Peace Act 1906, abolished the property qualification for county justices. It also removed the necessity for residence within the county, substituting therefor the same residential qualification as for borough magistrates, viz., "within seven miles thereof." The same act removed the disqualification of solicitors to be county justices and added to the existing power to remove other justices from the commission of the peace the power to exclude *ex officio* justices.

The justices for every petty sessional division of a county or for a borough having a separate commission of the peace must appoint a fit person to be their salaried clerk. He must be either a barrister of not less than 14 years' standing, or a solicitor of the supreme court, or have served for not less than seven years as a clerk to a police or stipendiary magistrate, or have been attached to a metropolitan police court The multifarious and constantly increasing duties and enhanced powers of justices embrace some portion of every important branch of the criminal law and include a considerable number of matters more particularly relating to the civil law.

In the United States, the justices of the peace usually are elected, although sometimes they are appointed by executive authority. The justices of the peace are the lowest of the state courts, and their limitation in civil matters generally is about $200, and in criminal matters they may try only misdemeanors. They are not courts of record. Ordinarily in criminal cases they may not impose a jail sentence, if the person tried prefers to pay the fine imposed.

JUSTICIAR. Unlike all other officers of the central administration in the 12th century the justiciar was not a household official. The justiciarship originated in the king's need for a responsible subordinate who could take as wide a view of the royal needs as the king himself. A man of unquestionable loyalty, with a specialist's knowledge of the details of administration, was necessary to act as regent when the king was abroad, and at other times to take charge of such matters as the king could not arrange himself. Such a man from the nature of his office could not be a member of the king's household. He was in a position superior to that of any household officer.

William I. had appointed men to hold authority while he was in Normandy, but their office had always ended on his return to England. Ranulf Flambard, chaplain to William II., was the first man to hold a position analogous to that of the 12th century justiciars. He was responsible for the collection of William II.'s revenue, and is known to have interested himself in the administration of justice all over the country. In the reign of Henry I. increasing specialisation in the administration meant more and better trained officials. Richard and Ralf Basset, father and son, were successively styled *Justiciarius*, with the implication that they held some authoritative position among the royal judges, but they never held the position of supremacy in the administration which belonged to the justiciar at the end of the century. That was held in the reign of Henry I. by Roger, bishop of Salisbury, who is styled, and who styles himself, *Justiciarius* and *Procurator Anglie*. The fall of Roger owing to King Stephen's jealousy, and the anarchy of Stephen's reign broke the normal development of the administrative offices.

Although at the beginning of his reign Henry II. appointed justiciars, apparently to fill the place once held by Roger, their position was very different. He appointed two justiciars instead of one, and kept them busy with routine work, not at first trusting them with control, even when he was abroad The Chancellor, Thomas Becket, was the chief minister in the earlier years of the reign, and it was not till after his appointment to the archbishopric and consequent quarrel with Henry that the justiciar became the greatest man in the kingdom after the king His supremacy was firmly established during the long official career of Richard de Lucy (1153–79) followed by that of Ranulf de Glanvil (1180–89). Head of the whole administration, the justiciar found his labours constantly increasing The volume of judicial work was growing greater every year owing to the popularity of Henry II.'s reforms. The justiciar presided over the bench of judges at Westminster, organised the judicial circuits, heard difficult pleas, gave his advice to judges on innumerable points of law and himself went round the country to see that the administration was properly conducted. Such work kept him fully occupied when the king was in England. It is not remarkable that although in theory he should have presided over the sessions of the Exchequer (*q.v.*), he was seldom able to be present. When the king was abroad, in addition to his ordinary routine duties, the justiciar had to raise such money as the king needed, and to see that peace was maintained. All the justiciars of the second half of the twelfth century on occasion raised forces and took the field either against rebels (*e g*, Count John in 1194) or to preserve the peace of the Marches. Under Richard I. the office grew in importance, since the king was continuously out of the country and it fell to successive justiciars to raise his ransom and the large sums for his war with France. John was interested in English administration and his justiciar, Geoffrey Fitz Peter, had less responsibility than his immediate predecessors. He was able to concentrate more on his judicial work.

The office became extremely important during the minority of Henry III. Hubert de Burgh was not a trained lawyer as Geoffrey Fitz Peter had been, and he was mainly concerned and interested in affairs of state. He was the ruler of the country as no justiciar had ever been before, but he was the last of the great justiciars. His fall (1232) was due to Henry's weariness of his domination, to royal jealousy of the supreme great official. The day of the great officer of state governing all departments and controlling all was past. One of the leading judges was appointed justiciar, but his work was mainly judicial and only lasted till 1234, when the barons secured the fall of the Poitevins, whose support had enabled Henry to rid himself of Hubert de Burgh. During the period of Henry's personal rule no justiciar was appointed. Henry distrusted the great official chancellor, treasurer and justiciar alike. When the barons took control in 1258 the office was re-established for a time. But the baronial justiciars were temporary, paid, and overworked officials, whose work lay in the administration of justice and the supervision of the routine of government. The office came to an end in 1261. In Sicily and Scotland, countries closely connected with England, similar officials existed in the 12th century. In Scotland there were two justiciars, one for the country to the north and another for that to the south of the Forth.

(D. M. S.)

JUSTICIARIUS CAPITALIS ANGLIAE, a minister of State who derived his office from the practice of the Norman kings to appoint two lieutenants to exercise the royal functions during their absence abroad. In this capacity William Fitz-Osbern and Odo of Bayeux acted during the Conqueror's visit to the Continent in 1067, and William of Warenne and Richard Clare who were left in charge in 1074 are described as *praecipui Angliae justiciarii*. Other holders of the office were Lanfranc, Gosfrid of Coutance, and Robert of Mortain. With the return of the king their functions ceased. With the appointment of Ranulf Flambard by William II. as sole holder, the office became permanent, and the justiciar became the first minister of the Crown with the direction of the whole judicial and financial administration of the kingdom. He was followed by Roger of Salisbury, Richard de Lucy, Glanvil, Hubert Walter de Burgh and Geoffrey Fitz Peter. It was the last-named who staved off the breach between John and the barons. The office was never again filled permanently after 1234, and when Robert de Brus was appointed in 1268 he was appointed *ad placita coram rege tenenda*, at the moment when the court of king's bench (*q.v.*) was beginning to emerge as a separate court from *Curia Regis*

See Holdsworth, *Hist. Eng. Law*, vol. i., p. 36. (H. H. L. B.)

JUSTICIARY, HIGH COURT OF, in Scotland, the supreme criminal court, consisting of the lord justice-general, the lord justice-clerk and 11 lords commissioners of justiciary. (*See* the Criminal Procedure [Scotland] Act, 1887.) Three judges form a quorum, but sometimes five judges sit When so constituted the high court has power to suspend and to quash the proceedings in the inferior criminal courts on the ground of incompetency or irregularity. The high court has also a statutory jurisdiction to entertain stated cases on points of law from inferior criminal courts. The sittings of the circuit courts of justiciary for the trial of indictments with a jury are presided over by a single judge, but are deemed to be sittings of the high court of justiciary. No other civil criminal court has power to pronounce sentence of death or of penal servitude. Until 1926 the sentences of this court were pronounced for doom and were not subject to suspension or review in any form. A single judge had power, however, instead of deciding a point of difficulty to report it to the high court in Edinburgh for decision if he saw fit. Since the Criminal Appeal (Scotland) Act, 1926, sentences of the justiciary court and of the sheriff and jury court are subject to appeal. In either case the appeal lies to the high court of justiciary then sitting as a court of appeal under that act, with a quorum of three judges and with jurisdiction to entertain an appeal on questions of fact and of law. Appeal from this court does not lie to the House of Lords, either at common law or under the act of 1926.

JUSTIFICATION, in law, the showing by a defendant in an action of sufficient legal reason why he did what he was called upon to answer. The word is employed particularly in actions for defamation (*see* LIBEL AND SLANDER).

JUSTIN I., East Roman emperor from 518 to 527; born in 450 in Asia. He rose to be commander of the imperial guards of Anastasius. On the latter's death in 518 Justin succeeded in securing his own election. Being ignorant even of the rudiments of letters, Justin entrusted the administration of state almost entirely to his quaestor Proclus and to his nephew Justinian. He effected in 519 a reconciliation of the Eastern and Western Churches

after a schism of thirty-five years. (*See* HORMISDAS.) In 522 Justin ceded to Theodoric the right of naming the consuls. On the 1st of April 527, enfeebled by an incurable wound, he assumed Justinian as his colleague; on the 1st of August he died.

See E. Gibbon, *Decline and Fall of the Roman Empire* (ed. Bury, 1896), iv. 206–209.

JUSTIN II. (d. 578), East Roman emperor (565–578), was the nephew and successor of Justinian I. As master of the palace, and as husband of Sophia, the niece of the late empress Theodora, he secured a peaceful election. The first few days of his reign—when he paid his uncle's debts, administered justice in person and proclaimed religious toleration—gave bright promise, but in the face of the lawless aristocracy and defiant governors of provinces he effected few subsequent reforms. The most important event of his reign was the invasion of Italy by the Lombards (*q.v.*), who, entering in 568, under Alboin, in a few years made themselves masters of nearly the entire country. Justin's attention was distracted from Italy towards the N. and E. frontiers. After refusing, with his usual hauteur, to pay the Avars tribute, he fought several unsuccessful campaigns against them. In 572 his overtures to the Turks and protection of the Christian Armenians led to a war with Persia. After two disastrous campaigns, in which his enemies overran Syria, Justin bought a precarious peace by payment of a yearly tribute. The temporary fits of insanity into which he fell warned him to name a colleague. Passing over his own relatives, he raised, on the advice of Sophia, the general Tiberius (*q.v.*) to be Caesar in December 574 and withdrew for his remaining years into retirement.

JUSTIN (IUNIANUS IUSTINUS), Roman historian, probably lived during the age of the Antonines. Of his personal history nothing is known. He is the author of *Historiarum Philippicarum libri XLIV.*, a work described by himself in his preface as a selection from the *Historiae philippicae et totius mundi origines et terrae situs*, written in the time of Augustus by Pompeius Trogus (*q.v.*). The work of Trogus is lost; but the *prologi* or arguments of the text are preserved by Pliny and other writers. The main theme of Trogus was the history of the Macedonian monarchy, but Justin permitted himself considerable freedom of digression. As it stands, however, the history contains much valuable information. The style, though far from perfect, is clear and occasionally elegant. The book was much used in the middle ages, when the author was sometimes confounded with Justin Martyr.

Ed. princeps (1470); J. G. Graevius (1668); J. F. Gronovius (1719); C. H. Frotscher (1827–1830); J. Jeep (1859), F Rühl (1886, with prologues); *see* also J. F. Fischer, *De elocutione Justini* (1868); F. Ruhl, *Die Verbreitung des J. im Mittelalter* (1871); Köhler and Rühl in *Neue Jahrbücher für Philologie*, xci., ci., cxxxiii. There are translations in the chief European languages; in English by A. Goldyng (1564); R. Codrington (1682), Brown-Dykes (1712); G. Turnbull (1746); J. Clarke (1790); J. S. Watson (1853).

JUSTINIAN I. (483–565). Flavius Anicius Iustinianus, surnamed the Great, the most famous of all the emperors of the Eastern Roman Empire, was by birth a barbarian, native of a place called Tauresium in Illyricum[1], and was born, most probably, on May 11, 483, probably of Slavonic parentage. His own name was originally Uprauda[2]. Iustinianus was a Roman name which he took from his uncle Justin I., who adopted him, and to whom his advancement in life was due. Of his early life we know nothing, except that he went to Constantinople while still a young man, and received there an excellent education, though it is alleged that he always spoke Greek with a barbarian accent. When Justin ascended the throne in 518, Justinian became at once a person of the first consequence, guiding, especially in church matters, the policy of his aged, childless and ignorant uncle, and soon coming to be regarded as his destined successor. On Justin's death in 527, having been a few months earlier associated with him as co-emperor, Justinian succeeded without opposition to the throne. About 523 he had married the famous Theodora (*q.v.*), who, as empress regnant, was closely associated in all his actions till her death in 547.

Justinian's reign was filled with great events, both at home and abroad, both in peace and in war. They may be classed under four heads: (1) his legal reforms; (2) his administration of the empire; (3) his ecclesiastical policy; and (4) his wars and foreign policy generally.

1. **Consolidation of Law.**—It is as a legislator and codifier of the law that Justinian's name is most familiar to the modern world. He found the law of the Roman empire in a state of great confusion. It consisted of two masses, which were usually distinguished as old law (*ius vetus*) and new law (*ius novum*). The first of these comprised: (i.) all such of the statutes (*leges*) passed under the republic and early empire as had not become obsolete; (ii.) the decrees of the senate (*senatus consulta*) passed at the end of the republic and during the first two centuries of the empire; (iii.) the writings of the jurists, and more particularly of those to whom the right of declaring the law with authority (*ius respondendi*) had been committed by the emperors. As these jurists had, in their commentaries upon the *leges, senatus consulta* and edicts of the magistrates, practically incorporated all that was of importance in those documents, the books of the jurists may substantially be taken as including (i.) and (ii.). These writings were, of course, very numerous. Many of them had become exceedingly scarce—many had been altogether lost. Some were of doubtful authenticity. They were so costly that even the public libraries had nothing approaching to a complete collection. Moreover, as was natural, they contained many discrepancies and contradictions. A remedy had been attempted to be applied to this evil by a law of the emperors Theodosius II. and Valentinian III., which gave special weight to the writings of five eminent jurists (Papinian, Paulus, Ulpian, Modestinus, Gaius); but it was very far from removing it.

The new law (*ius novum*), which consisted of the ordinances of the emperors promulgated during the middle and later empires (*edicta, rescripta, mandata, decreta*, usually called by the general name of *constitutiones*), was in a condition not much better. These ordinances or constitutions were extremely numerous. No complete collection of them existed, for the earlier Codices did not include all the constitutions; there were others which it was necessary to obtain separately, but many whereof it must have been impossible for a private person to procure. In this branch too of the law there existed some, though a less formidable, uncertainty; for there were constitutions which practically, if not formally, repealed or superseded others without expressly mentioning them. It was therefore clearly necessary to collect so much of the law, both New and Old, as was regarded as binding into a reasonable corpus and to purge away the contradictions and inconsistencies of it.

Immediately after his accession, Justinian appointed a commission to deal with the imperial constitutions (*ius novum*), this being the easier part of the problem. The commissioners, ten in number, were directed to go through all the constitutions of which copies existed, to select such as were of practical value, to cut these down by retrenching all unnecessary matter, and gather them, arranged in order of date, into one volume, getting rid of any contradictions by omitting one or other of the conflicting passages[3]. These law commissioners completed their task in fourteen months, distributing the constitutions which they "retained" into ten books, in general conformity with the order of the Perpetual Edict enacted by Hadrian. By this means the bulk of the statute law was immensely reduced, its obscurities and internal discrepancies in great measure removed, its provisions adapted, by the abrogation of what was obsolete, to the circumstances of Justinian's own time. This *Codex constitutionum* was formally

[1] It is commonly identified with the modern Küstendil, but Skoplye (the former Usküb) has also been suggested. *See* Tozer, *Highlands of European Turkey*, ii. 370.

[2] The name Uprauda is said to be derived from the word *prauda*, which in Old Slavic means *jus, justitia*, the prefix being simply a breathing frequently attached to Slavonic names.

[3] *See*, for an account of the instructions given to the commission, the constitution *Haec quae*, prefixed to the revised *Codex* in the *Corpus iuris civilis*.

promulgated in 529, all imperial ordinances not included in it being repealed at one stroke.

The success of this first experiment encouraged the emperor to attempt the more difficult enterprise of simplifying and digesting the old law. Before entering on this, however, he wisely took the preliminary step of settling the more important of the legal questions as to which the older jurists had been divided in opinion. This was accomplished by a series of constitutions known as the "Fifty Decisions" (*Quinquaginta decisiones*), along with which there were published other ordinances amending the law in a variety of points, in which old and now inconvenient rules had been suffered to subsist. Then in December 530 a new commission was appointed, consisting of sixteen eminent lawyers, under the presidency of the famous Tribonian, who had already served on the previous commission. They were to procure and peruse all the writings of all the authorized jurists (those who had enjoyed the *ius respondendi*); were to extract from these writings whatever was of the most permanent and substantial value, with power to change the expressions of the author wherever conciseness or clearness would be thereby promoted, or wherever such a change was needed in order to adapt his language to the condition of the law as it stood in Justinian's time; were to avoid repetitions and contradictions by giving only one statement of the law upon each point; were to insert nothing at variance with any provision contained in the *Codex constitutionum;* and were to distribute the results of their labours into fifty books, subdividing each book into titles, and following the order of the Perpetual Edict[4].

The commissioners presented their selection of extracts to the emperor in 533, and he published it as an imperial statute on December 16th of that year, with two prefatory constitutions (those known as *Omnem reipublicae* and *Dedit nobis*). It is the Latin volume which we now call the *Digest* (*Digesta*) or *Pandects* (Πάνδεκται). The extracts comprised in it are 9,123 in number, taken from thirty-nine authors, and are of greatly varying length, mostly only a few lines long. The worst thing about the *Digest* is its highly unscientific arrangement. The order of the Perpetual Edict, which appears to have been taken as a sort of model for the general scheme of books and titles, was doubtless convenient to the Roman lawyers from their familiarity with it, but was in itself rather accidental and historical than logical. The disposition of the extracts inside each title was still less rational; it has been shown by a modern jurist to have been the result of the way in which the committees of the commissioners worked through the books they had to peruse. In enacting the *Digest* as a law book, Justinian repealed all the other law contained in the treatises of the jurists (that *ius vetus* which has been already mentioned), and directed that those treatises should never be cited in future even by way of illustration; and he of course at the same time abrogated all the older statutes which had formed a part of the *ius vetus*. This was a necessary incident of his scheme of reform. But he went too far, and indeed attempted what was impossible, when he forbade all commentaries upon the *Digest*. He was obliged to allow a Greek translation to be made of it, but directed this translation to be exactly literal.

These two great enterprises had substantially despatched Justinian's work; however, he, or rather Tribonian, conceived that an outline of the elementary manual law was needed to take the place of the now obsolete *Commentarii* of Gaius. The result was the publication, shortly before the *Digest,* of the *Institutes of Justinian,* a work which nevertheless, both in matter and style, owes much to the work of Gaius.

In the four years and a half which elapsed between the publication of the *Codex* and that of the *Digest,* many important changes had been made in the law, notably by the publication of the "Fifty Decisions." It was therefore natural that the idea should present itself of revising the *Codex,* so as to contain in one volume the whole Statute Law. Accordingly, another commission was appointed, consisting of Tribonian with four other coadjutors, full power being given them not only to incorporate the new constitutions with the *Codex* and make in it the requisite changes, but also to revise the *Codex* generally. This work was completed in a few months; and in November 534 the revised *Codex* (*Codex repetitae praelectionis*) was promulgated with the force of law, prefaced by a constitution (*Cordi nobis*) which sets forth its history, and declares it to be alone authoritative. It is this revised *Codex* which has come down to the modern world.

The constitutions contained in it number 4,652, the earliest dating from Hadrian, the latest being of course Justinian's own. A few thus belong to the period to which the greater part of the *Digest* belongs, *i.e.,* the so-called classical period of Roman law down to the time of Alexander Severus (244); but the great majority are later, and belong to one or other of the four great eras of imperial legislation, the eras of Diocletian, of Constantine, of Theodosius II. and of Justinian himself. Although this *Codex* is said to have the same general order as that of the *Digest,* viz., the order of the Perpetual Edict, there are considerable differences of arrangement between the two. It is divided into twelve books. Its contents, although of course of the utmost practical importance to the lawyers of that time, and of much value still, historical as well as legal, are far less interesting and scientifically admirable than the extracts preserved in the *Digest.*

Between 534 and 565 Justinian issued a great number of ordinances, dealing with all sorts of subjects and seriously altering the law on many points—the majority appearing before the death of Tribonian, which happened in 545. These ordinances are called, by way of distinction, new constitutions, *Novellae constitutiones post codicem* (νεαραὶ διατάξεις), *Novels.* Although the emperor had stated in publishing the *Codex* that all further statutes (if any) would be officially collected, this promise does not seem to have been redeemed. The three collections of the Novels which we possess are apparently private collections, nor do we even know how many such constitutions were promulgated. One of the three contains 168 (together with 13 Edicts), but some of these are by the emperors Justin II. and Tiberius II Another, the so-called *Epitome of Julian,* contains 125 Novels in Latin; and the third, the *Liber authenticarum* or *vulgata versio,* has 134, also in Latin. This last was the collection first known and chiefly used in the West during the middle ages; and of its 134 only 97 have been written on by the *glossatores* or mediaeval commentators; these therefore alone have been received as binding in those countries which recognize and obey the Roman law,—according to the maxim *Quicquid non agnoscit glossa, nec agnoscit curia.* And, whereas Justinian's constitutions contained in the *Codex* were all issued in Latin, the rest of the book being in that tongue, these Novels were nearly all published in Greek, Latin translations being of course made for the use of the western provinces. They may be found printed in any edition of the *Corpus iuris civilis.*

This *Corpus iuris* consists of the four books described above: (1) *Codex constitutionum;* (2) *Digesta* or *Pandectae;* (3) *Institutiones;* (4) *Novellae.*

From what has been already stated, the reader will perceive that Justinian did not, according to a strict use of terms, codify the Roman law. By a codification we understand the reduction of the whole pre-existing body of law to a new form, the re-stating it in a series of propositions, scientifically ordered, which may or may not contain some new substance, but are at any rate new in form. What he did do was something quite different. It was not codification but consolidation. He gave to posterity not one code but two digests or collections of extracts, which are new only to this extent that they are arranged in a new order, and that here and there their words have been modified in order to bring one extract into harmony with some other. Except for this, the matter is old in expression as well as in substance.

Thus regarded, Justinian's work may appear to entitle him and Tribonian to much less credit than they have usually received for it. But let it be observed, first, that to reduce the huge and confused mass of pre-existing law into the compass of these two collections was an immense practical benefit to the empire; secondly, that, whereas the work which he undertook was accomplished in seven years, the infinitely more difficult task of codification might probably have been left unfinished at Tribonian's death, or even at Justinian's own, and been abandoned by his successor; thirdly, that in the extracts preserved in the *Digest* we have the opinions

[4] *See* the Constitution *Deo auctor* (*Cod.* i. 17, 1).

of the greatest legal luminaries given in their own admirably concise language, while in the extracts of which the *Codex* is composed we find valuable historical evidence bearing on the administration and social condition of the later empire; fourthly, that Justinian's age was quite unequal in intellect to so vast an undertaking as the fusing upon scientific principles into one new organic whole of the entire law of the empire.

To the merits of the work as actually performed some reference has already been made. The chief defect of the *Digest* is in point of scientific arrangement, a matter about which the Roman lawyers cared very little. There are some repetitions and some inconsistencies, but not more than may fairly be allowed for in a compilation of such magnitude executed so rapidly. Tribonian has been blamed for the insertions the compilers made in the sentences of the old jurists (the so-called *Emblemata Triboniani*); but it was a part of Justinian's plan that such insertions should be made, so as to adapt those sentences to the law as settled in the emperor's time. On Justinian's own laws, contained in the *Codex* and in his *Novels*, a less favourable judgment must be pronounced. They, and especially the latter, are diffuse and often lax in expression, needlessly prolix, and pompously rhetorical. The policy of many, particularly of those which deal with ecclesiastical matters, may also be condemned; yet some gratitude is due to the legislator who put the law of intestate succession on that plain and rational footing whereon it has ever since continued to stand. It is somewhat remarkable that, although Justinian is so much more familiar to us by his legislation than by anything else, this sphere of his imperial labour is hardly referred to by any of the contemporary historians, and then only with censure. Procopius complains that he and Tribonian were always repealing old laws and enacting new ones, and accuses them of venal motives for doing so.

The *Corpus Iuris* of Justinian continued to be, with naturally a few additions in the ordinances of succeeding emperors, the chief law-book of the Roman world till a new system was prepared by Leo the Isaurian, which we know as the *Basilica*. It is of course written in Greek, and consists of parts of the substance of the *Codex* and the *Digest*, thrown together and often altered in expression, together with some matter from the *Novels* and imperial ordinances posterior to Justinian. In the western provinces, the law as settled by Justinian held its ground; but copies of the *Corpus Iuris* were extremely rare, nor did the study of it revive until the end of the 11th century

The best edition of the *Digest* is that of Mommsen (Berlin 1868–70), and of the *Codex* that of Kruger (Berlin 1875–77).

2. **Financial Administration.**—In his financial administration of the empire Justinian is represented to us as being at once rapacious and extravagant. His unwearied activity and inordinate vanity led him to undertake a great many costly public works, many of them unremunerative. The money needed for these, for his wars, and for buying off the barbarians who threatened the frontiers, had to be obtained by increasing the burdens of the people. They suffered, not only from the regular taxes, which were seldom remitted even after bad seasons, but also from monopolies and even confiscations. Fiscal severities were no doubt one cause of the insurrections which now and then broke out, and in the gravest of which (532) thirty thousand persons are said to have perished in the capital. It is not always easy to discover, putting together the trustworthy evidence of Justinian's own laws and the angry complaints of Procopius, what was the nature and justification of the changes made in the civil administration. But the general conclusion seems to be that these changes were always in the direction of further centralization, of bringing all offices more directly under the control of the Crown, and in some cases limiting the powers and appropriating the funds of local municipalities. Financial necessities compelled retrenchment, so that a certain number of offices including the useless and expensive Consulship, were suppressed altogether.

In a bureaucratic despotism the greatest merit of a sovereign is to choose capable and honest ministers. Justinian's selections were usually capable, but not so often honest. Even the great Tribonian labours under the reproach of corruption, while the fact that Justinian maintained John of Cappadocia in power long after his greed, his unscrupulousness, and the excesses of his private life had excited the anger of the whole empire, reflects little credit on his own principles of government and sense of duty to his subjects. The department of administration in which he seems to have felt most personal interest was that of public works. He spent immense sums on buildings of all sorts, especially churches. Of these works only two remain perfect, the celebrated St. Sophia in Constantinople, and the church of SS Sergius and Bacchus, now commonly called Little St. Sophia, which stands about half a mile from the great church, and is in its way a very delicate and beautiful piece of work.

3. **Ecclesiastical Policy.**—Justinian's ecclesiastical policy was complex and varying. For many years before the accession of his uncle Justin, the Eastern world had been vexed by the struggles of the Monophysite party, who recognized only one nature in Christ, against the view which then and ever since has maintained itself as orthodox, that the divine and human natures coexisted in Him. The latter doctrine had triumphed at the council of Chalcedon, but Egypt, a great part of Syria and Asia Minor, and a considerable minority even in Constantinople clung to Monophysitism. One of Justinian's first public acts was to put an end to this schism by inducing Justin to make the then patriarch declare his full adhesion to the creed of Chalcedon. When he himself came to the throne he endeavoured to persuade the Monophysites to come in by summoning some of their leaders to a conference. This failing, he ejected suspected prelates, and occasionally persecuted them.

Not long afterwards, his attention having been called to the spread of Origenistic opinions in Syria, he issued an edict condemning fourteen propositions drawn from the writings of the great Alexandrian, and caused a synod to be held which renewed the condemnation of the impugned doctrines and anathematized Origen himself. Still later, he was induced by the machinations of some of the prelates who haunted his court, and by the influence of Theodora, herself much interested in theological questions, and more than suspected of Monophysitism, to raise a needless, mischievous, and protracted controversy. The Monophysites sometimes alleged that they could not accept the decrees of the council of Chalcedon because that council had not condemned, but (as they argued) virtually approved, three writers tainted with Nestorian principles, Theodore of Mopsuestia, Theodoret, and Ibas, bishop of Edessa. It was represented to the emperor, who was still pursued by the desire to bring back the schismatics, that a great step would have been taken towards reconciliation if a condemnation of these teachers, or rather of such of their books as were complained of, could be brought about, since then the Chalcedonian party would be purged from any appearance of sympathy with the errors of Nestorius.

Not stopping to reflect that in the angry and suspicious state of men's minds he was sure to lose as much in one direction as he would gain in the other, Justinian put forth an edict exposing and denouncing the errors contained in the writings of Theodore generally, in the treatise of Theodoret against Cyril of Alexandria, and in a letter of Bishop Ibas (a letter whose authenticity was doubted, but which passed under his name) to the Persian bishop Maris. This edict was circulated through the Christian world to be subscribed by the bishops. The four Eastern patriarchs, and the great majority of the Eastern prelates generally, subscribed. Among the Western bishops, who were less disposed to Monophysitism and subservience, the edict was earnestly resisted. Long disputes and negotiations followed, the end of which was that Justinian summoned a general council of the church, that which we reckon the Fifth, which condemned the impugned writings, and anathematized several other heretical authors. Its decrees were received in the East but long contested in the Western Church, where a schism arose that lasted for seventy years. This is the controversy known as that of the Three Chapters (*Tria capitula*, *τρία κεφάλαια*), apparently from the three propositions or condemnations contained in Justinian's original edict, one relating to Theodore's writings and person, the second to the incriminated treatise of Theodoret (whose person was not attacked), the third to the letter (if genuine) of Ibas. (*See* Hefele, *Conciliengeschichte*, ii. 777)

At the very end of his long career of theological discussion, Justinian himself lapsed into heresy, by accepting the doctrine that the earthly body of Christ was incorruptible, insensible to the weaknesses of the flesh, a doctrine which went by the name of Aphthartodocetism. According to his usual practice, he issued an edict enforcing this view, and requiring all patriarchs, metropolitans, and bishops to subscribe to it. Some refused at once, and were deprived of their sees. Others submitted or temporized; but before there had been time enough for the matter to be carried through, the emperor died.

As no preceding sovereign had been so much interested in church affairs, so none seems to have shown so much activity as a persecutor both of pagans and of heretics. He renewed with additional stringency the laws against both these classes. The former embraced a large part of the rural population in certain secluded districts, such as parts of Asia Minor and Peloponnesus; and we are told that the efforts directed against them resulted in the forcible baptism of 70,000 persons in Asia Minor alone. At Athens, the philosophers who taught in the schools hallowed by memories of Plato still openly professed what passed for Paganism, though it was really a body of moral doctrine, strongly tinged with mysticism, in which there was far more of Christianity and of the speculative metaphysics of the East than of the old Olympian religion. Justinian, partly from religious motives, partly because he discountenanced all rivals to the imperial university of Constantinople, closed these Athenian schools (529).

Heresy proved more obstinate. The severities directed against the Montanists of Phrygia led to a furious war, in which most of the sectaries perished, while the doctrine was not extinguished. Harsh laws provoked the Samaritans to a revolt, from whose effects Palestine had not recovered when conquered by the Arabs in the following century. The Nestorians and the Eutychian Monophysites were not threatened with such severe civil penalties, although their worship was interdicted, and their bishops were sometimes banished; but this vexatious treatment was quite enough to keep them disaffected, and the rapidity of the Mohammedan conquests may be partly traced to that alienation of the bulk of the Egyptian and a large part of the Syrian population which dates from Justinian's persecutions.

4. **Foreign Wars.**—Justinian was engaged in three great foreign wars, two of them of his own seeking, the third a legacy which nearly every emperor had come into for three centuries, the secular strife of Rome and Persia. When Justinian came to the throne, his troops were maintaining an unequal struggle on the Euphrates against the armies of Kavadh I. (*q.v.*). After some campaigns, in which the skill of Belisarius obtained considerable successes, a peace was concluded in 533 with Chosroes I. (*q.v.*). This lasted till 539, when Chosroes declared war. The emperor was too much occupied in the West to be able adequately to defend his eastern frontier. Chosroes advanced into Syria with little resistance, and in 540 captured Antioch. The war continued with varying fortunes for four years more in this quarter; while in the meantime an even fiercer struggle had begun in the mountainous region inhabited by the Lazi at the south-eastern corner of the Black Sea. (*See* COLCHIS.)

When after two-and-twenty years of fighting no substantial advantage had been gained by either party, Chosroes agreed in 562 to a peace which left Lazica to the Romans, but under the dishonourable condition of their paying 30,000 pieces of gold annually to the Persian king. Thus no result of permanent importance flowed from these Persian wars, except that they greatly weakened the Roman Empire, increased Justinian's financial embarrassments, and prevented him from prosecuting with sufficient vigour his enterprises in the West (*See* further PERSIA: *Ancient History,* "The Sassanid Dynasty.")

These enterprises had begun in 533 with an attack on the Vandals, in Africa. Belisarius landed without opposition, and destroyed the barbarian power in two engagements. North Africa from beyond the strait of Gibraltar to the Syrtes became again a Roman province, although the Moorish tribes of the interior maintained a species of independence; and part of southern Spain was also recovered for the empire. The ease with which so important a conquest had been effected encouraged Justinian to attack the Ostrogoths of Italy. Justinian began the war in 535, taking as his pretext the murder of Queen Amalasuntha, daughter of Theodoric, who had placed herself under his protection, and alleging that the Ostrogothic kingdom had always owned a species of allegiance to the emperor at Constantinople, a claim for which there was some foundation. For the Italian campaign *see* BELISARIUS.

The imperial administration was established through Italy, but its rapacity soon began to excite discontent, and the kernel of the Gothic nation had not submitted. After two short and unfortunate reigns, the crown had been bestowed on Totila or Baduila, a warrior of distinguished abilities, who by degrees drove the imperial generals and governors out of Italy. Belisarius was sent against him, but with forces too small for the gravity of the situation. He moved from place to place during several years, but saw city after city captured by or open its gates to Totila, till only Ravenna, Otranto and Ancona remained. Justinian was occupied by the ecclesiastical controversy of the Three Chapters, and had not the money to fit out a proper army and fleet. It was not until 552 that re-conquest was attempted. In that year a powerful army was despatched under Narses. Under him the Goths were completely defeated at Taginae and the Mons Lactarius, and Italy was annexed. (*See* NARSES.) But it was an Italy terribly impoverished and depopulated, whose possession carried little strength with it. Justinian's policy both in the Vandalic and in the Gothic War stands condemned by the result. The resources of the state, which might better have been spent in defending the frontiers of the empire, were consumed in the conquest of two countries which had suffered too much to be of any substantial value, and which could not be permanently retained. However, Justinian must have been almost preternaturally wise to have foreseen this: his conduct was in the circumstances only what might have been expected from an ambitious prince who perceived an opportunity of recovering territories that had formerly belonged to the empire, and over which its rights were conceived to be only suspended.

Besides these three great foreign wars, Justinian's reign was troubled by a constant succession of border inroads, especially on the northern frontier. Immense damage was inflicted by Slavonic and Hunnish marauders; and on one occasion the capital was itself in danger.

5. **Personal Character.**—Regarding Justinian's personal character and capacities a great diversity of opinion has existed among historians. The difficulty of arriving at a fair conclusion is increased by the fact that Procopius, our principal contemporary authority, speaks with a very different voice in his secret memoirs (the *Anecdota*) from that which he has used in his published history, and that some of the accusations contained in the former work are so rancorous and improbable that a certain measure of discredit attaches to everything which it contains.

The truth seems to be that Justinian was not a great ruler in the higher sense of the word, that is to say, a man of large views, deep insight, a capacity for forming just such plans as the circumstances needed, and carrying them out by a skilful adaptation of means to ends. But he was a man of considerable abilities, wonderful activity of mind and admirable industry. He was interested in many things, and threw himself with ardour into whatever he took up; he contrived schemes quickly, and pushed them on with an energy which usually made them succeed when no long time was needed, for, if a project was delayed, there was a risk of his tiring of it and dropping it. Although vain and full of self-confidence, he was easily led by those who knew how to get at him.

Justinian was quick rather than strong or profound; his policy does not strike one as the result of deliberate and well-considered views, but dictated by the hopes and fancies of the moment. His activity was in so far a misfortune as it led him to attempt too many things at once, and engage in undertakings so costly that oppression became necessary to provide the funds for them. Even his devotion to work, which excites our admiration, in the centre of a luxurious court, was to a great extent unprofitable, for it was mainly given to theological controversies which neither he nor any one else could settle.

Still, after making all deductions, it is plain that the man who accomplished so much, and kept the whole world so occupied, as Justinian did during the thirty-eight years of his reign, must have possessed no common abilities. He was affable and easy of approach to all his subjects, with a pleasant address; nor does he seem to have been, like his wife, either cruel or revengeful. We hear several times of his sparing those who had conspired against him. But he was not scrupulous in the means he employed, and he was willing to maintain in power detestable ministers if only they served him efficiently and filled his coffers. His chief passion, after that for his own fame and glory, seems to have been for theology; it was in this field that his literary powers exerted themselves, and his taste also, for among his numerous buildings the churches are those on which he spent most thought and money. Considering that his legal reforms are those by which his name is mainly known to posterity, it is curious that we should have hardly any information as to his legal knowledge, or the share which he took in those reforms.

In person he was somewhat above the middle height, well-shaped, with plenty of fresh colour in his cheeks, and an extraordinary power of doing without food and sleep. Two mosaic figures of him exist at Ravenna, one in the apse of the church of S. Vitale, the other in the church of S. Apollinare in Urbe; but of course one cannot be sure how far in such a material the portrait fairly represents the original. He had no children by his marriage with Theodora, and did not marry after her decease. On his death, on Nov. 14, 565, the crown passed to his nephew Justin II.

AUTHORITIES.—For the life of Justinian the chief authorities are Procopius (*Historiae, De aedificiis, Anecdota*) and (from A.D. 552) the *History* of Agathias; the Chronicle of Johannes Malalas is also of value. Occasional reference must be made to the writings of Jordanes and Marcellinus, and even to the late compilation of Cedrenus.

See also Gibbon (ed. Bury 1923); Bury, *Later Roman Empire*, vol. ii.; Grupe, *Kaiser Justinian* (Leipzig 1923). The best general account of Justinian's reign in all its aspects is probably Diehl, *Justinian et la civilisation byzantine* (1901). (J. BRY.; X.)

JUSTINIAN II., RHINOTMETUS (669–711), East Roman emperor 685–695 and 704–711, succeeded his father Constantine IV., at the age of sixteen. His reign was unhappy both at home and abroad. After a successful invasion he made a truce with the Arabs, which admitted them to the joint possession of Armenia, Iberia and Cyprus, while by removing 12,000 Christian Mardaites from their native Lebanon, he gave the Arabs a command over Asia Minor of which they took advantage in 692 by conquering all Armenia. In 689 Justinian was defeated by the Bulgarians, but settled many Slavs in Asia Minor. Meanwhile the bitter dissensions caused in the Church by the emperor, his bloody persecution of the Manichaeans, and the rapacity with which, through his creatures Stephanus and Theodatus, he extorted the means of gratifying his sumptuous tastes and his mania for erecting costly buildings, drove his subjects into rebellion. In 695 they rose under Leontius, and, after cutting off the emperor's nose (whence his surname), banished him to Cherson in the Crimea. Leontius, after a reign of three years, was in turn dethroned and imprisoned by Tiberius Absimarus, who next assumed the purple. Justinian meanwhile had escaped from Cherson and married Theodora, sister of Busirus, khan of the Khazars. Compelled, however, by the intrigues of Tiberius, to quit his new home, he fled to Terbelis, king of the Bulgarians. With an army of 15,000 horsemen Justinian suddenly pounced upon Constantinople, slew his rivals Leontius and Tiberius, with thousands of their partisans, and once more ascended the throne in 704. His second reign was marked by an unsuccessful war against Terbelis, by Arab victories in Asia Minor, by devastating expeditions sent against his own cities of Ravenna and Cherson, where he inflicted horrible punishment upon the disaffected nobles and refugees, and by the same cruel rapacity towards his subjects. Conspiracies again broke out: Bardanes, surnamed Philippicus, assumed the purple, and Justinian, the last of the house of Heraclius, was assassinated in Asia Minor, December 711.

See E. Gibbon, *Decline and Fall of the Roman Empire* (ed. Bury, 1896), v. 179–183; J. B. Bury, *The Later Roman Empire* (1889), ii. 320–330, 358–367; F. Görres, in *Byzantinische-Zeitschrift*, 1908, p. 432; E. W. Brooks, in *Cambridge Mediaeval History* II. (1913), pp. 406–414.

JUSTIN MARTYR (b. *c.* A.D. 100), Christian apologist, was born, of pagan parents, *c.* 100 at Flavia Neapolis (anc. *Sichem*), now Nablus, in Palestinian Syria (Samaria). A thorough study of the philosophy of Peripatetics and Pythagoreans, Stoics and Platonists, brought home to Justin the conviction that true knowledge was not to be found in them. On the other hand, he came to look upon the Old Testament prophets as approved by their antiquity, sanctity, mystery and prophecies to be interpreters of the truth. To this must be added the deep impression produced upon him by the life and death of Christ. His conversion apparently took place at Ephesus. After his conversion he retained his philosopher's cloak (Euseb., *Hist. Eccl.* iv. 11. 8), the distinctive badge of the wandering professional teacher of philosophy, and went about from place to place discussing the truths of Christianity in the hope of bringing educated Pagans, as he himself had been brought, through philosophy to Christ. In Rome he gave lectures in a class-room of his own, though not without opposition from his fellow-teachers. Among his opponents was the Cynic Crescentius (*Apol.* ii. 13). Eusebius (*Hist. Eccl.* iv. 16 7–8) concludes somewhat hastily, from the statement of Justin and his disciple Tatian (*Orat. ad Graec.* 19), that the accusation of Justin before the authorities, which led to his death, was due to Crescentius. But we know, from the undoubtedly genuine *Acta SS. Justini et sociorum*, that Justin suffered the death of a martyr under the prefect Rusticus between 163 and 167.

To form an opinion of Justin as a Christian and theologian, we must turn to his *Apology* and to the *Dialogue* with the Jew Trypho, for the authenticity of all other extant works attributed to him is disputed with good reason. The *Apology* was written in Rome about 150. In the first part Justin defends his fellow-believers against the charge of atheism and hostility to the state. He then demonstrates the truth of his religion from the effects of the new faith, and from the excellence of its moral teaching, and concludes with a comparison of Christian and Pagan doctrines, in which the latter are set down as the work of demons. As the main support of his proof of the truth of Christianity appears his demonstration that the prophecies of the old dispensation have found their fulfilment in Christianity. A third part shows, from the practices of their religious worship, that the Christians had in truth dedicated themselves to God. The whole closes with an appeal to the princes, with a reference to the edict issued by Hadrian in favour of the Christians In the so-called *Second Apology*, Justin takes occasion from the trial of a Christian recently held in Rome to argue that the innocence of the Christians was proved by the very persecutions

Even as a Christian Justin always remained a philosopher. By his conscious recognition of the Greek philosophy as a preparation for the truths of the Christian religion, he appears as the first and most distinguished in the long list of those who have endeavoured to reconcile Christian with non-Christian culture. In the *Dialogue* with the Jew Trypho, where he had to deal with the Judaism that believed in a Messiah, he was far better able to do justice to Christianity as a revelation; and the arguments of this work are much more completely in harmony with primitive Christian theology than those of the *Apology*.

Justin is a valuable authority for the life of the Christian Church in the middle of the 2nd century. The *Apology* contains a few paragraphs (61 *seq.*), which give a vivid description of the public worship of the Church and its method of celebrating the sacraments (Baptism and the Eucharist). His works are also of great value for the history of the New Testament writings. He knows of no canon of the New Testament, *i.e.*, no fixed and inclusive collection of the apostolic writings. His sources for the teachings of Jesus are the "Memoirs of the Apostles," by which are probably to be understood the Synoptic Gospels (without the Gospel according to St. John), which, according to his account, were read along with the prophetic writings at the public services.

Both the *Apology* and the *Dialogue* are preserved in but a single ms (cod. Paris, 450, A.D. 1364).

BIBLIOGRAPHY.—The editions of Robert Étienne (Stephanus) (1551); H. Sylburg (1593); F. Morel (1615); Prudentius Maranus

(1742) are superseded by J. C. T. Otto, *Justini philosophi et martyris opera quae feruntur omnia* (3rd ed 5 vols., Jena, 1876–81). This edition contains besides the *Apologies* (vol. i.) and the *Dialogue* (vol. ii.) other writings now admitted to be spurious For a handy edition of the *Apology, see* G. Krüger, *Die Apologien Justins des Märtyrers* (3rd ed. Tübingen, 1904) There is a good German translation with a comprehensive commentary by H. Veil (1894). For English translations consult the "Oxford Library of the Fathers" and the "Ante-Nicene Library." *See* also J. Donaldson, *A Critical History of Christian Literature and Doctrine,* vol. 2 (1866); T. M. Wehofer, *Die Apologie Justins des Philosophen und Martyrers in litterarhistorischer Beziehung zum ersten Male untersucht* (1897); A. L. Feder, *Justins des Märtyrers Lehre von Jesus Christus* (1906). On the spurious writings consult A. Harnack, *Diodor von Tarsus. Vier pseudo-justinische Schriften als Eigentum Diodors nachgewiesen* (1901); Goodenough, *The Theology of Justin Martyr* (1923).

JUSTUS OF GHENT (Jodocus, or Joos of Ghent) (?1430–?1480), a Flemish painter whom Vasari and Guicciardini called Guisto da Guanto, and who has been identified with Joos van Wassenhove, a member of the painters' guild at Antwerp in 1460 and at Ghent in 1464. His name is not mentioned in the records of the guilds after 1468 and it is supposed that he then emigrated to Italy. To his early period in Flanders two pictures have been ascribed: the altarpiece at St. Bavo in Ghent representing the "Crucifixion" and the "Adoration of the Magi" in the Blumenthal collection at New York. In 1474 we see him in Italy, where he painted the "Communion of the Apostles," which is described by Vasari and which is now in the Palazzo Ducale at Urbino. This is the only absolutely authenticated picture by the master. It was painted for the brotherhood of Corpus Christi at the bidding of Federico of Montefeltro, who was introduced into the picture as a companion of Caterino Zeno, a Persian envoy at that time on a mission to the court of Urbino. Vespasiano de Bisticci, the librarian of Federico of Montefeltro, states that this duke sent to the Netherlands for a capable artist to paint a series of "ancient worthies" for a library recently erected in the palace of Urbino, because he knew no one in Italy who understood how to paint in oil colours. It has been conjectured that the author of these "worthies," which are still in existence at the Louvre and in the Barberini palace at Rome, was Justus. His Flemish style is here tempered by the study of the masterpieces of Santi and Melozzo. To Justus is also ascribed the portrait of the duke and his son now in the Barberini palace in Rome. The seven "Liberal Arts," which decorated the ducal palace at Urbino, and whereof two are now in the National Gallery and another two at Berlin, are ascribed to Justus by some critics and by others to Melozzo da Forli. They seem to recall Melozzo in their design, but are Flemish in their colour and execution. According to recent art criticism Justus was an artist who brought his northern traditions to Italy and there combined them with those of the Italian school. His development was gradual and his later works are difficult to distinguish from those of Italian masters.

JUTE, a vegetable fibre now occupying a position in the manufacturing scale inferior only to cotton and flax. The term jute appears to have been first used in 1746. Importations of the substance had been made at earlier times under the name of *pāt,* an East Indian native term by which the fibre continued to be spoken of in England till the early years of the 19th century. The modern name appears to be derived from *jhot* or *jhout* (Sansk. *jhat*), the vernacular name by which the substance is known in the Cuttack district.

Different Species.—The fibre is obtained from two species of *Corchorus* (nat. ord. *Tiliaceae*), *C. capsularis* and *C. olitorius,* the products of both being so essentially alike that neither in commerce nor agriculture is any distinction made between them. These and various other species of *Corchorus* are natives of Bengal, where they have been cultivated from very remote times for economic purposes, although there is reason to believe that the cultivation did not originate in the northern parts of India. The two species cultivated for jute fibre are in all respects very similar to each other, except in their fructification and the relatively greater size attained by *C. capsularis.* They are annual plants from 5 to 10ft. high, with a cylindrical stalk as thick as a man's finger, and hardly branching except near the top. The light green leaves are from 4 to 5in. long by 1½in. broad above the base, and taper upwards into a fine point; the edges are serrated; the two lower teeth are drawn out into bristle-like points. The small whitish-yellow flowers are produced in clusters of two or three opposite the leaves.

The capsules or seed-pods in the case of *C. capsularis* are globular, rough and wrinkled, while in *C. olitorius* they are slender, quill-like cylinders (about 2in. long), a very marked distinction, as may be noted from fig. 1, in which *c* and *d* show the capsules of *C. capsularis* and *C. olitorius* respectively. Fig. *a* represents a flowering top of *C. olitorius.*

Both species are cultivated in India, not only on account of their fibre, but also for the sake of their leaves, which are there extensively used as a pot-herb. The cultivation of *C. capsularis* is most prevalent in central and eastern Bengal, while in the neighbourhood of Calcutta, where, however, the area under cultivation is limited, *C. olitorius* is principally grown The fibre known as China jute or Tien-tsin jute is the product of another plant, *Abutilon Avicennae,* a member of the Mallow family.

Cultivation and Cropping.—Attempts have been made to grow the jute plant in America, Egypt, Africa and other places, but up to the present the fibre has proved much inferior to that obtained from plants grown in India. Here the cultivation of the plant extends from the Hugli through eastern and northern Bengal. The successful cultivation of the plant demands a hot, moist climate, with a fair amount of rain. Too much rain at the beginning of the season is detrimental to the growth, while a very dry season is disastrous. The climate of eastern and northern Bengal appears to be ideal for the growth of the plant.

The quality of the fibre and the produce per acre depend in a measure on the preparation of the soil. The ground should be ploughed about four times and all weeds removed. The seed is then sown broadcast as in the case of flax. It is only within the last two decades that any attention has been paid to the selection of the seed.

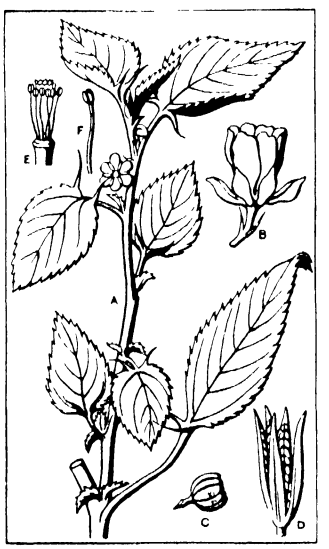

FIG. 1.—(A) JUTE PLANT (CORCHORUS OLITORIUS). (B) FLOWER. (C) CAPSULE OF CORCHORUS CAPSULARIS. (D) CAPSULE OF CORCHORUS OLITORIUS. (E) STAMENS. (F) STAMENS

The time of sowing extends from the middle of March to the middle of June, while the reaping, which depends upon the time of sowing and upon the weather, is performed from the end of June to the middle of October. The crop is said to be ready for gathering when the flowers begin to fade; if gathered before, the fibre is weak; while if left until the seed is ripe, the fibre is stronger, but is coarser and lacks the characteristic lustre.

Retting.—The fibre is separated from the stalks by a process of retting similar to that for flax and hemp. In certain districts of Bengal it is the practice to stack the crop for a few days previous to retting in order to allow the leaves to dry and to drop off the stalks. It is stated that the colour of the fibre is darkened if the leaves are allowed to remain on during the process of retting. It is also thought that the drying of the plants before retting facilitates the separation of the fibre. Any simple operation that improves the colour of the fibre or shortens the operation of retting is worthy of consideration. The benefits to be derived from the above process, however, cannot be great, for the bundles are usually taken direct to the pools and streams. The period necessary for the completion of the retting process varies according to the temperature and to the properties of the water, and

may occupy from two days to a month. After the first few days of immersion the stalks are examined daily to test the progress of the retting. When the fibres are easily separated from the stalk, the operation is complete and the bundles should be withdrawn. The following description of the retting of jute is taken from Royle's *Fibrous Plants of India:*

"The proper point being attained, the native operator, standing up to his middle in water, takes as many of the sticks in his hands as he can grasp, and removing a small portion of the bark from the ends next the roots, and grasping them together, he strips off the whole with a little management from end to end, without breaking either stem or fibre. Having prepared a certain quantity into this half state, he next proceeds to wash off; this is done by taking a large handful; swinging it round his head he dashes it repeatedly against the surface of the water, drawing it through towards him, so as to wash off the impurities; then, with a dexterous throw he fans it out on the surface of the water and carefully picks off all remaining black spots. It is now wrung out so as to remove as much water as possible, and then hung up on lines, prepared on the spot, to dry in the sun."

The separated fibre is then made up into bundles ready for sending to one of the jute presses. The jute is carefully sorted into different qualities, and then each lot is subjected to an enormous hydraulic pressure from which it emerges in the shape of the well-known bales, each weighing 400 lb.

The crop naturally depends upon the quality of the soil, and upon the attention which the fibre has received in its various stages; the yield per acre varies in different districts Three bales per acre, or 1,200 lb. is termed a 100% crop; but improved methods of manuring and of agricultural working are resulting in a yield above 100, indeed as high as 104; it is stated in percentages although the value exceeds 100. Sometimes the crop is stated in lakhs of 100,000 bales each. The crop varies from year to year, but it seldom reaches 10,000,000 bales; it is usually between 8 and 9 million bales. For detailed particulars concerning both fibre and cloth see *The Report of the Committee of the Indian Jute Mills Association.*

Cultivation and Production of Jute

Year	Cultivated acres	Bales of 400 lb. each
1922	1,800,000	5,408,000
1923	2,788,000	8,401,000
1924	2,770,000	8,062,000
1925	3,115,000	8,940,000
1926	3,840,900	12,187,000*
1927*	3,371,100	10,220,700

*1927 values are the Final Estimate; the others are actual values.

Fibre Characteristics.—The characters by which qualities of jute are judged are colour, lustre, softness, strength, length, firmness, uniformity and absence of roots. The best qualities are of a clear whitish-yellow colour, with a fine silky lustre, soft and smooth to the touch, and fine, long and uniform in fibre When the fibre is intended for goods in the natural colour it is essential that it should be of a light shade and uniform; but if intended for yarns that are to be dyed a dark shade the colour is not so important. The cultivated plant yields a fibre with a length of from 6 to 10ft., but in exceptional cases it has been known to reach 14 to 15ft. in length The fibre is decidedly inferior to flax and hemp in strength and tenacity; and, owing to a peculiarity in its microscopic structure, by which the walls of the separate cells composing the fibre vary much in thickness at different points, the single strands of fibre are of unequal strength. Recently prepared fibre is always stronger, more lustrous, softer and whiter than such as has been stored for some time—age and exposure rendering it brown in colour and harsh and brittle in quality. Jute, indeed, is much more woody in texture than either flax or hemp, a circumstance which may be easily demonstrated by its behaviour under appropriate reagents; and to that fact is due the change in colour and character it undergoes on exposure to the air. The fibre bleaches with facility, up to a certain point, sufficient to enable it to take brilliant and delicate shades of dye colour, but it is with great difficulty brought to a pure white by bleaching. A very striking and remarkable fact, which has much practical interest, is its highly hygroscopic nature. While in a dry position and atmosphere it may not possess more than 6% of moisture, under damp conditions it will absorb as much as 23%; the normal percentage is 12 to 13%

Sir G. Watt, in his *Dictionary of the Economic Products of India,* mentions the following 11 varieties of jute fibre: Serajganji, Narainganji, Desi, Deora, Uttariya, Deswāl, Bākrabadi, Bhatial, Karimginji, Mirganji and Jungipuri There are several other varieties of minor importance. The first four form the four classes into which the commercial fibre is divided, and they are commonly known as Serajgunge, Naraingunge, Daisee and Dowrah. Serajgunge is a soft fibre but it is superior in colour, which ranges from white to grey. Naraingunge is a strong fibre, possesses good spinning qualities, and is very suitable for good warp yarns Its colour, which is not so high as Serajgunge, begins with a cream shade and approaches red at the roots All the better class yarns are spun from these two kinds. Daisee is similar to Serajgunge in softness, is of good quality and of great length; its drawback is the low colour, and hence it is not so suitable for using in natural colour. It is, however, a valuable fibre for carpet yarns, especially for dark yarns. Dowrah is a strong, harsh and low quality fibre, and is used principally for heavy wefts. Each class is subdivided according to the quality and colour of the material, and each class receives a distinctive mark called a baler's mark. Thus the finest fibres may be divided as follows:—

Superfine first marks.
Extra fine first marks 1st, 2nd and 3rd numbers.
Superior first marks 1st, 2nd and 3rd numbers.
Standard first marks 1st, 2nd and 3rd numbers.
Good first marks 1st, 2nd and 3rd numbers
Ordinary first marks 1st, 2nd and 3rd numbers.
Good second marks 1st, 2nd and 3rd numbers
Ordinary second marks 1st, 2nd and 3rd numbers.

The lower qualities are, naturally, divided into fewer varieties.

Each baler has his own marks, the fibres of which are guaranteed equal in quality to some standard mark It would be impossible to give a list of the different marks, for there are hundreds, and new marks are constantly being added A list of all the principal marks is issued in book form by the Calcutta Jute Balers' association

The relative prices of the different classes depend upon the crop, upon the demand, and upon the quality of the fibre. The prices of first marks averaged about £19 per ton between the years 1903–6; in the former year the price was £12 15s., whereas in the latter year the price had risen to £27 15s. The price in Dec. 1927 was between £36 and £37

Prices of "First Marks" Jute Fibre

Year	Highest			Lowest			Mim.

See Watt's *Dictionary of the Economic Products of India* and Royle's *Fibrous Plants of India.* (T W)

Jute Manufacture.—Before jute came to occupy a prominent place amongst the textile fibres of Europe, it formed the raw material of a large and important industry throughout the regions of eastern Bengal. The Hindu population made the material up into cordage, paper and cloth, the chief use of the latter being in the manufacture of gunny bags. Indeed, up to 1830–40 there was little or no competition with hand labour for this class of material.

Development of the Trade.—For many years Great Britain was the only European country engaged in the manufacture of

jute, the great seat being Dundee. Gradually, however, the trade began to extend, and now almost every European country is partly engaged in the trade, and the work is extending much in North and South America.

The success of the mechanical method of spinning and weaving jute in Dundee and district led to the introduction of textile machinery into and around Calcutta. The first mill to be run there by power was started in 1854, while by 1872 three others had been established. In the next ten years no fewer than 16 new mills were erected and equipped with modern machinery from Great Britain, while in 1907 there were 39 mills engaged in the industry. There are now (1928) 59 mills, containing 50,454 looms, of which 19,353 are used for weaving sackings, and 31,001 for weaving hessians. If it is assumed that there are 20 spinning spindles for each loom, the usual figures, then the number of spindles amounts to 1,009,080.

The Calcutta looms are engaged for the most part with a few varieties of the commoner classes of jute fabrics, but the success in this direction has been really remarkable. Dundee, on the other hand, turns out not only the commoner classes of fabrics, but a very large variety of other fabrics. Amongst these may be mentioned the following. Hessian, bagging, tarpaulin, sacking, scrims, Brussels carpets, Wilton carpets, imitation Brussels, and several other types of carpets, rugs and matting, in addition to a large variety of fabrics of which jute forms a part Calcutta has certainly taken a large part of the trade which Dundee held in its former days, but the continually increasing demands for jute fabrics for new purposes have enabled Dundee to enter new markets and so to take part in the prosperity of the trade

Spinning and Weaving.—In their general features the spinning and weaving of jute fabrics do not differ essentially as to machinery and processes from those employed in the manufacture of hemp and heavy flax goods Owing, however, to the woody and brittle nature of the fibre, it has to undergo a preliminary treatment peculiar to itself The pioneers of the jute industry who did not understand this necessity, or rather who did not know how the woody and brittle character of the fibre could be remedied, were greatly perplexed by the difficulties they had to encounter, the fibre spinning badly into a hard, rough and hairy yarn owing to the splitting and breaking of the fibre. This peculiarity of jute, coupled also with the fact that the flax machinery on which it was first spun, although quite suitable for the stronger and more elastic fibres for which it was designed, required certain modifications to suit it to the weaker jute, was the cause of many annoyances and failures in the early days of the trade.

Batching, Opening and Softening.—The first process in the manufacture of jute is termed batching. Batch setting is the first part of this operation; it consists of selecting the different kinds or qualities of jute for any predetermined kind of yarn The number of bales for a batch seldom exceeds 12, indeed it is generally about six, and of these there may be three, four or even more varieties or marks The "stricks" (also in the forms "streek," "strick" or "strike," as in Chaucer, *Cant. Tales*, Prologue 676, where the Pardoner's hair is compared with a "strike of flax" The term is also used of a handful of hemp or other fibre, and is one of the many technical applications of "strike" or "streak," which etymologically are cognate words) or "heads" of jute as they come from the bale are in a hard condition in consequence of having been subjected to a high hydraulic pressure during baling, it is therefore necessary to soften them before any further process is entered. The stricks are sometimes partly softened or crushed by means of a steam hammer during the process of opening the bale, then taken to the "strikers-up" where the different varieties are selected and hung on pins, and then taken to the jute softening machine. The more general practice, however, is to employ what is termed a "bale opener," or "jute crusher." The essential parts of one type of bale opener are three specially shaped rollers, the peripheries of which contain a number of small knobs. Two of these rollers are supported in the same horizontal plane of the framework, while the third or top roller is kept in close contact by means of weights and springs acting on each end of the arbor. Another known type of machine goes by the name of the three-pair roller jute opener. The layers from different bales are laid upon the feed cloth on the left, which carries them up to the rollers, between which the layers are crushed and partly separated. The proximity of the weighted roller or rollers to the fixed ones depends upon the thickness of material passing through the machine. The fibre is delivered by what is called the delivery cloth—that shown on the right—and the batcher usually selects small stricks of about 1½lb to 2lb. weight each and passes them on to the attendant or feeder of the softening machine. These small stricks are now laid as regularly as possible upon the feed-cloth of the softening machine, a general view of which is shown in fig 4. The fibre passes between a series of fluted rollers, each pair of which is kept in contact by spiral springs as shown in the figure. The standard number of pairs is 63, but different numbers are used according to opinions. There is also a difference in the structure of the flutes, some being straight, and others spiral, and each pair may or may not contain the same number of flutes. The springs allow the top rollers of each pair to rise as the material passes through the machine. Advantage is taken of this slight upward and downward movement of the top rollers to regulate automatically the flow of water and oil upon the material; the apparatus is placed often over the 11th and 12th rollers of the softening machine In many cases the water and oil are applied by less automatic, but equally effective means. The main object is to see that the liquids are distributed evenly while the fibre is passing through, and to stop the supply when the machine stops or when no fibre is passing. The uniform moistening of the fibre in this machine facilitates the subsequent operations; indeed the introduction of this preliminary process (originally by hand) constituted the first important step in the practical solution of the difficulties of jute spinning. The relative quantities of oil and water depend upon the quality of the batch Sometimes both whale and mineral oils are used, but in most cases the whale oil is omitted About 1 to 1¼ gallons of oil is the usual amount given per bale of 400lb. of jute, while the quantity of water per bale varies from 3 to 7 gallons. The delivery attendants remove the stricks, give them a twist to facilitate future handling, and place them on what are termed jute barrows The stricks are now handed over to the cutters who cut off the roots, and finally the material is allowed to remain for 12 to 24 hours to allow the mixture of oil and water to spread evenly and thoroughly over the fibre.
